The better sort of coffee-houses are open on one side, and have a fountain playing in the midst of a range of marble seats, and recesses furnished with pillows, mats, and stuffed carpets. A row of them, near the Solymania, is frequented by opium eaters; but there are not nearly so many of these individuals in the Turkish capital as is generally imagined. All the public buildings of Constantinople are crowned by cupolas, in consequence of which, their number, at a distance, seems to be as great as that of the private houses. The domes, as well as the minarets of all the sacred structures, are terminated by a crescent.

The houses of opulent Turks, are built, like the *hans* and most other large houses in the E. round a court, which has always a fountain playing in its centre.

Occasionally these residences are not ill-constructed; but the common dwellings are mere comfortable wooden boxes, with unglazed windows, and without fire-places. (*Dallaway*.) House-rent is said to be higher in Constantinople than in any other city in the world: this is ascribed to the frequency of fires, a house not being reckoned worth more than 5 years' purchase, if so much. The fact is, that these fires are very often intentional; and that they are resorted to for the same purpose that public meetings and petitions are got up in England, to make the sultan aware of the public discontent, and of the necessity of appealing to it! A striking instance of this sort is given by Porter (*Observations on the Turks*, p. 92.), and similar instances may be found in other travellers. We do not know that any thing could better evince the atrocious nature of the despotism under which Turkey has so long groaned, than the circumstance of its making fire-raising a sort of constitutional resource!

The Golden Horn (an. *Sinus Byzantinus*) has assumed the ancient name of the promontory on which Byzantium was built, and which was first called *Episcopus Xavrus*, *Chrysoceras*, or Golden Horn. (*Clarke's Travels*, viii. 176, 182.) It is one of the finest and most secure harbours in the world, capable of containing upwards of 1,000 sail of the line, and of a depth sufficient to admit of goods being landed on the quays from the largest ships, in many places without the assistance of boats. It extends from the Seraglio Point inland, for about 4½ m. N.W., with a breadth varying from a furlong to half a mile. At its entrance there is a light-house on either side, and is defended by seven batteries on the Seraglio Point. At its upper end, the ancient *Lycus*, now called the Sweet Waters, falls into it, and it is continually cleared by the stream of that river, in conjunction with a current setting into it from the Bosphorus. It exhibits a most picturesque and animated scene, covered, as it always is, with merchant vessels, steamers, ships of war, and *cargoes* of all descriptions. Along the S.W. side of this harbour, the *Panar*, or Greek quarter, extends nearly the whole way from the seraglio to the western walls of the city. Beyond the walls, on the same side, is the suburb of Asoc or Ejoc, in the mosque of which the new sultan is always installed in his office. The upper extremity of the harbour, anciently called the *Marcidum Mare*, is now, as formerly, a low, marshy, unwholesome tract; but about 1½ m. beyond, in the Valley of the Sweet Waters, the Sultan Achmet III. had some grounds laid out in the French style, with the addition of gaudy kiosques, coffee-houses, &c., to which the inhabitants of the city and suburbs frequently resort.

On the N.E. side of the harbour are the suburbs of Galata, Topkanah, Pera, and Cassim Pasha. The first two stand side by side on the shore opposite to the seraglio, and E. end of the city. Pera is on a hill to the N.E. behind both; and Cassim Pasha to the N.W. of all, opposite the Fanar. Galata was built by the Genoese in the 13th century, and walled in the 15th. It is about 4 m. in circuit, divided into 3 or 4 districts, and is inhabited chiefly by European and other merchants. It has 12 gates, and contains a citadel or tower, 140 ft. high, built by the emperor Anastasius, a very fine fish-market, several mosques, a handsome fountain, and a great number of shops. Tournetfort remarks that "one tastes in Galata a snatch of liberty not to be found elsewhere in the Ottoman empire. Galata is, as it were, Christendom in Turkey; taverns are tolerated, and the Turks themselves freely resort thither to take a cheerful glass." Topkanah (an arsenal) contains an arsenal, artillery-barracks, and magazines, and a cannon-foundry. Pera is beautifully situated, but irregularly built and ill-paved. It is about 3 m. in length; its pop. is almost wholly Frank, and it contains the residences of most of the European ambassadors, besides 4 Catholic and 1 Greek church, a monastery of dervishes, and a Mohammedan college. In 1581, it suffered severely from a fire which destroyed 18,000 houses, amongst which were the palaces of nearly all the ambassadors, and property estimated to be worth 8,000,000 dollars. Cassim Pasha contains the great naval arsenal, dock-yards, barracks, quarters for slaves and workmen, the palace of the capitan-pasha, &c. There are no suburbs on the W. side of Constantinople, only a few cemeteries and scattered cottages beyond the walls. The immediate vicinity towards Thrace consists generally of an expanse of open downs; the solitude and desolation which prevail on this side are remarkable. On the Asiatic continent, about a mile across the Bosphorus from the Seraglio Point, stands the town of Scutari (an. *Chrysopolis*), and about 2 m. S. of it, the ancient Chalcedon.

Manufactures few: the principal are those of silk and cotton fabrics, arms, morocco leather, saddlery, horse-trappings, shoes, and other articles of ordinary use and consumption, together with those of tobacco bowls, tubes, and mouth-pieces. The latter branches of industry employ many hands, and one bazaar is devoted solely to those articles. The *kaf-kil* earth is dug in

several parts of Asia, rudely fashioned into pipe-bowls in Constantinople, and exported in large quantities to Hungary, Germany, and France, where the bowls are re-manufactured, and receive the name of *meerschmanns*. The best tubes are formed of the stems of the cherry or jessamine tree, both of which are largely cultivated in the neighbourhood for the purpose. The rank of a person in this city being determined by his pipe, it is often adorned in a very costly manner, and the price of a *tschibouque* may vary from 20 *paras* to 30,000 *plasteres*. The fisheries of Constantinople are by no means unimportant: the sea and harbour abound with shoals of tunny, sword-fish, &c., and the "sweet waters" with a profusion of fresh-water fish.

The foreign trade is considerable. Imports, chiefly corn, iron, timber, tallow, and furs, from the Black Sea; cotton stuffs and yarn, tin, tin-plates, woollens, silks, cutlery; watches, jewellery, paper, glass, furniture, indigo, cochineal, orpiment, &c., from England and other parts of Europe; corn and coffee from Alexandria; a good deal of coffee from Brazil and the W. Indies, in American bottoms, which traffic has lately much increased; sugar, partly from the E., but chiefly from the W. Indies; wax, copper, drugs, gums, porcelain, overland from China (a trade which existed in the time of the Romans); and slaves, chiefly from Georgia, Circassia, and Africa. Exports comparatively trifling: chiefly silk, carpets, hides, wool, goats' hair, potash, wax, galls, bullion, diamonds, &c. The trade, which, as a whole, is less than might have been expected in a city of such size, is for the most part in the hands of English, French, Armenian, and Greek merchants, and Jew-brokers. The more wealthy Armenians (a nation constituting a considerable proportion of the pop.) are money-changers, bankers, jewellers, physicians, apothecaries, &c.; the lower classes are employed in the most laborious occupations. As chintz-printers, and maulin-painters, the Armenians here surpass most European artisans. The Greeks are much less numerous than before the Greek revolution.

Constantinople is the residence of a Greek, an Armenian, and a Catholic-Armenian patriarch. The first has now no authority in the newly-erected kingdom of Greece. Elementary schools are to be met with in every street; and in every quarter there are Turkish free-schools for the poor, the expenses of which, as well as the board and lodging of many of the pupils, are defrayed out of the revenues of the mosques. It is asserted that altogether there are upwards of 1,000 schools in the city. (*Sketches of Turkey*.) Some of the *medreses*, or colleges attached to the mosques, have between 400 and 500 students, who are lodged and educated on the foundation, and have each several professors, the salaries of the principal among which are equivalent to about 100*l.* a year. In these seminaries all the members of the *ulenah* are educated, and no one can be admitted into the hierarchy or the law without having first graduated in one of them. The Mohammedan law has prevailed in the Turks from learning European tongues. But the late sultan established a school for the instruction of native youths in French, outside the seraglio. The French and Austrian embassies have schools for the acquisition of Turkish by their members. (*Elliott*, i. 396, 397.) There are 13 public libraries, 9 or 10 of which are attached to the royal mosques, and contain about 2,000 manuscripts each, mostly copies of the koran and commentaries on it. The private library in the seraglio is said to be richer than any of the rest, and has been believed to contain some valuable Greek and Latin MSS. (*Dalway*, p. 23.)

"Amid the novelties that strike the European on his arrival, nothing surprises him more than the silence that pervades so large a capital. He hears no noise of carts or carriages rattling through the streets; for there are no wheeled vehicles in the city, except a very few painted carts, called *shabaks*, drawn by buffaloes, in which women occasionally take the air in the suburbs, and which go only at a foot-pace. The contrast is still more strongly marked at night. By ten o'clock every human voice is hushed." Constantinople is a beautiful place of residence for strangers: it is subject to sudden changes of temperature; and the strong *elestion* or N. winds, which prevail in the summer, and do injury to trade, by preventing the access of ships from the *Ægean* and Mediterranean, are also detrimental to public health and comfort. Earthquakes, the plague, and devastating fires, often consuming 2,000 or 3,000 houses, cause great destruction of life and property. In other respects, too, it is a most unpleasant place of residence to a European or other stranger. In many cases property is not secure, justice is notoriously corrupt, the police is bad, the place is infested with cats, rats, and, as most travellers say, with herds of wild dogs, and birds of prey, which act as scavengers. Sir J. Hobhouse states, that "Constantinople is distinguished from every other capital in Europe, by having no names to its streets, no lamps, and no post-office."

The history of this renowned city for a lengthened

period is given by Gibbon. It was originally founded by Byzas, from whom it derived the name of *Byzantium*, anno 636 B. C.; and having been destroyed by Severus, was rebuilt A. D. 328, by Constantine, who made it the cap. of the Roman empire. On the subjugation of the Western empire by the barbarians, Constantinople continued to be the cap. of the Eastern empire. Its wealth and magnificence were celebrated during the middle ages. It has sustained numerous sieges, but has only been twice taken; first in 1204, by the Crusaders, who retained it till 1261; and, lastly, by the Turks, under Mohammed II. May 29, 1453, when the last remnant of the Roman empire was finally suppressed. (*Gyllius*; *Wheeler*; *Townsgate*; *Gibbon*; *Dalway*, &c. *passim*; *Clarke's Trav.* viii. 123-185.; *Andréossy*, *Constantinople*, &c.; *Elliott's Trav. in Austria*, &c. i. 344-406.; *Voyages du Maréchal Marmont*, vol. ii.; *Hobhouse's Albania*, &c. vol. ii.; *Modern Traveller*; *Commercial Dict.*, &c.)

CONSEGUERA, a town of Spain, prov. La Mancha, on the Amarguillo, 38 m. S.E. Toledo. Pop. 8,000. It has 2 churches, 3 convents, a palace, and a variety of Roman inscriptions and antiquities. On a neighbouring hill are the remains of its ancient castle. Streets tolerably regular, but narrow and steep. The vicinity produces grain, wine, oil, barilla, and soda, and has quarries of azure-coloured marble, jasper, and other stones. It has fabrics of coarse stuffs, balze, and serge.

CONWAY, a town and parl. bor. of N. Wales, co. Caernarvon, hund. Isaf, on the estuary of the Conway river, 18 m. N.W. by W. from the Menai bridge. Pop. 1,245. The town, which is of a triangular shape, stands on a steep slope, and is surrounded by lofty walls, fenced with 24 round towers. The lower face of the triangle borders on the river and at its farthest angle, on the verge of a slate rock, its magnificent castle

"Frowns o'er old Conway's flaming flood."

This noble structure was built by Edward I. in 1284. "A more beautiful fortress never arose. Its form is oblong, placed in all parts on the verge of the precipitous rock. One side is bounded by the river; another by a creek full of water at every tide, and most beautifully shaded by hanging woods. The other two sides face the town. Within are two courts; and on the outside project eight vast towers, each with a slender one of amazing elegance issuing from its top, within which had been a winding staircase. In one of the great towers is a fine window in form of an arched recess, or bow, ornamented with pillars. The great hall attests the magnificence of the founder. It extended 130 ft. in length, was 32 broad and of a six height. The roof was supported by eight noble arches, five of which still remain. There were two entrances into the fortress, one from the river, and one from the town." (*Pennant's Tour in Wales*, iii. 123. 8vo. ed.) The town is poor and inconsiderable, without trade or manufacture of any sort. Much of the ground within the walls is used for gardens. The bor. is one of the contributory bors. to Caernarvon in returning a penny to the H. of C. The limits of the bor. extend to a considerable distance beyond the walls of the town. The port dries at low water.

The old and dangerous ferry over the river has been superseded by a magnificent suspension bridge, completed in 1826. The length of the bridge between the centre of the supporting towers is 327 ft.; and it is elevated 18 ft. above high-water mark. The construction of this and the Menai bridge, and the excavations and improvements that have been made at Penmaenmawr and other places, have made the road, formerly so dangerous, from St. Asaph and Conway to Bangor and Anglesea, one of the best and safest in the empire. (*Boundary Report, Guide to N. Wales*, &c.)

COOCH-BAHAR, or VIHAR, a rajaship of Hindostan, prov. Bengal, between lat. 26° and 27° N., long. 89° and 90° E.; having N. Bootan, and on all other sides the distr. of Rungpore, with which it is incorporated; length about 90 m.; greatest breadth 60 m. Its rajah also possesses some tracts beyond the Mogul limits of Bengal, not subject to tribute, and on which opium is extensively cultivated. The S. part of this country is fine and fertile, but N. of the cap. it is low, marshy, and interspersed with jungle, and coarse rank vegetation. The Cooch or Rajbangal tribes eat various kinds of flesh, and are considered by the Bengalese and other Hindoos as very low and impure. Notwithstanding provisions are cheap as compared with other districts, and rents low, many of the natives, especially in the N., are so indigent as to be frequently obliged to sell their children for slaves. Hoe-cultivation is common. In 1682, Abul Fazel relates that the chief was a powerful sovereign, having Assam and Camroop under his government, and able to bring into the field 1,000 horse and 100,000 foot; in 1661 this territory was conquered by the Moguls, and devolved, with the rest of Bengal, to the British, in 1765. In 1814, the tribute paid by its rajah amounted to £6,280*l.*; but great difficulty has always been experienced in collecting it. (*Hamilton's E. I. Gaz.* vol. i.)

COOKSTOWN, an inl. town of Ireland, prov. Ulster, co. Tyrone, on the Ballinlerry river, 9 m. W. from Lough Neagh. Pop. in 1831, 2,883; pop. of par. in 1834, 6,683; of whom 2,328 were of the estab. church, 3,419 Prot. diss., and 3,946 Rom. Cath. It consists of one long street, planted on each side, with a transverse street crossing it. The par. church is a large Gothic structure; there are three meeting-houses for Presbyterians, two for Methodists, and near the town is a Rom. Cath. chapel. There is also a dispensary and a consistory station. A manor court holds pleas to the amount of £1: petty sessions are held on alternate Fridays. Linens are manufactured here, and bleached in the vicinity. Markets for grain are held on Tuesdays, and for general sales on Saturdays; fairs on the first Saturday of every month. Post-office rev. in 1830, 442; in 1836, 407. A branch of the Belfast Bank was opened here in 1835. (*Stat. Survey; Railway Rep.*)

COORG (Hadoogoo), an anc. rajaship of Hindostan, prov. Mysore, formerly independent, but now under the control of a British resident; for the most part between lat. 12° and 18° N., and intersected by the 76th parallel of E. long.; having N. and E. the Mysore territories, and on all other sides those of the Madras presidency; length N. to S. about 70 m., breadth very irregular; area, 2,340 sq. m. Pop. (1836) 59,000. To the W. it is bounded by the W. Ghats, parallel to which there is a succession of steeply rising ridges enclosing valleys of various extent. The chief elevations are, Tandiandamole 5,781 ft., and Soobramany 5,682 ft. above the sea; the principal valley is that between Markara and Naknaad, 18 m. long, by 15 m. broad, with an extremely uneven surface, in the lowest part of which runs the Cavery. The geology of Coorg strongly resembles that of the Neelgherries; the principal rocks being sienite, granite, and greenstone, and the subordinate ranges uniformly capped with the detritus of these, cemented by argillaceous earth, and coloured by oxide of iron; porcelain clay frequently occurs. The whole country, with few exceptions, is covered with forests, but not overladen with jungle, excepting in the vicinity of the Mysore dominion; where elephants, game, and other wild animals are found. Sandal, and other valuable woods, abound. Both the botany and zoology of this region offer a rich field to observers, but have hitherto been but little studied. From the greater elevation, the temperature is much below that of either Malabar or Mysore, and remarkable for its equality. The climate is, in general, highly suitable to European constitutions; though the monsoon rains, from June to Sept., often fall with great violence. The Coorgs are a Nair tribe of martial habits; they have few towns, or even villages, of any size, preferring to live in jungles and wilds. They cultivate rice in the valleys, which are very productive, though the quantity of land under culture be very trifling. The pastures are excellent, and cattle are abundant. Manufactures limited to the blankets worn by the pop. Cotton cloths are imported. Contrary to the custom in Malabar on the other side of the Ghats, hereditary rights and possessions in Coorg descend to the male line, and some family disputes arose in 1808, in consequence of Beer Rajendra, who had expelled the troops of Tipuoo from Coorg) having left, at his death, the government of his dom. to his daughter, to the prejudice of his brother, who was ultimately established in possession by the British government. (*Madras Journal*, No. 13, pp. 338-343; *Hamilton's E. I. Gaz.* 1. 451. 2d ed.)

COOTERHILL, an inl. town of Ireland, prov. Ulster, co. Cavan, on a small river of the same name, 26 m. W. by N. Dundalk. Pop. in 1831, 2,182; in 1834, 2,178; pop. of par. in 1834, 12,091; of whom 1,493 are of the estab. church, 1,074 Prot. diss., and 9,524 Rom. Cath. The town consists of four broad streets, neatly laid out and well kept. It has a par. church, a Rom. Cath. chapel, two Presbyterian meeting-houses, places of worship for Moravians, Quakers, and Methodists; a market-house, a court-house, and a bridewell. General sessions are held here at Easter and in October; petty sessions every Wednesday. There is an extensive trade in grain and coarse linens. The corn markets are held on Saturdays, the general markets on Fridays; and fairs on the second Friday in every month. Post-office rev. in 1830, 395; in 1836, 433. Branches of the Provincial and Ulster banks were opened here in 1835 and 1837. (*Stat. Survey; Railway Rep.*)

COPENHAGEN (Kiøbenhavn, merchants' haven), the cap. of Denmark, a well-built city, principally on the E. coast of the island of Zealand, but partly also on the contiguous small island of Amak, the channel between them forming the port. Lat. 55° 41' 4" N., long. 12° 35' 46" E. Pop. (1834) 119,292. It is well fortified. The ramparts, which extend for about 5 m., are flanked with bastions, and surrounded by a deep ditch filled with water. It is also defended by a very strong citadel, and by the *Three Crowns Battery*, constructed at the entrance of the port on a bank of sand, about 1,500 fathoms from shore. The city is usually divided into the old town, the new town,

and Christianshavn. The first is the largest and most populous, and having at different periods suffered much from fire, most part of it has been rebuilt on an improved plan, though some of the streets are still narrow, crooked, and inconvenient. In the new town the streets are straight and broad, though generally ill-paved, the squares regular and spacious, and the private houses and public buildings the finest in the city. The part called Christianshavn, from its being built by Christian IV., stands on the island of Amak. It is intersected by various canals, and communicates with the other parts of the town by bridges. Public buildings numerous, and many of them superb. Among others may be specified the castle of Christiansborg, destroyed by fire in 1796, and since rebuilt. It has a picture-gallery, comprising a complete collection of Danish pictures, with a fine collection of the Dutch school, &c.; a chapel ornamented by bas-reliefs from the chisel of Thorwaldsen; and the royal library, one of the best in Europe, containing, exclusive of manuscripts, above 450,000 volumes. The part of the new town called Amalienborg was entirely rebuilt by Frederick V. between 1745 and 1768. It consists chiefly of an octagon, divided by four broad rectangular streets, in which is the palace of the king, the crown prince, &c. In the centre is a bronze equestrian statue of Frederick V., erected by the East India Company. There are also the royal palaces of Rosenberg and Charlottenborg, appropriate to public purposes, the university, the town-house, the theatre, the exchange, and the barracks. The cathedral church of Notre Dame, nearly destroyed during the bombardment in 1807, has been rebuilt; and is enriched by statues of Christ and the apostles, by Thorwaldsen. The tower of the church of the Trinity, 115 ft. in height, is used as an observatory; it also contains the library of the university, and the great globe of Tycho Brahe. The church of Our Saviour is reckoned the finest in the town: its spire, nearly 300 ft. in height, is a masterpiece of art. The educational, literary, and scientific establishments of Copenhagen rank with the first of their class, and reflect infinite credit on the government and the people. Besides the university, to which we have elsewhere alluded, there is a polytechnic school, a metropolitan school, a royal school of marine, a royal school for the higher military sciences, a normal school, &c. There is, also, a royal society similar to that of London, a Scandinavian society, and a society of northern antiquaries. The academy of arts is and has long been in a flourishing condition. Besides the royal library in the palace of Christiansborg, the university library has above 100,000 volumes, and a large collection of manuscripts. The *Classen* library, bequeathed to the public by the general of that name, is mainly devoted to science and natural history; and, exclusive of these, there are several other minor but still valuable collections.

The hospitals are numerous and well conducted. The most splendid is that of Frederick V. The lying-in hospital is attached to it, a school of midwifery, and a foundling hospital. The royal institution for the dumb admits patients, from whatever part of the kingdom they may come. Soup, made of horse flesh, is said to be supplied as an article of diet to prisoners in the house of correction. (*Bremner*, 1. 158.)

If distillation be excepted, the manufactures of Copenhagen are neither very extensive nor important. There are about 258 distilleries, mostly, of course, on a small scale, and about 50 breweries, with sugar refineries, tobacco manufactories, soap-works, &c.: cotton and woollen goods, linens, silks, gloves, hats, &c., are also produced, but in limited quantities: there are several tanneries.

The trade of the port is said to have declined, but it is still pretty considerable. There is annually imported about 11,000,000 lbs. sugar, the half of which is supplied by St. Croix; 3,000,000 lbs. coffee, with other colonial products. Anchors, pitch, and tar, are brought from Sweden and Norway; flax and hemp, masts, sail cloth, and cordage from Russia; tobacco and rice, from the United States; wines and brandy from France; coal, earthenware, and salt, are the principal articles of direct import from England; train oil, herrings, &c. from the fisheries. In 1837 there entered the port 1,433 ships (excluding steamers), of which 164 were Swedish, 463 Prussian, 154 Norwegian, and 95 of the burden of 17,762 tons British.

The harbour is formed, as already stated, by the channel or arm of the sea running between Zealand and the opposite island of Amak. The entrance to it is narrow; but the water is sufficiently deep to admit the largest men-of-war. There are dry docks, and every facility for the rebuilding and repairing of ships. Copenhagen is the station of the Danish navy. The bank of Copenhagen, founded in 1736, was remodelled in 1818: it is now a private institution. There is also an insurance company. The charge of the public health is entrusted to a commission. The police is under a special establishment; and

besides the garrison, the citizens are formed into a national guard.

Copenhagen is not a very ancient city, having been founded in 1387. It has at different periods suffered severely from fires, particularly in 1738, 1794, and 1798; but how disastrous soever at the time, these visitations were in the end advantageous, the narrow streets and wooden houses of which the town formerly consisted having been replaced by broad streets and handsome stone buildings. Besides the loss of her fleet, Copenhagen suffered severely from the bombardment by the English in 1807, and by an inundation in 1824. But she has fortunately recovered from both these disasters, and by her library and other establishments has placed herself at the head of civilisation in the north of Europe.

The environs of Copenhagen are celebrated for their beauty. Fredericksberg, a magnificent castle, the summer residence of the king, stands on a rising ground within a moderate distance of the city. Its gardens are open to the public, and are a favourite resort. Fredericksborg, another royal residence, is situated about 21 m. N. Copenhagen. It is a vast, but incongruous pile, partly brick and partly stone, and partly of Greek and partly of Gothic architecture. It has some fine pictures and a series of portraits (partly imaginary) of the sovereigns of Denmark.

COPIAPO, the most N. town of Chili, formerly the cap. of the prov. of same name, now incorporated with that of Coquimbo. It stands on the right bank of the rivulet of Copiapo, 30 m. from the Pacific, and 178 m. N.N.E. Coquimbo, lat. $27^{\circ}10' S.$, long. $71^{\circ}8'15'' W.$ Pop. (1830) about 4,000. (Meyen.) Most of the houses are built of sun-dried bricks whitewashed; and, the better to resist earthquakes, used to be constructed with great solidity; but in 1819 it was almost utterly destroyed by the great earthquake that caused such devastation throughout a great part of Chili. In 1822 it suffered severely from another earthquake, which phenomena are so common in this prov., that, during Dr. Meyen's stay in it, six or seven shocks commonly occurred in the twenty-four hours! though the greater number were, of course, very slight. The harbour of Copiapo on the Pacific is good; and at a small village on the shore most of the ore from the mines of the prov. is smelted, and the metal exported. (Mier's Travels, &c. l. 402-404.; Meyen's Reise um die Erde; Geog. Journal, vi. 368.; Hall's S. America, li. 25-27.)

COQUIMBO (or LA SERENA), a sea-port town of Chili, in the N. part of the republic, cap. of the prov. of same name, on the Chuapa, near its mouth, 270 m. N.N.W. Santiago, lat. $29^{\circ}53'49'' S.$, long. $71^{\circ}18'40'' W.$ Pop. (perhaps) 10,000. (Amer. Almanac, 1820.) Town clean, and tolerably well laid out; streets intersect each other at right angles; houses mostly of sun-dried bricks, and only one story in height, but interspersed with numerous gardens of fruit-trees, evergreens, &c. It has several churches and convents, a public school, and an hospital. It is the seat of the intendant of the prov., and is the residence of many families, and in some sort the cap. of N. Chili, as well as the chief mercantile port. In 1834 83,979 mares of silver and nearly 43,860 quintals of copper and copper ore, were exported from it: it also exports chinchilla skins, &c. The harbour or bay of Coquimbo is large, well-sheltered, and secure at all seasons. There is sufficient depth of water for ships of large burden: 9 fathoms being found 300 yards off shore, and nearly 7 fathoms close in shore. Coquimbo was founded by Valdivia in 1644. About 35 m. up the valley of Coquimbo are some singular parallel roads, of which Captain Hall has given an account. (Hall's S. America, li. 6.; Mier's American Enquiry.)

CORDOVA (an. *Corduba* and *Colonia Patricia*), a famous city of Spain, cap. prov. and kingdom of the same name in Andalusia, on the Guadalquivir, 73 m. N.E. Seville, and 185 m. S.S.W. Madrid; lat. $37^{\circ}52'13'' N.$, long. $6^{\circ}46'52'' W.$ Pop. (1836) 46,750 (Mikano), not a tenth part of what it is said to have amounted to in its most flourishing period in the 11th century. It occupies a large oblong space of sloping ground, enclosed by walls flanked with towers originally erected by the Romans, and afterwards repaired, strengthened, and extended by the Moors. But a great part of this space is now covered with gardens and ruined buildings, and but little remains of its ancient grandeur. Streets narrow, crooked, and dirty; and few either of the public or private buildings are conspicuous for their architecture; the latter seldom exceed two stories in height. The great square, *Plaza Real*, or *de la Constitucion*, is, however, large and regular; the houses surrounding it are lofty, and furnished with porticoes and balconies. There is a suburb of some extent on the S. bank of the river, with which the city communicates by means of a stone bridge of 16 irregular arches, 800 ft. in length, and 23 ft. in width, constructed by the Moors towards the close of the 8th century, and the approach to which is guarded by an old Saracenic castle, still maintained in a state of defence.

The city contains a cathedral, 13 parish churches, about 40 convents, 7 hospitals, a foundling and another asylum, city-hall, bishop's palace, 3 colleges, besides other schools, &c. By far the most remarkable public edifice is the cathedral or *mezquita*, formerly a mosque, built by the Moors at the latter end of the 8th century upon the ruins of a Gothic church, which is itself believed to have replaced a Roman temple. Both of these edifices have apparently furnished many pillars and other materials for the present building. The *mezquita* externally is unimposing, and little calculated to attract notice; but the singularity of its interior strikes every one with astonishment. It is a gloomy labyrinth of pillars, 386 ft. in length N. to S., by 204 ft. broad E. to W., and lighted only by the few doors that remain open, and some small cupolas in different parts of the roof, which latter is flat, and only 35 ft. above the pavement; being supported in most places by a kind of double arcade of horse-shoe arches. The columns supporting these arches, and which amount to several hundreds, are of jasper, marble, porphyry, granite, *vers antique*, and various other materials, and differ as much in their architectural as in their geological character. They are all, however, of the same height, and have the same fluting, which, taken from Roman buildings, served them in the same manner that Procrustes did his guests: to the short ones they clapped on monstrous capitals and thick bases; those that were too long for their purpose had their base chopped off and a diminutive shallow bonnet placed on their head." (Swinburne, li. 85.) The number of aisles or naves is lengthwise 19, and transversely from 32 to 35. A considerable space at the S. end was parted off for the use of the *Imams*, and now serves for the chapter-house, sacristy, and treasury of the cathedral. In the front of this space is what is called the *zamarraon*, an octagon Moorish sanctuary, 15 ft. in diameter, richly ornamented without and within, and domed over by a single block of white marble, carved into the form of a scallop-shell. Adjoining this, in 1815, another small apartment was brought to light, preserving, in a remarkable degree, its pristine decorations. The gorgeousness of this little chamber will perhaps give an idea of that of the building generally in the time of the Moors; for the splendour of almost all the rest of the *mezquita* has entirely disappeared; the gilding and ornaments of the roof, the arabesques and descriptions on the walls, and the mosaics of the pavement, have nearly all vanished; and of the 24 gates, formerly plated with brass, and curiously embossed, only 5 remain open. The sacristy contains some tolerable paintings, and the church is very rich in jewels, plate, and silks. The *mezquita* stands within a court planted with orange-trees, palms, and cypresses, and surrounded with a cloister, on the N. side of which a square belfry has been built.

The bishop's palace is a large and rather handsome building, containing a suite of state apartments, in one of which there is a large collection of portraits of the bishops of Cordova. Previously to the late civil war, 2,000 poor persons were daily supplied with food from the bishop's kitchen, which mistaken bounty accounts sufficiently, as observed by Mr. Townsend, for the swarms of beggars with which the town is infested. (li. 300.) The famous palace of the Moorish sovereigns is now unoccupied; it had been converted into a royal stud-house, where the best horses in Spain were reared: the stables are now empty. (Scott.) The manufactures have participated in the general decay of the place; there are at present only some trifling fabrics of ribands, lace, hats, baize, and leather after the Moorish fashion: the latter article was formerly very extensively manufactured; and was known in commerce by the name of *cordovan*, and from it the term cordwainer has been derived. In 1833, a handsome quay was in the course of being erected above the bridge, but as there is now but little trade, and the river is for 9 months in the year navigable only for boats, the quay would seem, like many other public works in Spain, to be more for show than for use.

Cordova is said by Strabo to have been founded by the Romans under Marcus Julius; but there were several distinguished persons of that name, this leaves the epoch of its foundation uncertain. No mention is made of it before the age of Caesar and Pompey, but it soon after attained to great distinction as a rich and populous city, and a seat of learning. (Cellarii, Not. Orbis Antiqui, l. 86.) In 573 it was taken by the Goths, and in 693 by the Moors, under whom it became the splendid cap. of the "Caliphate of the West," and subsequently of the kingdom of Cordova. In 1236, however, it was taken and almost wholly destroyed by the impetuous zeal of Ferdinand III. of Castile, and has never since recovered its previous prosperity. Cordova has given birth to some illustrious men, among whom may be specified the two Senecas, Lucan the poet, and the famous Arabic physician, Avicenna and Averroes. (Mikano; Townsend's, Swinburne's, &c. Travels; Scott's Excursions in Ronda, &c.)

CORDOVA, an ind. town of Mexico, state Vera Cruz,

at the E. foot of the volcano of Orizaba, and on one of the roads between Vera Cruz and La Puebla, 50 m. S. W. the former, and 73 m. E.S.E. the latter city. Pop., before the revolution, about 5,000. Streets wide, regular, and well paved; houses built mostly of stone. In the centre of the town there is a large square, three sides of which are ornamented with Gothic arcades; the fourth is occupied by the principal church, an elegant structure, richly decorated within. Cordova contains two convents, each with an hospital attached; many of its edifices have domes, towers, or steeples. Cotton and woollen fabrics and leather are made here; and there are besides numerous distilleries, sugar-mills, and bee-hive farms; but the principal employment of the inhab. is the culture of tobacco and coffee; and Humboldt states that the whole of these products raised in Mexico comes from Cordova and Orizaba. The climate is moist and sultry. The vicinity is extremely fertile, and abounds in fruits, timber, game, and fish. (Humboldt, *Essai sur la Nouv. Esp.*; Ward's Mexico.)

COREA (called by the natives, *Chaou-Seen*, by the Chinese, *Keou-le*, and by the Manchoo Tartars *Sol-ho*), a marit. country of N.E. Asia, tributary to China, consisting of a large oblong-shaped peninsula, with an adjoining portion of the continent, and a vast number of islands, which are especially numerous on the W. coast. The whole of the domain lies between lat. 34° and 43° N. and long. 128° 50' and 129° 30' E.; baying E. the Sea of Japan; S. the Straits of Corea; W. the Yellow Sea, and Gulph of Leao-tong; N.W. the prov. Leao-tong; and N. Manchoo Tartary. From the latter it is separated by a mountain chain, and the Thu-men-Kiang river, and from Leao-tong mostly by a wooden wall or palisade. Length, N.W. to S.E., 550 m.; average breadth of the peninsula, about 130 m. Total area, inclusive of islands, probably about 80,000 sq. m. Corea is generally mountainous. A mountain range runs through it longitudinally, much nearer its E. than its W. coast. The E. declivity of this range is steep and rugged; its W. one declines gradually into a fertile and well-watered country. All the principal rivers run W. and discharge themselves into the Yellow Sea; the chief is the Ya-lu-kiang in the N.W., which is navigable for large ships to about 22 m., and for small vessels for a distance of nearly 120 m. above its mouth. The coasts, as well of the islands as of the continent, are generally rocky and difficult of access; though there are some spacious and secure harbours. The climate of the N. is very rigorous; the Thu-men-kiang, for six months in the year, is thickly frozen over, and barley is the only kind of corn capable of being cultivated in that region: even the S., though in the same lat. with Sicily and Malta, is said to experience sometimes very heavy falls of snow. The climate of this part of Corea, however, must be on the whole mild, since cotton, rice, and hemp are staple products; and Gutzlaff conjectures (*Voyages*, &c. p. 319), that many other plants, common to the S. of Europe, flourish. Gutzlaff observes, in point of vegetation, the coast of Corea is far superior to that of China, where barren rocks often preclude any attempt at cultivation; but here, where the land is fertile, the inhab. do not plough the ground." (p. 337.) Agriculture may be better farther inland, but on the coast it is much neglected: wheat, millet, and ginseng are amongst the chief articles cultivated. Tobacco was introduced by the Japanese about the beginning of the 17th century, and potatoes, by Gutzlaff and Lindsay, in 1832. The orange, citron, hazel-nut, pear, chestnut, peach, mulberry, *Morus papyrifera*, *Ficus saccharinus*, and the wild grape, are common; but the art of making wine from the latter seems to be unknown. An ardent liquor is, however, made from rice. The mountainous parts of the N. are covered with extensive forests: pines are very abundant on the coasts; and in the interior there is a species of palm producing a valuable gum, from which a varnish, giving an appearance little inferior to gilding, is made. Oxen, hogs, and other domestic animals common to Europe are reared: there is a spirited breed of dwarf horses not exceeding 3 ft. in height; panthers, bears, wild boars, cats, and dogs, sables (whose skins form the most valuable article of trade), deer, and an abundance of game, storks, and water-fowl of many sorts, are found; caymans of 30 or 40 ft. in length are said to be met with in the rivers, and venomous serpents are not rare. In the winter, whales, seals, &c. visit the shores. The mineral kingdom produces gold, silver, iron, rock salt, and coal.

People, &c.—The pop. has been estimated at 15,000,000, but there are no real grounds for this estimate, which, we have little doubt, is greatly beyond the mark. Gutzlaff represents the coasts as thinly inhabited. We have elsewhere stated that the Coreans are superior in strength and stature to the Chinese and Japanese, but that they are inferior to either in mental energy and capacity. (*Ann.*, 191.) They are gross in their habits, eat greedily, and drink to excess. The dress of both men and women is very similar to that of the Chinese,

though the Coreans do not, like that people, cut off their hair. Their houses are also like those of China, being built of bricks in the towns, and in the country are mere mud hovels; each house is surrounded by wooden stockade. Their language or languages are peculiar, differing from those of their immediate neighbours. In writing they use alphabetic characters, though the symbolic characters of the Chinese are also understood and sometimes resorted to. They have a copious literature, and are very fond of reading, as well as of music, dancing, and festivities. Polygamy is permitted; but the women do not appear to be under such restraint as in China. (*M'Leod*.) The religion of the upper orders is that of Confucius, while the mass of the people are attached to Buddhism; but neither appears to have much influence. Christianity, which was introduced by the Japanese, appeared to be extinct when Gutzlaff visited Corea in 1832.

Manufactures, Trade, &c.—The manufactures are few: the principal are a kind of grass-cloth, straw-plait, horse-hair caps, and other articles for domestic use; a very fine and transparent fabric woven from filaments of the *Urtica japonica*, cotton cloth, and a very strong kind of paper made of cotton, rice-paper, &c.; which articles, together with ginseng, skins, some metals, horses, and silk, constitute the chief exports. What trade there is, is principally with Japan, from which they import pepper, aromatic woods, alum, buffaloes, goats, and bucks' horns, and Dutch and Japanese manufactured goods. There is, however, some trade with China carried on at Fungwang-ching (the *Phanis-toun*), beyond the Leao-tong border; but this trade is conducted with great secrecy, in consequence of the jealousy of the government of any intercourse with foreigners. This jealousy is so great, that no Chinese is allowed to settle in Corea, nor any Corean to leave his own country; Europeans are scarcely ever suffered to land, or remain any length of time on the coast; and the N. frontier is abandoned for many miles, in order that no communication should take place with the Manchoo Tartars. Little skill in ship-building is displayed by the Coreans; their junks do not carry more than 200 tons, and are quite unmanageable in a heavy sea. In the construction of their fishing-boats, not a nail is used. Metallic articles and money are rare. The only coin in circulation is of copper; but payment is often made in silver ingots.

Corea is divided into 8 provs. King-hi-tao, the cap., is placed on the Kiang river, in about 37° 40' N. lat., and 127° 20' E. long., or about the centre of the kingdom. The gov. is said to be despotic: most of the landed property in the country belongs to the king, of whom it is held in different portions as fiefs, which revert to the sovereign at the decease of the occupier. Besides the revenues from these domains, a 10th part of all kind of produce belongs to the king. Justice is in many respects very rigid. Rebellion, as in China, is punished by the destruction of the rebel, with his entire family, and the confiscation of their property. None but the king can order the death of an official person: the master has always power over the life of his slave. For minor crimes the general punishment is the bastinado, which is pretty constantly at work. The Chinese interfere but little with the internal administration of Corea; but the king can neither assume the government, nor choose his successor or colleague, without the authority of the court of Peking, to which he sends tribute four times a year: the tribute consists of ginseng-root, sable-skins, white cotton paper, silk, horses, silver ingots, &c. The Korean ambassador is treated at Peking with but little consideration. There seems reason to believe, that, like some other states in Asia, Corea is tributary to the more powerful nations on either side, and that it also sends a yearly tribute to Japan, consisting of ginseng, leopards, &c., skins, silks, white cotton fabrics, horses, &c.; but for which an acknowledgment is made in gold articles, fans, tea, presents of silver to the ambassadors, &c.

History.—Corea was known to the Chinese from a very early period, and is reported to have been civilised by the Chinese sovereign Kih-sun, about 1,120 years before our era. After experiencing several revolutions it was invaded and conquered by the Japanese in 1629, who, however, abandoned their conquest in 1698. The Coreans having called in the aid of China during that struggle, Corea has since formed a subordinate part of the Chinese empire. (*Ritter's Asien Erskunde*, iii. 573–547; *De Halde; Klapproth; Timkovski; Gutzlaff's Three Voyages*, &c.; *Lindsay; M'Leod*, &c.; *Matte-Brum*.)

CORELLA, a city of Spain, prov. Navarre, in a fertile plain on the Aizama, 18 m. W. Tunes, 12 m. S.E. Calahorra. Pop. 5,850. It has 9 churches, 4 convents, a hospital, and some remains of an ancient castle. The inhabitants are employed in the extraction of liquorice and madder juice, and in the manufacture of brandy, oil, and flour.

CORFE-CASTLE, a market town and bor. of Eng-

land, co. Dorset, Blandford div., hund. Halsior, in the Isle of Purbeck, 32 m. E. S.W. Salisbury. Pop. (1831) 860. This town is most probably indebted for its origin to its castle, on a steep rocky hill, a little to the N., formerly a place of considerable strength. But its entire importance, in more modern times, was owing to its having enjoyed the privilege of returning 2 mems. to the H. of C. from the 14th of Elizabeth down to the passing of the Reform Act, by which it was disfranchised. Sunday-schools were early established in this town and the surrounding district. The inhab. are mostly employed in the neighbouring clay-works and quarries. Market-day, Thursday.

CORFU (an. *Coryra*), an island in the Mediterranean, the seat of government, and most important, though not the largest, of the Ionian Islands. It lies between lat. $39^{\circ} 30'$ and $39^{\circ} 50'$ N., and long. $19^{\circ} 35'$ and $20^{\circ} 8'$ E.; off the S. part of the coast of Albania, from which it is separated by a channel only 3-5ths of a m. wide at its N. extremity, 6 m. at its S. extremity, and 15 m. in the centre. The shape of Corfu is elongated; the island describes a curve, the convexity of which is towards the W.; length N.W. to S.E. 41 m.; breadth greatest in the N., where it is 30 m.; but it gradually tapers towards its S. extremity. Area, 287 sq. m. Pop. (1833) 60,860. Surface hilly, particularly in the N.W., where the peak of St. Salvador rises 2,975 ft. above the level of the sea. The streams watering it are few and small, and mostly dried up in summer. Climate mild; the mean maximum temp. in the open air for the 5 years ending December, 1838, was about 88° Fahr.; and the average minimum 51° Fahr.; but Corfu is subject to sudden transitions from heat to cold, owing, amongst other causes, to the proximity of the snowy mountains of Epirus. Earthquakes also are frequent. The more elevated lands are rugged and barren, but the plains and valleys are fertile, and productive of wheat, maize, oats, olive-oil, wine, cotton, flax, and pulse. Corfu yields no currants. Oil is the great staple of this isl., which has, in fact, the appearance of a continuous olive wood, a consequence partly of the extraordinary encouragement formerly given to the culture of the plant by the Venetians. There is an oil harvest every year, but the great crop is properly biennial, the trees being suffered to repose for a year. Next to oil, salt, obtained from saltpans along the shores, oranges, citrons, and other fruits, besides honey and wax, are the other chief articles produced. Corfu is divided into 7 cantons: it sends 7 mems. to the legislative assembly, and 1 to the senate; Corfu, the cap., is the only town worthy of mention; the rest are mere villages.

The city and port of Corfu, the chief in the Ionian Islands, lie on the E. side of the island, on the channel between it and the opposite coast, which is here about 5 m. wide; lat. $39^{\circ} 37'$ 39° N.; long. $19^{\circ} 56'$ $34'$ E. Pop. about 17,000, exclusive of the military. It consists of the town and citadel, both fortified; and has several suburbs, one of which is supposed to occupy the site of the ancient city. Corfu was founded by the Corinthians about the same time with Syracuse. The citadel, separated from the town by wet ditches and outworks, and an esplanade, is built upon a rocky cape projecting into the sea, and contains the barracks, arsenal, military hospital, the residence of the lord high commissioner, many private houses, and a lighthouse erected upon a point 233 ft. above the level of the sea. The town has three gates towards the sea, and one on the land side: it is not well built; streets narrow and irregular, and houses mostly small and ill-contrived; but great improvements are anticipated on the extension of the town, after the works surrounding it are demolished, a measure which has been recently sanctioned by the government. Corfu is strengthened by two other fortresses besides its citadel—Fort Neuf and Vido. The latter is built on a small island of the same name (an. *Ptyche*), nearly 1 m. N. from the city, and has had much pains and expense bestowed on its improvement for many years past. When the works are completed, the island of Vido, though requiring only a small garrison to defend it, will, it is supposed, be next to impregnable. (*Private MS. Report*.) Corfu contains a cathedral, and several Greek and Roman Catholic churches and chapels, a university, gymnasium, ecclesiastical seminary, and several primary schools. Around it there are some pleasant walks, interesting from classical associations; the esplanade is well planted with trees, and forms an agreeable promenade. The town is now well supplied with water, which is conveyed by means of iron pipes from Benizis, a distance of 7 m. Roads have been made from Corfu to most of the principal towns and villages in the island. The harbour between the island of Vido and the city is safe and commodious, and vessels anchor in from 15 to 17 fathoms water. The coast, or channel of Corfu, is a little difficult of navigation, but has deep water throughout; there is a lighthouse on the rock of Tigmoso at its N. entrance, and a floating light is moored off the point of Lechinio near its S. extremity. The city of

Corfu is the seat of the parliament, and senate of the Ionian Islands, of the supreme court of justice of the republic, the chief special courts for the island, and of a Greek archbishop. In 1716 it was unsuccessfully besieged by the Turks, and did not fall into their hands until the end of last century.

Corfu is the chief seat of the external trade of the Ionian Islands. The roads in it are good, having been greatly improved since it has been under British protection. Most of the inhab. belong to the Greek church. It is believed to be the country of Phæacia, or Scheria, mentioned by Homer, on which Ulysses was wrecked, and afterwards hospitably entertained by King Alcinoüs. It became afterwards a celebrated colony and naval station of the Corinthians, and a quarrel between it and the mother country led to the Peloponnesian war. It was also an important naval station under the Romans. It belonged successively to the Eastern Empire, the Normans, and Venetians, and shared the fate of the Venetian republic in 1799. (*Private MS. Report*; *Port. Papers*, 1834; *Commerc. Dict.* &c.)

CORINGA (*Carangá*), a considerable sea-port town of Hindostan, prov. N. Circar, distr. Rajahmundry, and 33 m. S.E. that town, lat. $16^{\circ} 40'$ N., long. $82^{\circ} 44'$ E. Excepting Blackwood's Harbour, Coringa Bay contains the only smooth water to be found on the W. side of the Bay of Bengal, during the S.W. monsoon. A wet dock has been formed, and many small vessels are annually built here. In 1784, a remarkable inundation of the sea took place, destroying much property and many inhabitants. (*Hamilton*, l. 453.)

CORINTH (*Kárvhos*), a famous city of Greece within the Morea (an. *Peloponnesus*), near the isthmus of the same name, between the gulphs of Lepanto (*Corinthiacus Sinus*) on the W., and of Egina (*Saronicus Sinus*) on the E., 7 m. from the nearest point of the latter, and 3 m. from the nearest point of the former; lat. $37^{\circ} 58'$ $37''$ N., long. $22^{\circ} 52'$ $51''$ E. The town is situated at the N. foot of a steep rock, 1,336 ft. in height, the *Acrocorinthus* or *Acropolis* of Corinth, the summit of which is now, as in antiquity, occupied by a fortress. The present town, though thinly peopled, is of considerable extent, the houses being placed wide apart, and much space occupied with gardens. The only Grecian ruin at present to be found in Corinth, is a Doric temple, which had 11 columns standing when it was visited by the E. 7 m. from the nearest point of the latter, and 3 m. from the nearest point of the former; lat. $37^{\circ} 58'$ $37''$ N., long. $22^{\circ} 52'$ $51''$ E. The town is situated at the N. foot of a steep rock, 1,336 ft. in height, the *Acrocorinthus* or *Acropolis* of Corinth, the summit of which is now, as in antiquity, occupied by a fortress. The present town, though thinly peopled, is of considerable extent, the houses being placed wide apart, and much space occupied with gardens. The only Grecian ruin at present to be found in Corinth, is a Doric temple, which had 11 columns standing when it was visited by the E. 7 m. from the nearest point of the latter, and 3 m. from the nearest point of the former; lat. $37^{\circ} 58'$ $37''$ N., long. $22^{\circ} 52'$ $51''$ E. The town is situated at the N. foot of a steep rock, 1,336 ft. in height, the *Acrocorinthus* or *Acropolis* of Corinth, the summit of which is now, as in antiquity, occupied by a fortress. The present town, though thinly peopled, is of considerable extent, the houses being placed wide apart, and much space occupied with gardens. The only Grecian ruin at present to be found in Corinth, is a Doric temple, which had 11 columns standing when it was visited by the E. 7 m. from the nearest point of the latter, and 3 m. from the nearest point of the former; lat. $37^{\circ} 58'$ $37''$ N., long. $22^{\circ} 52'$ $51''$ E. The town is situated at the N. foot of a steep rock, 1,336 ft. in height, the *Acrocorinthus* or *Acropolis* of Corinth, the summit of which is now, as in antiquity, occupied by a fortress. The present town, though thinly peopled, is of considerable extent, the houses being placed wide apart, and much space occupied with gardens. The only Grecian ruin at present to be found in Corinth, is a Doric temple, which had 11 columns standing when it was visited by the E. 7 m. from the nearest point of the latter, and 3 m. from the nearest point of the former; lat. $37^{\circ} 58'$ $37''$ N., long. $22^{\circ} 52'$ $51''$ E. The town is situated at the N. foot of a steep rock, 1,336 ft. in height, the *Acrocorinthus* or *Acropolis* of Corinth, the summit of which is now, as in antiquity, occupied by a fortress. The present town, though thinly peopled, is of considerable extent, the houses being placed wide apart, and much space occupied with gardens. The only Grecian ruin at present to be found in Corinth, is a Doric temple, which had 11 columns standing when it was visited by the E. 7 m. from the nearest point of the latter, and 3 m. from the nearest point of the former; lat. $37^{\circ} 58'$ $37''$ N., long. $22^{\circ} 52'$ $51''$ E. The town is situated at the N. foot of a steep rock, 1,336 ft. in height, the *Acrocorinthus* or *Acropolis* of Corinth, the summit of which is now, as in antiquity, occupied by a fortress. The present town, though thinly peopled, is of considerable extent, the houses being placed wide apart, and much space occupied with gardens. The only Grecian ruin at present to be found in Corinth, is a Doric temple, which had 11 columns standing when it was visited by the E. 7 m. from the nearest point of the latter, and 3 m. from the nearest point of the former; lat. $37^{\circ} 58'$ $37''$ N., long. $22^{\circ} 52'$ $51''$ E. The town is situated at the N. foot of a steep rock, 1,336 ft. in height, the *Acrocorinthus* or *Acropolis* of Corinth, the summit of which is now, as in antiquity, occupied by a fortress. The town is situated at the N. foot of a steep rock, 1,336 ft. in height, the *Acrocorinthus* or *Acropolis* of Corinth, the summit of which is now, as in antiquity, occupied by a fortress. The present town, though thinly peopled, is of considerable extent, the houses being placed wide apart, and much space occupied with gardens. The only Grecian ruin at present to be found in Corinth, is a Doric

Corinth as her favourite residence; and so highly was she esteemed, that a magnificent tomb (described by Pausanias) was erected over her remains, and medals struck in commemoration of her beauty! In consequence, Corinth became not only one of the most luxurious, but also one of the most expensive places of antiquity, which gave rise to the proverb—

"Non cuius domini contingit adire Corinthus."
Hor. Epist. l. 17—38.

The Acropolis is one of the most striking objects in Greece. It has some famous springs, and is in most parts precipitous. Livy calls it, *Arx inter omnia in insulam altitudinem edita, scaturis fontibus* (lib. 45. § 28.); and Statius says, that it throws its shadow over both seas—

— "qua summæ caput Acrocorinthus in auris
Tollit, et æternæ geminum mare protegit umbra."
Theoc. lib. 7. lin. 106.

If properly fortified, it would render all access to the Morea by land impracticable; and as a fortress, it might be rendered not less secure than Gibraltar. (Clarke, vi. 568. 8vo. ed.) It is, in fact, one of the keys of Greece; and was, therefore, aptly said by the oracle to be one of the *horas* which a conqueror should lay hold of to secure that valuable key of the Peloponnesus. The view from its summit is one of the most extensive, and at the same time richest in classical associations, of any in Greece. Athens is seen in the distance; and the eye wanders over six of the most celebrated of the Grecian states—Attica, Achaia, Boeotia, Locris, Phocia, and Argolis.

The government of Corinth, like that of the other Grecian states, was originally monarchical. It then became subject to the oligarchy of the Bacchidae, and was again, after a period of ninety years, subjected to kings or tyrants. Pericles, the early part of whose reign was that of a Titus, and the latter of a Tiberius, was the last of its sovereigns. At his death the Corinthians established a republican form of government, including, however, more to aristocracy or oligarchy than democracy. It seems to have been judiciously devised; and the public tranquillity was less disturbed in Corinth than in most Grecian states.

When the Achæans became involved in a war with Rome, Corinth was one of their principal strongholds. Though the Roman senate had resolved upon the destruction of the city, Metellus was anxious to avert the catastrophe; but his offers to bring about a reconciliation, which might have saved Corinth, were contemptuously rejected, and his deputies were thrown into prison. The Corinthians suffered severely for this inconsiderate conduct. The consul Mummius, having superseded Metellus, appeared before Corinth with a powerful army; and after defeating the Achæans, entered the city, which had been left without any garrison, and was deserted by the greater number of its inhabitants. It was first sacked, and then set on fire; and it is said that the accidental mixture of the gold, silver, and copper, melted on this occasion, furnished the first specimens of the *Corinthian brass*, so much esteemed in subsequent ages! Not satisfied with the total destruction of the city, the natives of Corinth who had escaped were carefully hunted out and sold as slaves, their lands being at the same time disposed of to strangers, mostly to the Sicyonians. The destruction of Corinth took place anno 146 B.C.; and it is worthy of remark that this also was the epoch of the destruction of Carthage; both these great cities having been sacrificed nearly at the same moment to the insatiable rapacity and ambition of Rome. According to Strabo, the finest works of art which adorned Rome in his time had been brought from Corinth; but it seems probable that many, not the greater number, of these masterpieces had been destroyed. Polybius, who was present at the destruction of the city, had the mortification to see the Roman soldiers playing at dice on a picture of Aristides, a contemporary of Apelles, for which Attalus king of Pergamum subsequently offered 600,000 sesterces, or about 5,000*l.* of our money. (Strabo, lib. viii.; *Phil. Hist. Nat.*, lib. 35. cap. 4. &c.) We need not, indeed, be much surprised that the soldiers should have made use of such a dice-board, when we find the consul himself assuring the masters of the vessels selected to convey the pictures and statues to Rome, that if any of them were lost or injured, he should compel them to supply others in their stead at their own cost! (*Pelleius Paterculæ*, lib. i. cap. 13.)

Corinth remained in the ruinous state to which it had been reduced by Mummius, till a colony was sent thither by Julius Cæsar. Under its new masters it once more became a considerable city, as is evident from the account given of it by Pausanias (lib. ii.), and is much distinguished in the gospel history. After being sacked by Alaric it came, on the fall of the Eastern empire, into the possession of the Venetians. The Turks took it

from the latter in 1458; the Venetians, however, retook it in 1687, but lost it again to the Turks in 1715. It is now a principal place in the nomarchy of Argolis and Corinth. (Besides the authorities previously referred to, see *Ancient Universal History*, vii. 319. 8vo. ed.; *Voyage d'Anacharsis*, cap. 37.)

CORINTH (ISTHMUS OF). Where narrowest, about 6 m. E. from Corinth, this celebrated isthmus is about 1 m. across. The advantages that would result to Corinth, and to the commerce of Greece, by cutting a canal or navigable channel through this isthmus, were perceived at a very early period; and attempts to accomplish so beneficial a work were made by Pericles, Demetrius Poliorcetes, Julius Cæsar, and other Roman emperors: all of them, however, proved abortive, though parts of the excavations are still visible. This want of success has been variously accounted for; but we incline to think that it was wholly owing to the difficulty of the ground. The isthmus is high and rocky; and at a period when the construction of locks was unknown, the canal must either have been excavated to the required level, or been partly excavated and partly tunneled, either of which operations would have been all but impracticable. As the next best resource, ships were drawn by means of machinery from one sea to another; but it is clear that none but the smaller class of vessels could be so conveyed.

The isthmus has been repeatedly fortified. The first instance of this of which we have any certain accounts took place on the invasion of Greece by Xerxes. It was afterwards fortified by the Spartans and Athenians in the time of Epaminondas. During the decline of the Eastern empire, the defence of the Peloponnesus principally depended on this bulwark, which was strengthened and renovated under Justinian. It was restored for the last time by the Venetians in 1686. (See *Dodwell's Greece*, ii. 185, and the authorities there quoted.)

The Isthmus of Corinth was also famous in antiquity for the games celebrated there, every fifth year, in honour of Neptune and of Palemon or Melicertes, with the utmost splendour and magnificence. They continued in vogue after the Olympian and other public games had fallen into disuse. After the destruction of Corinth, the Romans continued the superintendence of the Isthmian games to the Sicyonians; but on its restoration by Julius Cæsar, Corinth recovered its ancient presidency. Dr. Clarke discovered at the port of Schœnus, on the E. side of the isthmus, the remains of the temple of Neptune, the theatre, stadium, and other public buildings, described by Pausanias as connected with the Isthmian solemnities. (*Travels*, vi. 573. 8vo. ed.; *Cramer's Greece*, iii. 30.)

CORK, a marit co. of Ireland, prov. Munster, in the S.W. part of the island, having S. St. George's Channel, E. Waterford and Tipperary, N. Limerick, and W. Kerry and the Atlantic Ocean. It is the most extensive of all the Irish cos., containing 1,769,563 imp. acres, of which 700,760 are unimproved mountain and bog. It has every variety of surface and soil; in the W. it is rugged and mountainous, but the N. and E. districts are distinguished by their richness and fertility. There is a great deficiency of timber, otherwise the country would be eminently beautiful. Climate extremely mild, but moist. Property principally in very large estates. Tillage farms for the most part small; those of larger area are frequently held in partnership, or have been divided amongst the family of the occupant. Where such practices prevail, agriculture cannot be otherwise than in a very backward state. Potatoes engross a great part of the attention and labour of the smaller class of occupiers; and after them the ground used to be subjected to a series of corn crops, as long as it was capable of bearing any thing. But an improved system has been introduced of late years on several large estates; and better implements and breeds of cattle are now generally met with. Oats is the principal corn crop, but wheat is also extensively produced. There are extensive dairies in the vicinity of Cork and in other districts; and the exports of corn, flour, provisions, and other articles of agricultural produce from Cork, are very extensive (see next article). Average rent of land, 13*s.* 7*d.* an acre. The copper mine of Allihies, near Castletown, employs from 1,200 to 1,800 men (*Railway Report*); but, with this exception, limestone is the most valuable mineral. Different branches of the linen manufacture have been established at Cork and other towns, and there are some large distilleries. The coast of Cork is deeply indented by the sea, and has some of the finest bays and harbours in the world, among which Bantry Bay and Cork Harbour are pre-eminent. Principal rivers, Lee, Bandon, Blackwater, Ilan, Funchion, Bride, and Awbeg. Principal towns, Cork city, Youghal, Bandon, Kinsale, Mallow, Fermoy. Cork contains, exclusive of the city of the co., 19 baronies and 269 parishes, and returns 8 mems. to the H. of C., viz. 2 for the co., 2 for the city of Cork, and 1 each for the bors. of Youghal, Bandon, Mallow, and Kinsale. Registered electors for Cork in 1836, 4,438. In 1831, Cork had 118,879 inhab. houses, 138,307 families

and 810,733 individuals, of whom 396,712 were males, and 414,016 females.

Cork, a city and river-port of Ireland, prov. Munster, on the Lee, 11 m. above where it discharges itself into Cork harbour; lat. 51° 38' 35" N., long. 8° 23' W.; 135 m. S. W. Dublin. This is the second city of Ireland in respect of pop. and commercial importance, and forms a co. in itself, having a local jurisdiction separate from that of the co. of Cork, by which it is surrounded. The co. of the city extends over 44,463 acres, of which 2,396, constituting the city and suburbs, are built upon, the remainder being inhabited by a rural pop. The city lies in the vale of the river Lee, and is surrounded by hills of considerable elevation, which render the climate moist, though not unhealthy. It owes its origin to a religious establishment founded at a remote period. Previously to the arrival of the English, it was inhabited by a colony of Danes, and then, and for a long time after, consisted of a single street in an island formed by the river. Even so lately as the reign of Elizabeth, it is described as "a little trading town of much resort," but consisting of a single street. After the Revolution, it began to improve, and at length, chiefly in consequence of its vicinity to Cork harbour, the principal place of rendezvous for the channel fleet during the French war, and its being a great mart for the supply of the fleets and colonies with provisions, it rose rapidly to its present state of wealth and importance.

The pop. in 1821 amounted to 100,668 souls, and in 1831 to 107,016: of the inhab., at the latter of these two periods, excluding a few small parts of parishes, the greater portion of which are in the rural district, there were 15,731 Protestants of the estab. church, 11,650 Protestant dissenters, and 76,783 R. Cath. The number of dwelling houses, in 1833, was 7,928, besides 1,694 warehouses and buildings, making a total of 9,612; of these, 8,564 were slated, 1,028 thatched, and 5,602 had seven windows and upwards.

The city is intersected by two great, and some smaller branches of the Lee, the latter having been arched over and built upon: the river is crossed by nine bridges, all of modern construction, and mostly of elegant architecture. The main streets are broad, well paved, with flagged footways, and lighted with gas. An assessment for their cleaning, lighting, &c. is levied to the amount of about 6,000*l.* per ann. The houses in the more ancient part of the city are of limestone, raised in the neighbourhood, and sometimes faced with roofing slate or cement; those in the modern part are mostly of brick. "St. Patrick Street, the Grand Parade, the S. Mall, Great George Street, St. Patrick's Hill, and perhaps one or two other streets; the quays, the Glanmire road, South Terrace, Warren Place, and Lapps Island, are inhabited by persons of wealth and respectability, or occupied by warehouses; but many of the streets, and nearly all the lanes branching off from the main streets and places, are occupied by numerous families of the lower classes, and many, apparently, in the lowest state of destitution. The suburbs towards the S., and parts of those towards the N. and N.W., are occupied by persons in a condition bordering on pauperism. The principal streets and quarters of the city and suburbs are well paved and lighted, but the lanes and narrow brick streets are generally neglected." (*Municipal Boundary Report*) The part of the county within the city and suburbs is divided into six parishes; the rural part into four; besides eight parts of parishes, the remainders of which are in the co. at large. The parishes within the city and suburbs are St. Finbarr's, the church of which is the cathedral; the Holy Trinity or Christ Church; St. Peter's; St. Mary's, Shandon; St. Anne's, Shandon; and St. Paul's, and St. Nicholas. There is also a free church; and a chapel for seamen has been opened in a hulk in the river. These parishes are combined in the R. Catholic arrangement into three unions or parishes, each having a large chapel, one of which is considered the cathedral: there are also several chapels of ease. The monastic establishments of the Augustines, Franciscans, Dominicans, Capuchins (a splendid structure), and two of Nuns of the Presentation, have their respective chapels; to the latter are attached schools, in which hundreds of female children receive a religious and useful education. There are two places of worship for Presbyterians, three for Methodists, and one each for Quakers, Independents, and Baptists.

The diocesan schools for the sees of Cork, Ross, and Cloyne, in which the pupils receive gratuitous instruction, are in the city. The other schools, supported by bequests, donations, or subscriptions, are the Green-coat Hospital, St. Stephen's, Blue-coat Hospital, Deane's Charity Schools, Archdeacon Pomeroy's Free School, the Lancasterian School, and the Female Orphan Asylum. Foremost among the charitable institutions for promoting education are two establishments, called Monks' schools, conducted by laymen, and not, as the name would seem to imply, by religious. They are extremely well managed, and are spoken of by all competent judges in high terms of commendation.

The Cork Royal Institution, founded in 1803, was for a series of years the principal literary and scientific foundation in the city. It was supported partly by subscriptions, but chiefly by a grant of public money, which, being withdrawn in 1830, the institution has since declined; and its fine botanic garden has been converted into a cemetery, on the plan of the *Père la Chaise* at Paris; but its museum, and library of about 8,000 volumes, are still kept up. The voluntary societies of a similar character are, the Scientific and Literary Society, Cuvierian, Agricultural, Horticultural, and Library Societies, Society of Arts, the School of Physic and Surgery, and the Mechanics' Institute, with about 200 members. Five newspapers are published in the city.

The charitable and benevolent institutions are numerous. The Foundling Hospital, incorporated in 1747, is supported by a local tax on the import of coals, averaging 6,500*l.* annually: it is conducted in a manner similar to that in Dublin: in 1833 it maintained 446 children within, and 872 without the establishment. The N. and S. infirmaries and dispensaries are supported partly by grand jury presentments, and partly by subscriptions. The Fever Hospital, in a healthy situation in the immediate vicinity of the city, is supported in a similar manner: it has accommodation for 300 patients. The Cork General Dispensary, to which is attached the Humane Society and Vaccine Institution, is also partially supported by grants of public money. The Lying-in Hospital is maintained by voluntary contributions. The city and county Lunatic Asylum contains 313 single rooms for patients: it received 376 patients during the year 1836, of whom 181 were males, and 192 females; the average annual expense for their maintenance per head was 12*l.* 14*s.* The House of Industry is an extensive and well-regulated building, and maintains upwards of 1,200 paupers. Hitherto it has been supported by grand jury presentments and voluntary subscriptions, but under the Poor Law Act the support of the poor will be thrown on the rate to be raised for that purpose. The other charitable institutions are, the Magdalen Asylum, the Refuge, chiefly for destitute females discharged from prison, and several almshouses supported by bequests, or supported by voluntary contributions. A loan fund, commenced in 1774, still continues to grant loans of from 2*l.* to 5*l.*, repayable by weekly instalments.

There are two theatres and a circus; but the theatres are seldom open, and theatrical entertainments do not appear to be much in fashion in Cork. There are three club-houses. The Mardyke is a very fine walk, a mile in length, between two branches of the Lee. On a height above the town are cavalry and infantry barracks, suited to accommodate 2,000 men.

The corporation derives its privileges from a series of charters, commencing with one from King John, when Earl of Morton and vicar of Ireland. It consists of a mayor and two sheriffs, elected annually; an unlimited number of aldermen, being those citizens who have served the office of mayor; this office, by an innovation made in the charter by a law in 1721, cannot be filled except by a person who has previously served the office of sheriff, and who thus becomes a Burgess, from the body of whom alone the mayor is eligible under the bye law. The freemen, from whom the sheriffs must be selected, acquire that right by being the eldest sons of freemen, by apprenticeship, or by grace especial. The mayor, recorder, and aldermen are justices for the city. The corporate business is transacted by the court of common council, composed of the mayor, recorder, sheriffs, and aldermen; and by the court d'oyer hundred, formed of the freemen at large. The mayor resides in the mansion-house, a large and elegant building on the Mardyke. The city sends 2 mem. to the H. of C., who are elected by the freemen resident within 7 m., the 40*s.* freeholders, the 10*l.* householders, and the 10*l.*, 20*l.*, and 50*l.* leaseholders: No. of registered electors in 1838, 4,344. The courts are those of the mayor and sheriffs, which have jurisdiction in cases to any amount above 40*s.*, those of a lower rate are adjudicated in the court of consent. The former of these courts sits weekly, as does the city sessions court, for criminal cases. The mayor, sheriffs, recorder, and aldermen are the recognised judges of these courts; but virtually the recorder presides. A police-office, or magistrates' court, is also held: the constabulary force for the city consists of 66 men. The city court-house is a splendid building lately erected at an expense of 20,000*l.* The prison is divided into 32 wards, having in all 102 cells, besides day and work-rooms. The number of committals to the city prison was, in the year—

1826	385	1830	502	1834	792
1827	490	1831	534	1835	792
1828	468	1832	529	1836	860
1829	423	1833	611	1837	562

The number of committals, in 1837, was 562; of sentences were,—death, 3, but none executed; transportation for life, 5; for 14 years, none; and for 7 years, 60; imprisonment for 2 years, 3; for 1 year, 8; for 6 months or

under, 312: released on fine or securities, 32; acquitted or discharged, for want of prosecution, 129. There is also a bridewell for the temporary confinement of persons under examination. The assizes for the co., and one of the general sessions for its E. riding, are held here. The county gaol and house of correction are situated a short distance from the city. A female convict dépôt, for the reception of prisoners from all parts of the country, till the arrival of the transport ship to convey them to Australia, is in the S. suburb.

Manufactures are few; those of woollen and cotton, which had been carried on to some extent, are now nearly extinct. The tanning of leather is, however, extensively carried on, there being 45 tanyards in the city and suburbs. There are 7 distilleries, which produce annually about 2,000,000 gallons whisky, several large breweries, 7 iron-foundries, and 2 glass-houses. The glove trade is also very extensive, the gloves made here having long since superseded those of Limerick, by which name, however, they continue to be sold.

The butter trade was at one time the staple of Cork, and it still forms an important item in its exports. All the butter sold here is previously subjected to an inspection, under the direction of a select body, chosen from among the chief merchants, and called "the Committee of Merchants," which also performs all the functions exercised by the Chamber of Commerce in other mercantile towns. After inspection, the firkins are branded with the quality, weight, and private-mark of the inspector. These arrangements have, it is said, obtained for the Cork butter a decided preference in the British and foreign markets. The quantity weighed in 1834-35 was 280,000 firkins. The provision trade was carried on to a very great extent during the late war with France, this port being the principal mart for the supply of corn, army, and colonies; and though it has declined considerably since the peace of 1815, partly in consequence of the competition of some of the N. continental ports and of the U. States, it is still carried on to a very considerable extent. Bacon and hams are cured in large quantities for exportation.

The corn trade, arising out of the increase of tillage, and the consequent diminution of pasture land, has risen on the decline of that of provisions, and now forms the chief branch of commerce. In 1835, exclusive of the grain consumed in the breweries and distilleries of the city and its vicinity, the exports amounted to 201,000 barrels, of which 126,500 were wheat. A corn-market, built in 1833, consists of a large quadrangular enclosed area, with covered passages and offices for weighing the grain, and transacting other business connected with the trade. The exportation of grain and flour to Great Britain has been considerably increased by steam navigation, as has that of live stock and provisions. Upwards of 1,200 pigs, and half a million eggs, are sent away weekly during the season. Salmon, both fresh and cured, is also exported in large quantities.

Subjoined is a statement of the quantity and value of the principal articles of native produce exported from Cork in 1835:—

Articles.	Quantity.			Estimated Value.
	No.	Tons.	Cwt.	£.
Corn, Meal, and Flour	722,372	36,468	12	372,854
Provisions	581,530	29,076	10	2,019,846
Feathers	2,381	119	1	10,958
Spirits	104,680	467	6	38,086
Beer	231,000	1,044	12	7,795
Eggs	10,686	1,068	12	31,000
Linen	501,600	35	12	86,160
Oxen and Cows	1,226	1,412	0	43,550
Horses	123	61	10	2,460
Sheep	7,759	228	9	11,210
Swine	75,189	5,012	12	265,162
Hides and Calf Skins, untanned	7,143	178	11	3,394
Other articles	-	-	-	55,932
Total value	-	-	-	3,909,846

The principal articles of import are cotton and woollen manufactures, haberdashery and apparel, glass and earthenware, hides, coal, &c.

The principal market-days are Wednesdays and Saturdays. The meat and vegetable market is well laid out, and plentifully provided. In the cattle market about 6,000 head of cattle, and 90,000 live pigs (besides carcases), are annually sold. The Bank of Ireland, and the Provincial, Agricultural, and National banks have branches here. The savings' bank, held in a handsome building erected from the profits, was established in 1817. The amount of deposits, now about 250,000*l.*, has been derived from upwards of 34,000 depositors.

The foreign trade is carried on with Portugal, whence wines and salt are brought; with the Mediterranean, for wine and fruit; and with the Baltic, for timber and articles for naval equipment; timber is also imported from Halifax and Canada. The West India trade has declined in consequence of the great facilities for supply from those colonies through the English ports.

The excellence of its harbour, situated about 11 m. below the city, where the Lee discharges itself into a spacious land-locked basin, capable of containing the whole British navy, has been the main cause of the commercial prosperity of Cork. During the war, it was a great naval station, and the place of rendezvous for most of the outward-bound convoys. Naval arsenals and stores, which have now become nearly useless, having been abandoned by the government, though in the best state of preservation, were fitted up in its smaller islands. The communication by water between the port and the city has been much improved by the Board of Harbour Commissioners, established under an act of parliament, by whom the bed of the river has been deepened, and lines of quays of upwards of 4 m. in length raised on both its sides, the expenses of which were defrayed from the harbour dues. The buildings connected with commercial transactions are, the Custom-house, the Commercial Buildings, the Chamber of Commerce, and the Post-office; all neat and convenient edifices.

The custom duties, including those of Kinsale and Youghal, were, in 1836, 230,504*l.*; and in 1837, 221,411*l.* The office revenue, in 1835, amounted to 13,022*l.*, and in 1836 to 13,227*l.* The number of vessels belonging to the port, in 1836, was 302, of an aggregate tonnage of 21,514 tons. During the same year, 171 ships in the foreign trade entered, and 89 cleared out; in the cross channel trade, 2,346 vessels entered, and 1,384 cleared out; and in the coasting trade the number of entries and clearances was 406 and 596 respectively. Steam navigation is chiefly in the hands of the St. George Joint Stock Company, which employs seven regular vessels that ply to London, Liverpool, Bristol, and Dublin. A daily communication between Cork and the town of Cove, in the harbour, is kept up by smaller steamers. (For further details, see Cove.)

The appearance and habits of this city are almost exclusively mercantile. The attempts that have been made to elevate the city in the scale of literature and science have not had that success which the more sanguine promoters anticipated; though they have probably succeeded better than a careless observer might suppose. Some very distinguished persons have been natives of Cork, among whom may be specified Arthur O'Connell, Keefe, Barry the artist, Macleise the artist, and Sheridan Knowles. The newer part of the city indicates a high and increasing state of prosperity; in it are the town residences of the wealthy merchants; while the adjoining country, for several miles round, is studded with their villas and country seats. But, on the other hand, several extensive districts of the suburbs evince the existence of comparative destitution; lines of cabins being built and peopled like those in the surrounding rural villages. But improvement is notwithstanding rapidly advancing, even in those quarters in which there is the greatest poverty, and where old habits and prejudices are sure to linger longest. The food of the working classes is chiefly potatoes; the fuel, turf. Several remains of antiquities, chiefly monastic, are to be traced, as are considerable remains of the ancient walls, some parts of which are in a perfect state. Coins struck at a royal mint in the time of Edward I. have been occasionally found. (*Railway Report; Whilde's Cork; and private Information.*)

CORLEONE, an hil. town of Sicily, prov. Palermo, cap. distr., near the source of the Belini; on the declivity of a hill rising from a fruitful well cultivated plain, 22 m. S. by W. Palermo. Pop. (1831) 13,748. It is pretty well built, and has several churches and convents, a royal college, a prison, and some other public buildings.

CORNWALL, a marit. co. of England, forming the extremity of the S.W. peninsula, being every where surrounded by the sea, except on the E., where it adjoins Devonshire, from which it is separated nearly in its whole extent by the Tamar. Area, 851,200 acres; of which about 600,000 are arable, meadow, and pasture. In many parts Cornwall is rugged and moorish; but though its general aspect be bleak and dreary, it has numerous valleys of great beauty and fertility. The temperature is particularly equal, being so far embosomed in the Atlantic that it is neither so cold in winter, nor so warm in summer, as the co. more to the E. The winds, however, are very variable, and often violent; and the air being surcharged with moisture, harvests are late, and fruit is inferior in flavour to that raised in the E. and midland co's. The raising of corn and potatoes are the principal objects of Cornish agriculture, which has been much improved of late years. Property much divided and "vexatiously intermixed." Farms for the most part small, and held under lease for 14 or 21 years. Average rent of land in 1810, 10*s.* 3*d.* an acre. The principal wealth of Cornwall is derived from its mines of tin and copper. It is believed that the Phœnician traded thither for tin, and that the mines have been wrought ever since. The total quantity of tin at present (1839) produced in Cornwall amounts to about 4,000 tons a year, worth from 5*s.* to 8*s.* a ton. The

Cornish copper mines, though they were not wrought with spirit or success till the beginning of last century, are now become of great value and importance. Their produce, which a century ago did not exceed 700 tons pure metal, amounts at present to about 11,000 tons, worth from 90L to 100L a ton. The capital vested in the Cornish mines, and the employments connected with them, is estimated at about 2,450,000L, and the persons employed at 71,000. Ores of lead, antimony, manganese, &c., are also met with. Gold is sometimes found in the stream-works, or places where the alluvial deposits are washed in order to procure grain tin. Silver is, also, found intermixed with the lead ores, and is now extracted to a considerable extent. About 5,000 tons of soapstone, and about 7,000 tons of China clay, are annually shipped for the Potteries and other seats of the porcelain manufacture. The miners and others engaged in the Cornish mines are under the special jurisdiction of the stannary courts: these were much improved by a late act, and are said to transact the business brought before them expeditiously, cheaply, and well. The oppressive duties formerly imposed on the coinage of tin were repealed in 1837. The pilchard fishery is extensively carried on along the Cornish coasts, particularly at St. Ives, Mounts-bay, and Mewaglessey; and is a considerable source of employment and of wealth to the co. Principal towns, Truro, Helston, Penzance, St. Ives, Falmouth. Previously to the Reform Act, Cornwall sent 42 mems. to the H. of C., but now it sends only 14; viz. 4 for the co., 2 each for the bors. of Bodmin, Falmouth, and Truro, and 1 each for the bors. of Launceston, Helston, St. Ives, and Liskeard. Registered electors for the co. (1838-39) 10,397; viz. R. div. 5,469, W. div. 4,928. In 1831, Cornwall was divided into 9 hundreds, and 203 pars.; and had, in 1831, 55,521 inhab. houses, 59,816 families, and 300,538 individuals, of whom 146,213 were males* and 154,725 females. Sunn contributed to the relief of the poor in 1838, 71,247L. Annual value of real property in 1815, 922,350L. Profits of trade and professions in ditto, 220,112L.

CORO, a marit. city of Venezuela, cap. prov. of the same name, in a sandy and arid plain, near the head of El Golfoete, an arm of the Gulph of Maracaybo, 3 m. S.W. the Caribbean Sea, and 210 m. W.N.W. Caracas; lat. 11° 23' N., long. 69° 48' W. Pop. 10,000. ? It is well situated for commerce, and has had a considerable trade with the West India Islands, especially Caracoa, in mules, goats, hides, skins, cheese, and pottery; but this has now very much dwindled, and the inhab. are poor and parsimonious. The streets of Coro are regular, but unpaved, and the houses mean; the only public buildings are, 2 churches, a convent, several chapels, and an hospital. The climate is dry and hot, but not unhealthy; so great, however, is the heat of the water, that it has to be brought thither daily on the backs of mules, &c. a distance of 2 m. Coro was the second European settlement formed on this coast, and was considered the capital of Venezuela, till the transference of the seat of government to Caracas, in 1576. (*Geographical Account of Colombia*, &c.)

COROMANDEL (*Cholomandala*), COAST OF, forming the E. shore of Hindostan, from Point Calymere, lat. 10° 20', to the mouth of the Krishna river, 18° 50' N., probably deriving its name from the Chola dynasty, who formerly ruled in Tanjore. It is a substitute of any good harbours, and, from the great surf, it is usually difficult any where to effect a landing. The monsoons on this coast are always in a contrary direction to those on that of Malabar. From the middle of October to the middle of April, winds from the N.E. prevail, during which period the storms are so violent and dangerous that all British ships of war are ordered to quit the coast by the 15th of October. In the middle of April the S.W. winds set in, and a period of great drought commences. (*Hamilton*, i. 458.)

CORREZE, a dep. of France, reg. South, formerly part of the Limousin, having N. the dep. Haute Vienne and Creuse, E. Puy-de-Dôme and Cantal, S. Lot, and W. Dordogne. Area, 582,803 hectares. Pop. (1836) 309,433. Surface mostly hilly and mountainous. Its N. part is intersected by a mountain-chain dividing the basin of the Loire from that of the Dordogne. The latter, which runs through the S.E. part of the dep., is the only navigable stream, the Corrèze, from which the dep. derives its name, being available only for rafts and boats. Climate comparatively cold; soil stony and inferior, except in some of the larger valleys. Heaths and wastes occupy more of the surface than the arable lands; sufficient corn, however, chiefly rye and buckwheat, is grown for home consumption. Agriculture is in an exceedingly backward state, partly owing to the obstinate attachment of the cultivators to ancient routine practices, and partly, as Hugo alleges, to over-taxation, and the want of capital; but more than all, we believe, to the minute division of the land, and the poverty it is sure to occasion. The plough in use in many districts is identical with that described by Virgil!

Chestnuts, buckwheat, and potatoes, constitute the principal dependence of a large proportion of the pop., and when these fail, the inhab. suffer severely. Vineyards occupy about 16,900 hectares. Some of the wines are tolerably good, and though no great quantity of wine be produced, still, as few of the labouring classes can afford to drink it, some is exported. The meadows are extensive, and considerable numbers of oxen are reared for the Paris market and the plough. In 1830, there were upwards of 400,000 sheep, chiefly an indigenous breed, yielding annually about 450,000 kilogr. of wool. Property much subdivided, there not being in the whole dep. above 7 properties which pay a government tax of 1,000 fr. Corrèze has mines of copper, iron, argentiferous lead, antimony, and coal; but with the exception perhaps of coal at Lapleau, none of them are wrought to any considerable extent. Manufacturing industry is even in a less prosperous state than agriculture. There is, however, a large gun manufactory at Tulle, which employs about 1,000 hands. Though a speculation of private individuals, it is conducted under the superintendence of government officers, and the muskets are sold at the fixed price of 34 fr. 80 cents each. There is a large cotton mill at Brives. Tulle is very generally supposed to be the grand seat of the manufacture of the species of point lace, called *point de Tulle*; in point of fact, however, there is not a single lace-worker in the dep., nor has there been, since immemorial, a lace-frame in Tulle! (*Hugo*.) Trade chiefly in cattle, wine, poultry, agricultural produce, and truffles. The dep. is divided into 3 arrondis. ; it sends 4 mems. to the Ch. of Dep. Number of electors in 1838-39, 1,084. Chief towns, Tulle, the cap. Brives, and Ussel. Total public revenue (1831), 4,067,803 fr. A general usage (for it is inconsistent with the law of France) in this dep., whereby the eldest son becomes entitled to a clear fourth of the paternal property, over and above an equal share with each of the other children, tends, according to Hugo, to produce much dissension in families. The peasantry exhibit a remarkable dislike to enter the military service, but prove afterwards very good soldiers. Marmontel, Cabanis, and Latreille were natives of this dep. (*Hugo*, art. *Corrèze*; *French Official Tables*, &c.)

CORSILIAM, a par. and village of England, co. Wilts, hund. Chippenham. Area of par., 6,710 acres. Pop. (1831) 2,352. The village in an open pleasant district, 8 m. N.E. Bath, consists chiefly of one long street of neatly-built houses, with a market-house near the centre, erected in 1784. The church is a cruciform Gothic structure, with a tower: there are also 2 dissenting chapels; and an almshouse founded in 1698, at present supporting 6 old women. A free school for boys and girls was built by the Medchen family, to which the manor belongs; and who have a fine mansion, with a good collection of pictures, near the village. The manufacture of woollens, formerly carried on to a considerable extent, has long been discontinued; agriculture being now the chief employment of the inhab. Sir R. Blackmore, the author of various epic poems, now known only by the satirical allusions made to them by Pope and other wits of the time, was a native of Corsilham.

CORSICA (Fr. *Corse*), a large island of the Mediterranean, belonging to France, of which it forms a dep., between lat. 41° 27' and 43° 1' N., and long. 8° 37' and 9° 30' E. Its S. extremity is 10 m. Sardinia, from which it is separated by the Strait of Bonifacio. Pionbio, about 55 m. distant, is the nearest town in Italy, and Antibes, 120 m. W.W., the nearest point in France. Shape somewhat oval, with a projecting appendage at the N.E. extremity; length, N. to S., 100 m.; greatest breadth, 44 m.; area, divisions, &c. as follow:—

Arrondissements.	Area in hectares.	Pop. 1836.	Chief towns.	Pop. 1836.
Ajaccio -	905,402	46,383	Ajaccio -	9,403
Sartène -	184,334	25,739	Sartène -	2,682
Calvi -	136,205	63,764	Bastia -	15,601
Calvi -	101,293	81,665	Calvi -	1,457
Corte -	248,597	60,534	Corte -	5,587
Total -	874,745	207,889		39,780

The E. shores of Corsica are generally low and sandy, and in many parts marshy; the W. shores are more lofty, and indented with several extensive harbours or bays, the principal of which are those of Valinco, Ajaccio, Sagone, Porto, Calvi, and St. Florent. Corsica has several small islets, especially at its S. extremity. It is, generally speaking, hilly. A chain of mountains traverses it from its N. to its S. extremity, for the most part nearest to its W. than to its E. coast; the highest summits of this chain are Monte Rotondo, 8,765 ft., and Monte d'Oro (the *Mons Aureus* of Ptolemy), 8,700 ft. above the level of the sea. The declivities of the central chain are steep: it abounds in clefts and gorges; valleys are few, excepting in the lower hill ranges, and even there they are narrow. The plains along the E. coast amounting to about 1/24th part of the whole surface, though rich and densely

peopled in the time of the Romans, are now mostly abandoned. Were they drained and cultivated, they would be again, of old, the best part of the island. The majority of the rivers run W., but the two largest, the Golo and Savignano, have an E. course; most of them are mere torrents, and none of them are navigable or adapted even for rafts, by reason of their rapidity. There are a few insignificant lakes in the centre of the island; but the largest collections of waters are some lagoons on the E. coast, a topographical feature which this part of Corsica shares with the opposite coast of the Tuscan Maremma and the Campagna di Roma. These stagnant waters render the adjacent parts unhealthy, giving rise to intermittent fevers, &c., similar to those of the corresponding Italian shores; but elsewhere the climate is sufficiently salubrious. The temperature of course varies with the elevation; in the low lands the maximum is 95° Fahr., in the mountains the minimum is 25° Fahr. The most prevalent winds are,—the *scirocco*, or S.E., which brings rain; the N., which often brings snow; and the S.W., which is commonly very violent. The aspect of the country is, in the words of Hugo, "a vast elevated region, the culminating points of which are covered with snow, surrounded by lower ranges of mountains, their summits bare, but their sides covered with thick forests of fir and oak; narrow and dark glens, through which roll impetuous torrents; and here and there an isolated human habitation, perched on some solitary crag, like the inaccessible eyrie of an eagle. As we approach nearer the sea, the valleys enlarge, and show traces of culture, and villages begin to enliven the banks of the rivulets; the hill-sides are covered with olive, orange, and laurel trees; while their tops are crowned with woods of chestnut, whose time-honoured trunks, notwithstanding the little depth of soil they grow in, have attained an enormous size. On the sea-shores, obscured by an unhealthy fog, ruined habitations, corn-lands, *makia* (close coppes), and marshes alternate with each other; and the traveller hastens to quit this pestiferous tract for a brighter sky and a purer air upon the uplands." Granite, mica, porphyry, alabaster, and marble of various colours, serpentine, jasper, asbestos of remarkably long fibre, &c., are plentiful in Corsica. The island probably contains neither gold, silver, nor copper; but there is a vein of lead at Barbaggio, and iron mines are worked in several places: the produce of the last occupies 10 forges at Catalone. Quarries of statuary marble are worked; pipe-clay, encaustic, and globular masses of granite and porphyry are found; the last, which are prized as gems, have been hitherto met with no where but in the bed of one of the torrents. There are an abundance of warm, mineral, and saline springs. The upper soils consist chiefly of decomposed granite, siliceous, &c., with a small proportion of chalk and other calcareous matters, and the remains of animal and vegetable substances. In many parts the land is very fertile; agriculture is, however, in a very backward state, and artificial irrigation unknown. The surface of Corsica was, in 1834, supposed to be distributed as follows:—

Arable lands	- 371,014	hect.	Orchards, gardens,	- 6,976	hect.
Meadow ditto	- 441		Variously cultivated	- 51,565	
Vineyards	- 16,115		Heaths, wastes, &c.	- 342,516	
Woods, forests,	- 94,828		Land built on	- 380	
&c.			Rivers, lakes, &c.	- 5,938	

Landed property in Corsica is extremely subdivided, and is almost all occupied by owners. "For centuries the laws have promoted an equal succession among children; the Genoese, when rulers, abetted this system, and the French law of succession, which found Corsica in an extravagantly parcelled state, has confirmed and aggravated it. These ancient and modern agrarianisms, unaccompanied by the remedies of capital and of various roads to industry, have made a proprietor of almost every Corsican, and have, it is true, averted bare mendicity, but also generally created a narrow situation, without resources, pregnant of family intrigues, and not unbloody dissensions, litigious propensities, and various checks on population; and, combining with these incidents, they have fostered maxims which again serve to the same end of disconnecting all landed property. It is a distinctive trait, that the Corsican rather starves than sells land; that inheritances which lose in value by division still must submit to it; and advantageous offers are the more readily refused the more such land would aggrandize and connect the purchaser's estate." (*Consular Report*.) The inhab. do not live in cottages dispersed over the country, but in villages, many of which are built on the summits and declivities of the mountains.

The forests are remarkably fine, and abound with timber of the best quality, and which supplies the best masts for the dockyards at Toulon; but such is the indolence of the inhab., that this source of wealth is comparatively neglected. The *makia*, previously mentioned, are dense thickets of cistus, bay, myrtle, thorn, &c., which rapidly grow up on rich untilled lands, into inextricable masses of 3 to 12 ft. in height, and which when burnt—the

usual mode of getting rid of them—form admirable manure. The orange, citron, pomegranate, &c. grow in the open air, and yield excellent fruit. The olive is badly managed; but much more oil is produced than is required in the island, and is therefore exported. The vine is tolerably well cultivated in most of the cantons; and, notwithstanding that but little art is displayed in the manufacture of wines, the red wines of Sari, and the white of Cape Corsica, are very good, and exported to the Continent. The corn grown is not adequate to the demand, but its deficiency is made up by the abundant supply of chestnuts. Vast quantities of honey are produced in the island; and, when subject to the Romans, it paid an annual tribute of 200,000 lbs. of wax (*Liv. lib. xliii. cap. 7.*); the honey has a bitterish taste, supposed to be imparted by the abundance of boxwood and yew. Tobacco, though little cultivated, is said to be preferable to that of France, and the mulberry and flax are grown with advantage. Cattle constitute the principal wealth of the farmers and peasantry. Most kinds are small, but the ox, horse, mule and ass are all strong and active; the cows afford good milk, from which much cheese is made. The sheep are black, with four or even six horns: in 1830, there were nearly 300,000 in the entire island: huge very plentiful. Goats are large and strong; the *nonifion*, considered by Buffon to have been the original of the sheep, is found in this island. Game is extremely abundant, as are wild boars and foxes; turtles are obtained in great number, and are important articles of trade. There is a great profusion of the most excellent fish in the surrounding seas, and the Corsican mullet was among the delicacies supplied to the Roman tables. (*Juv. Sat. v. 1.92.*) Red coral of a fine deep colour is found in many places round the coast. But, owing to the indolence and apathy envisioned by the dependence of the people on small patches of land, and the want of capital and manufactures, every thing is conducted according to a system of routine, and very few improvements are either attempted or even so much as thought of. Agricultural implements are all of the most wretched description, and they hardly know anything even of the advantages of manure. All the more laborious employments are devolved upon the females, who are the slaves rather than the companions of their husbands, or upon emigrants from Lucera, Tuscany, and other parts of Italy, by whom the island is annually visited. The fisheries are wholly abandoned to the Genoese and Neapolitans. Their manufactures are limited to the fabrication of some coarse woollens used by themselves, a few forges and tanneries, a glass factory, a pottery (in which asbestos is used), a manufactory of tobacco-pipes, and one of soap. The exports are nearly confined to timber, firewood, wines, dried fruits, oil, silk, leather, and fish, in comparatively trifling quantities. The imports from France amount annually to about 3,000,000 fr. The public expenditure and receipts in 1831 were—

Expenditure	- - -	- 4,941,170 fr.
Receipts	- - -	- 1,144,642
Surplus expenditure of dep.	-	- 3,796,528 = £151,601

The roads are wretched; those called *royal* being in parts almost impracticable even for mules. In 1713 Corsica was divided into two departments—those of Golo and Liamone; but since 1811 these have been again united: the seat of the prefecture is Ajaccio. The island sends 2 m. to the Ch. of Dep. No. of electors in 1827-38, 310. A royal court is established in the capital; there are 5 tribunals of original jurisdiction, one in each arrond., and 3 tribunals of commerce, viz. at Ajaccio, Bastia, and Ile-Rousse; from 1814 to Nov. 1830, Corsica was deprived of the privilege of trial by jury. There are no churches but those of the Catholic establishment in Corsica; the dep. is a bishopric suffragan to Aix. There are 3 colleges, 4 model primary schools, and 286 other schools; the number of children receiving instruction amounts to 10,361. Corsica forms the 17th military division of France; it contains 10 fortresses: since the revolution of 1830 it has had no national guard.

In person, habits, and disposition, the Corsicans bear a considerable similarity to the natives of Italy. They are brave, sober, and hospitable; but subject to violent gusts of passion, and in the last degree revengeful and implacable. This, in fact, is the distinguishing trait of their character, and has been supposed to indicate a peculiar ferocity of disposition. It appears, however, rather to have originated in the long-continued misgovernment of the Genoese, when the grossest corruption prevailed, and money or interest could procure impunity for the most atrocious crimes. Under such circumstances, the avenging of injuries became, as it were, a private duty; and the Corsican would have considered himself degraded who had not obtained that redress for himself that was denied by law. It is needless to point out the sanguinary practices, crimes, and enormities to which such a state of things must necessarily lead. The improved and more vigorous government introduced by the French has,

however, done a good deal to lessen the temptations to vengeance; though it will be long before the passion be wholly subdued among a people in the situation of the Corsicans. They use an Italian dialect, with a large number of Arabic words, and Spanish idioms intermixed. The dress of both sexes bears a similarity to that of the Italians: the men wear a kind of Phrygian buncot, and commonly go armed with a long knife, pistol, musket, bayonet, &c. At Cargese, on the W. coast, there is a Greek colony of Mainot origin, consisting of about 700 individuals, the descendants of some Greeks who settled in Corsica in 1676, who preserve their dress, religion, &c., but have adopted Catholic rites of worship. The tract they inhabit is the best cultivated in the isl. The Phœnicians, who afterwards founded Marseilles, and the Phœnicians, have both been considered the first inhab. of Corsica; and by them the island was called *Cyrrnos*. It was afterwards conquered by the Carthaginians, from whom it was taken by the Romans about B.C. 231. In the middle ages, the Goths, the emperors of the East, Saracens, Franks, House of Colonna, Pisans, and Genoese, successively possessed it. Insurrections against the latter continued at intervals for several centuries, till the Genoese finally ceded it to France in 1768. The pop. under the gallant Paoli made a determined resistance; but ultimately they were forced to submit, and the island has since been ceded to France, with the exception of two short periods, in 1796 and 1814, when it was occupied by British troops. The names of Pascal Paoli and of NAPOLEON, both natives of Corsica, are sufficient to confer on it an enduring celebrity. (*Hugo, art. Corse; Tableau de l'Etat Statistique; Bonelli's Corsica, &c.*)

CORTONA (an. *Crotona*), a city and sea-port of the kingdom of Naples, prov. Calabria Ultra, cap. district and cant., near the mouth of the Esaro (an. *Esarus*), on the Ionian Sea; lat. $39^{\circ} 7' 30''$ N., long. $17^{\circ} 8' 55''$ E. Pop. circa 5,000. It is surrounded by walls and defended by a strong citadel. The latter fronts the sea, and is separated from the town by a ditch and drawbridge. "Its private buildings are poor and sordid; the streets dismal and narrow." Ill-humour, misery, and despondency were strongly depicted on the countenance of every inhabitant I met. There is very little bustle; little commercial hurry; cheese and corn are the principal commodities: for the stowage of corn there are ranges of granaries in the suburbs." (*Swinburne, l. 315, 4to. ed.*) It has a cathedral and several other churches, 2 convents, a seminary, 2 hospitals, &c. The harbour is protected on the S. by the projecting tongue of land on the side of which the town is built, and on the N. by a mole; but it is too shallow to admit of vessels of considerable size, and is not very safe. Mr. Craven says, that 3 altars or pedestals, with Latin inscriptions, are the only remains of antiquity he could find in Cortona.

Such is the present abject and degraded state of what was once one of the richest, most populous and powerful cities of Magna Græcia! Various accounts have been given of its origin, but it is sufficient to say that it was founded by emigrants from Greece at a very remote period. It specially rose to eminence, Pythagoras resided here for a considerable period after leaving Samos; founded a very extensive school; and is said, by his example and his precepts, to have effected a very considerable change in the manners and conduct of the inhab. It had also a celebrated school of medicine. Ancient writers have praised its invigorating air, which was said to give superior strength to the men, and beauty to the women. Milo, famous alike for his success as a wrestler at the Olympian and Pythian games, and for his tragical end, was a native of Cortona. It produced many other celebrated wrestlers, so that it became a proverbial saying, that the last wrestler of Cortona was the first of the other Greeks. (*Strabo, l. 262.*) The mode which Zeuxis took to paint his famous picture of Helen is a sufficient compliment to the beauty of the fair Crotonæans. (The curious reader will find this subject thoroughly discussed in Bayle, art. *Zeuxis*.) In the third year of the 67th Olympiad, some exiles from Sybaris, having taken refuge in Cortona, the latter, on refusing to give them up, was attacked by 30,000 Sybarites; and though the Crotoniats are said to have been able only to bring 10,000 men into the field, they effected a complete victory over the Sybarites, and took and sacked their city. (*Ancient Universal History, vi. 424. 8vo. ed.*) But their success in this conflict is said to have been followed by a renewal of that corruption of morals which Pythagoras had done so much to correct, and by a decline of the martial virtues. At all events, the Crotoniats were not long after signally defeated by the Locrians, and do not appear to have again recovered their former power or influence. Still, however, Cortona was a large city at the epoch of the invasion of Italy by Pyrrhus, though it appears to have suffered severely in the contests to which it led. Livy says, *Urbs Croto mirum in civitatis patens 12,000 pas-*

* Mr. Craven, on the contrary, says that "the town has some straight and wide streets, with spacious houses." (*Ibid.*, 235, 4to. ed.) Non nobis est, &c.; but, on the whole, we prefer Swinburne.

sum habuit, ante Pyrrhi in Italiam adventum. Post vastitatem eo bello factam, viz. pars dimidia habitabatur: fumen (Esarus) quod medio oppido fuserat, extra frequentia trita loca præterfuebat." (Liv. 24. 83.) It was afterwards taken by the Carthaginians, and the inhabitants removed to Locri. Subsequently, however, it received a colony from Rome. In the war between Charles of Anjou and Frederick of Arragon, it was taken by surprise, and sacked; and it has since continued in the depressed state in which we now find it.

About 6 m. S.E. from Cortona, at the extremity of the narrow projecting tongue of land, now called Capo Nau or Delle Colonne (the *Lactium Promontorium* of the ancients), stood a famous temple of Juno, hence frequently called *Dies Lactina*. It is said by Livy to be *sacred templum, ipse urbe nobilis*. It was of great antiquity, was surrounded by magnificent groves, and was held in such veneration that it was annually resorted to by crowds of pilgrims from all parts of Italy and Greece. The Helen of Zeuxis was placed, with many other articles of great rarity and value, in this sacred edifice, whose sanctity was respected both by Pyrrhus and Hannibal. But succeeding conquerors have had less forbearance; and a solitary Doric column is now all that remains of this once venerated and splendid edifice! (*Craven's Tour, 238; Craven's Ancient Italy, li. 395.*)

CORUNNA, a town of Italy, G. D. of Tuscany, prov. Firenze, on the declivity of a steep hill, which commands a magnificent prospect of the Trasimene lake, the mountains of Radicofani, and the wide and variegated vale of Chiana, 82 m. S.E. Florence, and 22 m. N.W. Perugia. Pop. circa 5,000. This, which was one of the 12 principal cities of Etruria, is supposed to have been founded by the Pelasgi, and is probably among the most ancient towns in Italy. "Its original walls still appear round the city, as foundations to the modern, which were built in the 13th century. Those Etruscan works are most entire towards the N. Their huge, unexcavated blocks have resisted on that side, the storms of near 3,000 winters; while on the S. they have yielded to the silent erosion of the *siuocco*. None of the stones run parallel; most of them are faced in the form of *trapezia*; some are indented and inserted in each other like dovetail. This construction is peculiar to the ruins of Tuscany: it is far more irregular, and, therefore, I presume, more ancient than the Etruscan work of Rome. No part of these walls is fortified." (*Forsyth's Italy, p. 99*) The town is commanded by a castle built by the Medici, on the summit of the hill on which it stands. It has a cathedral, which possesses some fine works of art, several other churches, and a theatre. According to some authorities, there is a temple of Bacchus, and the remains of some baths ornamented with mosaic work. Next to the city walls, however, the most interesting relic of antiquity is a small sepulchral chamber a little below the town, formed of large blocks of sandstone, the construction of which proves that the architects of the Etruscan period were acquainted with the principle of the arch. Cortona is the residence of a bishop; it has an episcopal and some other convents, and was the seat of the Etruscan academy, founded in 1726, which had here a library, a cabinet of natural history, a museum of antiquities, engravings, gem., &c., but these collections have been dispersed. In the middle ages, Cortona was attached to the Ghibelline party; since the early part of the 15th century it has always been subject to Florence, except during the short interval it belonged to the French under Napoleon. (*Craven's Anc. Italy; Forsyth; Ranipoldi, &c.*)

CORUNNA (Span. *Coruña*), a city and sea-port of Spain, prov. Galicia, N.W. extremity of the kingdom, on the E. side of a small peninsula joining the S. extremity of the Betanzos Bay, 13 m. S.W. Ferrol, 315 m. N.W. Madrid; lat. $43^{\circ} 23' 35''$ N., long. $8^{\circ} 20' 13''$ W. Pop. 22,500. (*Alfama*.) It is divided into the Upper and Lower Towns. The former, situated on more elevated ground, is surrounded by walls and bastions, and defended by a citadel: the other is situated lower down, on the isthmus joining the peninsula to the mainland, from which it is separated by ramparts and a ditch. The streets in the Upper Town are comparatively steep and narrow. Soutary says that "its climate is astonishing." "Other towns," says he, "attract the eye of a traveller, but Corunna takes his attention by the nose!" Among the public buildings are 4 churches, 5 convents, a palace for the captain-general, and the supreme court of justice of the prov.; 2 barracks, an arsenal, 2 hospitals, and a school of design, mathematics and navigation, supported by the commercial consulate.

There is a fine commodious quay, and a good building yard. The harbour, which is safe and well-sheltered, is commanded by Fort St. Anthony, on an insulated rock at its mouth, and by Fort St. Diego on the mainland. It is the station for packets between Spain and the Azores, and between Spain and Falmouth. At the bottom of the harbour is the suburb of St. Lucia. On the N. shore of the peninsula is the famous lighthouse, called

the Tower of Hercules, or the Iron Tower, 92 ft. in height, and which, being built on high land, is visible at sea in clear weather 60 m. off. The tower is said by Humboldt to be of Roman construction, and is believed to be of the era of Trajan. It was repaired in 1791. (*Pers. Narrative*, i. 25.) The principal manufacture carried on in the town is that of fine table and other linen, with which the royal palaces used to be supplied, and of coarse linen. It has also fabrics of hats, canvass, and cordage, and a royal manufactory of cigars, in which 500 women are employed. (*Milano*.) Corunna is famous, in the history of the struggle between Spain and Napoleon, for being the point to which Sir John Moore directed his disastrous retreat in 1808; and for his death in the engagement which took place under its walls, on the 16th of January 1809, previously to the embarkation of the British, when a superior French force under Marshal Soult was repulsed with great loss.

COSALA, a town of Mexico, state of Sonora, in a mountainous district, 200 m. S.E. El Fuerte, and 60 m. from the Pacific Ocean. Pop. (1835) 6,000. This town is the third in the state in point of size. It derives importance partly from being a depot for goods passing to and from the port of Guaymas, and the Gulph of California, but chiefly on account of its mines, one of which, called Guadalupe, contains an extremely rich vein of gold; and being at a considerable elevation, is free from water. The present proprietor, however, a man of very eccentric habits, refuses to work this mine. (See *Ward's Mexico*, ii. 324, 325.)

COSLIN, or KOSLIN, a Prussian town, prov. Pomerania, cap. reg. and circ. of same name, on the Niesenbecke, about 4 m. from where it falls into the lagoon Jamund, which communicates with the Baltic; lat. $51^{\circ} 12' 7''$ N., long. $16^{\circ} 10'$ E. Pop. 6,900. Having been nearly destroyed by fire in 1718, it was rebuilt on a regular plan by Frederick William I., whose statue has been erected in the market-place by the citizens to commemorate the beneficence of the monarch and their gratitude. It is the residence of the governor of the regency, and has a court of appeal, and a society for the promotion of agriculture, and various schools. Mount Gollen, a little to the E. of the town, is one of the highest elevations on the Pomeranian coast.

COSSÉIR, KOSSAIR, or KOSIR, a sea-port town of Upper Egypt, on the W. shore of the Red Sea, 93 m. E. by S. Gheneh, or Kenne, and 102 m. E.N.E. Thebes; lat. $26^{\circ} 6'$, long. $34^{\circ} 23'$ E. Pop. estimated at from 1,500 to 2,000. It is situated near the centre of a semicircular bay, about 5 m. across, sheltered on the N. by a sandy point of land, where vessels may lie in 5 fathoms water within 60 yards of the shore. The town is meanly built; the houses being low, and built of sun-dried bricks made of a white calcareous earth: only a few have two stories. Immediately on the N.W. is a small citadel defended by round towers, on which a few small guns are mounted. This fortress is the residence of the governor and garrison. A caravan road leads from Gheneh to Cosseir, which is the centre for all the traffic between the upper valley of the Nile and the Arabian ports; and this circumstance it owes its existence, as it has neither trade nor manufactures of its own, and the surrounding country is perfectly bare of all vegetation. Old Cosseir is about 10 m. N.W. of the modern town, on the N. bank of a small inlet, from which the sea has now mostly retired. Of the latter town only a few ruins exist. Berenice, the great port for the eastern traffic of Egypt under the Ptolemies, was situated a good deal further S. (*Geographical Journal*, iv. 202, 203; v. 287; *Private Information*; *Wellsted's Trav.*)

COSSENZA (an. *Consentia*), a city of Naples, cap. prov. Calabria Citra, on the margin of a valley surrounded by hills, at the confluence of the Crati and Busento, 12 m. E. from the Mediterranean; lat. $39^{\circ} 18'$ N., long. $16^{\circ} 15'$ E. Pop. about 9,000. It is intersected by the Busento, which is here crossed by two bridges, and the lower parts of the town are said to be unhealthy. It has only one good street, the others being narrow, crooked, and dirty. The *tribunale*, or palace of justice, is one of the finest edifices in the kingdom; an old castle, now converted into barracks, crowns the summit of an eminence on the opposite side of the river. It has also a cathedral, several churches and convents, a grand seminary, a royal college, an hospital, a founding hospital, 2 academies of science and *belles-lettres*, and a theatre. It is the seat of the provincial courts and authorities, and of an archbishop. Earthenware and cutlery are made here; and it has a considerable trade in silk, rice, wine, fruits, manna, flax, &c. In the 16th century there was here a famous academy, founded or improved by Bernardino Telesio. Hampold says, that Cossenza was the country of Campanella; but this is an error, Stilo, in Calabria Ultra, being his native place.

In antiquity Cossenza was the cap. of the Brettii. Alaric, by whom it was besieged anno 410, died before its walls, and was buried in the bed of the Busento. It

was taken and sacked by the Saracens, who were expelled from it by the Normans, and has suffered much from earthquakes, particularly from those of 1658 and 1783. The extensive forest of Silla lies a little to the W. of Cossenza. (*Craven's Tour*, 342; *Hampold*.)

COSSIMBAZAR, an inh. town of Hindostan, prov. Bengal, distr. Moorsshedabad, and about 1 m. S. of that city, of which it is the port; on the left bank of the Bhajirathi, or Hooghly river; lat. $24^{\circ} 10'$ N., long. $88^{\circ} 15'$ E. It is one of the most considerable trading towns in Bengal, and during the rainy season has an unequalled variety and extent of water carriage. A vast quantity of raw silk is thence exported to Europe, and to almost every part of India; and a great deal consumed annually by the natives in the manufacture of carpets, satins, and other stuffs. Cossimbazar is also noted for its stockings, which are wire-knitted, and esteemed the best in Bengal. Its vicinity is flat and sandy, and abounds with a great variety of wild animals. (*Hamilton's E. I. Gaz.*, i. 455.)

COSTAMBOUL, or COSTAMANI, a town of Asiatic Turkey, Nafolia, cap. pachalik, 225 m. E. Constantinople, and 50 m. S. from the nearest point of the Black Sea, in a dreary and unfertile country, intersected by deep ravines and numerous water courses. Pop. 12,500. It stands in a hollow, in the centre of which rises a lofty and perpendicular rock crowned with a ruined fortress, formerly possessed by the Comneni. The houses are built of wood and stone, and the great part of the wretched poor edifice, opens into the *nygadis* or square. There are 80 mosques, with minarets, 25 public baths, 6 khans, and a Greek church. When it was visited by Mr. Klinef, the bazaars were well supplied; but the inha. are frequently reduced to extremities, particularly after a severe winter, when the snow remains so long upon the ground as to impede the operations of agriculture. The trade of the town is but inconsiderable, and there are no manufactures. In the later ages of the Greek empire, Costamani was the cap. of an independent principality, who was first expelled by Bajazet, re-established in its possessions by Timour, and finally subdued by Mahomet I. (*Kinncir's Journey through Asia Minor*, &c., p. 281.)

CÔTE-D'OR, a dep. of France, in the E. part of the king., between lat. $46^{\circ} 56'$ and $48^{\circ} 2'$ N., and long. $4^{\circ} 7'$ and $5^{\circ} 3'$ W., formerly part of the prov. of Burgundy, leaving N. the déps. Aube and Haute Marne, E. Haute Saône and Jura, S. Saône-et-Loire, and W. Yonne and Nièvre. Area, 8,644,445 hectares. Pop. (1836) 388,624. Surface mostly hilly and mountainous. The principal chain connecting the Faucilles with the Cevennes runs nearly through its centre, separating the streams which flow into the Seine from the affluents of the Saône. A part of this range gives its name to the dep., having been appropriately termed the Côte-d'Or, from the number and excellence of the vineyards on its declivities. Both the Seine and Armançon have their sources in this dep.; and the Saône winds along its S.E. border. Climate temperate; but said to have become colder within the last 30 years (though probably without any good foundation), from the woods having been extensively cut down. Soil for the most part gravelly or calcareous; and in the E. and S. very fertile. The land is estimated at 457,000 hect., forests 198,000, meadows 63,000, and vineyards 26,450 do. The vine culture is by far the most important branch of industry carried on in this dep. It is almost superfluous to say any thing as to the quality of the wines of Burgundy. Their excellence is universally admitted — "*Ils réunissent dans des justes proportions toutes les qualités qui constituent des vins parfaits; ils n'ont besoin d'aucun mélange, d'aucune préparation, pour atteindre leur plus haut degré de perfection. Les vins rouges joignent à une belle couleur beaucoup de parfum, et un goût délicat qui; ils sont à la fois corrés, fins, réchauffés et suaves, sans être tristes.*" (*Journ.*, p. 104.) It has been said that the wines of the Côte d'Or have degenerated within the last forty years; but this is not really the case, though, from the extension of vineyards in less favourable situations, the quantity of secondary and inferior growths bears a larger proportion to the superior growths, the supply of which is limited, and apparently unsusceptible of increase. The best wines are produced in two contiguous tracts to the S.E. of the Côte d'Or range. One tract, called the Côte-de-Nuits, extends between Dijon and Nuits, the other the Côte Beaunoise, is comprised between Nuits and the Dheune. To the Côte-de-Nuits belong the first class wines of the *Clos Vougeot, Romanée, Chambertin, Corton, Richebourg*, &c.; to the Côte Beaunoise the celebrated but secondary growths of *Tolnay, Pomard, Beaune*, and others, and some fine white wines, as *Montreuil*, and *Musquillon*. Burgundy wines are not often found in the best order in England, a circumstance ascribed (and we believe truly) to their liability to be injured by a sea voyage. *Corton* and *Chambertin* are said to stand the sea better than the others. The total annual produce of wine is estimated at 700,000 hectolitres, or 18,500,000 gallons. (*Hugo*.) Agriculture is in a more state of advancement. More than sufficient corn is grown

for home consumption, principally wheat, oats, barley, and rye. Hemp, flax, and some leguminous and oleaginous plants are also cultivated. Dijon is famous for its mustard. Cattle abundant; both the ox and horse are used for the plough, except in the mountainous districts, where the spade is employed. The first attempts to improve the breeds of sheep in France were made in this dep., and here they have been eminently successful. The annual produce of wool is estimated at 245,600 kilogs. There are some fine natural pastures on the banks of the Saône, but the system of irrigation pursued in the Vosges and elsewhere is not adopted. Hogs are numerous; and beef and pork are extensively reared. Property in this is less subdivided than in most other depts. in France. Mineral products numerous and valuable, especially iron and coal. There are above 100 furnaces for smelting iron, and its production and manufacture into different articles constitute a very considerable branch of industry. There are also numerous breweries and distilleries, with establishments for the manufacture of beet-root sugar, mustard, and vinegar; tanneries, potteries, cloth fabrics, &c. Wine forms, of course, the principal article of export. The trade of the dep. is much promoted by the canal of Burgundy, by which it is intersected. It is divided into 5 arrondissements, and sends 5 mems. to the Ch. of Dep. Number of electors (1838-39) 2,694. Chief towns, Dijon, Beaune, and Châtillon-sur-Seine. Total public revenue (1831) 12,480,859 francs. Number of children attending 760 primary schools about 43,000. There are several Roman antiquities in this dep., especially a sculptured column near Cussy, supposed to have been erected in the time of Dioclesian (*Hugo, France Pittoresque*, art. Côte-d'Or; *French Official Tables*, &c.)

COTES-DU-NORD, a marit. dep. of France, region of the N. W. formerly part of the prov. of Brittany, lying E. Ille-et-Vilaine, S. Morbihan, W. Finistère, and N. the British Channel. Area, 672,086 hectares. Pop. (1836) 605,563. Coast generally steep, rocky, much indented with the mouths of small rivers, the chief of which is the Rance, and surrounded, particularly towards its W. end, by many small islands. A chain of heights, called the "Black Mountains," runs through the centre of the dep. E. and W., sending off numerous branches on either side: the highest point of these is the Montez-Haut, about 1,115 ft. above the level of the sea. Soil mostly stony, primitive formations being every where found near the surface: the plains on both sides the mountain-chain are often sandy and sterile. Arable lands occupy 411,000 hectares, meadows 54,500 do., heathy wastes and forests about 170,000 do. Agriculture is in a very backward state: in some cantons asses only are employed in farm labour: more corn is however grown than is required for home consumption; it is mostly oats, wheat, and rye. In 1835, 1,011,600 hectolitres of potatoes were raised. This dep. is beyond the limits of the vine culture, but the annual produce of cider is estimated at 500,000 hectolitres. The sheep are generally small and weak, but the rearing of black-cattle and horses engrosses a considerable share of attention; and the latter especially are strong and much esteemed. The fisheries of cod, mackerel, pilchards, &c. yield an annual sum of about 600,000 fr., and while they constitute one of the most important resources of the dep., are useful as preparatory schools for seamen. The forests are extensive, and abound with wild animals. Iron and lead mines are wrought: but the dep. is not rich in other minerals. The culture of flax, and its manufacture into linen, are pursued to a great extent. In 1834, in the arrond. of Loudéac only, there were 4,000 looms, producing annually 2,600,000 yds. of linen cloth, worth 4,000,000 fr. The linens of Brittany are mostly exported to S. America. Sailcloth, woollens, parchment, leather, shoes, and beet-root sugar are amongst the other principal articles of manufacture. Two canals, that of the Ille and Rance, and that between Nantes and Brest, pass through different parts of this dep. It is divided into 5 arrondissements, and sends 6 mems. to the Ch. of Dep. Number of electors (1838-39), 1,615. Chief towns St. Brieg, the cap., Dinan, Guingamp, Lannion, and Loudéac. Total public revenue (1831), 10,355,670 fr. The Bas-Breton is the language commonly spoken, but most of the upper classes understand French. Many Celtic and Roman antiquities are scattered over this dep., of which the temple of Lanléf is the principal. (*Hugo, France Pittoresque*, art. Côtes-du-Nord; *French Official Tables*.)

COTHEM (Germ. Köthen), a town of central Germany, cap. of the duchy of Anhalt-Cöthen, residence of the sovereign, and seat of the government, on the Ziecher, 78 m. S.W. Berlin, and 33 m. N.W. Leipzig. Pop. 6,200. It is divided into the old and new town, and is well built. Amongst the public buildings are the old ducal palace, in which the states (*Landeshöligen*) of the duchy hold their sittings; with a gallery of paintings, cabinet of natural curiosities, and a good library; the new ducal residence, three churches, a synagogue, orphan and female asylums, a teachers' seminary, and a school for the indi-

gent. Gold and silver lace, woollen cloth, linens, tobacco, and leather, are manufactured here; and there is some trade in corn, butter, cheese, and wool (*Berghaus, Allg. Land., &c.; Cassinabich*.)

COTOPAXI, a celebrated volcano of S. America, in the republic of Ecuador (Colombia), belonging to the E. or more inland chain of the great Cordillera of the Andes, in lat. 0° 40' S., and long. 78° 39' W., 34 m. S.E.E. Quito. Its shape is a perfect cone; it consists chiefly of mica, but in part of obsidian; its absolute height is 18,978 ft. above the level of the ocean, the upper 4,400 of which are covered with perpetual snow. Its summit is not more than about 9,800 ft. above the great longitudinal valley between the two chains of the Cordillera; but such is its steepness that Humboldt was unable to ascend it above the point at which the perpetual snows commence. The crater appears to be surrounded by a kind of circular wall, which, especially on the S. side, has the aspect of a parapet; and, probably owing for the most part to the heat, this summit of the cone is never covered with snow, and looks at a distance like a dark spire. On the S.E. side of the mountain, near the snow-limit, there is a comparatively small projecting mass of rock, studded with points, and called the "Head of the Icen" by the Indians, who have a popular tradition that it formed originally a part of the summit of Cotopaxi. Humboldt himself inclines to the belief that the cone supporting the present crater, like the somma on Vesuvius, is composed of a great number of strata of lava heaped upon each other. "Cotopaxi is the most dreadful volcano of the kingdom of Quito, and its explosions are the most frequent and disastrous. The mass of scoria, and the huge pieces of rock thrown out of this volcano which are spread over the neighbouring valleys, covering a surface of several square leagues, would form, were they heaped together, a colossal mountain. In 1738, the flames of Cotopaxi rose some hundred metres (43 furlongs) above the brink of the crater. In 1744, the roarings of the volcano were heard as far as Honda, a town on the borders of the Magdalena, and at the distance of 200 common leagues. On the 4th of April, 1768, the quantity of ashes ejected was so great that in the towns of Hambato and Tuenaga day broke only at three in the afternoon. The explosion that took place in the month of January, 1803, was preceded by a dreadful phenomenon, the sudden melting of the snows that covered the mountain. At the port of Guayaquil, 52 leagues distant in a straight line from the crater, we heard day and night the noises of the volcano, like continued discharges of a battery; we distinguished these tremendous sounds even on the Pacific Ocean, to the S.W. of the island of Puna." (*Humboldt's Researches*, English trans. i. 115-125.)

COTTBUS, a town of the Prussian states, prov. Brandenburg, cap. circ. same name, on the Spree, 42 m. S. by W. Frankfurt-on-the-Oder, and 67 m. S.E. Berlin. Pop. (1837) 8,216. It is walled, and has four churches, two hospitals, a gymnasium, and library, an orphan asylum, and girls' school. It has three suburbs, and is commanded by castle built on a height to the E. Cottbus is the seat of the council for the circ. a municipal court, a board of taxation, &c. There are here considerable fabrics of woollen and linen stuffs, stockings, &c., with breweries and distilleries. This town was made over to Prussia by the congress of Vienna, previously to which it belonged to Saxony. (*Berghaus, Allg. Land., &c.* iv. 631; *Zedlitz Preussische Stat.*)

COVE, a marit. town of Ireland, prov. Munster, co. Cork, on the S. side of Great Cove Island, and opposite to the entrance into, and grand basin of, Cork Harbour, 133 m. S.W. by S. Dublin, 9 m. S.W. by W. Cork. Pop. in 1821, 6,508; in 1831, 6,566. The town, which in 1796 was a poor fishing village, is now large, well built, and populous; a change effected during the late French war, when Cork Harbour was a station for a large naval force, and a rendezvous for the W. India fleets waiting for convoy. It is built on the slope of a hill rising abruptly from the sea, so that most of the streets range in terraces one above the other, and are connected by cross streets which ascend the hill in a slanting direction; that the ascent and descent is attended with but little inconvenience. The higher parts of the town command magnificent views of the harbour and of the hills that enclose it on all sides, studded with mansions, villas, and plantations. The entrance to the harbour, between Forts Camden and Carlisle, is about 3 m. from the town. Within the basin are the small islands of Hawthorling (which, during the war, was a victualling depot for the navy, and an arsenal); Rocky Island, with a powder magazine heaved out of the solid rock, and capable of storing 25,000 barrels; Spike Island, opposite to Cove, serves as a breakwater for vessels anchoring between it and the town, and has extensive bomb-proof artillery barracks; and Ringskiddy Island, fortified by a mangle tower.

Cove itself is protected by a formidable battery.

The par. church is a plain building, on an elevated site; near it is a large Rom. Cath. chapel; and there is also a Methodist chapel. It has a national school, a fever hospital, a dispensary, a club-room, and two reading-rooms. At one end of the town is a large pier and extensive landing quays, with a station-house for the pilots and officers connected with the custom-house in Cork.

Cove is not a place of manufacture or trade; its pop. consists either of visitors, attracted by the extreme beauty of the place, and the mildness and salubrity of the climate, or of those connected with the military and naval establishments in its vicinity. Petty sessions are held weekly; there is a small bridewell, and it is a coast-guard station. Market on Saturday; but a sale of provisions for domestic consumption is carried on daily in the market-house, a spacious modern building, arranged in compartments for butchers' meat, potatoes, and fish and vegetables. Fish of every kind is abundant; but the supply of salt fish is, notwithstanding, so deficient, that much is imported from Scotland. Oysters are abundant, and of large size.

Cove, being regarded as the outport of Cork, no separate returns are kept of its trade, tonnage, and port dues. Its post-office revenue in 1830 was £777, and in 1836, 1,036*l*. A constant communication is kept up with the city of Cork by land (for the most part) by carriages of every description, and by water by steamers. The island on which Cove is built contains about 13,000 acres, is very fertile, and is in great part occupied with villas and plantations. It communicates with the main-land on each side by ferries. An annual regatta is attended by pleasure yachts not only from several ports of Ireland, but from England and Scotland. Roches Point, at the E. entrance of Cork Harbour, lat. 51° 48' N., long. 8° 14' W., is surrounded by a ditch, and has a fixed light, having the lantern elevated 52 ft. above high-water mark. (*Winelet's Cork, &c.; Railway Rep., &c.*)

COVENTRY, a co. and city of England, within the co. of Warwick, 10 m. N. N. E. W. Warwick, 18 m. S. E. Birmingham, 91 m. N. W. London: lat. 52° 24' N., long. 1° 34' W. Pop. (1831) 27,070. It stands on gentle declivity, and is watered by the Raimford and Sherborne brooks. Streets of the old town, (with the exception of Cross Cheaping, where the splendid cross formerly stood, and which is now used as a corn market,) generally narrow and ill paved, and the upper parts of a few of the houses, which are high, project and present a scabrous appearance. Within the last seven years, however, the suburbs have been considerably extended, several new lines of street having been laid out, and at least 2,000 new houses erected. The principal buildings are, St. Michael's church, one of the finest specimens of the lighter Gothic in England, with a beautiful steeple, 303 feet in height; St. John's and Trinity churches, and Christ Church, recently erected, and attached to the old and beautiful spire of the Greyfriars' monastery; a catholic chapel; several dissenting meeting-houses; the county hall, erected in 1785; St. Mary's hall, erected (Henry VI.) for the Trinity guild, now used for meetings of the town-council, public concerts, &c.; a new and commodious theatre; the drapers-hall; the canal-office; the free school; the goal, and the barracks. Coventry was, conjointly with Lichfield, the see of a bishop, but on the recommendation of the ecclesiastical commissioners, it is now joined to the diocese of Worcester.

Under the Municipal Corporation Act the city is divided into 6 wards; and is governed by a mayor, 12 aldermen, and 36 councillors. The jurisdiction of the corporate authorities extends over the city and the co. of the city, including, in all, an area of 16,970 acres. The jurisdiction of the mag. strates extends to capital punishment, but this power is always referred to the judge of assize, the assizes being regularly held in the city. The recorder holds a court of quarter sessions, and a court of record for the recovery of debts to any amount. The sheriff holds a county court monthly. Coventry has regularly sent 2 mems. to the H. of C. since 1463. Previously to the Reform Act the right of voting was exclusively in the freemen of the city who had served a 7 years' apprenticeship in the city or suburbs. Registered electors in 1837-38, 8,650. The limits of the par. bor. correspond with the ancient limits of the par. of St. Michael and the Holy Trinity, except that it does not include the hamlet of Keresley. It embraces an area of 4,920 acres. The municipal boundary is co-extensive with the co.

Coventry has been the seat of 2 parliaments: one (Henry IV.) in 1404, called, from lawyers being excluded, *parliamentum in doctum*; the other (Henry VI.) in 1469, called *parliamentum diabolum*, from its numerous acts of attainder. The city was incorporated by Edward III., and the first mayor chosen in 1348. It was erected into a co. by Henry VI., with the hamlets belonging thereto, and lying within the vill or township.

This city has many extensive and well-endowed charities: of these, one of the most celebrated is the free school, founded by John Hales in the reign of Henry VIII., in which the celebrated antiquary, Dugdale, re-

ceived the early part of his education; it has a revenue of 800*l*. a year, and exhibitions to both universities. Here are also various charity, national, and infant schools, as Bonds' hospital, at Bablake, for 45 old men, with a revenue of 1,050*l*. a year; and Wheatley's school and hospital, at the same place, for 40 poor boys, with nearly 600*l*. a year; Ford's hospital, in Greyfriars-lane, for 35 old women; Falfax's school, in St. John's par., for 40 boys; Mrs. Catharine Bailey's school, in St. Michael's par., for 35 boys; the Blue Coat school, in Trinity par., for 60 girls; White's charity, amounting to about 2,500*l*. per annum; and the House of Industry, formerly the Whitefriars' monastery. A library was established here in 1791; it has at present about 200 members, and is regulated by a committee. A mechanics' institute, founded in 1828, has from 400 to 500 members. Here is also a society for the diffusion of religious and useful knowledge; general and self-supporting dispensaries, and a public hospital.

Previously to 1436, woollen cloth caps and bonnets were an important article of manufacture. In the early part of the 16th century, Coventry became famous for the production of a blue thread, called "Coventry true blue." But this was given up before 1581, after which woollen and broad cloths continued the staple until the destruction of the Turkey trade in 1694. The manufacture of striped and mixed tammies, camlets, shalloons, and calmancoes, flourished during a part of the last century, but is now almost discontinued. This was succeeded by silk throwing and riband weaving, now the staple business of the place, and watch making. When first introduced, about a century and a half ago, the riband trade was for some time confined to a few hands, but it afterwards increased so as to exceed that of every other town in England. The alteration of the law as to the silk trade, in 1826, though productive of considerable loss and injury at the time, has, by introducing a spirit of competition, and stimulating the manufacturers to call all the resources of science and ingenuity to their aid, been productive of the greatest improvement. Late struggles may now be purchased more cheaply in Coventry than in France. Plain goods of English manufacture are fully equal to those of the French; but the latter have the advantage in style and fashion, and in the brilliancy, though not in the permanency, of their colours. With the exception of 5 small steam engines for throwing silk, no powerful machinery is used in the riband manufacture. An attempt was made in 1831 to introduce power looms; but after the buildings and machinery were erected and ready to be put in operation, the weavers attacked the manufactory and destroyed the looms. Fortunately, however, an effort has since been made to introduce them, and with success, a large factory having been erected about 3 years since, in which all descriptions of ribbands are made by steam power. It is the general practice for the work to be given out to be executed in the houses of the workmen. The manufacturers employ girls and young women, who work together on the premises of the manufacturers, in winding and warping the silk for the outdoor weavers. In 1808 there were 2,819 silk and riband looms at work in Coventry only, exclusive of a great many in the adjacent villages. At present (1839), it appears from the report of Mr. Fletcher to the commissioners of inquiry into the condition of the hand-loom weavers, that the operative loom owners in the city and suburban villages hold 3,967 looms, of which 3,145 are worked by members of their own families, and the remaining 822 by journeymen and half-pay apprentices. It further appears from the same report, that 27 master manufacturers employ in loom shops or factories 1,862 looms. The wages of the hands employed as weavers vary from 12*s*. to 20*s*. per week. Throwsters, chiefly children, get from 2*s*. 6*d*. to 7*s*.; silk winders, from 1*d*. to 2*d*. an oz., or from 6*s*. to 8*s*. a week; shuttle fillers, from 3*s*. to 8*s*.; warpers, from 7*s*. to 9*s*. The winders, shuttle fillers, and warpers, are principally females. Large quantities of ribbands are exported; but the principal demand is for the London and country markets. There are several large dyehouses, for dyeing the silk, employing from 300 to 400 hands.

The manufacture of watches was introduced about 80 years since, and has continued progressively to increase. Large quantities are prepared for the home and foreign markets; some manufacturers employing, when the trade is in a state of activity, several hundred hands. The wages of the workmen vary from 15*s*. to 70*s*. per week, the larger amounts being paid to those only who are proficient in working at the *patent lever* and other superior watches, which are now produced here equal in quality to those made in London. Of the entire population of Coventry in 1831, 204 families were employed in agriculture; 4,913 in trade manufacture, and 878 were not included in the foregoing. Coventry is advantageously situated for commercial operations, lying nearly in the centre between the four greatest ports of the country—London, Bristol, Liverpool, and Hull, and having direct communication by railroads and canals with the

metropolis and principal towns in the kingdom. The amount of assessed taxes in 1831, was 6,684. 7s. 11d. In 1836, the total sum raised by parochial assessments was 11,592. 5s., of which 7,711. 11s. was expended for the relief of the poor. The number of houses in the city, in 1832, was 5,867. It is supposed that the number of houses and lodgings at present (1839) is not less than 8,000, and the population from 32,000 to 35,000. The Lamas grounds, on which the freemen have a right to keep three head of cattle from 13th Aug. to Candlemas, come up close to the city, and are very suitable for building villas, factories, &c.

During the monastic ages, Coventry had a splendid monastery, and a large and beautiful cathedral, similar to that at Lichfield. The latter was destroyed by a barbarous order of Henry VIII., and only a few fragments of it now remain. The city was formerly surrounded with walls of great strength and grandeur, with 32 towers and 12 gates. It has been always renowned for its pageants and processions, and particularly in the monastic ages, for the performance of *Mysterie*. The legend of Peeping Tom, and the Lady Godiva, is too well known to require any special notice. An effigy of the over-inquisitive tailor may be seen in the upper part of a house at the corner of Hertford Street. The tradesmen of Coventry were formerly famed for their affluence. In 1448, they equipped 600 men armed for the public service. Many eminent persons have either been born or bred at Coventry, among whom were, Nehemiah Grew, curator, in 1674, to the Royal Society for the anatomy of plants, and in 1677, sec. to the Royal Society. Coventry gives the title of earl to the descendants of John Coventry, Mayor of London, in 1425. Market-days, Wednesdays and Fridays. The principal fair, held first Friday after Trinity Sunday, is called Show Fair, and continues 8 days, on the first of which the representation of the Countess Godiva's procession is enacted. The other chartered fairs are in March, May, Aug., and Nov., for cattle and commodities generally; monthly fairs for cattle have been recently established, and cheese fairs, holden in May and September. Hacks take place in the spring; and though established only about 6 years, they already rank high. (See *Dugdale's Antig. Warwick; Beauties of England and Wales; Hist. and Antig. Coventry; Boundary Commissioners' Reports; Private Inform.*)

COVILHA, a town of Portugal, prov. Beira, on the E. slope of the Sierra de la Estrella, 20 m. S.W. Guarda. Pop. 6,350. It rises amphitheatrically between two streams. In the upper part there is an antique castle and tower, and in the lower part, on the margin of one of the streams, is a manufactory of fine cloths, druggs, and baizes, carried on by a company in Lisbon, containing above 120 looms. There are nine churches, with an hospital, and a workhouse. (*Milano*.)

COURLAND, a government of Russia in Europe, on its W. frontier, having N. the Gulf of Riga and Livonia; E. the gov. of Wittepsk; S. that of Wilna, and a small portion of Prussia; and W. the Baltic. Area about 10,000 sq. m. Pop. (1826) 384,790. Near Mittau, and along the shores, the surface is flat, and is overspread with marshes and sandy heaths; but the interior is mostly undulating, there being a chain of hills along the bank of the Duna, which sends ramifications over the whole country. The Duna forms the E. and a part of the N. boundary: the other principal rivers are the Aa and Vindau. There are many lakes. Speaking generally, the atmosphere is damp, the sky cloudy, and the temperature low and variable. Soil generally light and sandy, requiring much manure; it is most fertile towards the E.: two-fifths of the surface is occupied by forests, chiefly of pine, fir, birch, alder, with a considerable intermixture of oaks. Agriculture is the principal occupation of the people, and notwithstanding the badness of the soil, has advanced more than in any of the neighbouring provs. More corn is grown than is necessary for home consumption; it is chiefly rye, barley, and oats. Flax and hemp, and a few fruits and pulse, besides a little tobacco, are also cultivated. Pasturage is scarce, and but few cattle are reared: the oxen and horses are both of a bad quality, and the sheep yield only a coarse species of wool. Bees are kept only to a trifling extent. Iron, lime, and turf, and occasionally amber, are found. Manufactures quite insignificant, and mostly domestic. In respect to them, Courland ranks nearly last amongst the Russian govts. There are a few of paper, copper articles, and earthenware; and some brandy distilleries, and tile factories. Mittau, the cap., is the only town of any size: the principal sea-ports are Liebau and Vindau, both on the W. coast. The exports, which are principally corn, flax, hemp and hemp-seed, skins, and salted meat, are said to amount to about 2,500,000 roubles a year, and the imports about 600,000. The inland trade is almost entirely in the hands of the Jews, of whom there are about 20,000 in the gov. Most of the pop. are Lutherans, and of *Letton* origin. Courland was anciently a part of Livonia, and was conquered in the 13th century by the Teutonic Knights; in 1561 it became a fief of Poland. After the fall of that

power, it remained for a short time independent under its own dukes; but in 1795 it was united to Russia. (*Schmidler, La Russie*, pp. 576-585.)

COURTRAY, or COURTRAI (Flem. *Kortryk*, Lat. *Cortoriacum*), a fortified and manufacturing town of W. Flanders, 17 m. E. Ypres, 25 m. S. Bruges, on the navigable river Lys, by which it communicates with the principal towns of Flanders; lat. 50° 50' N., long. 30° 18' E. Pop. (1835) 19,124. Houses about 2,000, and well built; streets spacious and remarkably clean. The principal public buildings are the town house and the cathedral of Notre Dame, which are fine old Gothic edifices beautifully ornamented. The church of St. Martin is also a handsome structure. There is a nunnery, a collegiate school, an excellent academy of design, two orphan asylums, a savings' bank, a *mont-de-piété*, and, for mercantile business, an exchange and a chamber of commerce. The spinning of linen thread, and the weaving of plain and damask linsens, employ a large portion of the inhabitants. The fine linsens of Courtray are known throughout Europe. All the weaving is performed on the handloom at home, and much of it by cottage farmers. The annual quantity of unbleached linen brought to the Courtray market is about 30,000 pieces, two-thirds of which are bought by the merchants of the town, and the rest by those of Belgium, France, and England. The spinning of cotton yarn, and the manufacture and dyeing of various cotton fabrics, constitute an important branch of industry. Courtray has also establishments for the manufacture of soap, candles, salt, tobacco, chicory, chocolate, oil, wax, paper, and pottery; besides numerous breweries, tanneries, &c.

The surrounding plain is abundantly productive of all kinds of field and garden crops, especially flax, of which immense quantities are grown of the finest description, and the vicinities of the town are picturesquely varied by numerous bleaching-fields. Courtray was first built in the 6th century. It was anciently known under the name of Cortoriacum, and in the 7th century it was a municipal city. Like the other towns of Flanders, it has been subject to many rising and falling, having sustained several memorable sieges, and been burnt and plundered in war. Under its walls was fought, in 1302, the famous battle of the Spurs, between 20,000 Flemings, consisting chiefly of weavers of Ghent and Bruges, and a French army composed of 7,000 knights and noblemen, and 40,000 infantry. In this conflict the flower of the French chivalry were slain, and the victorious Flemings collected from the battle-field about 6,000 pairs of gold spurs worn by their proud and defeated foes. Amongst the antiquities that have been found, are numerous medals of the Cæsars. Fairs for all kinds of merchandise are numerous attended on Easter Monday and Aug. 21. (*Dict. Géog. de Flandres; Guide Books of Belgium*.)

COUTANCES (an. *Constantia*), a town of France, dép. La Manche, cap. arrond., on a hill on the N. bank of the Soule, 6 m. E. from the sea, and 16 m. W. S.W. St. Lô. Pop. 7,663. Streets narrow, steep, and ill-paved; houses mostly of stone, roofed with slate. It contains several old churches worthy of notice, especially a Gothic cathedral, having two spires in front, and a large square tower surmounting the centre of the cross; it is a conspicuous object, and a landmark for ships in the Channel. The town has a bishop's palace, with gardens, &c., a communal college, a public library with 5,000 volumes, and a small theatre. Druggs, cutlery, parchment, &c. are produced here; it has also marble-works, and a brask trade in corn, butter, poultry, flax, hemp, and horses. In its immediate vicinity are the remains of an ancient aqueduct, with many of the arches still very perfect. Coutances was the opposite side of the Abbe de St. Pierre.

COWES (WEST), a town and sea-port of England, co. Hants, Isle of Wight, liberty West Medina, par. Northwood, 75 m. S.W. London, 10 m. W. Portsmouth, on the acclivity and summit of a hill rising immediately from the W. bank of the Medina, at its embouchure in the channel between the Isle of Wight and the opposite coast of Hampshire. Area of par., 4,270 acres: pop. of do., 4,491. Streets narrow and very irregular; but, as the houses rise above each other from the water's edge to the summit, they have a striking effect, many of the upper and more modern ones being handsome structures commanding splendid and extensive views. In the immediate neighbourhood are numerous elegant villas. The town, which is much resorted to as a fashionable sea-bathing place, possesses ample accommodations for visitors, in hotels, lodging-houses, assembly-rooms, reading-rooms, &c. A crescent-shaped battery, defending the entrance to the harbour, has 11 heavy pieces of ordnance and accommodation for a company of artillery. E. Cowes, on the opposite side of the river, 3 m. from W. Cowes, is a small irregularly built hamlet, on the par. of Whippendham, at the foot of a hill. Here is the custom-house of the port. The harbour and roadstead of Cowes are amongst the best and most convenient in the English Channel, and form the rendezvous of the Royal Yacht

Club, and the station where their annual regatta is held. Many merchant vessels, yachts, &c. are built in the harbour, and several ships of the line were launched from it during last war. It had then also an extensive trade in the supply of provisions and stores to merchant vessels waiting convoy, &c.; and from its position it still retains a portion of this trade, though much less extensive than during the war. Most large ships outward or homeward bound from or to London are accustomed to touch at Cowes before proceeding on their voyage. It has also a considerable coasting trade. The exports consist chiefly of agricultural produce and malt; the imports of coals, manufactured goods, colonial produce, and other articles of general consumption. There are daily steamers to Portsmouth and Southampton, and passage boats to Newport, up to which the tide flows.

CRACOW, a small and nominally independent state of Central Europe, formerly part of the k. of Poland, chiefly between lat. 50° and 50° 16' N., and long. 19° 8' and 20° 12' E.; having N. and E. Poland, W. Prussian Silesia, and S. Galicia. Length, E. to W. 46 m.; breadth varying from 5 to 15 m. Area, 488 sq. m. Pop. (1837) 131,463, of whom 37,027 belong to the city of Cracow. Surface generally undulating, consisting of the last ramifications of the Carpathian mountains. The Vistula, which flows into it on the S. in its whole extent, receives several small streams from the N. in this part of its course, one of which, the Brinica, forms the W. boundary of the Cracow territory. Climate healthy, and temperate; mean annual temp. 47½ Fahr. Soil very fertile, producing sufficient corn for home consumption, and an abundance of pulse, culinary vegetables, and fruit. In 1834 there were upwards of 50,000 head of cattle, and 100,000 hogs. There are no serfs; and the land is becoming more and more subdivided among independent proprietors. The territory contains rich mines of coal, zinc, and alum; some iron also is found; and there are quarries of marble, building stone, freestone, &c. The mines of Jaworzno furnished in 1831 upwards of 128,660 korzec of coal, 1,794 quintals of alum, and 8,744 quintals of zinc. If we except breweries and distilleries, which flourish here, as in all other parts of Poland, manufactures are of no importance. In 1831 there were produced 1,660,000 litres of beer, 520,000 litres of brandy, 1,914 quintals of tobacco; 920 pieces of woollen cloth, 12,000 reams of paper, 13,032 yds. of linen cloth, with some minor articles. Commerce has until lately been chiefly carried on with Poland, but there is now a considerable trade with Prussia, the Silesias, and Galicia. Average annual amount of exports, 1,340,000 fl. (33,500,000); imports, 2,200,000 fl. (54,400,000). Next to Cracow, the principal towns are Chrzanow, Lubab, chiefly by Jews; and Krzeszowice, famous for its mineral baths. Besides the university (see next article), there are 51 parish schools, 3 superior and 2 inferior schools, 6 seminaries for boys, and 13 for girls. A foundation for defraying the expenses of poor students was established in the 16th century. The budget voted for the three years from 1838 to 1841 fixed the annual revenue and expenditure at 1,812,224 fl. (45,300,000). The state coins its own money. The armed force consists of 410 infantry and 40 mounted *gens-d'armes*. By the third partition of Poland, in 1795, Cracow passed under the dominion of Austria; but it was reconquered by the Poles in 1809, and incorporated with the grand duchy of Warsaw. At the Congress of Vienna, in 1815, the territory was erected into an independent neutral republic, under the protection of Russia, Austria, and Prussia. Agreeably to the amended constitution of 1833, the government is vested in a senate composed of a president and eight senators, two of whom are elected for life, and the other six, as well as the president, for six years. One of the latter is elected by the clergy (*chapters*) of Cracow. There is a legislative chamber, composed of 2 senators, (one of whom, chosen by the chamber, presides at its deliberations,) 4 justices of the peace, 2 delegates of the clergy, 2 of the university, and 20 representatives, chosen by the electoral colleges of the city and territory. This assembly is convoked every three years to vote the budget, to inquire into the administration of the public funds, to elect the members of the senate and the different tribunals, and to discuss the laws presented for its sanction by the senate. But since 1826 the city has been garrisoned by Austrian troops; and the government is substantially and in fact administered by the resident agents of Austria, Russia, and Prussia. And this, in truth, is the only result that could have been anticipated. No doubt it would be desirable to have small independent states like this scattered up and down the continent, to serve as *fact* for the diffusion of political information, as asylums to which persecuted individuals might resort, and as depôts for foreign produce. But the circumstances that make the formation of such states desirable are quite sufficient to hinder them from ever having any real existence. Is it to be imagined that the governments of Russia, Prussia, and Austria, should be so inattentive to their own interests as to permit a state like Cracow, on the

very borders of their territories, to become an asylum for individuals obnoxious to them, and where the latter might prosecute their projects in safety? To suppose that such a thing should be tolerated is absurd. How long should we permit a similar state to exist on the confines of our Indian empire? And have the Russians, Prussians, and Austrians, less cause for jealousy?

CRACOW (an. *Carrodunum*), a city of central Europe, cap. of the above territory, and previously to the 17th century, the metropolis of the k. of Poland; on the N. bank of the Vistula, where it is joined by the Rudawa, 160 m. S.S.W. Warsaw, and 200 m. N.E. Vienna; lat. 50° 3' 32" N., long. 17° 35' 45" E. Pop. (1837) 37,027, of whom 11,453 were Jews. The city is divided into three portions, one of which, the Jews' quarter, is built on an island in the Vistula. The quarter of Podgorze, on the Austrian side of the river, is now politically disconnected with the city, but has since 1815 enjoyed the advantages of a free town. The city has, besides, several suburbs. Cracow has near it Mount Wawel, a rock of moderate elevation, but considerable extent, on which are the castle and cathedral; and two barrows, said to be the burial-places of the founder of the city and of his daughter Vanda. The city itself is old, and irregularly built; but its streets are broad, and its churches and other public buildings, having many of them interesting monuments, and being associated with some of the most important events in Polish history, invest it with much interest. It was formerly fortified, but the ramparts have been recently converted into public walks. The royal castle of Cracow, built in the 14th century, and formerly the residence of the kings of Poland, though not in ruins, is greatly decayed. It has been partly destroyed by fire at different times, and imperfectly restored; but it has suffered more from the effects of war, having been in great part demolished by Charles X. in 1702; and still more from its change of masters at one time, it was used by the Austrians for barracks, and now serves for a workhouse. Of the 76 churches formerly in Cracow, 40 are in ruins; the cathedral alone has retained its splendour and costly decorations, for which, and for its monuments, it is justly celebrated. Around its interior are 20 small chapels, crowned with domes in the Byzantine style. Most of the Polish kings, and many illustrious men are buried in it; among others, it contains the tombs of Casimir the Great, of John Sobieski, the deliverer of Vienna, and of the "last of the Poles," Kosciuszko and Poniatowski. The other churches and palaces have fine paintings, statues, and ancient monuments. The episcopal palace is the most striking of the modern edifices, its walls being adorned with paintings in fresco, representing the most remarkable events of Polish history.

The university, founded and endowed by Casimir the Great, and improved by Ladislaus Jaghellon, has lost most of its ancient importance; and though the subjects of the neighbouring powers be prohibited from studying in it, at an average of the five years ending with 1837, it had 271 students. Cracow contains a college, a school of arts, an academy of painting, a public library with 30,000 vols. and 4,500 MSS., an observatory, a botanical garden, theatre, &c. There are five printing presses, from which seven periodical publications are issued, one daily, the rest monthly and quarterly. The articles of export and import consist principally of skins, linen, wax, corn, wood, Hungarian wines, and manufactured articles from England and Germany; but commerce has greatly declined since Russia, in 1833, prohibited the introduction of foreign wares into Poland through Cracow. Since 1831, the city has possessed a national bank. Its environs are remarkable for their picturesque scenery.

About a league W. of the city is an artificial tumulus erected to the memory of Kosciuszko. "On the 16th of Oct. 1820, the senate of Cracow, accompanied by vast numbers of the nobles and the people from all the adjacent provinces, proceeded to deposit the first load of earth upon an eminence not far from the walls of the city, which had been selected to bear a mountain tumulus in honour of the patriotic general. For four years this great work was eagerly pursued; citizens of every rank toiled at the wheelbarrow; parcels of the sacred soil were sent to join the mass from all the great battle-fields which had been sprinkled with Polish blood; and the mound gradually rose to an altitude of about 150 ft. This monument of clay, planted on the soil which has been most frequently and grievously convulsed by political revolutions, will probably maintain its place as long as the world is habitable by men. Of all the structures of our age, if structure it can be called, this alone seems raised for all time—a thing lasting in itself, lasting the name it bears, and lasting by the spirit which made it, when those who raised it shall all be scattered in uncollected dust." (*Reveries Sketches of Bohemia, &c.*)

This city is said to have been built about the year 700, by Krak, a Polish duke, from whom it derived its name. It successively belonged to the Moravians and Bohe-

slains; and was taken from the latter at the end of the 10th century by Boleslaus the Great, who made it the cap. of Poland. In the 18th century it contained three times its present number of inhab.; but it has, notwithstanding, materially improved of late years. In 1784, the pop. did not exceed 16,000; the pop. of the city and territory increased 5,000 during the five years ending with 1837. (*Cosse's Travels in the N. of Europe*, i. 125; *Official Returns*.)

CRAIL, a royal and parl. bor. of Scotland, co. Fife, 2 m. from the *East Neuk* of Fife, or Fife Ness. Pop. 900. It is a decayed place, destitute of trade or manufactures. Many of the houses, however, are of that massive description that indicates former greatness. David I. had a palace here, which is now entirely demolished. The par. church was once collegiate, with a provost, sacrist, and ten prebendaries. (*Keith's Scottish Bishops*, edit. 1824, p. 467.) The famous James Sharp, afterwards archbishop of St. Andrews, murdered by the Covenanters on Magus Muir in 1679, was once minister of Crail. Coal is abundant in the neighbourhood. It unites with five small neighbouring burghs in sending a m. to the H. of C. Parl. constit., 1838-39, 44.

CRANBOURNE, a town and par. of England, co. Dorset, div. Shaston. Area of par., 13,730 acres. Pop. of do. (1831), 3,158. The town is situated in an open pleasant district, 12 m. S.W. Salisbury. The church is a fine old structure, partly in the Norman, and partly in the earliest Gothic, with a noble tower in the later Gothic style. There is an almshouse for 3 old people, and a few smaller charities. Market, Thursday; fairs, chiefly for cheese and sheep, Aug. 24. and Dec. 6. The riband manufacture, formerly carried on here, has declined, and the inhab. are now chiefly employed in agriculture. This par. is the supposed arena of the battle between the British, under Boadicea, and the Romans. Numerous barrows are dispersed over it, in which bones, urns, &c. have been found. On the Castle-hill, S. of the town, are the remains of a circular fortification, enclosing an area of 6 acres. Cranbourne Chase, a tract extending nearly to Salisbury, was celebrated during both the Saxon and the Norman periods. An old embattled manor house, called the Castle, still exists, which was occasionally the royal residence; in its hall courts were held; and there is a dungeon for the confinement of those who infringed on the game laws. Bishop Stillingfleet was a native of Cranbourne.

CRANBROOKE, a town and par. of England, co. Kent, lathe of Scray, hund. Cranbrooke. Area of par., 10,400 acres. Pop. (1831), 3,244. The town, on the Crane (a small stream traversing the Weald district), 38 m. S.S.E. London, consists of a main street, nearly 1 m. in length, and a smaller one diverging from it: many of the houses are well built, and it is partially paved and lighted, and amply supplied with water. The church, rebuilt about 1730, in the later Gothic style, has a lofty embattled tower. There are also 6 dissenting chapels; a grammar-school, endowed by Queen Elizabeth and others, with lands, &c., producing 300*l.* a year; a writing-school, founded in the same reign, with a small endowment; and a national subscription school. Market, Wednesday. A school for the corn and hops; there is also a cattle-market every alternate Wednesday; and fairs for horses and cattle, May 30. and Sept. 29.; the latter being likewise a large hop fair. The woollen trade, introduced here by Edward III., and long considerable, has disappeared; and the trade in hops is now the staple business of the place. Sir R. Baker, the antiquary, and Huntington, the founder of a religious sect, were natives of this place.

CRAYFORD, a town and par. of England, co. Kent, lathe Sutton-at-Hone, 11 m. E. by S. London. Area of par., 2,380 acres. Pop. of do., 1831, 2,922. The town, situated on the Cray, about 4 m. above its confluence with the Darent, and on the great road from London to Dartford, consists of a long irregular street. The church is a good modern structure, on an acclivity at the higher end of the town. Its market has been long discontinued, but an annual fair is held Sept. 8. Until a recent period, extensive print-works were carried on a little below the town; and a mill for flattening iron and splitting iron into hoops, one of the first of its sort constructed in England, is still in operation. In the parish are numerous artificial caves upwards of 100 ft. in depth, increasing in magnitude as they recede from the earth's surface. Some of them contain several distinct apartments, excavated in the chalk, supported by pillars left at intervals for the purpose. Their origin is a matter of dispute; some having supposed them to be mere chalk quarries, while by others they are supposed to be places of security excavated by the ancient Britons or Saxons as receptacles for their families and goods during periods of danger. The Roman station, *Noviomagus*, is supposed to have been near Crayford, contiguous to which, A. D. 47., was fought the great battle between Hengist and Vortigern, which ended in the total defeat of the Britons.

CRECY, an inconsiderable village of France, dép. Somme, 11 m. N. Abbeville, famous in history for the victory gained here on the 25th of August, 1346, by the English forces under Edward III. over the French under their king Philip of Valois. The French army is believed to have amounted to about 120,000 men, while that of the English was under 40,000; but the superior discipline and good order of the latter more than counterbalanced their inferiority in point of numbers, and enabled them to achieve one of the greatest victories of which we have any account. The loss of the French in the battle and pursuit has been estimated at 1,300 knights, 1,400 gentlemen, 4,000 men at arms, and about 30,000 inferior troops. Besides the king of France, there were in the defeated army the kings of Bohemia and Majorca, both of whom were killed. The crest of the former, consisting of three ostrich feathers, with the motto *Ich dien (I serve)*, was adopted by the Black Prince, the eldest son of Edward, whose bravery was most conspicuous on this occasion; and has been continued as the crest and motto of all subsequent princes of Wales down to the present times. The loss on the part of the English was comparatively trifling. It has been said that caution were first employed by the English in this battle, and that they contributed not a little to their success. (*Rapin's Hist. of England*, iii. 458. 8vo edit.; *Hume's do.*, cap. 15.)

CREDITION, a town and par. of England, co. Devon, hund. Crediton, 7 m. N.W. Exeter. Area of par., 11,440 acres. Pop. 1821, 5,515; 1831, 5,922; of which the town may have about 2,000. The latter is situated in a narrow vale between two steep ridges, through which the Creedy flows and joins the Exe, a little lower down. It is divided into 2 distinct parts, the E. or ancient town, and the W. more modern and larger part, consisting chiefly of a broad street along the principal line of road from Exeter to N. Devon; and there are many respectable houses, and extensive improvements are now in progress, to facilitate which the ancient market-place, in the centre of the High-street, has been removed, and a modern structure, more conveniently situated, been substituted in its stead. The church, a noble building in the later pointed style, with a fine tower springing from the centre, was rebuilt in 2 Henry VII. There are 4 dissenting chapels; a free grammar school, founded by Edward VI., for boys of Crediton and Sandford par., it has 3 exhib. to either university; a blue coat school, founded 1730, and incorporated with a national school established 1814, in which 150 boys are instructed, 80 of whom are clothed; a mathematical school, founded 1794, for 12 boys; 2 sets of ancient almshouses, and several minor charities. Market on Saturday; a great cattle market, last Saturday in April; fairs, for cattle, May 11., Aug. 21., Sept. 21.: all these markets and fairs are large, and numerously attended; the town being in a fertile district, with some of the best grazing land in the co. near it. The majority of the labouring pop. are now employed in agriculture; formerly there were several large woollen and serge manufactories: at present, however, there are no resident manufacturers, though many females weave long Ellis at their own dwellings, for manufacturers resident in N. Devon. A flax manufactory at Fordton, near the town, employs 50 hands; and there are some large flour mills. The petty sessions of the div. are held at Crediton; and it is the centre of a poor union of 29 par., with a large district workhouse, recently built; its own average rates, 3,821*l.* This town sent mem. to the parl. at Carlisle, in Edward I. (*Willis's Not. Parl.*). It was several times the head quarters of each party during the last civil war. In 1743 it was nearly destroyed by fire, and was also seriously injured by fire in 1769.

CREETOWN, a neat marit. village of Scotland, co. or stewartry of Kirkcubright, par. Kirkmahreck, at the head of Wigton Bay, where the Creel or Cree runs out on the road between Dumfries and Portpatrick. A small packet-boat plies once a day between this place and the town of Wigton, on the opposite side of the bay, a distance of about 4 m.; and there is a regular ferry about 1 m. above the town. The hills in the neighbourhood of Creetown seem to be almost entirely composed of granite; and an extensive granite quarry, within 2 miles of the village, held on lease by the Liverpool Dock commissioners, affords employment to about 300 persons. The commissioners have erected a temporary harbour in the vicinity of the quarry, and export the stone to Liverpool in their own vessels. There used formerly to be large beds of sea shells in the vicinity, the shipment of which for manure to other places was a considerable source of employment; but these are now nearly exhausted. The late Dr. Thomas Brown, the celebrated ethical philosopher, was born here in 1780, his father being minister of the parish.

CREFELD, a thriving town of Rhénish Prussia, cap. circ. same name, in a fertile plain, 6 m. W. from the Rhine, and 13 m. N.W. Düsseldorf. Pop. (1835) 14,750. It is the principal town of the Prussian dom. for the manufacture of silks, silk velvets, silk threads, &c.

These fabrics are said by Zedlitz and Cennabich to employ, in Crefoed and its vicinity, about 2,800 looms, and 6,000 thiners a year. A large proportion of the silks introduced into England as French, are really made in Crefoed. It has also fabrics of woollen, cotton, and linen stuffs, lace, oil-cloth, camlets, and earthenware; with tanneries, distilleries, &c. The town is well built, with wide streets and neat houses. It has four churches, an orphan and a deaf and dumb asylum, an hospital, a high school, police and commercial courts, &c.; and is the seat of the court of justice for its circle. In its vicinity is an old castle now used for a silk-dyeing establishment. In the latter half of the 17th and beginning of the 18th centuries, its pop. was greatly augmented by many reformists, Mennonites, &c. expelled from the neighbouring duchy of Juliers, and who, in return for their hospitable reception, introduced those manufactures to which the town owes all its prosperity. (*Zedlitz, Der Preussische Staat*, p. 419.; *Cennabich*.)

CREMA, a town of Austrian Italy, deleg. Lodi and Crema, cap. 2 distra., on the Serio, 25 m. E.S.E. Milan. Pop. near 9,000. It is surrounded by a brick wall, a ditch, and some other old fortifications, and has a castle, which, before the use of artillery, was considered one of the four strongest fortresses in Italy. It is well built; streets spacious; palaces and public edifices numerous, including a cathedral and many other churches, an hospital, three separate charitable asylums, a *monte-di-pieta*, and two theatres. It has manufactures of lace, hats, linen thread, silks, &c., and is celebrated for the excellence of its flax. Very good wine, fruit, and fish, are obtained in its vicinity.

Crema was founded about 570 A.D., during the reign of Alboin, the first Lombard king of Italy. In 1159 it was sacked by Fred. Barbarossa; it was taken by the French in 1757, the day after the capture of Lodi. (*Rampoldi*; *Ortografia*.)

CREMONA, a city of Austrian Italy, cap. deleg. same name, on the left bank of the Po, 46 m. S.E. by E. Milan, and 26 m. N.W. Parma; lat. 45° 7' 43" N., long. 10° 2' 12" E. Pop. 28,500. It is of an oval shape, about 6 m. in circ.; is surrounded by walls, bastions, and wet-ditches, and defended by a citadel. It is well laid out, but, "like most of the cities of Lombardy, it has a melancholy appearance, from the evident signs of decay, and large tracts of grass being seen in many of the broad and regular streets. Among its 41 churches, the *Duomo* alone has any particular attractions. This is an ancient edifice in the style of architecture approaching to Saxon, mixed with a sort of mongrel Italian. If not beautiful, it is at least picturesque; and its lofty tower, 372 ft. in height, is singularly so, being adorned with a sort of rich open work: it is one of the highest in Italy. The interior is composed of a nave with two aisles, divided by eight immense pillars, above which are a series of paintings by Bordonone. Near the cathedral is an octagon baptistery, said to have been once a temple of Minerva. In the town-hall, among others, there is a picture by Paul Veronese. The convents are upwards of 40 in number, and there is an obscure university." (*Italy, in Mod. Trav.*, &c.)

Cremona is the residence of the delegate of the prov. and seat of a bishopric; it has civil, criminal, and commercial tribunals, a lyceum, gymnasium, superior and female schools, several well-attended infant schools, which were the first institutions of the kind opened in Italy, a public library, numerous collections of works of art, two theatres, barracks, a *monte-di-pieta*, and several hospitals, asylums, and other charitable institutions. The manufactures of silk and cotton fabrics are considerable, and there are others of porcelain and earthenware, dyes, and chemical products. During the 17th, and the earlier part of last century, Cremona was highly celebrated for its musical instruments, especially its violins made by the Amati and Stradivari. Instruments by these makers are now very scarce, and fetch an extraordinary price; and the manufacture of violins and strings has greatly declined. Cremona has a brisk trade in corn, flax, cheese, silk, oil, honey, wax, &c.; the flax grown in its vicinity much esteemed. This city is very ancient: it was probably founded originally by the Gauls, and, together with Piacenza, was the seat of the first colony established by the Romans in Cisalpine Gaul; but its antiquities have been swept away by the successive revolutions it has undergone. Having espoused the cause of Brutus, Augustus divided its territory among his veterans; and this being insufficient for the purpose, he added to it the territory of Mantua, as is well known from the line of Virgil:—

Mantua vi misere nilum vicina Cremona: ix. 26.

But it speedily recovered from this disaster, and rose to great wealth and eminence. Certainly, however, it was, as *Tacitus* says, "bellis civilibus infelix." In the struggle between Vitellius and Vespasian it was occu-

pled by the troops of the former, and, being taken by those of the latter, it was sacked and burnt by the infuriated soldiery. (*Tacit. Hist. lib. iii. §§ 26—33.*) It was again, in as far as practicable, restored by Vespasian. From the 12th century, downwards, its history is identified with that of Milan. In 1796 it opened its gates to the French; and from 1800 to 1814 was the cap. of the d^{ép.} Alto-Po. Vida, bishop of Alba, one of the best modern Latin poets, was born at Cremona in 1490. (*Oesterr. Nat. Encyc.*; *Rampoldi*, &c.)

CRETE (vulg. CANDIA), a large and celebrated isl. of the Mediterranean, belonging to the Grecian Archipelago, of which it forms the S. boundary. It lies between 34° 57' and 35° 41' N. lat., and 23° 29' and 25° 20' E. long., its N.W. extremity being 80 m. S.E. Cape Matapan, in Greece, and its N.W. termination 110 m. S.W. the nearest point of Asia Minor. It is long and narrow, its length from E. to W. being about 160 m., with a breadth varying from 6 to nearly 50 m. but averaging about 20 m. Area, 3,260 sq. m. Pop., according to Pashley, in 1834, 129,000; and according to a return by the British consul, in 1839, 158,000; of whom 100,000 are native Greeks, 44,000 Turks, and the remainder Hellenes, Jews, and other foreigners, Arab and Albanian troops, and about 2,000 black slaves. Previously to the breaking out of the late Revolution, the pop. was estimated at 270,000. At the period when it was used by the Venetians, Crete had probably a pop. of 360,000 or 600,000, but it fell off greatly under their oppressive and rapacious sway. Its fertility, and the number and magnitude of its ancient cities, warrant the supposition that the pop. in antiquity may have amounted to 1,000,000 or 1,200,000. (*Pashley*, i. 326.) The isl. at present belongs to the viceroy or sovereign of Egypt, and is divided into the three prov. of Candia, Retimo, and Canea, so named from their respective capitals. These prov. are subdivided into 20 eparchies, or districts, of which Candia comprises 11, Retimo 4, and Canea 5.

Topography.—Crete is almost wholly covered with mountains. A serrated range stretches through its whole extent E. to W.: in the E., although rugged and barren it attains no great elevation; but as it proceeds westward, its peaks increase in height, and are covered with snow even in June. At the W. extremity of the island, the range of the White, or Sphakian mountains, rises to perhaps 5,400 ft. and Ida (now Psiloriti) the loftiest as well as the most famous of the Cretan mountains, nearly in the centre of the island, is crowding to Sisehr 7,674 ft. high. Ida, however, would seem to have little besides its height and classical celebrity to recommend it. Tournefort says, "*Cr celebre Mont Ida ne montre qu'un gros vâlain dux d'une tout pelle: on n'y voit ni paysage, ni solitude agréable, ni fontaine, ni ruissseau.*" (i. 53.) The different mountain ranges abound with grottos and caverns, some of which are alike extensive and celebrated. Every classical reader is, of course, acquainted with the history of the famous labyrinth in which Minos kept the Minotaur killed by Theseus, nearly of great extent and capacity, which answers in all the most essential particulars to the accounts given of the labyrinth, in a hill at the S. foot of Mount Ida, about 3 m. from the ruins of Gortyna, has been visited and described by Tournefort, (i. 65.) Cockerell, (*Walpole's Memoirs*, i. 405.), and others. It has been supposed by some that this cavern, which consists principally of many long winding and narrow passages, which can only be safely explored by means of a cine, was a quarry whence the stones used in the building of Cnossus and Gortyna had been derived; but any such supposition seems wholly out of the question: it is not possible to imagine, had it been a quarry, that it should have been excavated in narrow winding passages, as that would have added immeasurably to the difficulty and cost of procuring the stones. Tournefort has supposed it to have been originally a natural cavern, and that it had been improved and perfected by art, to make it a place of concealment, or refuge, in periods of distress. This learned and excellent traveller does not, however, suppose that this cavern can be identified with the famous labyrinth; but though the question be not free from difficulty, its substantial coincidence with the distinguishing traits ascribed to the labyrinth, seems to leave little room for doubt as to their identity.*

On every side of the island, but especially on the S., the mountain region extends quite to the coast, which is generally lofty and inaccessible. The N. shores present several remarkable headlands, as capes Rosa

* Mr. Pashley dismisses this question in a very brief, if not very satisfactory manner, by denying that the Cretan labyrinth ever existed any more than its fabled occupant, the Minotaur! (i. 306.) But it is needless to say, that the fact of the stories connected with the Minotaur being fabulous, affords no room or ground for denying the existence of the labyrinth; the more so when the traveller, who has been bewildered in the mazes of the existing Gortynian cavern, and who has experienced the absolute necessity of a clue to guide him (through its windings, must admit that it is admirably adapted to the Athenian tale of Theseus." (Cockerell in Walpole, loc. cit.)

(Coryseum), Spada (Pacon), Melek (Cyamon Pr.), St. John, Salmons, &c., and are indented by many extensive bays, the chief of which are those of Kisamos, Khamia, Sudha, Armyro (*Amphimalle*) and Mirabel. There are some tolerable harbours on this shore: but of these the S. coast is entirely destitute, and presents only one point worthy of notice, Cape Matala, the most southerly of all belonging to Europe. Several small islands surround Crete, as Grabusa, Dhia, Gozo, &c., and in the Bay of Sudha, are the Leuca, supposed to be the isles of the Syrens celebrated by Homer. The plains are few; the chief are those in the N. of Crete, surrounding the towns of Canea, Candia, &c., and the larger one of Gortyna or Messara, in the S., through which the Messara, the largest stream, flows. There are no rivers of any importance, but every little ravine in the furrowed sides of the mountains bears its tribute of melted snow to the rich alluvial valleys lying at their feet, rendering them abundantly fertile. At the E. and W. extremities of Crete there are a few unimportant lakes.

Climate, and Natural Products.—In the lower parts of the country it never freezes, and in summer the heat would be intolerable if not tempered by N. winds, which are then prevalent. It rains occur mostly in the spring and autumn. The country is generally healthy, and subject to few endemic diseases. Granite, schist, slate, &c. are amongst the primary rocks of the mountains, but calcareous formations, as in Greece, are the most common. Crete is not rich in metals: there are no mines, though Diodorus Siculus, and other ancient writers preserve the tradition that iron was first discovered here. The mountains are clothed with woods of oak, chestnut, walnut, and pine trees, and the plane, cypress, myrtle, wild olive, vine, carob, alse, arbutus, *ficus indicus*, and a multitude of fine fruits and vegetables grow spontaneously, while the ground is fragrant with aromatic herbs. For luxuriant vegetation it presents a wide and favourable contrast with some of the arid regions of continental Greece. The wild boar, wild goat, wolf, &c. are met with in the forests, and game of various kinds is plentiful. Birds of prey are numerous, but reptiles are few. (*Pashley, Scott, &c.*)

Agriculture, &c.—From 1821 to 1830, Crete suffered the worst evils of a sanguinary and devastating war, and though its agriculture be now somewhat revived, it is still in a most deplorable state. Its male pop. has been more than decimated, its olive plantations and vineyards uprooted, its villages burned down, and much of its most productive land been overgrown with rank vegetation. The soil is for the most part light, and but little adapted for the culture of grain. Wheat, barley, oats, &c. are, however, grown, and,

previously to the late revolution, wheat was annually exported: but sufficient corn is not produced for home consumption, and Crete is obliged to depend for supplies on Egypt and Barca. The chief products are oil, alk, wine, raisins, carobs, valonia, wool, oranges, lemons, wax, honey, linseed, and almonds. Cotton and flax are also cultivated, and in the mountains many of the fruits and vegetables of colder climates. The oil is good. Cretan wine is frequently eulogised by ancient authors. In the middle ages it held the first place amongst the exports, and under the names of malmsey and muscadine, considerable quantities were sent to England. The pastures are fine, and cattle of all kinds are reared, but their exportation is prohibited. Poultry are everywhere plentiful. Almost every peasant has his own farm; those who have not, cultivate the lands of the aga, or district governor, on a kind of metayer system, the lessor furnishing the seed and all the necessaries of husbandry, and dividing the crops in equal proportions with the cultivator, after deducting the seventh, to be paid to the government, and the seed previously advanced. The Mussulman rural population has been diminishing ever since the island fell under the Egyptian rule. Finding they are no longer able to obtain the forced labour of the Greeks, they are continually selling their lands, which are as eagerly purchased by the Greeks, who often borrow money for the purpose at an interest of 20 to 30 per cent. per ann. Landed property gives at an average a net profit of 8 to 10 per cent. per ann. Labourers are paid 6d. to 7½d. a day, with food, or 10d. to 14d., without. They can always gain considerably more than their expenses. (*Consular Report, &c.*)

Manufactures inconsiderable. The chief are those of soap, leather, and spirits: the rest consist only of domestic manufactures, as coverlids, sacking, and coarse cloths, woven by women and children. There are 64 soap manufactories at work, capable of producing 6,000 tons a year, though the article more than half that quantity is made. The article is of good quality, highly esteemed in the Levant and fetches the highest price in the market at Trieste. (*Consular Report, &c.*)

Trade.—In 14 months of 1817 and 1818, before the ravages of the revolution had destroyed the olive trees, 119,779 Venetian barrels of oil, worth 131,300*l.* were exported. The exportation of raisins also used to amount to 60,000, 80,000, or even 100,000 quintals annually. A considerable trade in carobs and white wax carried on, and 45 soap factories existed, which supplied Smyrna, Constantinople and various parts of Turkey. The average quantities of the principal articles exported and imported have been estimated as follows:—

Exports.	Quantities.	Value in Turkish piastres.	Imports.	Quantities.	Value in Turkish piastres.
Oil - - -	3,500,000 okes	8,750,000	Manufactured goods - - -	- - -	3,630,000
Soap - - -	50,000 quintals	6,600,000	Hides, leather, &c. - - -	- - -	2,800,000
Almonds - - -	- - -	195,000	Wheat - - -	70,000 quilots	980,000
Cheese - - -	50,000 okes	137,500	Barley - - -	360,000	2,160,000
Silk - - -	11,000	1,320,000	Legumes, &c. - - -	90,000	1,080,000
Carobs - - -	40,000 quint.	320,000	Rice - - -	280,000 okes	560,000
Wax - - -	15,000 okes	202,500	Soda (for soap) - - -	35,000 quintals	1,575,000
Chestnuts - - -	200,000	100,000	Cod and salt-fish - - -	6,000	775,000
Raisins - - -	6,000 quint.	168,000	Tobacco - - -	160,000 okes	640,000
Wool - - -	130,000 okes	390,000	Coffee - - -	50,000	400,000
Oranges and lemons -	2,500,000 No.	200,000	Sugar - - -	80,000	382,500
Vallonea - - -	2,500 quint.	80,000	Wine and spirits - - -	- - -	690,000
Apples and pears - -	150,000 okes	75,000	Wood - - -	- - -	690,000
Honey - - -	14,000	42,000	Butter - - -	50,000	350,000
Linseed - - -	25,000	15,620	Cutlery - - -	- - -	300,000
Malze - - -	30,000	30,000	Oxen and sheep - - -	5,400 head	150,000
Snails - - -	20,000	15,000	Other imports - - -	- - -	935,500
Total - - -	- - -	18,540,620	Total - - -	- - -	17,818,000

In two recent years, the total exports and imports amount to —

Years.	Exports.	Imports.
1836	161,708	151,654
1837	64,440	119,904
Decrease (1837)	97,268	32,450

The falling off in the latter year was caused by the failure of the oil crop of 1836. That of 1837 was nearly as bad, and the circumstance caused a great depression of trade and prosperity.

The average consumption of British manufactures and metals amounts to about 2,000*l.* annually: these goods come chiefly through Syra and Trieste. The calicoes and cottons imported come chiefly from England, the woollens from Belgium, rum from Leghorn and Smyrna, and butter from Barbary and Russia.

Canea is the chief commercial port, next to it Candia and Retimo, and generally no goods are allowed to be exported or imported but at one of these towns.

The roads are so bad as to be nearly impassable even for mules. Most of the bridges have been destroyed, and all communication is often cut off by the inundations during rains. Government is endeavouring to remedy these defects, and has already spent 37,000*l.* in repairing roads, &c.: an aqueduct for supplying water is amongst the public works it has recently undertaken. (*Consular Report; Pashley, Append.*)

Government, Taxation, &c.—Crete is governed by a pasha, and each province by a president with a large salary, who is either a European or Asiatic Turk. In each province there is a council consisting of the cadî, treasurer, and other functionaries, and of a Turkish and a Greek representative from each of its districts, chosen however not by the district they represent, but by the pasha himself, from whom they receive a salary. These councils decide on all judicial questions within

their respective provinces, and professedly according to the code-Napoleon. Questions are all put to the vote, but it cannot be expected that such assemblies should be very independent. The will of the president determines the council. The public revenues and expenditure are estimated as follows:—

Receipts.		Expenses.	
	Piastres.		Piastres.
Seventh of all produce	6,400,000	Salary of pasha -	800,000
Duty on sheep and goats	200,000	Expenses of councils -	535,540
Ditto on exports -	2,091,725	Treasury -	120,000
Ditto on imports	375,013	Customs and printing-	
Duties and other revenue	718,951	office -	77,079
		Army, &c. -	7,885,540
	9,785,691		9,418,159

A recent Consular Report enumerates, among the sources of revenue, a capitation tax of about 6s. per head on all males above the age of 13, and assumes the average yearly revenue at about 87,709*l.*, and the expenditure at 100,000*l.*

Mehemet Ali, on entering on possession of Crete, was tied down by the allied powers to impose no fresh taxes, and for a short period he endeavoured to amuse and pacify the Cretans with the hopes of good government. But he soon commenced breaking his promises. He began by levying a duty on all wine, of one eighth its value; next he increased the export duties on oil and many other articles, and laid taxes on articles which had never been taxed before. The *octroi* was introduced; the capitation tax was raised from 4, 8, or 12, to 15, 30, and 60 piastres per head; and from these and various other sources 6,000*l.* a year additional was raised. The seventh of the corn due to government is now obliged to be thrashed out and delivered by the farmer before he may attend to the rest of his crop; and all private oil-mills that may have fallen into disuse are not suffered to be repaired, that government may secure to itself the monopoly of the olive pressure. (*Consular Rep.; Pashley, i. 28.*)

The armed force amounts to about 4,500 men, chiefly Arabs and Albanians. There are 8 fortresses, mounting altogether 468 pieces of cannon. The fortifications of the principal towns are kept in good order; but those of the others are in quite the contrary predicament.

Religion, &c.—Before the revolution, the Christians and Mohammedans were nearly equal as to numbers; the balance is now greatly in favour of the former. The island is divided into 8 bishoprics, the metropolitan bishop residing at Candia. There are 30 large monasteries and many small ones in the island; and, like the mosques, they are all endowed, and possess extensive lands. The patriarch of Constantinople receives annually from Crete about 250,000 piastres (2,500*l.*). The priesthood are generally very ignorant. There are 2 schools at Candia, and the same number at Retimo; and an American missionary school has been recently established. The total number of scholars is about 400. (*Consular Report, &c.*)

People, &c.—The Cretans are stronger built than the inhab. of the other Greek islands; but it is said that generally they have not the same intelligence or vivacity. They are frugal, inoffensive, and superstitious in the extreme. Both ancients and moderns have accused them of being excessively addicted to lying and thieving; but Pashley (i. 36.) thinks that in the interior, at least, they hardly deserve this character. They are polite and ceremonious, and dress like other Greeks, except that the men all wear high boots, and the women, when abroad, cover the face. Their dwellings are mean and comfortable; the food the peasantry consists mostly of barley bread, cheese, olives, pulse, and vegetables, cooked with an abundance of oil. The language is modern Greek.

Antiquities and History.—Crete is highly interesting from its classical associations. Its history leads us back to the earliest mythological ages. It was the birthplace of Jupiter, "king of gods and men." Adventurers from Phenicia and Egypt introduced arts and sciences into Crete, while Greece and the rest of Europe were involved in the darkest barbarism. The laws of Minos served as a model to those of Lycurgus; so that Crete became, as it were, the channel by which the civilisation of the East was transferred to Europe. Its wealth, and the number 100) and flourishing condition of its cities, particularly those of Cnosus, Gortyna, Cydonia, &c., are repeatedly referred to by Homer. Unluckily, however, the most violent animosities usually subsisted among the principal cities of the island, which formed so many independent republics; and Crete was thus prevented from playing any conspicuous part in the affairs of Greece, or from making that figure in history it could hardly have failed to make had it been a single state. It was con-

quered by the Romans, after an obstinate resistance, anno 67 B.C. After being possessed for a while by the Byzantine emperors, the Saracens took it in the 9th century; but being expelled in 962, it was again restored to the eastern empire. The Genoese, and the Marquis of Montserrat, afterwards successively possessed it. The Venetians bought it of the latter in 1204; and in 1669, after a 24 years' war, it was conquered by the Turks. The revolution in Greece was followed by one in Crete, which deserved, and would doubtless have obtained, a happier issue had not the allies confirmed the gift of the island, in 1830, by the sultan, to Mehmet Ali, for his services during the war. Before the outbreak of the Greek revolution, Crete was the worst governed and most oppressed province of the Turkish empire. Since it has belonged to Egypt, notwithstanding the tyrannical rule of the viceroy, some amelioration has been experienced; but the Cretans "still sigh to be united to Greece, or to be taken under the protection of some European power," a protection to which their ancient fame, and their sacrifices in the cause of freedom, give them a well-founded claim. For further information as to the ancient laws and institutions of the Cretans, see the learned and excellent treatise of St. Croix, *De la Législation de Crète*, annexed to his treatise *Des Anciens Gouvernements Fédératifs*. Tournouret gives the best description of the island, and the best account of its antiquities.

CREUSE, a dep. of France, reg. centre, having N. the depts. Indre and Cher, E. Allier and Puy-de-Dôme, S. Corrèze, and W. Haute Vienne. Area, 558,341 hect. Pop. (1836) 275,234. Surface mostly mountainous, with a general slope towards the N. Some of its mountains are so environed with volcanic products as to leave little doubt that they were formerly active volcanoes. Plains of any extent few. Rivers numerous, including the Creuse (whence the dep. has its name), Cher, Tardes, &c., but none navigable. Climate rather severe; the summer being comparatively short, and the winter long and rigorous. Soil, except in the valleys, sandy and little productive. Arable lands occupy about 240,000 hect., pastures 125,000 do., and heath, wastes, &c., 122,000 do. Agriculture is in general very backward, as was remarked on a large scale. Corn, the chief part of which is rye, is not grown in sufficient quantity for home consumption. Fruits of various kinds are cultivated, but wine is furnished from the neighbouring depts. Cattle-breeding is rather an important branch of industry. In 1830 there were 110,300 head of black cattle, and 498,000 sheep. The oxen, which are of a middle size, fatten readily, and form a portion of the supply for the Paris market. The sheep supply annually about 350,000 kilog. of wool, but it is mostly of inferior quality. Hogs are reared both for home consumption and for exportation. The management of bees is well understood, and the honey and wax are excellent. Property is here very much subdivided; more than three-fourths of the estates in the dep. being assessed below 20 fr. a year, and there are but 5 that pay an annual tax of 1,000 fr. Some coal mines, and quarries of granite, building-stone, and plastic clay, are worked. Manufactures very few: the chief are those of carpets, at Aubusson and Felletin, of the value of from 1,000,000 fr. to 1,200,000 fr. a year; a porcelain factory at Bourgneuf, and some factories of paper, coarse woollen and linen cloth, glass, earthenware, leather, &c. The exports are limited to some thousand head of cattle, timber, coarse woollens, carpets, and pottery, with hair, which the females of this dep. supply in exchange for articles of dress, &c., to the extent of many cwt. a year, sent to the *coiffeurs* of Paris. The imports include most articles of prime necessity, including all the wine and nearly all the wheat consumed, with iron, salt, colonial produce, horses, silks, drugs, &c. The depressed state of agriculture and manufactures, and the consequent want of employment, occasion the annual emigration of from 28,000 to 28,000 labourers, who resort to other parts of the kingdom in search of work and wages. They leave home in small parties of from 4 to 12, which sometimes augment on the road to 300. Each of these parties travels under the conduct of a master, who undertakes work, and engages and pays those who travel with him. The period of emigration is from March to December. Creuse is divided into 4 arrond. It sends 4 mem. to the Ch. of Dep. Number of electors, 770. Chief towns, Guéret, the cap., Aubusson, Bourgneuf and Felletin. Public revenue (1831), 3,733,684 fr. Generally speaking, this dep. is remarkably free from crime. The whole are poor, economical, and excessively litigious. The women share in the most laborious occupations. According to Hugo, "Ce ne sont ni les grâces, ni la beauté, qui font le mérite des filles de campagne; elles sont recherchées des jeunes gens sur leur réputation de bonnes travailleuses, fortes ouvrières, et soigneuses dans l'intérieur de la maison." (*Idem, art. Creuse, French Official Tables.*)

CREWKERNE, a town and par. of England, near the S. border of the co. of Somerset; in a vale watered by the Parret and Axe. Area of par., 5,810 acres. Pop.

(1831) 2,799. The town, 16 m. S.E. Taunton, consists chiefly of 8 streets, diverging from a central market-place, and is paved, lighted with gas, and amply supplied with water. The church, a cruciform structure in the later Gothic style, has a fine elaborately-ornamented tower, and the windows and interior also present rich specimens of tracery, &c.; a free grammar-school, founded in 1449, has an annual revenue of 300*l.*, and there are 4 exhib. from it to any college in Oxford. There is also a national subscription school, and 2 sets of almshouses, founded in 1707, the one for 6 old men, the other for 6 old women. Market-day, Saturday. It is an extensive one for corn, and is a commodious modern market-house. A fair is held Sept. 4. for horses, cattle, cheese, and linen goods. There are manufactures of sail-cloth, dowlas, and stockings, each of which employs a considerable number of hands.

CRICKLADE, a par. bor. of England, co. Wilts, hunds. Highworth, Cricklade, and Staple, in an open level tract, at the junction of the Churn and Key with the Isis, 75 m. W. N.W. London. Pop. (1831) 1,642. It consists chiefly of a long street of mostly built houses, paved, but not lighted, and very inadequately supplied with water. It comprises two par., St. Mary and St. Sampson, and a township, including in all an area of 5,840 acres. The church of the former par. is small and antique, while that of St. Sampson is a spacious cruciform building, with a lofty and highly ornamented tower. It has numerous escutcheons, bearing the cognizances of the earl of Warwick, and other eminent individuals, and is a fine specimen of the Gothic. In the churchyard is a well-preserved cross, with canopied niches, which was removed from the High Street, and placed here when the old town-hall was demolished. The remains of a priory, founded in the 1st of Henry III., are now used as tenements for paupers. There are 2 national schools, supported by subscription; formerly an ancient free school existed, but the endowment has been lost; a charity, producing 125*l.* a year from land, is appropriated to the apprenticing of poor children. Market, Saturday; it was formerly a large one for corn, but is now inconsiderable; fairs, April 1. for cattle, Sept. 21. a pleasure fair. The Thames and Severn canal passes through the N. end of the town; and a branch, joining the Wilts and Berks canal at Swindon, crosses within 1 m. of it. The inhab. are chiefly engaged in agriculture.

Cricklade returned 2 mem. to the H. of C. from the 21st of Edward I. to the 1st of Henry VI., with some interruptions; and from the latter reign, continuously to 1780: the right being exclusively vested in freeholders and copyholders of the bor. lands, and leaseholders of the same for not less than 3 years. In 1780 (after a contested election) the bor., in consequence of its notorious corruption, was thrown open, and the freeholders of the 5 adjoining divisions of Highworth, Cricklade, Staple, Kingsbridge, and Malmesbury, admitted to a participation in the elective franchise. Registered electors, 1837-38, 1,636. The bailiff of Cricklade is returning officer. This town has considerable claims to antiquity; but the story of the University of Oxford being founded by the professors and students of an ancient school established here, appears to be wholly destitute of foundation.

CRIEFF, a burgh of barony of Scotland, co. Perth, on a gentle acclivity on the N. bank of the Earn (a tributary of the Tay), 17 m. W. Perth. Pop. in 1835, 3,835. It lies near the foot of the Grampian Hills, at the mouth of one of the important passes to the Highlands, and is the second town in the co. It formed, more than once, the head-quarters of the Duke of Montrose, during the civil wars in the reign of Charles I.; and was burnt by the Highlanders in 1715. It was formerly the scene of the greatest cattle-market in Scotland, but that was transferred to Falkirk in 1770. Its chief distinction now consists in its manufacturing industry. There are in Crieff 480 hand-loom weavers, chiefly employed in the cotton trade. The average annual number of webs (of about 180 yards each) woven by them is 5,300. (*New Statist. Acc. of Scotland*, & *Crieff*.) Some hands are engaged in weaving linen and worsted stuffs; but cotton forms the staple employment. A woollen manufactory has recently been erected on the banks of the Turret, a small stream in the neighbourhood, which employs between 40 and 50 persons, and produces blankets, plaidings, and shawls. No machinery is employed in weaving, dyeing, or in almost any of the processes. There are three tan-works, with corn, flour, and saw-mills, an oil mill, and two distilleries. There is, a considerable trade in tannobouring and flowered for the Glasgow manufacturers, carried on by females. About 300 acres of land in the immediate vicinity of the town are let to the inhab. in small patches, technically called *acres*; or in still smaller portions, called *pecks*. There are three branch banks in the town, several friendly societies, a savings bank, and a subscription library; two places of worship connected with the

established church, three chapels belonging to Presbyterian dissenters, and an Episcopal chapel. The post-office revenue, at an average of the three years ending with 1837, is about 740*l.* a year.

CRIMEA, the *Chersonesus Taurica* of the ancients, a peninsula of Russia in Europe, government of Taurida, between 44° 28' and 46° N. lat., and 32° 33' and 36° 22' E. long. It is situated on the N. to the mainland by the Isth. of Perekop, 5 m. in width, and has on its E. the *Sinache*, or Euxine Sea (which see), the Sea of Azoff, and the Straits of Yeniköi, by which it is separated from the Isth. of Taman, being every where else surrounded by the Black Sea. It is estimated to contain about 15,000 sq. m. Pop. unknown. The Crimea is divided into two distinct parts, one lying N. and the other S. of the river Salghir, which flows from W. to E., and is the only stream of any importance in the peninsula. The former consists almost entirely of vast plains, or steppes, destitute of trees, but covered with luxuriant pasture, except where they are interspersed with heaths, salt-lakes, and marshes. The climate of this region is far from good; being cold and damp in winter, and oppressively hot, and very unhealthy, in summer, particularly along the Isth. of Perekop. The aspect and climate of the other, or S. portion of the peninsula, are entirely different. It presents a succession of lofty mountains, picturesque ravines, chasms, and the most beautiful slopes and valleys. The mountains, formed of strata of calcareous rocks, stretch along the S. coast from Caffa, on the E., to Balaclava on the W. The Tchadyadag, or Tent mountain, the highest in the chain, rises to the height of about 5,110 ft. above the level of the sea, and several of the other summits attain to a considerable elevation. The climate of the valleys, and of the slopes between the mountains and the sea, is said to be the most delicious that can be imagined; and, besides the common products, such as corn, flax, hemp, and tobacco, vines, olives, fig-trees, mulberry-trees, pomegranates, oranges, &c., flourish in the greatest profusion. Pallas, Dr. Clarke, and others, have given the most glowing descriptions of this interesting region. According to Clarke, "If there exist a terrestrial paradise, it is to be found in the district intervening between Kutchuk and Sudak, on the S. coast of the Crimea. Protected by encircling alps from every cold and blighting wind, and only open to those breezes which are wafted from the S., the inhabitants enjoy every advantage of climate and of situation. Continual streams of crystal water pour down from the mountains upon their gardens, where every species of fruit known in the rest of Europe, and many that are not, attain the highest perfection. Neither unwholesome exhalations, nor chilling winds, nor venomous insects, nor poisonous reptiles, nor hostile neighbours, infest their blessed territory. The life of its inhabitants resembles that of the golden age. The soil, like a hot-bed, rapidly puts forth such variety of spontaneous produce, that labour becomes merely an amusing exercise. Peace and plenty crown their board; while the repose they so much admire is only interrupted by harmless thunder, reverberating on rocks above them, or by the murmur of the waves on the beach below." (*Clarke*, ii. p. 252. 8vo. ed.) But if this description be as faithful as it is eloquent, it will not certainly apply to any other portion of the Crimea, not even to the famous valley of Balidar. At certain seasons of the year the finest parts of the peninsula are infested with swarms of locusts, which frequently commit the most dreadful devastations, nothing escaping them, from the leaves of the forest to the herbs of the plain. Tarantulas, centipedes, scorpions, and other venomous insects, are also met with in most parts; and even to the S. of the mountains the air in autumn is not every where salubrious; and malignant fevers are not uncommon.

Owing to the thinness of the population, and their want of industry, the Crimea, which in antiquity was the granary of Athens, and whose natural fertility is nowise diminished, does not produce a tenth part of what it might do. The steppe, or N. portion, is in general more suitable for grazing than for tillage, and is depastured by immense numbers of sheep, horses, and black cattle. Some of the rich Nogai Tartars are said to have as many as 50,000 sheep, and 1,000 horses; and the poorer classes have 100 of the former and 10 of the latter! Thousands of cattle often belong to a single individual: camels also are abundant. Breed of horses improved by crossing with Arabs. Sheep mostly of the large-tailed species peculiar to the Kirghises. The buffalo is domesticated, and yields a rich milk; and the culture of bees is a good deal attended to. Though they have renounced their migratory habits, the Tartars, who constitute the bulk of the population, have little liking to, or skill in, husbandry. Exclusive of milk and other animal food, they subsist chiefly on millet, producing, however, in some years, as much as 150,000 chetwerts of wheat for exportation. The mountainous, or S. portion of the peninsula, furnishes large quantities of indifferent wine, with flax, fruits, timber, honey, and wax, &c.; but the cultivation of corn is so

little attended to, that even in the best years its inhabitants have to import a large proportion of their supplies. The most important and valuable product of the Crimea is the salt derived from the salt-lakes in the vicinity of Perekop, Caffa, Koslow, and Kertsch. It is monopolised by the gov., and yields a considerable revenue. The quantity exported from the lakes near Kertsch amounts to from 1,500,000 to 2,000,000 poods a year; the lakes of Perekop are even more productive. At Koslow there is only a single lake. In 1833 the different lakes of the Crimea produced the immense quantity of 15,065,000 poods (242,000 tons); of which 8,514,885 poods were sold in the course of the year. About 13,000 men are employed in the works; each pood cost the treasury 4 copecks, or thereabouts, the expense of production being seldom greater than from 6 to 10 copecks. Government sells this salt at 80 copecks per pood, except the portion destined for the consumption of the peninsula, which only pays 15 copecks. Salt exported is charged with a duty of 5 copecks. (*Hagemister on the Trade of the Black Sea*, p. 130, Eng. trans.) Exclusive of salt and corn, the other principal articles of export are wine, honey (of an excellent quality), wax, Morocco leather, hides, a considerable quantity of inferior wool, with lamb-skins, which are highly esteemed, &c. Silks and cottons, in the style of the Asiatic, form the basis of the import trade; and there are also imported woollen stuffs, wine, oil, dried fruits, tobacco, jewellery, drugs, and spices. The only manufacture worth notice is that of Morocco leather. Principal towns—Kertsch, Caffa, Balacava, and Koslow, or Kupaoria. Sevastopol, the finest harbour in the peninsula, is one of the stations of the Russian fleet. Bakhchiseraï was the capital under the Khans; Simpheropol is, however, the modern capital, not of the Crimea only, but of the entire gov. of Taurida. The population consists of Tartars, Russians, Greeks, Germans, Jews, Armenians, and gipsies. The variety of different nations found in the Crimea, and the fact that each lives as in its own country, practicing its peculiar customs, and preserving its religious rites, is one of the remarkable circumstances that render the peninsula so curious to a stranger. The number of Tartars has declined considerably, by emigration and otherwise, since the occupation of the country by the Russians; but they still form the nucleus and main body of the population. They consist 1st, of Nogai Tartars, living in villages, who plough themselves on their pure Mongolian blood; 2d, of Tartars of the steppe, of less pure descent; and 3d, of those inhabiting the S. coast, a mixed breed, largely alloyed with Greek and Turkish blood, and despised by the others, who bestow on them the contemptuous designation of *Tut*, or renegade. They are all attached to the Mohammedan faith, and Simpheropol is the seat of one of the two *muftis* of the Russian empire. The Tartars are divided into the classes of nobles (*moorzas*), of whom there are about 250, priests (*mulлахs*), and peasants. A *mulлах* is at the head of every parish, and nothing is undertaken without his consent. The peasants plough his land, sow and reap his corn, and carry it home; and it is seldom that the proprietor takes tithes of the priest. In summer the feet and legs of the peasantry are bare; but in winter they are clothed after the Russian fashion. They are simple in their manners and dress; and their sobriety, chastity, cleanliness, and hospitality, have been highly eulogised, and probably exaggerated; they live principally on the produce of their flocks and herds; are wedded to routine practices; and if they be not, as Pallas seems to have supposed, decidedly averse from labour, they, at all events, are but little disposed to be industrious. The emigration that took place after the occupation of the country by the Russians was owing quite as much to the efforts of the latter to convert the Tartars into husbandmen, as to the excesses they committed. (*Readdy*, p. 176.) In their diet they make great use of honey, and are much addicted to smoking. Every family has two or more copies of the Koran, which the children are taught to read; but in despite of this, and of the schools established in their villages, they are, for the most part, exceedingly ignorant.

The Greeks established themselves in the Crimea, and founded several colonies upon its coasts, nearly six centuries before the Christian era. The country fell successively into the possession of Mithridates, and of the Romans, Goths, Huns, &c. In 1327 it was taken possession of by the Tartars. About the same time its ports were much resorted to by the Venetians and Genoese; the latter of whom rebuilt Caffa, the ancient Theodosia, and made it the centre of their power and of the extensive commerce they carried on in the Euxine. In 1475 the Turkish sovereign Mahomet II. expelled the Genoese, and reduced the peninsula to the state of a dependency of the Ottoman empire, leaving it to be governed by a *khan* or native prince. This state of things continued for about three centuries, or till Catherine II. stipulated for the independence of the Crimea. In 1788, the *khan* having abdicated, the armies of Russia took forcible possession

of the country, which was secured to her by the peace of 1791. It is to be regretted that the conquest was attended by great excesses on the part of the Russian troops; the destruction of not a few towns and villages; and the emigration of large numbers of the Tartar inhabitants. But, during the present century, government has exerted itself to improve the condition and to enlighten the minds of the inhabitants, and also to increase their numbers, and improve their habits, by planting among them industrious colonists from Germany and elsewhere. The unhealthiness of the climate is the great obstacle to the progress of the latter. (*Pallas, Tableau Physique et Topographique de la Tauride*, passim; *Clarke's Travels*, li. 97—331. 8vo. ed.; *Lycell's Travels*, i. 224—381.; *Readdy, Voyage en Crimée*, passim; *Casselman, Histoire de la Nouvelle Russie*; *Schultzler, La Russie*, &c. p. 727, &c.)

CROATIA (AUSTRIAN), called by the inhab. *Horvath Orasag*, prov. of the Austrian empire, regarded as forming the marit. portion of Hungary, between lat. 44° 7' and 46° 23' N., and long. 14° 23' and 17° 31' E., having N.W. Carinthia and Styria, N.E. Hungary-Prer, E. and S.E. Slavonia, Turkish Croatia, and Dalmatia, and S.W. the Adriatic. Shape very irregular; length N.E. to S.W. 150 m., breadth varying from 30 to 125 m. Area, 9,500 sq. m. Pop. (1828) 1,047,400. The S. portion of Croatia is mountainous, being intersected by the Julian Alps, and their ramifications. N. of the Save the surface is rather hilly than mountainous, but a continuation of the Carnic Alps traverses the N. portion of the country, dividing the waters which flow into the Drave from those which flow into the Save and Unna. The valleys are numerous, and there are some considerable plains. The principal rivers are the Drave, separating Croatia from Hungary; the Unna, which for the most part forms its boundary on the side of Turkey; and the Save, and Kulpa by which it is intersected. Climate varies very much in different parts. Along the Adriatic, it is similar to that of the opposite coast of Italy; and the olive and other fruits of S. climates grow in perfection, in the N. also it is warmer than in Hungary; but in the elevated mountain region of the S., snow frequently falls in Aug. or Sept., and lies till the following April or May. The mountain ranges are composed chiefly of lime-stone, which they however afford not only fine marble, alabaster, and gypsum, but porphyry, gneiss, clay-slate, quartz, &c. The upper soil is frequently gravelly or sandy; it is less fertile in the S. than in the N., where maize, barley, buckwheat, millet, and oats are grown in considerable quantities. But little wheat and rye are cultivated, and the flax and hemp produced are sufficient only for home consumption. The most abundant fruit is the Damascene plum, of which the favourite beverage of the Croats and Illyrians is made. The vine is, however, cultivated to some extent in the N., and a strong and full-flavoured wine is made, most part of which is consumed in the prov. There are large forests, and timber is an important product. The pastures are limited, and but little fodder is grown, so that the rearing of cattle is but little attended to. Hogs, which feed in the woods, are the most plentiful domestic animals. Iron, copper, lead, and a little silver are found in various parts; and small quantities of gold are obtained by washing the sands of the Drave. Coal, sulphur, and salt are the other chief mineral products. Manufactures very few, and of the rudest kind. Croatia is divided into 6 cos.; its principal cities, Agram, the cap., Warasdin, Carlstadt, Bellovor, Kreutz, and Flimny, the principal sea-port. In all that belongs to the right of sending representatives to the diet, Croatia is an integral portion of the Hungarian monarchy, but it retains many political rights and privileges peculiar to itself, and its *ban* or executive magistracy is completely beyond the control of the palatine of Hungary. The inhab. are either Roman Catholics, or of the united Greek church; the former are under the bishop of Agram, the latter have their own bishop, who resides at Kreutz. The arm of the reformer, which in Hungary swept away so many convents, has here accomplished nothing. Religious houses for both sexes abound. Religious toleration, which elsewhere in Hungary is unlimited, exists not at all within the limits of Croatia. Neither Lutheran nor Calvinist is permitted to make a confession of his belief, and the attempt to open a Protestant place of worship would subject him who made it to condign punishment.* Of these, such a state of things cannot exist, except coordinately with universal ignorance and superstition; and these are accordingly the leading features in the Croatian character." (*Gleig, Germany*, &c. iii. 342, 343.) The police of this prov. appears to be extremely bad; and many districts, especially in the S., are inhabited by a wild and lawless banditti, for an account of which, see *Gleig's Tour*, vol. iii. ch. 18. The Croats are of a Slavonian

* B. Ritter says, that since 1827, Protestants have been allowed the free exercise of their religion. (*Geographisch, &c. Locum*, 1836.)

stock, speaking a dialect which has a greater affinity with the Polish than any other language: they are the descendants of the Chrobaks, who settled here in 640, and established several extensive *sepanies*, or duchies. Towards the end of the 10th century, Croatia was erected into a kingdom, which acquired dominion over parts of Dalmatia and Bosnia: about 1180, it was incorporated with Hungary. (*Oesterr. Nat. Encycl.* i. 610-625; *Croatia*; *Giclig. Germania, Bohemia, Hungary, &c.*)

CROMARTY (TUMARTH). See BOHMA.

CROMARTY, a small co. of Scotland, consisting of various detached portions, about 14 in number, almost wholly included in Ross-shire, with which it is connected in the return of a mem. to the H. of C. It is estimated to comprise about 170,000 acres, and had, in 1831, 2,255 inhab. houses, 2,541 families, and 11,299 inhab. Valued rent, 12,897*l.* Scotch. Registered electors in 1839, 103. (For further details, see ROSS-SHIRE.)

CROMARTY, a sea-port town and par. bor. of Scotland, cap. of the above, on a low alluvial promontory at the S. entrance to the Cromarty Frith. Pop. 2,200. Though irregularly built, it is neat and clean. Owing to its situation, its communication with different parts of the country is interrupted by fiths and arms of the sea. The Cromarty Frith, the mouth of which is formed by two richly wooded hills, nearly alike, and about 2 m. apart, extends about 10 m. inland, forming a most spacious bay, with deep water, and sufficient to afford safe anchorage for every navy in the world. Cromarty, though in former times a royal burgh, was disfranchised by the Scottish parliament in the 15th century, and is now only a burgh of barony. It has an excellent pier and harbour, vessels of 400 tons coming close up to the quay. The inhab. have long engaged extensively in the herring fishery. In some instances, not fewer than 20,000 barrels are stated as having been cured in the town in a single year. But such is the capricious nature of the herring, that that fish has of late almost disappeared from the Cromarty coast. (*New Statist. Acc. of Scotland*, part xii.) Hence the numerous coopers, fish-curers, sailors, and others, to whom the herring fishery gave regular employment, have suffered much from its suspension. Cromarty has long carried on a considerable trade in the hempen manufacture, including sacking and sailcloth, which affords work to about 400 persons. (*Id.*) It also enjoys an extensive trade in pork for the English market, the value of the quantity exported varying from 15,000*l.* to 20,000*l.* annually. There is a flourishing brewery in the town. Ship-building is carried on to a trifling extent. A steam-boat plies between Cromarty and Lethm once a week; and there is now a regular steam communication with London. There are two places of worship, in one of which the Gaelic language is exclusively used; they both belong to the established church, there not being more than half a dozen dissenters in the parish. Cromarty unites with Dingwall, Dornoch, Kirkwall, and Tain in sending a m. to the H. of C. Registered electors, in 1839-39, 50. Sir Thomas Urquhart, the eccentric but learned author of the "Jewel," "Logopandectelson," and numerous other works, was proprietor of the whole co. of Cromarty.

CROMER, a sea-port town and par. of England, co. Norfolk, hund. M. Springham, on a high cliff on the N.E. coast, 21 m. N. Norwich; lat. 52° 55' 20" N., long. 1° 19' E. Area of par., 800 acres; pop. of do., in 1831, 1,232. Cromer was formerly nothing better than a small fishing station; but of late years it has been much resorted to by sea-bathers, attracted by the fine beach and picturesque scenery of the vicinity. The older part consists of mean, badly arranged tenements, but the more modern houses, near the sea, are much superior, and pleasantly situated. There are several good inns, and a new roomy one at each annual regatta. The church, in the later Gothic style, has a pinnacled tower 180 feet in height. There is also a dissenting chapel, and a national subscription school. Some remains of an ancient abbey, and of the old walls which surrounded the town, are still traceable. A fort and two half-moon batteries were erected during the late war on an adjoining eminence. About ½ m. E. of the town is Foulness light-house, furnished with a revolving light, and having the lantern elevated 374 feet above the level of the sea. In consequence of the dangerous character of the coast, there are three other light-houses betwixt this place and Yarmouth. The parish was formerly of much greater extent, and at the period of Domesday Book included the town of Shipden; which subsequently with its church, and also a considerable number of houses in an adjoining parish, were swept off by an inroad of the ocean. The sea is here, in fact, constantly gaining on the land. In the winter of 1835, some cliffs contiguous to the light-house, 250 ft. in height, were precipitated into the sea, their fragments covering 13 acres! (*Livest. Geography*, i. 296.) The inhab. are mostly engaged in the fishery; the coasting trade is also carried on, though under considerable difficulties, from the want of a proper landing-place, which makes it necessary to employ carts to load

and unload the vessels lying on the beach at low water. Cromer Bay is exceedingly dangerous, and has thence obtained from the sailors the expressive name of the "Devil's Throat." Exports chiefly corn; imports, coals, tiles, oil-cake, &c. Many attempts have been made to construct a pier, but it has always been swept off. Life-boats are kept in constant readiness on the beach, and have been the means of rescuing many from destruction.

CROMFORD, a chapelry and town of England, co. Derby, hund. and par. of Wirksworth, on the Derwent, near the S. end of Matlock Dale, 13 m. N. by W. Derby. Pop. 1821, 1,242; 1831, 1,291. It is mostly on the N. side of the stream, and is surrounded on the N. S. and W. by lofty calcareous rocks: the houses are mostly small neat buildings, occupied by work-people employed in the adjoining cotton factories. There is a neat Episcopal chapel, founded by Sir R. Arkwright; a Wesleyan chapel; two good school-rooms, built in 1835; and almshouses for 6 poor widows. Market, Saturday. This town owes its rise to Sir R. Arkwright, the great founder of the British cotton-manufacture, who built here 2 large cotton-mills—the (first in 1771, the other a few years subsequently),—where his great improvements were brought into successful operation: these, and another factory, still in the possession of his family, employ between 800 and 900 hands. There is also a paper-mill, and a small hat-factory. Lead and lime mines are worked in the immediate vicinity. The S. terminus of the Cromford and Peak Forest railway is at this town; and from it a canal extends to the Erewash canal near Langley Bridge.

CRONSTADT (Germ. *Kronstadt*; Hung. *Brasso*), a town of Transylvania, near its S.E. extremity, being the largest and most populous, as well as the principal manufacturing and commercial town in that country; cap. co. of the same name in the "Saxon-land," in a narrow valley, 120 m. S.E. Klausenburg. Pop., according to Berghaus, 22,476; but the Austrian *Encyc.* and Mr. Paget say, that, including the suburbs, the pop. is 36,000. If the reader will understand the situation of Kronstadt, let him imagine an opening in the long line of mountains which separate Transylvania from Wallachia, in the form of a triangle, between the legs of which stands an isolated hill. Within this triangle lies the town of Kronstadt, and on the top of the isolated hill there is a modern fortress of some strength. The mountains come so close down on the little valley, that the walls are in many places built part of the way up their sides." (*Paget, Hungary*, &c. ii. 434.) Cronstadt Proper, or the "Inner Town," is small, rectangular, surrounded by walls, towers, and ditches, and entered by 5 gates. It is regularly and well built, with paved streets. The inhab. are mostly of Saxon descent. Blumenau, the E. suburb, is chiefly inhabited by Szeklers, as Bulgarey, the S. suburb, is by Wallacks; the latter is built on a height interspersed with gardens, and separated from the inner town by a large open esplanade, ornamented with avenues of trees and a Turkish kiosk. Altstadt, the other suburb, is on the N. side. The chief public edifices in Kronstadt are the great Lutheran church, a venerable Gothic building of the 14th century; the Lutheran college, Wallack and Rom. Cath. churches, the former rebuilt by Elizabeth, empress of Russia, in 1751, town-hall, barracks, 2 hospitals, the workhouse, several different schools, and the great market-house. In the latter, Saxons, Greeks, Armenians, Jews, Moldavians, Szeklers, Hungarians, Turks, Wallacks, and gipsies meet to make up the bustling and motley crew. Its proximity to Turkey has introduced a good deal of Turkish habits and manners. But Cronstadt is principally distinguished by its industry.

A rapid stream rushes in various channels through the streets, and makes itself useful to a host of dyers, feltmongers, tanners, and millers, with which this little Manchester abounds. Kronstadt and its neighbourhood are, in fact, the only parts of Transylvania in which any manufactured produce is prepared for exportation, and heretofore carried on to a considerable extent. The chief articles produced are woollen cloths of a coarse description, such as are used for the dresses of the peasants, linen and cotton goods, stockings, skins, leather, wooden bottles of a peculiar form and very much esteemed, and light wagons on wooden springs. The principal part of its exports are to Wallachia and Moldavia. A considerable transit commerce between Vienna and the principalities is likewise carried on through Kronstadt, which is chiefly in the hands of a privileged company of Greek merchants." (*Paget*, ii. 435, 436.) The first paper-mill and printing-press in Transylvania were established at Cronstadt. (*Oesterr. Nat. Encyc.*; *Berghaus*; *Paget's Hungary and Transylvania*, &c.)

CRONSTADT or **KNOWSTADT**, a strongly fortified marit. town of Russia in Europe, gov. Peterburg, of which city it is the port, besides being the principal station of the Russian navy. It stands on the S.E. extremity of the sandy island of Kotline in the Gulph of

CROWLAND.

Finland, about 20 m. W. Petersburg. Lat. $59^{\circ} 59' 26''$ N., long. $29^{\circ} 49' 30''$ E. Pop. variable, but inclusive of sailors, foreigners, &c. during the summer, generally between 40,000 and 60,000. Its shape is triangular, its base being towards the S. Being, as it were, the outwork of Petersburg, it is very strongly fortified. The narrow channel which bounds the island of Kottine S., and is the only practicable passage from the Gulph of Finland to the cap., is protected on the side of Cronstadt by a fortress erected on a detached islet; and on the opposite side by the batteries of the Riebsbank, and the castle of Croniout. The streets of Cronstadt are regular and generally paved; but the houses are mostly of wood, and only one story in height. There are about 160 stone buildings, most of which belong to the government. The town is divided into 2 grand sections, those of the commandant and the admiralty, and into 4 subdivisions; it is traversed by 2 navigable canals, those of Peter the Great, and of Catherine. The former, commenced in 1721 and finished in 1752, is $3\frac{1}{2}$ furlongs in length, by about 30 yds. wide, and bordered with stonework. It is in the form of a cross, one of its arms communicating with a dock paved with granite, in which 10 ships of the line may be repaired at once. The Catherine canal, begun in 1792, is much more extensive and bordered with granite; it communicates with the mercantile port, and is used chiefly for commercial purposes. Between these two canals is the Italian palace, built and formerly inhabited by Prince Menchikoff, now a school for Baltic pilots with 300 pupils. The other principal public buildings and establishments are, the naval hospital with 2,500 beds, the civil hospital, arsenal, cannon and ball foundry, admiralty, barracks, custom-house, Protestant college, several schools, nobility's club, 3 churches and 2 chapels appropriated to the Greek faith, and Lutheran, English, and Rom. Cath. chapels. Peter the Great has a residence and a garden here: the latter continues to be a public promenade; but of the trees planted by the creative hand of Peter, only a few remain: here is, however, a bust of the great emperor on a column, which bears an inscription stating that he founded Cronstadt in 1703. On the S. side of the town are the 3 ports: the E. or Imperial port will accommodate 35 ships of the line, besides small vessels: the second or middle port, used chiefly for the equipment or repair of ships, has been already noticed, and has attached to it some building docks and pitch-houses, and a powder-magazine: the W. or mercantile port is capable of accommodating 600 vessels of any size. All these ports are very strongly fortified, of a convenient depth, and safe; but the freshness of the water injures ships which remain long in them; and the bay of Cronstadt is liable to be blocked up with ice for several months of the year.

Two thirds of the whole external commerce of Russia is carried on through Cronstadt. Most ships load and unload here, and goods are conveyed to and from Petersburg by means of lighters, the channel higher up being generally available only for vessels drawing not more than 7 or 8 ft. water. For further particulars respecting the trade of Cronstadt, see PETERSBURG. (Schmitzer, *La Russie*, pp. 294–300.; *Com. Dic.* &c.)

CROWLAND, a town and par. of England, co. Lincoln, parts of Holland, wapent. Elloe. Area of par., inc. Deeping Fen, 29,070 acres: pop. of ditto, in 1821, 2,631; 1831, 2,716. The town is situated in a low flat district, 8 m. N.E. Peterborough, on the rivers Welland and Nene, and the Catwater drain, the communication between its different parts being kept up by a bridge of singular construction, but impassable for carriages, built in the reign of Edw. II. It is accessible only by artificially embanked roads. Here was formerly one of the most celebrated of the English abbeys. The present church forms but a small portion of that originally attached to the abbey, but it is, notwithstanding, a very fine specimen of the later Gothic style; its W. front is elaborately ornamented, and has statues of several kings and abbots. The windows and interior tracery are also very splendid. The remains of the abbey are highly interesting. It was built on piers, of which many remain. The ruins are partly in the Norman and partly in the different periods of the Gothic style. It was originally founded by Ethelbald, in 716: though several times destroyed, it was as often rebuilt with augmented splendour: its endowments were most ample; and its revenue at the dissolution in the reign of Henry VIII. amounted to 1,317*l.* 5*s.* 11*d.* a year. From this period it fell into decay; and during the last civil war (after being for some time occupied as a garrison) was almost wholly demolished. A market formerly held in the town has long been removed to Thorney; but there is still an annual fair, on Sept. 5., for cattle and flax. The inhab. are chiefly employed in agriculture. The par., formerly for the most part an unprofitable morass, has, by dint of draining, been converted into rich arable and pasture land; to assist in this are several powerful windmills, which pump up the superfluous water into channels, which conduct it off. An extensive fishery (formerly belonging to the abbey, and

CRUZ (SANTA).

659.

now to the crown) includes many decoys for wildfowl of which this parish furnishes a large supply to various markets. Geese are also largely reared. *Antiquary's Itinerary Curiousum*, p. 33, &c.)

CROYDON, a town and par. of England, co. Surrey, hund. Wallington, 9 m. S. London. Area of par., 9,846 acres. Pop of do., 1821, 9,254; 1831, 12,447. The town, situated on the borders of Banstead Downs, near the source of the Wandie, consists chiefly of a wide street, about 1 m. in length, with substantially built, good houses; it is well lighted, but scantily supplied with water. The church, the finest in the co., in the later pointed style, has a lofty tower with pinnacles, and contains many fine old monuments, chiefly of Archbishops of Canterbury. This originated in the circumstance of the archbishops of the metropolitan see having formerly resided in a palace here, the remains and grounds of which were sold in 1740. There are 2 other churches, built by parliamentary grant, within a recent period: one near Croydon Common, with 400 free sittings, the other at Norwood, with 439; 4 dissenting chapels; a free school, founded 1710, for 20 children; a school of industry for girls; a school for educating 160 children of Quakers, removed from Islington, 1829; a Lancasterian school; a union school; this last occupies the schoolroom of the Trinity hospital, founded by Archbishop Whitgift in 1596, for a warden, schoolmaster, chaplain, and not less than 30 or more than 40 poor brothers and sisters; the income, which originally amounted to about 200*l.* a year, is now nearly 2,000*l.*; the archbishop of Canterbury is visitor. The building (with a chapel annexed) forms 3 sides of a quadrangle, in the domestic style of that period: there are also 2 sets of almshouses, and several minor charities; a small theatre, seldom opened. A handsome town-hall, surmounted by a dome, was built in 1807, in which the summer assizes of the co. are held, alternately with Guildford; when not thus used, it is occupied as a corn-market: on the site of the old town-hall is a structure used as a prison during the assizes, and at other times, as a poultry and butter market; the co. magistrates hold petty sessions weekly for the district; and there is a court of requests for debts under 5*l.*, whose jurisdiction extends over the hundred. Market, Saturday. Fairs, July 6, for cattle; Oct. 2, horses, cattle, sheep, pigs; the latter is a crowded pleasure fair, and noted for the large quantity of walnuts brought to it. It has a good deal of trade in corn, and a large brewery. The principal line of road from London to Brighton passes through Croydon, and it also communicates with the metropolis, by a railway recently opened, and by a canal, finished in 1809. The members for the E. division co. Surrey, are elected here. Croydon is the centre of a poor union of 10 parishes; its own rates average 6,486*l.*

The great increase of pop. in the par., from 1821 to 1831, is ascribed in the pop. returns,—with what justice, we shall not undertake to say—to abuses in the management of the poor laws; but under the new system these, if they did exist, will probably have been obviated. There are barracks at the end of the town, at present occupied as a dépôt of the royal wagon train. At Addiscombe, $\frac{1}{2}$ m. distant, is a military college, established in 1809, for cadets in the E. I. Company's service; it has 14 professors and masters in the various departments, and usually from 120 to 150 students; 2 public examinations take place annually, and the education is believed to be exceedingly good. Croydon is the supposed site of the *Novimagus* of Antonine's Itinerary. On Broad Green, near it, are traces of the Roman road from London to Arundel, and many Roman coins have been found; there are also many remains of an older period; amongst others, a cluster of 25 tumuli, on a hill, between the town and Addington Park (the archbishop of Canterbury's seat), and a circular encampment with a double moat. (*Ducarel's Croydon*; *Bibliotheca Topographica Britanica*, ii. &c.)

CRUZ (SANTA), the most S. of the Virgin Islands in the W. Indies, belonging to the Danes, and situated in the Caribbean Sea, about lat. $17^{\circ} 45'$ N., and long. $64^{\circ} 40'$ W.; 60 m. E.S.E. Porto Rico. Length, E. to W., 20 m.; average breadth, 5 m. Area about 100 sq. m. Pop. 32,000, of whom 27,000 are slaves. There is a chain of hills in the N.; but the island is generally level. The coasts are much indented, and present numerous harbours, the best of which are those of Christiansstad and Friederichstadt. The rivulets are dried up during a part of the year, and water is then scarce and bad. The climate is unhealthy at certain seasons. Soil fertile, producing the sugar-cane, cotton, coffee, indigo, &c. The average value of the produce of sugar amounts to about 1,200,000 rixdollars, and that of rum to 500,000 rixdollar a year. (*B. Ritter*.) Timber is scarce. The principal town, Christiansstad, the cap. of all the Danish possessions in the W. Indies, is situated on the declivity of a hill on the N.E. shore of the island; it is well built, and has 5,000 inhab. Its port is secure, and defended by a battery. Friederichstadt, on the W. coast, has 1,200 inhab. This island was discovered by Columbus in his second

voyage. The Dutch, English, French, Spaniards, and Danes, alternately possessed it till 1814, when it was finally ceded to Denmark. (*American Encyclopedia; Cassinich; Ritter.*)

CSABA, a large market town of Hungary, in the Great Hungarian plain beyond the Theiss, 68 m. S. S.W. Debrecin. The latest census gives it 2,063 houses, and 22,143 inhab. Its pop. is mostly Protestant. It has an extensive trade in corn, wine, cattle, fruit, hemp, and flax. (*Oesterr. Nat. Encyc., &c.*)

CSANAD, a town of Hungary beyond the Theiss, cap. of. of same name, on the Maros, 7 m. S.E. Makó. Pop. about 7,000, of whom about a half are of the Greek church. It was formerly a populous and flourishing place; but its castle is now in ruins, its bishop non-resident, and the county meetings have been transferred to Makó.

CSÖNGRÁD, a market town of Hungary, between the Danube and Theiss, on the right bank of the latter, immediately after the influx of the Kőrös, 31 m. N. Segedin. Pop. 10,618. It is well built, and contains the ruins of an ancient castle. It was the original cap. of the co. of same name; but the county meetings are now held at Segedin. (*Oesterr. Nat. Encyc.; Berghaus.*)

CUBA, an isl. belonging to Spain, being the largest, most flourishing, and important of the Antilles, or W. Indian isls. It was discovered by Columbus, Oct. 28, 1492; and was first called Juana, in honour of Prince John, son of Ferdinand and Isabella; afterwards Fernandina, in memory of the Catholic king; then successively Santiago and Ave Maria, in deference to the patron saint of Spain and the Virgin; and by Spanish geographers *La lengua de pájaro*, as being descriptive of its form. The name *Cuba* is that in use among the aborigines at the time of its discovery.

Form, Position, and Extent.—Its figure is long and narrow, approaching that of a crescent, with its convex side looking towards the Arctic Pole; its W. portion, lying between Florida and the peninsula of Yucatan in Mexico, leaves two entrances into the Gulf of Mexico; the distance from Cape St. Antonio, the most W. point of the island, in lat. $21^{\circ} 54' N.$, long. $84^{\circ} 57' 15'' W.$, to the nearest point in Yucatan, is 125 m. across; and that from Point Icaosa, the most N. point in the island, in lat. $25^{\circ} 10' N.$, long. $81^{\circ} 11' 45'' W.$, to Cape Tancha, the S. extremity of Florida, being 130 m. across. Point Mayal, the E. extremity of Cuba, lat. $20^{\circ} 16' 40'' N.$, long. $74^{\circ} 7' 53'' W.$, is 49 m. N.E. by E. from Cape San Nicolas Mole, in Hayti; and Cape Cruz in Cuba, is about 98 m. N. from the nearest point of Jamaica. The greatest length of the island, following its curve, is about 500 m.; its breadth, which is very irregular, varies from 180 to 35 m. Its coasts are very much indented, and it is surrounded by many islands, islets, reefs, &c. The estimates of its area have, in consequence, differed considerably; but, including its principal dependencies, it was calculated by Don Felipe Bauza at 3,615 sq. leagues of the sq. deg., equal to about 43,380 sq. Eng. m. (*Humboldt, Essai sur l'Isle de Cuba*, i. 42.*). Notwithstanding the general difficulty of approaching its shores, it has several excellent harbours, that of the Havannah being one of the best in the world. The land along the isls. shores almost all round the isl. is so low and flat as to be scarcely raised above the level of the sea, which greatly increases the difficulty, especially in the rainy season, of communicating with the interior. In the lagoons, near the shore, especially on the N. side of the isl., filled with sea water during spring tides, sufficient salt is collected for the use of the inhab. A cordillera stretches from the one end of the isl. to the other, dividing it into two unequal sections, that on the N. side being for the most part the narrowest of the two. Of the geology little is known beyond what is to be found in fossils. The cordillera is one great calcareous mass, which is found to rest on a schistose formation. Its summit presents a naked ridge of barren rocks, occasionally interrupted by more gentle undulations.

Climate.—In the W. half of the isl. the climate is such as is to be expected along the N. limit of the torrid zone, presenting many inequalities of temp. from the near neighbourhood of the American continent. The seasons are spoken of as the rainy and the dry, but the line of demarcation is not very clearly defined. The warmest months are July and August, when the mean temp. is from 26° to 29° of the centigrade, or from 80° to 84° Fahr. The coldest months are Dec. and Jan., when the mean temp. is nearly 10° Fahr. less than under the equator. During the rainy season the heat would be insupportable but for the regular alternation of the land and sea breezes. The weather of the dry season is comparatively cool and agreeable. It never snows, but hail and hoar frost are not uncommon; and at an elevation of 300 or 400 ft. above the level of the sea ice has been found several lines in thickness, when the N. wind has happened to prevail for several weeks in succession. Hurricanes are not so frequent as in Hayti, and the other W. Indian isls., and

* Mr. Turnbull estimates the area at only 32,807 sq. m., which, if Humboldt be correct, is above 10,000 under the mark.

seldom do much damage on shore. In the E. part of the isl., particularly in the neighbourhood of Santiago, earthquakes are not unfrequent. The most severe on record are those which took place in 1678, 1682, 1766, and 1836.

Animal Kingdom.—The only indigenous quadruped known in the island is the *lutia* or *hulla*, shaped like a rat, but from 12 to 18 in. in length, exclusive of the tail; of a clear black colour, feeding on leaves and fruits, and inhabiting the hollows and clefts of trees. Its flesh, though insipid, is sometimes eaten. Ambiguous oviparous animals, the crocodile, cayman, manati, tortoise, and *fiscotea*; the first on the coast, and the others in the rivers and lagoons. The *perro fibaro* is the domestic dog restored to a state of nature. It becomes fierce and carnivorous, though not so much so as the wolf of Europe; never attacking man until pressed in the chase. Whatever be their original colour, they uniformly degenerate into a dirty black, with a very rough coat. In spite of the efforts made to extirpate them, they increase in numbers, and do great damage among the cattle. The domestic cat, called the *gato fibaro*, when it becomes wild, commits similar depredations on the poultry yard. The most valuable of the domestic animals are the cow and pig. The sheep, goat, and ass are not in such general use, although within these few years the great Jackson of the peninsula has been introduced with some success, for the purpose of breeding mules. The feathered race are remarkable for the beauty of their plumage; but are far too numerous for separate notice. The rivers, though not large, are well supplied with excellent fish, as are the bays and inlets with the natives of the deep. Oysters and other shell-fish are also numerous; but of inferior quality, and adhere to the branches of the mangrove trees which surround the coast. Snakes of a large size are of rare occurrence, though some have been seen 10 or 12 ft. long, and 7 or 8 in. in diameter. Of insects the bee is turned to valuable account by the exportation of its wax, and the use made of its honey. The mosquito tribe are troublesome, and the phosphorescent family are remarkable for the brilliancy of the coloured lights they exhibit.

Vegetable Kingdom.—The forests are of vast extent. Mahogany and other hard woods are indigenous, and several sorts are well suited for ship-building. The palm tribe are as remarkable for beauty as utility; and of vines there is great variety, some of such strength as to destroy the largest of the forest trees. The parasitical emulsi of the tropical fruits are plentiful and various; of these the pine-apple, orange, and its varieties, are the most highly valued. Of the alimentary plants, the *platano* or plantain is by far the most important. Next in order come the sweet and bitter *yuca*, the sweet root being eaten as a vegetable, and the bitter converted into bread after its poisonous juice has been extracted. The sweet potato, the yam, and other farinaceous roots are also known, although not in such general use as in the British West Indies. The maize or Indian corn is indigenous, and in extensive use, the green leaves for fodder, under the name of *mullajo*; and the grain in various forms for man and beast. Rice is cultivated in considerable quantity; and a variety of beans, especially the *garbanzo*, so well known in the peninsula. Garden stuffs are scarcely known, except in the Havannah and other large towns, and there only in the dry season. The culture of flowers is still less attended to.

Mineral Kingdom.—The pursuit of the precious metals was the great object of the first discoverers, but if gold was found at all it was probably in washing the sands of some of the rivers, as no traces of the supposed mining operations are now to be found. The gold and silver sent to Spain from Cuba, Hayti, and Jamaica, soon after the discovery and conquest of these islands, consisted, most likely, of the accumulations of the aborigines. In the course of the 17th century, the copper mines near Santiago, in the E. part of the island, were wrought with some success, but were abandoned upwards of 100 years ago, from the imperfect knowledge which then existed, of the art of extracting the metal from the ore. When the mines were abandoned, a large quantity of the mineral, amounting to several hundred tons, was left on the spot as worthless, but having been subjected to analysis a few years ago, by one of the present English proprietors, it was found to be so rich in metal as amply to repay the expense of sending it to Swansea for smelting. In consequence of this discovery, the old workings were explored, and three distinct companies have been formed for the purpose of renewing the mining operations on a scale of considerable magnitude. One of these, called the English Company, has been highly successful, employing 900 miners and labourers, some of them slaves, some emigrants from the Canaries, and some articles, servants from Cornwall. Two powerful steam engines have been erected by this company to assist in preparing the ore

for exportation; and 500 beasts of burden, horses, mules, and camels are constantly employed in transporting it to the place of shipment at Santiago. In the neighbourhood of Santa Clara, another copper-mine has been opened by an American company, but its greater distance from the sea, and the smaller proportion of pure metal in a given quantity of ore, have hitherto prevented it from meeting with an equal degree of success. At first, the mineral of Santa Clara was sent to be smelted at New York; but lately, like that from Cobres, near Santiago, it has been shipped to the great smelting-houses in Wales. Coal of tolerable quality has been found in the neighbourhood of the Havannah, but though several pits have been opened, the means of internal communication are so imperfect, that English coal, carried out in the sugar ships as ballast, can still be sold at a cheaper rate. The coal of Cuba is highly bituminous, and in some places degenerates into a form resembling the asphaltum which is found in the pitch lake of Trinidad, and in various parts of Europe. The ships of the discoverers were careened with this bitumen, which is often found near the coast in a semi-liquid state, like petroleum or naphtha. Marbles and jaspers, of various colours, and susceptible of a high polish, are found in many parts of Cuba, and in its chief dependency, the Isle of Pines. The mineral waters of San Diego, Madrinas, and Guanabacoa have obtained some celebrity, but with the exception of the last, which is within a few miles of the Havannah, they are difficult of access, and therefore not much resorted to. The temperature of the springs of San Diego is about 95° Fahr.; the water is clear and transparent, causing nausea on the stomach, and exhaling the fetid smell of rotten eggs. The analysis of a pound of water gives 10.5 grains of the sulphate of chalk, 1 grain of the hydrochlorate of magnesia, 1 of the carbonate of magnesia, and .46 of sulphurated hydrogen gas. The baths are used in cutaneous affections, congestions of the lymphatic glands, scrofula, obstinate syphilis, suppressions of the menstrua, chronic diarrheas, strictures of the abdominal viscera, muscular contractions, and in various other disorders.

Population.—There have been four regular censuses of the population: the first in 1775, when it amounted to 170,370; the second in 1791, when it was 272,140; the third in 1817, when it was 551,998, and with transient persons, 630,980; and the fourth in 1827, when the permanent population was 704,487, and with transient persons, 730,562. A fifth census is now (1839) in progress, when it is supposed that the gross numbers will exceed 900,000. According to the census of 1827, the population is divided as follows:—

	Males.	Females.	Total.
White people of colour	168,653	142,398	311,051
Free people of colour	26,038	29,456	55,494
Free Negroes	23,904	25,076	48,980
Negro and coloured slaves	183,890	103,562	287,452
Total	405,905	300,582	704,487

Education is at a very low ebb: in the whole island there are only 222 schools. Of these, 129 are for white boys, and 79 for white girls; 6 for coloured boys, and 8 for coloured girls. They are attended by 6,025 white boys, 4,417 white girls; 460 coloured boys, and 180 coloured girls. The proportion of free children, between 5 and 15 years of age, at school, to those not at school, is supposed to be about 1 to 10! There is not, in the entire prov. of Puerto Principe, a single school for free coloured children of either sex; and it is needless to add that they are inadmissible at the white schools. Of those who pay for their own education, there are 3,265 white boys, 1,657 white girls; 371 coloured boys, and 142 coloured girls. Of those taught gratuitously by the masters, there are 672 white boys, 363 white girls; 71 coloured boys, and 28 coloured girls. Of those who have the expense of their education defrayed by patriotic societies, there are 340 white boys, and 200 white girls. Of those educated by public subscription, or by local taxation, there are 1,758 white boys, 297 white girls; 18 coloured boys, and 10 coloured girls. No slave, negro or coloured, is admitted or admissible into any of the schools of the island.

Agriculture.—The raising of sugar and coffee constitutes by far the most important branch of industry carried on in Cuba. The culture of both these great staples has advanced with extraordinary rapidity, especially since 1809, when the ports of the island were freely opened to foreigners. The principal export of both articles takes place from the Havannah; and the export of sugar from that city, which in 1760 amounted to about 5,000,000 lbs., had increased in 1800 to above 40,000,000 lbs., in 1820 to above 100,000,000 lbs., and may at present amount to from 110 to 120 millions lbs. According to the custom-house returns, the exports of sugar from the entire island amounted, in 1827, to 126,000,000 lbs.; but it is ascertained that at least 1-4th

part additional is clandestinely exported from the unlicensed ports, and otherwise. In 1833 the customs returns gave a total export of 7,624,668 arrobas, or 190,613,826 lbs.; and in 1837 the export, according to the same returns, amounted to 9,080,063 arrobas, or 226,501,355 lbs.; to which, by adding 1-4th part for the quantity clandestinely exported, the total export in 1837 will be found to amount to the prodigious sum of 283,126,625 lbs., or 126,400 tons!

The culture of coffee has advanced with equal or even greater rapidity. In 1800 there were but 80 plantations in the island; in 1817 there were 779; and in 1837 there were no fewer than 2,067, of at least 40,000 trees each! The low prices of coffee that have since generally prevailed seem to have checked this astonishing progress. But in 1837 the custom-house returns show an export of no less than 2,133,667 arrobas, or of 53,339,175 lbs., to which, as in the case of sugar, considerable additions must be made to get the true exports.

Tobacco is indigenous in Cuba, and its excellent quality is celebrated in all parts of the world. It is, however, said to be seldom profitable to the planter; but we doubt this, as its export, and consequently, culture, have largely increased. In 1826 the export of cigars amounted to 197,194 lbs., whereas it had increased, in 1837, to 792,438 lbs. The culture of cotton and indigo is very much on the decline. Indian corn, rice, beans, plantains, and even wheat, are raised for the consumption of the inhabitants; but not in sufficient quantities for the demand, so that foreign is an important article of importation. Cattle have become extremely numerous, being estimated at about 1,300,000 head; and hides form an important article of export. Horticulture is very little attended to.

Manufactures.—Of these the most important are the making of sugar, molasses, and rum, the preparation of coffee, the making of cigars, the bleaching of wax, and the manipulation of the minor staples of the island.

Internal Communication.—The means of communication between the interior and the coast are very imperfect. The common roads are badly constructed, and during the rainy season are in general impassable for wheel-carriages. The evil is diminished by the long and narrow form of the island, which enables the planters to bring their produce to a place of shipment without any very long land journey. The number of coasting vessels is in consequence considerable, and in 1830 the island possessed 13 steam-boats. There are also three steam ferry-boats plying in the harbour of the Havannah, a steam dredging-machine for cleaning it, and a steamer-boat for carrying the posts loaded with the mud of the harbour out to sea. A line of railroad, the first of any consideration which has yet been laid down in any part of the W. Indies, was opened in 1838, connecting the Havannah with one of the most important sugar districts, and having its inland terminus at the town of Guines, 45 m. distant. The other points at which it touches are Almendares, Bejucal, San Felipe, and Melena. The capital employed in its construction was obtained by means of a loan negotiated in London. Its nominal amount was 450,450*l*, but having been taken at 75 per cent., its actual produce was 337,837*l* 10*s*., bearing 6 per cent. interest, with a 2 per cent. sinking fund, which ought to extinguish the capital in 1860. The gross produce for the first month after it was opened was 26,000 *dols.*, of which 24,000 arose from the conveyance of passengers, 10,000 from the freight of produce, and 2,000 for the transit of goods going inland from the Havannah. Several branches have been proposed for connecting this railroad with the S. coast at Batabano or Guaninmar, and in 1838 a company was formed for constructing a railway between Ca-denas and Soledad de Benito, which, if carried into effect, would probably afterwards be extended so as to communicate with the Havannah and Guines railroad at Bejucal.

Currency.—Paper money is unknown. The coins in use are Spanish doubloons or ounces, which are a legal tender for 17 hard dollars, and at the exchange of 8 $\frac{1}{2}$ per cent. are worth 2*l*. 10*s*. 10*d*.; also the subdivisions of these doubloons, the half being 8 *dols.*; the quarter, 4 *dols.*; the eighth, 2 *dols.*; and the sixteenth, 1 $\frac{1}{2}$ *dol*. Mexican and Columbian doubloons, or ounces, are also in circulation, and are legal tender for 16 hard dollars, equal to 2*l*. 6*s*. 6*d*.; they are sometimes in demand for exportation, at a premium. Their aliquot parts are worth eight, four, two, and one dollar respectively. Of silver coins, the Spanish pillar dollar is worth 4*s*. 2*d*., and is only legal tender at its nominal worth; but it is generally in demand for export, at a premium of from 2 to 5 per cent. Mexican, United States, and South American dollars, are also legal tender at their numerical value, and are occasionally in demand, at a trifling premium. For small payments, the coins in circulation are the four, two, one and half real pieces, which are equal to the half, quarter, eighth, and sixteenth of a dollar respectively.

Trade.—The ports of the island licensed for foreign

trade are the Havannah, Santiago de Cuba, Puerto Principe, Matanzas, Trinidad, Baracoa, Gibara, Cienfuegos, and Mansanillo. We subjoin some tabular statements as to the trade of Cuba in 1834, 1835, and 1836:—

Abstract Account of the Import and Export Trade of the Island of Cuba, for the Years 1834, 1835, and 1836.

IMPORTS.				EXPORTS.			
	1834.	1835.	1836.		1834.	1835.	1836.
	<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>		<i>Dollars.</i>	<i>Dollars.</i>	<i>Dollars.</i>
Liquors	1,675,553 3	1,524,544 2	3,074,428 2	In staple productions of the island	12,059,611 6	11,791,919 3	12,829,566 5

1834. Duties on imports	4,405,814 1		
Ditto exports	692,971 5		
Territorial rents and other branches not comprised in the balance	3,847,446 1	8,945,734 7	
1835. Duties on imports	4,791,777 3		
Ditto exports	634,256 3		
Territorial rents, and other branches not comprised in the balance	3,371,149 1	8,797,182 7	Decrease.
1836. Duties on imports	5,017,217 4		
Ditto exports	726,576 0		
Territorial rents, and other branches not comprised in the balance	3,523,472 5	9,267,266 2	Increase.

In 1837 the value of the imports amounted to 22,940,357 dollars, and that of the exports to 20,346,407 1/2 dollars. The value of the cottons imported was 3,233,120 dollars; that of woolens, 576,178; linens, 3,581,999; and silks, 516,484 dollars. The principal exports in 1837 were 9,080,083 arrobas sugar, val. 7,927,546 dollars; 2,133,567 hogsheads coffee, value 2,133,567 dollars; 114,975 hogsheads molasses, value 718,598 dollars; tobacco, value 560,948 dollars; and 792,438 pounds of cigars, value 1,367,466 dollars. Of the total value of the imports in 1837, 1,373,962 dollars were imported from Great Britain, and 6,546,965 dollars from the U. States, the exports to these countries being in about the same proportion. This great preponderance of the U. States in the trade with Cuba is ascribable principally, perhaps, to their greater proximity and superior facilities for supplying the planters with provisions and lumber; but it is, no doubt, owing also, in a very considerable degree, to the U. States being the principal market for the sugar, coffee, and other staple productions of Cuba, whereas these are almost wholly shut out of our markets by the high discriminating duties imposed in favour of our own colonies. Hence it is that the greater part of our trade with Cuba, as well as that with Brazil, has to be carried on indirectly, and at a comparative disadvantage.

Slaves, a most important article of import, are not noticed in the above tables. The number annually introduced into the island has been variously estimated at from 40,000 to 20,000; the smaller number being most probably nearest the mark.

The extraordinary increase of the pop. and of the staple articles of export from Cuba, is, no doubt, ascribable to a variety of causes. Of these, the most important unquestionably has been the breaking up of the old colonial monopoly that so long pressed down the industry of the island, and the establishment in its stead of a liberal commercial system. A good deal of the late rapid increase in the cultivation of sugar and coffee may also be ascribed to the continued importation of slaves, and to the consequent abundant supply of the species of labour necessary in this department. The extraordinary fertility of the soil, and the proximity of all parts to the sea, are also important considerations. The fertility of great part of Cuba is unequalled, perhaps, except by the best parts of Hayti and Guiana. And taking these circumstances into account, and adverting to the fact that the portion of the surface at present under cultivation is not supposed to amount to 7 per cent. of its whole extent, it will at once be seen that Cuba might not only furnish vastly increased supplies of sugar and coffee, but that

she might also, were her capabilities moderately developed, supply more than double her present pop. with all sorts of necessities.

The usual commission charged by merchants on the sale of goods is 5 per cent., with a *del credere* of 2½ per cent. If the sales are on credit and guaranteed, and a further commission of 2½ per cent. for the returns, whether in bills or produce. On purchases the commission is 2½ per cent., and a further 2½ per cent. if drawn for in bills of exchange. For procuring freight 5 per cent. is charged, and 2½ for insuring the amount. For advances of money the rate is 5 per cent., when no other commission is chargeable. Bill business is done at various rates, from 1 to 2½ per cent. according to its magnitude. These are the rates of the foreign houses; those of the Spanish and Creole merchants are generally higher. There is no obstacle whatever to the establishment of foreigners as merchants in the island. The law says that those who are naturalised in Spain may freely carry on trade with the same rights and obligations as the natives of the kingdom, and that those who have not been naturalised, or have a legal domicile, may still carry on trade under the regulations stipulated in the treaties in force between the respective governments; and in default of such conventional regulations, the same privileges are to be conceded as those enjoyed by Spaniards carrying on trade in the country of which such foreigners are natives. In practice this last condition is not much attended to; as foreigners are allowed to establish themselves as merchants without any inquiry as to the rights or privileges enjoyed by Spaniards in the country they come from. As to manufacturers and mechanics, the only difficulty that can arise regards their religion. On entering the island every stranger is required to find security in the following terms:—"I am responsible and become security in every case for the person and conduct of A. B., arrived from C. in the ship D.; binding myself to present him, if called on by the government, and to conduct him at my expense to any place that may be demanded." This security is easily obtained, and, in fact, encouragement is given to mechanics and white people of all classes to settle in the island. After landing, it is only necessary to apply for a letter of domicile, and to present a certificate that the applicant is of a respectable character, and professes the Rom. Cath. religion. Free coloured people, however, by a royal order of 12th March, 1837, are prohibited from landing under any pretence whatever; and so rigorously is this order enforced, that such persons, though acting as seamen, are, on their arrival, taken out of the vessels in which they have come, and are kept in custody till their departure, when they are compelled to proceed again on board, and leave the island. A negotiation has been opened by Great Britain with the Spanish government for the purpose of obtaining a relaxation of this order in favour of the black and coloured inhab. of the British W. Indies; but as yet the object has not been obtained. The business of a broker is exercised under a royal license, and no foreigner is eligible to the office unless naturalised in the form prescribed by law. In every commercial place a certain number of guilds is allowed, corresponding with the pop. and trade of the place. In the great cities, the business of merchant is often combined with that of planter; and sometimes, also, the importing merchant keeps a shop or store when he sells his goods by retail. The foreign merchants are generally regarded as transient visitors, who go there for the purpose of accumulating such a fortune as may enable them to live with some degree of comfort in their own country. As a class they are not considered wealthy, but they are almost all in the full enjoyment of credit. The mercantile capital, as well as the proprietary wealth of the island, may be said to be concentrated in the hands of the Creoles. When the emigrants from the peninsula make fortunes in the island, they seldom think of returning to Europe.

Slave Trade.—Mr. Turnbull, who visited Cuba in 1838-39, from whose work several of the details in this article have been derived, estimates the annual average number of slaves imported at about 23,000. He affirms that the trade is protected by the Spanish government for the purpose of retaining the island more securely in the Catholic majesty's obedience, and contends that the landed proprietors, whose estates are fully peopled with slaves, have an interest directly opposed to it, because, if the trade were abolished, their slave property would immediately be doubled or trebled in value, a seasoned slave, who can be sold for 1,000 or 1,200 dollars at New Orleans, being not worth more than 500 or 400 dollars at the Havannah. Mr. Turnbull proposes, for the suppression of the trade, to give to the courts of mixed commission, established at the Havannah and Rio de Janeiro, under the existing treaties with Spain and Brazil, the power of carrying the laws of these countries into effect by adjudging to imported Africans their freedom after being landed in the country. As the Spanish and Brazilian governments profess the strongest desire to abolish the trade, they could not well object to the

necessary extension of the powers of the mixed courts already established in their territory. Since the date of the treaty negotiated with Spain in 1835, giving to English cruisers the power of seizing Spanish vessels, and carrying them before the mixed courts for condemnation, when found equipped for the trade, although without any slaves on board, the dealers resorted to the flag of Portugal for protection, so that, from 1835 to 1839, it became the practice for slavers to obtain a fictitious change of registry, in order to avoid the risk created by the equipment clause of the Spanish treaty. Portugal having refused to agree to a similar treaty, a law was passed by the British parliament in 1839, subjecting Portuguese vessels to search, seizure, and condemnation, if found by our cruisers equipped for the slave trade in the manner described in our treaties with other European powers. The dealers have since successfully resorted to the flag of the U. States, trusting to the known jealousy of the right of search for a temporary protection. As long as any one government refuses to accede to the general league proposed by England for the universal abolition of the trade, it is to be feared that the enormous profits derived from it will induce the dealers to persevere, unless deprived of a market by some such method as that proposed by Mr. Turnbull.

Revenue.—The greater part of that portion of the public revenue which is levied at the custom-house is derived from duties on importation. If the goods imported be of foreign origin and have not been landed in Spain under the national flag, the duty is fixed at 10½ per cent. *ad valorem*, and, in some special cases, 13½ per cent. If of foreign origin and imported from a foreign country, but in Spanish vessels, the *ad valorem* duty is 14½ per cent., and in some cases 18½; but if the goods be imported not only from a foreign country but under a foreign flag, the duty *ad valorem* is 21½, and in some cases 27½ per cent. There is always to be added a supplementary duty of 3 per cent. on the value of the goods, besides the duty called the *balanza* of 1 per cent. on the gross amount of the duties previously ascertained. If the goods be of Spanish origin, and arrive direct from Spain under the national flag, they are liable only to a duty of 6½ per cent. *ad valorem*; but if such Spanish goods should be brought from Spain in foreign vessels, the duty would be 14½, and in some cases 18½ per cent. On exports of goods the produce of the island, the duty is fixed at 2½ per cent. *ad valorem*, if their destination be a Spanish port, and if the vessel bear a Spanish register. If the destination be foreign and the vessel Spanish, the duty is 4½ per cent., and if the vessel and destination be both foreign, 6½. In each of these cases there is to be added the balance duty of 1 per cent., determined by the amount of the export duties. In every case of import, as well as export, the value is fixed as far as that is possible by the tariff; but in many cases the applicability of the specified duty to specific articles must necessarily remain to be fixed by the custom-house officers. The most material deviation from the *ad valorem* duties is in the case of flour, which, independent of the war contribution, if of the produce of Spain, and imported in a Spanish vessel, is liable to a duty of 2 doll. per barrel; but if imported in foreign vessels, 6 doll. per barrel. If the flour be foreign and the flag national, the duty is 8½ doll.; but if flour and flag be both foreign, the duty is 9½ doll.

In these cases also, the *balanza* duty of 1 per cent. is to be added. On tobacco exported in foreign vessels, with a foreign destination, the duty is 12½ per cent.; in Spanish vessels, with a foreign destination, 6½; and in Spanish vessels to a Spanish port, 2½. On the precious metals there is an export duty only, if Spain be not the place of destination. On gold it is 1½, and on silver 2½ per cent. The export duty on sugar is 3 reals per box if shipped in a Spanish, and 4 reals if in a foreign vessel. The articles admissible, free of duty, are iron sugar-kettles, iron or copper clarifiers, steam engines and machinery for sugar-works, and the parts of it that may be required for future repairs; also, mills for cleaning rice, the Róville plough, stallions, and mares. The articles exportable, free of duty, are green fruits, lime juice, and syrup, whatever their destination. There is also an exception in favour of the precious metals, if entered for exportation to the peninsula. The crown revenues of the island are, 1st, the *rentas maritimas*, including duties on imports, exports, and tonnage, and some municipal duties; 2d, *impuestas interiores*, including a tax on home manufactures, a consumption duty on butchers' meat, the composition levied from hucksters and hawkers, the sale of papal bulls and stamp paper, the profits derived from the lottery, and an impost on cock-fights; 3d, deductions from the ecclesiastical revenues; 4th, personal deductions from the pay of public functionaries, including the price of exemption from military service; 5th, miscellaneous receipts, including the produce of the sale of royal lands, the rents of vacant livings and unclaimed estates, and the produce of vendible offices; and 6th, casual receipts, including deposits, confiscations, donations, and

arrars. The territorial revenues, and the produce of the other taxes not exhibited in the official returns of the balance, amounted, at an average of the five years ending with 1837, to 3,485,928 dollars. In 1833, they were 3,600,185 dollars; in 1834, 3,847,446 dollars; in 1835, 3,371,149 dollars; in 1836, 3,531,473 dollars; and in 1837, 3,027,300 dollars. The whole revenues of the island, at an average of the five years ending with 1837, amounted to 8,948,981 dollars a year. Of this sum, the maritime duties formed 61 per cent.; the internal taxes, 22½ per cent.; the ecclesiastical deductions, 12 per cent.; the personal deductions, 24 per cent.; the miscellaneous revenues, 24 per cent.; and the casual revenues, 10½ per cent. To show the effect of the different duties, to which two vessels would be liable, the one a Spaniard, the other a foreigner,—let us suppose them to arrive with equal burdens of 300 tons each; that they bring mixed cargoes of the same description of goods, which they discharge at the Havannah; and that they receive their mixed cargoes in all respects similar to each other. In that case the foreign vessel would have to pay:—

	Dollars.
For tonnage dues, at 12 reals per ton, with the addition of 1 per cent. of balance	454 4
For the dredging machine at 12 reals per ton	47 5
For wharf dues, at 10 reals per 100 tons per day, supposing that 8 days are necessary	80 0
For the custom-house charges on the visit of entry (if the ship had been in ballast, this article would have been reduced one half)	5 4
For assistance in discharging, at the rate of 5½ doll. per day	44 0
For an extract of the manifest	1 0
For the custom-house clearance visit (if the ship had sailed in ballast, this would have been reduced one half)	5 4
For the cockpit of the outward cargo	8 0
For the cockpit stamp	2 2
For a translation of the manifest	12 0
For the custom-house officers' fee (if in ballast, this charge would be 3 dollars)	5 0
For the captain of the port	6 0
For lighthouse dues	4 0
For government fees	4 0
For bill of health	8 0
For the visit of the health officer	2 0
Total	645 1

On the other hand, supposing the vessel to have been Spanish, she would have had to pay—

	Dollars.
For tonnage dues, at 5 reals per ton, with the addition of 1 per cent. of balance	189 3
For wharf dues, at the rate of 6 reals per 100 tons per day, supposing, as before, that 8 days are necessary	18 0
The charges for the dredging machine and the other items are the same on Spanish as on foreign vessels, amounting in the supposed case to	160 5
Total	368 0
As the charges on the foreign vessel amounted to	645 1
It follows, that the distinction in favour of the national flag amounts to	277 1

Government.—As respects its civil jurisdiction, Cuba is divided into two provs., the Havannah being the cap. of the one, and Santiago of the other. The captain-general, governor, or supreme military chief of the island, is, at the same time, civil governor of the W. prov.; but, except in military matters, the governor of the E. prov. is perfectly independent of the captain-general, and is responsible only to the court of Madrid. The island is also divided into three military divisions—a western, central, and eastern; the chiefs of which are, of course, subordinate to the captain-general. The royal court (*Real Audiencia*) of Puerto Principe, of which the captain-general is the *ex officio* president, has the supreme jurisdiction in all civil and criminal affairs. In the principalities there are *Ayuntamientos*, and in the rural districts *Juices Pedaneos*, who combine the exercise of judicial functions with those of police commissioners, &c. (*Turnbull*, p. 243.)

Political Importance.—It is not easy to exaggerate the political importance of Cuba. Her size, geographical position, and the situation, great strength, and admirable harbour of the Havannah, render her, as it were, the mistress of the Gulf of Mexico. No wonder, therefore, that her possession, and the nature of the government to which she is subject, should be objects of intense interest to the U. States, and also to Great Britain and other commercial nations. On the whole, it would seem to be most for the common advantage of the commercial world, that Cuba should continue, as at present, dependent on Spain, or that she should become independent. So long as she remains under Spain, there is but little risk of her natural capabilities being turned to the prejudice either of commerce in general, or of that of any particular state. But there is good reason to fear that it would be very much the reverse, were Cuba to come into the possession of the U. States, or of any of the great European powers. Instead of ministering exclusively to the wants of a great and growing commerce, she might then be converted into an important military station, and be employed as a basis for warlike operations, that could not be carried on without great injury

to the trade of the western world. Now that the ports of Cuba are open to the ships of all nations, and that emigrants from all countries may freely resort to her, she would gain comparatively little by becoming independent, and might lose a good deal. Fortunately, there is in Cuba a large white population; but in the event of the question of independence being agitated, it would, most probably, be split into factions, some of which might endeavour to strengthen themselves by resorting to the assistance of the slaves. The maintenance of the existing political arrangements would, therefore, seem to be for the advantage, as well of Cuba, as of the commercial world. At the same time, it is clear that the suppression of the slave trade, by checking the rapid increase of blacks, would materially contribute to the security of the island; and is probably, indeed, the best means that could be devised to guarantee Cuba against the greatest of all the evils by which it is possible she should be assailed—a successful, or even partially successful, slave insurrection. (*Cuadro estadístico de la Isla de Cuba, correspondiente al Año de 1837; Humboldt, Essai Statistique; Turnbull's Cuba*, passim.)

CUBAGUA, an island in the Caribbean Sea, belonging to Venezuela, between the coast of Cumana, and the island of Margarita, and formerly celebrated for its pearl fishery.

CUCKFIELD, a market-town and par. of England, co. Sussex, rape Lewes, the town being in a commanding situation, on the high road from London to Brighton, 24 m. S. from the former, and 13 m. N. from the latter. Area of par., 10,500 acres: pop. of do., 2,586. It is a neat little town. The church, a spacious structure, has a lofty spire, covered with wooden shingles, that have assumed the colour and appearance of blue slate. It has a free grammar school, founded in the reign of queen Elizabeth.

CUCUTA (formerly *Rosario*, or *San Jose de Cucuta*), an incl. town of New Granada, prov. Pamplona, near the border of Venezuela, 28 m. N.N.E. Pamplona; lat. 7° 37' N., long. 72° 14' W. Its situation is extremely pleasant; it is well-built, neat, and clean; streets paved, with currents of water running through them. The par. church is celebrated as the place in which the first congress was held, and the constitution of Colombia formed, in 1820. It is of Moorish architecture, and contains a respectable copy of one of Raphael's Madonnas, by a Mexican artist. (*Mod. Trav.* xxvii. 266, 267; *Dict. Geogr.*)

CUDDALORE, a mark. town of Hindostan, Carnatic, S. div. Arcot, and one of the most extensive and populous towns in the S. of India, 66 m. S.S.E. Madras; lat. 11° 43' 24" N., long. 79° 49' E. It is naturally strong, being enclosed between two arms of the Pannaur. Streets broad, and it contains many houses of the better class. N. the Pannaur is a suburb called the New Town, with a large Portuguese church, and some handsome European dwelling-houses and other buildings; and beyond this is a large and beautifully situated city, formerly the residence of the chief-governor of the British settlements on this coast. Some English looms have been established in this town, and a paper manufactory. Cuddalore was taken by the British in 1760, but obliged to surrender to the French in 1782. It was restored to the British in 1795. (*Hamilton*, I. 460.)

CUDDAPAH (*Cripa*, mercy), an incl. town of Hindostan, presid. Madras, on the banks of the Cuddapah river, 507 ft. above the sea, 120 m. N.W. Madras. It has a mud fort, containing the palace of the former nabob, now converted into a court of justice, and a prison for both debtors and felons. Cuddapah is not a place of much trade; it was the cap. of an indep. Patan state, which survived the destruction of the other Deccan kingdoms: a great deal of sugar and jaghery is made in its vicinity. (*Hamilton*, I. 469.)

CUENÇA, a city of Spain, cap. prov. same name, on a high mountain, between two others higher still, and separated from them by the deep beds of the Jucar and the Hucuar rivers, near their confluence; 86 m. E.S.E. Madrid, 126 m. S.W. Saragossa. Pop. 8,270. It is surrounded by uncommonly high walls, and its streets are extremely steep, crooked, and narrow. It has 7 gates; 6 bridges over the Hucuar and 3 over the Jucar, one of the latter being of very superior construction. Cuença is the see of a bishop, and the residence of the principal authorities of the prov., and contains a vast cathedral built by Alphonso IX. in the 12th century; a fine episcopal palace; 14 parish churches; 13 convents, some of them built on precipices overhanging the river, and containing paintings of great merit; 3 colleges, and an ecclesiastical seminary; 2 hospitals for the sick, and 1 for foundlings; a public granary, and several public fountains. It has some fabrica of paper and wool. The latter were formerly much more considerable than at present; and the town was also much more populous and important. It is the native country of the painter Salmeron, and of the famous Jesuit Molina. Cuença was given in dowry by the Moorish king of Sevilla, to

Ben Abut, with his daughter Zaida, to Alphonso VI. king of Castile, when he left the cloisters to succeed his brother in 1072. The Moors again retook it, but it was finally wrested from them in 1176. (*Memo; Dict. Geogr. Univ.*)

CUENCA, an inh. town of Ecuador, cap. prov. same name, in a spacious plain, nearly 9,000 ft. above the level of the sea, 186 m. S. Quito; lat. 2° 56' S., long. 79° 12' W. Pop. 20,000? of whom about 2,000 are Indians. Its streets are broad and straight; but the houses are low, and built of unburnt brick. It contains a cathedral, 2 par. churches, several monasteries, a college, and an hospital; has manufactures of confectionary, cheese, hats, &c.; and some trade in these, together with grain, cinchona bark, and other productions of its vicinity. Its climate is temperate as to heat, but it is subject to violent storms. A little to the S. is the Mountain of Farquihos, by the French astronomers for their meridian in 1742. In its neighbourhood there are several remains of the works of the Peruvian Incas.

CUEVAS, a town of Spain, Granada, 51 m. N.E. Almería. Pop., including its dependencies, 9,500. It is almost surrounded by the river Almanzor, and there are between the town and the Mediterranean, about 8 m. distant, a number of very deep caverns in the mountain, supposed to have been opened by the Moors, in search of minerals or water: from these the town takes its name. It contains a church, a convent, and a public granary. There is a castle on the coast, and a small island belonging to the town.

CUIACAN (an. *Huetcolhuacan*, Mex.), an inland town of Mexico, state of Sonora, on the right bank of the river of the same name, 106 m. E.S.E. Chinoala, and 170 S.E. El Fuerte. Pop. (1835) 11,000. It is a depot for goods passing to and from the port of Guaymas, on the Gulf of California. During the Spanish rule it was the cap. of a prov. The country around is said, by Mr. Ward, to be well watered and highly productive.

CULLEN, a marit. royal, and parl. bor. of Scotland, co. Banff, on an eminence at the mouth of a little rivulet, 12 m. W. Banff. Pop. 1,200. Though an ancient burgh, the present town is comparatively new, the old town having been superseded, and the site on which it stood enclosed within the park of Cullen House, the splendid mansion of the Earl of Seafield. The linen manufacture, so common on all the E. coast of Scotland N. of Dundee, has found its way to Cullen, but is there carried on to an inconsiderable extent. The inhabs. engage in the herring fishery, and in that of cod, skate, ling, and haddock, which abound on their shores; so that dried or cured fish form their chief export. The harbour is bad, and the town, on the whole, not flourishing.

Cullen unites with Banff, Inverury, Kintore, and Peterhead, in returning a mem. to the H. of C. Registered electors, in 1838-39, 37.

CULLERA, a sea-port town of Spain, Valencia. It lies on the Júcar, near its mouth, and to the S. of the mountain range of the same name, on the Mediterranean coast, 25 m. S. Valencia. Pop. 9,400. It has a church, a convent, an hospital, a handsomely-built elementary school, a public granary, and barracks for troops on their march, being on the shortest and most frequented road from the coast to the capital. It carries on considerable coasting trade, as many as 40 or 50 vessels being sometimes seen at a time, principally about 30 tons burden, taking in fruit for France, rice for the Balearic Islands, and the coasts of the Peninsula, &c. The neighbourhood produces rice, wheat, maize, muscatel raisins, wine, oil, and garden stuff. (*Memo.*)

CULPREE, an inh. town of Hindostan, prov. Bengal, in a jungly and unhealthy situation, on the left bank of the Hooghly River, about 30 m. S.S.W. Calcutta; lat. 22° 6' N., long. 88° 25' E.

CULROSS, a royal and parl. bor. and marit. town of Scotland, in a detached corner, co. Perth, on a steep acclivity on the N. shore of the Frith of Forth, about 16 m. N.E. Edinburgh. Pop. 900. It was made a royal burgh by James VI. in 1589; and though it had once a considerable trade in salt and corn, &c., the latter of which was wrought at a very remote period, trade of every kind has now entirely left it, except, perhaps, a little traffic in fish caught in the Forth, and a little damask weaving for manufacturers in Dunfermline. There are vestiges of an old harbour; but the smallest yawls can now approach the town only at high water. But though of no modern importance, Culross can boast of many remains of antiquity, which throw an air of interest over a place otherwise meagre and decayed. At the E. end of the town once stood a chapel dedicated to St. Mungo or Kentigern, said to have been built here. A monastery, dedicated to the Virgin and St. Earl, was founded here in 1217 by Malcolme earl of Fife for Cistercian monks; of which considerable remains are extant, a part of it serving as the parish church. Culross Abbey, occupying a magnificent terrace overlooking the sea, and successively the seat of the Bruces and the noble family of Dundonald, is now the property of the heirs of the late Sir Robert

Preston, Bart. The present parish church is collegiate, having two clergymen.

Cullen unites with Queensferry, Inverkeithing, Dunfermline, and Stirling, in sending a mem. to the H. of C. Registered electors, 1838-39, 47.

CUMANA, a city of Venezuela, cap. of the dep. and prov. Cumana, in an arid and sandy plain on the E. bank of the Manzanares, and near the mouth of the Gulf of Cariaco, about 1 m. from the sea-shore, and 180 m. E. Caracas; lat. 10° 28' N., long. 64° 16' W. Pop. 12,000? It is commanded by Fort St. Antonio, built on the extremity of a hill immediately to the E.; the Manzanares encompasses the town on the S. and W., dividing it from its principal suburbs. It has 9 parish churches, 5 convents, and a theatre. Having suffered greatly at different times from earthquakes, its buildings are generally low; but in the early part of the present century great improvements were introduced into the buildings, and its prosperity was much augmented by the judicious conduct of its governor. It has a roadstead capable of receiving all the navies of Europe, with excellent anchorage for large ships. It is protected by a shoal and the battery of Boca at its entrance. Exports—mules, cattle, smoked meat, salted fish, cacao, and other provisions; fish, wild fowl, and other necessaries, are obtained here in great plenty, and very cheap. Climate intensely hot, from June to October the temperature being usually 90° or 95° F. during the day, and seldom so low even as 80° in the night. The inhabs. are distinguished for their assiduity in business, and their polished manners. This is the oldest European city in the New Continent, having been built by Diego Castellon in 1523. It was totally destroyed by the earthquake of 1766. (*American Almanack*, 1839; *Mod. Trav.* xvii. 24-48; *Geog. &c. Account of Colombia*.)

CUMANA COCA, an inh. town of Venezuela, prov. Cumana, in a valley surrounded by lofty heights, m. S.E. Cumana, and noted for the prodigious difference between its climate and that of the latter city; lat. 10° 15' N., long. 64° 5' W. Pop. 2,900. It has 7 months of wintry weather, though only 730 ft. above the level of the sea. It is small, ill-built, with houses mostly of wood. (*Geog. &c. Account of Colombia*, i. 192-195.)

CUMBERLAND, a marit. co. of England, having N. Scotland and the Solway Frith, E. Northumberland and Durham, S. Westmoreland and Lancashire, and W. the Irish Sea. Area, 974,720 acres, of which about 600,000 are supposed to be arable meadow, and pasture. This co. has some of the highest mountains in the kingdom: on its E. border, adjoining Northumberland and Durham, these consist of a portion of the Pennine or great central chain; while the W. group has received the name of the Cambrian range, from their being principally in this co.; the two ranges are divided by the plain of the Eden (see ENGLAND for an account of these mountains, and of the lakes interspersed among them). Principal rivers, Eden, Eak, Irthing, Derwent, Caldew, &c. Soil in the lower district, and in parts of the W. mountainous height, and well adapted to the turnip husbandry; but there is also a good deal of wet loam on a clay bottom. The soil of the E. or central moors and mountains is mostly peat earth, and they are bleak, heathy, and extremely barren. Climate rather humid. Principal crops, wheat and oats. Agriculture is much improved; a judicious rotation is observed; and turnips are extensively cultivated according to the most approved principles of the drill-husbandry. Property is much divided. There are a few large estates, but by far the greatest portion of the co. is divided into small properties, worth from 10s. or 20s. to 200s. a year, belonging to "statesmen," or "lairds," formerly distinguished by their attachment to routine practices, their supplying themselves with all sorts of domestic manufactures, and their economy and independence. But their habits have materially changed during the present century: domestic manufactures have been wholly abandoned, and their habits approach much more nearly than before to the common level of cultivators. Average rent of land, in 1810, 3s. 7½d. an acre. There are valuable coal mines near Whitehaven, and in other places; plumbago, or black lead, is found in the greatest perfection in Borrowdale in this co.; and limestone and slate are abundant. The cotton manufacture is extensively carried on at Carlisle, Penrith, &c.; and cordage and canvass are made, and ships built, at Whitehaven and other places. Principal towns, Carlisle, Whitehaven, Workington, and Cockermouth.

Cumberland is divided into 5 wards and 104 pars. It returns 9 mem. to the H. of C.; viz. 4 for the co., 2 each for Carlisle and Cockermouth, and 1 for Whitehaven. Registered electors for the co. in 1839, 9,075; viz. 4,628 for the E., and 4,447 for the W. division. It had, in 1831, 31,017 inhabs. houses, 34,930 families, 169,681 inhabs., of whom 81,971 were males, and 87,710 females. Sum paid for relief of the poor in 1838, 32,513s. Ann. value of real prop. in 1815, 737,438s.; profits of trade, &c. in ditto, 179,753s.

CUMBERNAULD, a manufacturing village of Scot-

land, co. Dumbarton, 13 m. E. Glasgow, on the highway leading from that city to Falkirk, Stirling, &c. Pop. 1821, 690; 1831, 1,400; and it is supposed to have increased still more rapidly since last census. The chief employment of the people is cotton weaving, there being above 560 looms in the parish, of which nearly 400 belong to the town. The average weekly earnings of the weavers is stated (1839) by the minister of the parish "not to exceed 5s. or 6s. clear." (*New Statist. Acc. of Scotland*, part xxii.) The Forth and Clyde canal runs within a ¼ m. of the town; and the Edinburgh and Glasgow railroad, now being made, will run still nearer it; so that its means of communication will be of the very best description. It was erected into a burgh of barony in 1649; and has for five centuries been the property of the eminent family of Fleming, whose seat is in its immediate vicinity. There is no poor-rate either in the town or parish. It has a parish church, two dissenting chapels, and a good subscription library.

CUMNOCK, or OLD CUMNOCK, a village of Scotland, co. Ayr, on the Lugar water, 12 m. E. Ayr. Pop. about 1,300. This place has been famous for above 30 years for the beautiful and ingenious manufacture of what are known by the name of Cumnock, or Lawrence-kirk, snuff-boxes. This manufacture (to use the words of the *New Statist. Acc. of Scotland*, *art. Old Cumnock*) rose from a very small and rude beginning to its present state of perfection. An ingenious artist of the name of Crawford caught the first idea of them from a box made at Lawrencekirk (where they were first made), which had been sent him to repair. The distinguishing excellence of the Cumnock snuff-boxes lies in the hinge, which is both extremely ingenious in point of contrivance and delicate in point of execution; so that it lies, with much propriety, styled the "invisible wooden hinge." The wood used in the manufacture is plane; by reason of its peculiarly close texture. One set of artists make the boxes; another set paint those beautiful designs that embellish the lids; while women and children are employed in varnishing and polishing. The process of varnishing a single box takes from three to six weeks. Spirit varnish takes three weeks, and requires about 30 coats; while copal varnish, which is now mostly used, takes six weeks, and requires about 15 coats to complete the process. When the process of varnishing is finished, the surface is polished with ground flint; and then the box is ready for the market. The principle on which the hinge is formed, as well as the instruments employed in making it, were for many years kept secret. Hence the price of a box, owing to want of competition, was exorbitantly high, being about 30 times its present price, now that the secret has been disclosed, and competition allowed freely to operate; in other words, a box may now be got for 15d. or 18d., which formerly cost 25s. or 30s.: These ingenious specimens of art have been brought to the highest degree of perfection, particularly so far as the variety and exquisite finish of the painting are concerned. The year's value of the boxes made in Cumnock may, at wholesale price, average about 1,600*l.* sterling. (*ib.*) The total number of persons employed in the manufacture is about 50; and the aggregate number of boxes annually produced is between 25,000 and 25,600. The manufacture prevails to a similar extent in the neighbouring village of Mauchline, as also, to a less degree, in Lawrencekirk, Montrose, and one or two other places. (*Vide ut supra*, compared with the *art. Snuff-boxes*, in *Com. Dict.*)

CUPAR-ANGUS, a burgh of barony of Scotland, partly in the parish of Perth, and partly in Angus, on the Isla, a tributary of the Tay, on the high road between Perth and Aberdeen, about 12½ m. from the former. Pop. 2,000. It is neatly built, well paved, and lighted; has a town-house and jail, an elegant parish church, two chapels belonging to Presbyterian dissenters, and an Episcopal chapel; a weekly cattle-market, and five annual fairs. The town enjoys its share of the weaving of the coarser kinds of linen fabrics, for the manufacture of which the various towns and villages of Angus are distinguished. The webs are generally obtained from Dundee. It has also extensive bleach-works and tan-pits; but weaving is the staple employment of the place.

CUPAR-FIFE (so called to distinguish it from Cupar-Angus), a royal and parl. bor. of Scotland, co. Fife, of which it is the cap., 25 feet above the level of the sea, in the centre of the *Howe* of Fife, and on the l. bank of the Eden, 10 m. W. St. Andrew's. Pop. 6,473. Though ancient, Cupar has at present all the characteristic appearances of a modern town. The streets seem as if they had been recently built; and are wide, well built, lighted with gas, and partially paved. The country-hall is a handsome modern structure. Manufactures, too, for which the water of the Eden affords great facilities, have been introduced: there are three spinning-mills, of which two are employed in spinning flax, and one in spinning thread; the aggregate number of hands engaged in them is 336. But the manufacture of the coarser fabrics of linen form the staple trade of the

town. There are 10 master linen manufacturers, and 600 weavers; and as every two weavers require one to wind for them, 900 persons are constantly employed, all of them living in their own houses, and labouring in their own workshops, either in the town or its vicinity. (*New Stat. Acc. of Scotland*.) There are corn, barley, and flour mills, reckoned the best in the co., a snuff-mill which manufactures 60,000 lbs. of snuff a year, a washing or fulling mill, a glue manufactory, three breweries, two tan-works, a tile and brick work, at which coarse earthenware is made, and a rope-work. Cupar has long had a flourishing joint-stock academy, which numerous other schools; and the bequest by Dr. Bell of 10,000*l.* for educational purposes according to the Madras system, has recently become available. As the seat of the co. courts, it has no fewer than 30 legal practitioners, exclusive of clerks. There are two reading-rooms and a subscription library, containing 4,000 volumes. The only newspapers (two in number) published in the co., belong to Cupar. It has long been eminent in the typographical art; the beautiful and accurate editions of Virgil, Horace, and other classics, superintended by Dr. Hunter of St. Andrews, having been printed here by the late Mr. Tullis. Besides the par. church, there are four Presbyterian dissenting chapels, one Episcopal, and one Glasite chapel. There is a savings bank, and poor-rates are unknown. Cupar is associated with St. Andrew's, the two Anstruthers, Crall, Kilrenny, and Pittenweem, in returning a mem. to the H. of C. Registered electors in 1839, 333. Municipal do., 259. Corporation revenue, 221*l.* 5s. It is governed by a provost, 3 bailies, and 23 councillors. Cupar was a royal bor. so far back, at least, as the reign of David II. On a mound at the E. end of the town, called the Castle-hill, formerly stood a castellated fortress, the chief residence of the family of Macduff, the feudal thanes or earls of Fife. At the foot of this mound was a convent of dominican or black friars, founded by the Macduffs, and afterwards annexed to St. Monance in the same co. (*Kelch's Scot. Bishopry*, ed. 1824, p. 445.); but of these two buildings no traces are now extant. The patrimonial estate of the famous Scottish poet, Sir David Lindsay of the Mount, was within a short distance of Cupar; and on a verdant esplanade, still called the Play Field, in front of Macduff Castle, was acted, in 1655, his witty drama of the *Three Estates*, a popular satire on the priesthood, and which is thought to have had no mean effect in hastening the reformation. (*ib.*, *Boundary Returns*, and *Chambers's Gazetteer*.)

CURACOA or CURASSAO, an isl. in the Caribbean Sea, belonging to the Dutch, off the N. coast of Venezuela, between lat. 12° and 12° 13' N., and long. 68° 44' and 69° 13' W. Length, N.W. to S.E., about 43 m.; average breadth about 14 m.; area, 600 q. m. Pop. in 1815 nearly 13,000; of whom 6,000 were slaves, 4,000 free-coloured, and 2,780 whites. Its shores are bold, and its interior is in a level. It has several harbours, the chief of which is that of Santa Anna, in the S.W., where its principal town is built. The soil is in general poor and rocky, and there is a great deficiency of water; but by the industry of the inhab., some tobacco, sugar in considerable quantities, indigo, &c., are grown; and a good deal of salt is obtained from the marshes. Maize, cassava, figs, oranges, citrons, and most European culinary vegetables are cultivated; but provisions are not produced on the island in sufficient quantity for its inhab. Curaçoa was formerly noted for its contraband trade; but since the independence of S. America, this has greatly diminished. The government is conducted by a *stadtholder*, assisted by a civil and military council. Wilhelmstadt, the cap. and seat of government, is one of the neatest cities in the W. Indies; its public buildings are magnificent, the private houses commodious, and the clean streets remind the traveller of those in the Dutch towns. The port of Curaçoa has a narrow entrance, but is large and safe. It is protected by the fort of Amsterdam and other batteries; but was taken by a squadron of four English frigates in 1807. Two smaller islands, one on either side, Buen Ayre and Oruba, also belong to the Dutch. Their inhab. are chiefly cattle-breeder.

CUSTRIN or KUSTRIN, a strongly fortified town of the Prussian states, prov. Brandenburg, on the Oder, where it is joined by the Warta, 52 m. E. Berlin. Pop. 5,840. The Oder is here crossed by a bridge nearly 900 ft. in length, uniting the citadel with the town; being surrounded by marshes, it is strong as well by nature as by art. The Russians burnt the town (without, however, taking the fort) in 1758. It was soon after rebuilt on a greatly improved plan. The fortifications have been much improved since the peace of 1815.

CUTCH-GUNDAVA, an isl. prov. of Beloochistan, differing in some important respects from all the others, being by far the most valuable portion of that country, and its only prov. E. the Brahoolick Mountains. It lies between lat. 27° 40' and 29° 15' N., and long. 67° 30' and 69° 30' E. Length N. to S. about 120 m.; breadth of its

habitable and fertile part a little more than 60 m.; having N. Sewestan (Caulbi), E. and S. Sinda, and W. the prov. Thalawan. It is for the most part a plain, bounded by deserts on the N. S. and E.; and watered by several rivulets communicating by numerous aqueducts. Soil rich and loamy, and so exceedingly productive that it is said, were it all cultivated, the crops would be more than sufficient to supply all Beloochistan; as it is, considerable quantities of grain, besides cotton, indigo, and oil, are exported. It is alleged, but probably without foundation, that rice will not grow in Cutch Gundava, notwithstanding the luxuriance of all other crops, and the plentiful supply of water. Climate oppressively hot throughout the summer, when the simoom is frequently experienced; during winter it is so mild that the chiefs and principal inhabitants of the adjoining W. provinces resort thither. The bulk of the pop. are Juts; there are few Hindoos in the towns and villages, who live by barter, transporting grain, &c. Villages extremely numerous. The chief towns are Gundava, the cap., Dadur, Bhag, and Lheres. (*Pottenger's Travels in Beloochistan*, i. 308. 311—321. 325. 326, &c.)

CUTTACK, a large marit. distr. of Hindostan, prov. Orissa, presid. Bengal, between lat. $19^{\circ} 30'$ and $21^{\circ} 40'$ N., and long. $84^{\circ} 30'$ and $87^{\circ} E.$; having N. the distr. Midnapore and the Berar ceded districts, W. the latter, S. Ganjam, and E. the Bay of Bengal. Area 9,000 sq. m. Pop. 1,984,600. It consists of three different tracts of country,—the marshy coast, the dry central region, and the hilly country to the W. The latter abounds with trees, valuable either for cabinet-work, dyeing, or varnish-making. Rivers numerous; the chief are the Mahanuddy, Brahimny, Coyli, and Subunreka; all these are of considerable size, and even the minor streams swell, during the rains, to an enormous magnitude, rendering the construction of extensive and solid embankments necessary in many parts of the distr. The periodical rains are not so early here as in Bengal; the summer heats are very oppressive, and the forests of Cuttack are generally highly insalubrious. They are also much infested with ferocious wild animals, especially leopards; and reptiles, many of which are venomous. Rice of different qualities, wheat and maize, in the hilly tracts, the sugar-cane, pulse, aromatic roots, spices, and dyeing-drugs, are the chief articles of culture. Several kinds of granite, slate, and iron ore are found, and gold dust in the beds of the mountain torrents. The land is not assessed under the permanent settlement, as is the case in the adjoining prov. of Bengal; but an agreement is usually made between the government and the landholders for a certain term, the amount of the land-tax being by no means fixed. A considerable proportion of the territory in the W. or mountainous region, is in the possession of a number of nearly independent zemindars, each of whom maintains a kind of sovereign state, and pays but a light tribute. A more valuable source of revenue to the government than the land-tax has been the monopoly of salt, much of which, remarkable for whiteness and purity, is made on the coast of this district. The chief towns are Cuttack the cap., Balasore, and Juggernaut, the seat of the celebrated temple of that name. (*See JUGGERNAUT.*) Cuttack was acquired by the British, on the expulsion of the Mahrattas, and the reduction of the Juggernaut rajah in 1803-4. In 1817, the too rapid introduction of the revenue, and judicial systems established in Bengal, amongst the rude and barbarous inhabitants of Cuttack, together with the evils of over-assessment and mismanagement, excited a rebellion in this distr., which was subdued in the ensuing year, but at the expense of much treasure, and the loss of many lives. (*Hamilton's E. I. Gaz.* i. 469—472; *Parl Reports*, &c., *Revenue Section*.)

CUTTACK (Calak, a royal residence), a town of Hindostan, cap. of the above distr., seat of its principal judicial court, &c., on the Mahanuddy, and in the rainy season insulated by two of its branches, 280 m. S.W. Calcutta; lat. $20^{\circ} 27' N.$, long. $86^{\circ} 5' E.$ Pop., a few years since, 40,000. Its principal street is well built, and it has many houses two and three stories high, a spacious marketplace, some handsome Mohammedan structures, and some military cantonments. The dwellings of the civil establishment are dispersed over the environs. This town is secured from inundation by large and solid embankments along the river: the value of these was sufficiently proved in 1817, when during the heavy rains the waters of the river rose in one night 18 ft., or 6 ft. above the general level of the town, which was only preserved by their means. Cuttack is said to have been a capital as early as the 10th century. (*Lieutnant*, i. 473.)

CUXHIA VEN, a sea-port town of N. Germany, immediately within the estuary of the Elbe, on its S.W. side, in a detached portion of territory belonging to Hamburg, from which it is distant 55 m. W.N.W.; lat. $53^{\circ} 52' 21'' N.$, long. $8^{\circ} 42' E.$ It has about 100 houses, 200 inhab., a good harbour, with deep water, a lighthouse, and is a quarantine station. It was formerly the rendezvous of most passengers to and from England and the

Elbe; but since the establishment of steam-packets, they are conveyed direct to and from Hamburg. Vessels entering the Elbe generally have to opposite Cuxhaven for pilots, by whom it is mostly inhabited. In summer it is resorted to by sea-bathers.

CUZCO, an inland city of Peru, formerly the cap. of the empire of the Incas, at the foot of some hills, having an extensive valley opening to the S.E., said by Mr. Pentland to be 11,860 ft. above the level of the sea, about 400 m. E.S.E. Lima; lat. $13^{\circ} 30' 54'' S.$, long. $73^{\circ} 4' 10'' W.$ Pop. unknown, but estimated in 1828 at 40,000, mostly Indians. The cathedral and convent of St. Augustine are said to rank amongst the finest religious edifices in the New World; and it had a few years ago 6 churches, 8 convents, besides that of St. Augustine, 4 well-endowed hospitals, 3 monasteries, a university, and 3 collegiate schools. But Cuzco derives most part of its interest from the historical associations connected with it, and from its remains of the architecture of the Incas.

In fact, great numbers of the private houses belong to that era; and by the size of the stones, and the fineness and peculiarity of the buildings, give to the city a wonderful imposing air. The Dominican convent, a magnificent structure, is raised on walls that formed part of the famous temple of the sun destroyed by the fanatical zeal of the Spaniards. Ulloa says that the high altar stands on the very spot formerly occupied by the golden image of the sun. Upon a hill to the N. of the city are the ruins of a very extensive fortress, the work of the Incas, the walls of which are of the species named Cyclopean, and have a striking analogy to the so-called structures found in various parts of Greece, Italy, &c. Some of the stones, which are all of angular shapes, are of such an enormous size, that their weight is said to exceed 150 tons; and, though no cement be used in the building, they are so admirably jointed and fitted together that the interstices are hardly perceptible. It is very difficult to imagine how such vast blocks could have been conveyed from the quarries and placed on the walls without the aid of powerful machinery. In the plain to the S. of the city are extensive remains of ancient edifices in the same style; and it is said by Alcedo that a subterranean passage led from the palace of the Incas to the fortress, and that a road was constructed from the city to Lima.

The inhab. have been described as industrious, and as excelling in embroidery, painting, and sculpture. There are manufactures of cotton, linen, and woollen stuffs, and of leather and parchment. A considerable trade is carried on in these and in the products of the adjacent district. But despite all this, the markets are said by General Miller to be "very ill supplied."

Cuzco is the most ancient of the Peruvian cities; its origin dating from the era of Manco Capac, the founder of the empire of the Incas, probably in the 12th century. Pisarro took possession of it in 1534; and was shortly after besieged in it by the whole Peruvian forces. During this siege a great part of the town was destroyed. (*Modern Traveller*, xxviii. 289; *Ulloa, Voyage de l'Amérique*, i. 507; *Geogr. Journ.* viii. 427.)

CYPRUS, a famous and considerable island, in the N.E. angle of the Mediterranean, between Asia Minor and Syria, at present belonging to Egypt, 44 m. S. Cape Anamour in the former, 65 m. W. Latakia in the latter, and 330 m. E. Crete; between lat. $34^{\circ} 34'$ and $35^{\circ} 42' N.$, and long. $32^{\circ} 18'$ and $34^{\circ} 37' E.$ Shape somewhat oval, with a considerable promontory projecting E.N.E. from the main body of the island; greatest length, 132 m.; average breadth from 30 to 35 m. Pop. estimated at 70,000, of whom 40,000 are Greeks. It is intersected lengthways, or from E. to W., by a range of mountains, the highest point of which, St. Croce (an *M. Olympus*), is about 15 m. S. Nicosia. The principal river Pedla (an. *Pedarus*) consists of two main branches; it flows E. through the centre of the island, having its embouchure near the ruins of Constantia, on the E. coast; but this, like most of the other rivers, is but of limited dimensions, and is nearly dried up in summer. Cyprus is also otherwise ill supplied with water, that obtained from most of the wells being brackish. The principal plains lie along the banks of the Pedla, and the S. coast of the island. The climate differs in different parts: along the N. shore it is comparatively temperate; the winds coming from the cold mountainous districts of Asia Minor, temper the heat in summer, and in winter produce piercing colds on the mountains, which are covered with snow, for several months. But it is otherwise in the plains along the S. and E. coasts: these consist, for the most part, of a whitish soil which has an offensive glare, and being defended from the N. and N.W. winds by the mountains, at the same time that they are exposed to the full sweep of the E., S.E., and S. winds from the Syrian, Arabian, and Lybian deserts, they have a higher temperature than any other place in the Levant. During the summer heats *malaria* is frequently generated; and long droughts, combined with the want of industry, and the neglect of irrigation, not unfrequently destroy

the crops. The soil is naturally fruitful and, in antiquity, Cyprus was famous for its fertility, and the variety and excellence of its products. Even now, though only a very small portion of the land be cultivated, and that in the most wretched manner, the merchants of Larnica annually export several cargoes of excellent wheat to Spain and Portugal. The best, as well as the most agreeable parts of the island are in the vicinity of Cerina and Baffa, the ancient Paphos. (See BAFFA.)

Cotton, of a superior quality, is produced in trifling quantities; but under the Venetians, the island annually exported about 30,000 bales. It then also exported considerable quantities of sugar, produced from plantations of canes in the vicinity of Limasol and Baffa. There are extensive forests of oak, beech, and pines; groves of olives and plantations of mulberries. It is remarkable for the fineness of its fruits, and its rich sweet wine, oil, and silk. The latter is of two kinds, yellow and white, but the former is preferred. The wheat is of a superior quality, affording excellent bread; and rice, madder, and an endless variety of other valuable products, might be cultivated in several parts of the island.

The wines of Cyprus, particularly those produced from the vineyard called the Commandery, from its having belonged to the knights of Malta, were formerly more highly prized for desserts than even those of Crete. In the earlier part of last century, the total produce of the vintage was supposed to amount to above 3,000,000 gallons, of which nearly half was exported; but now, the wine grown and exported does not amount to a tenth part of these quantities. "Perhaps," says Dr. Clarke, "there is no part of the world where the vine yields such redundant and luscious fruit: the juice of the Cyprian grape resembles a concentrated essence. The wine of the island is famous all over the Levant. Englishmen, however, do not consider it as a favourite beverage; it requires nearly a century of age to deprive it of that sickly sweetness which renders it repugnant to their palates. Its powerful aperient quality is also not likely to recommend it. When it has remained in bottles for 10 or 12 years, it acquires a slight degree of fermentation upon exposure to the air; and this, added to its sweetness and high colour, causes it to resemble Tokay more than any other wine. It will keep in casks, to which the air has access, for any number of years. If the inhabitants were industrious, and capable of turning their vintage to the best account, the red wine of the island might be rendered as famous as the white, and, perhaps, better suited for exportation." (*Travels*, iv. 19.)

But the brutal despotism under which it has groaned for centuries, has depopulated the island, and rendered the few inhabitants, it now contains, remarkable only for indigence, sloth, and misery. In antiquity, the pop. probably fell little short of 1,000,000; and in 1571, when it was conquered by the Turks, it had a pop. of about 400,000, or nearly six times its present amount. No where, indeed, as Mr. Kinnelr has truly stated, is the baleful influence of the Ottoman dominion more conspicuous than in Cyprus, where it has literally turned cities into miserable villages, and cultivated fields into arid deserts. In describing his journey from Larnica to Nicosia, Dr. Clarke observes: "The soil every where exhibited a white marly clay, said to be exceedingly rich in its nature, although neglected. The Greeks are so oppressed by their Turkish masters, that they dare not cultivate the land: the harvest would instantly be taken from them if they did. Their whole aim seems to be to scrape together sufficient, in the course of the year, to pay their tax to the governor. The omission of this is punished by torture or by death: and in cases of their inability to supply the impost, the inhab. fly from the island. So many emigrations of this sort happen during the year, that the pop. of all Cyprus scarcely exceeds 60,000 persons, a number formerly insufficient to have peopled one of its many cities." The governor resides at Nicosia. His appointment is annual, and as it is obtained by purchase, the highest bidder succeeds; each striving, after his arrival, to surpass his predecessor in the enormity of his exactions. From this terrible oppression, the consuls and a few other families are free, in consequence of a protection granted by their respective nations." (*Travels*, iv. 55; see also to the same effect, *Walpole's Travels*, ii. 31.)

Mr. Kinnelr states, that "the governor and the archbishop deal more largely in corn than all the other people of the island put together: they frequently sell upon the whole yearly produce, at their own valuation, and either export or retail it at an advanced price; nay, it happened more than once, during the war in Spain, that the whole of the corn was purchased in this manner by the merchants of Malta, and exported without leaving the lower orders a morsel of bread." (pp. 183, 185.) We have seen no very recent accounts of the condition of Cyprus, under the rule of Mehmet Ali;

but, unless the pacha have established a different government in it from what he has established in Egypt, the miserable inhabitants have gained little by the change.

Sheep and cattle are bred in considerable numbers. There is abundance of game, such as partridges, quails, woodcocks, and snipes; there are no wild quadrupeds, excepting foxes and hares, but many kinds of serpents, and the tarantula. Clouds of locusts sometimes devastate the country. The ancient mines of Cyprus, now wholly neglected, afforded large quantities of the finest copper (*Æs Cyprium*), whence, though that is very doubtful, the name of the island has been supposed to be derived: it is also said to contain ores of gold, silver, and other metals, and has a species of rock-crystal called Paphos diamond. Amlanthus or asbestos of a very superior quality is found near Baffa; it is flexible as silk, white, and more delicately fibrous than that of any other country. Mariti states that a village, called Amlanthus, existed in Cyprus in his time; and it was most probably the spot where the amlanthus, or incombustible cloth, used by the ancients to wrap up the bodies of distinguished persons when laid on the funeral pile, was principally produced. (*Travels*, i. 177.) Salt is obtained by evaporation at various places on the S. coast. The inhab. manufacture small carpets, some silk and cotton fabrics, and excellent Turkei leather. Under the Turks this island was divided into three sanjacks—those of Baffa, Cerina, and Nicosia. Nicosia, in the centre of the island, is the cap. The other principal towns are Larnica, on the site of the ancient Citium, Limasol, Famagusta on the E., Cerina (an. *Cervina*) on the N., and Baffa (*Paphos*) on the W. coast. Even the ruins of most of the ancient cities mentioned by Strabo have disappeared; but at Constantia, near Famagusta, Kinnelr traced the circ. of the ancient walls, and the foundations of some buildings; and at Larnica medals and other antiquities are frequently dug up. The remains of a monastery, built by a princess of the house of Lusignan, stand about 4 m. S.E. Cerina. Cyprus was originally peopled by the Phœnicians. It was colonised by the Greeks, and successively possessed by the Egyptians, Persians, Greeks, and Romans. In antiquity, it was as famous for the worship of Venus as Delos for that of Apollo and Diana. This, in fact, was the favourite seat of the goddess, "*digna potens Cyprî*." Divine honours are supposed to have been first paid to her at Paphos (see BAFFA), where she had a magnificent temple—

"ubi templum illi, centumque Sabæo
Thure calant arm, ceterisque recentibus halant."
Æneid, l. 415.

But the whole island was sacred to Venus; and besides Paphos, other three cities were celebrated for her worship.

"Est Amathus, est celas mihi Paphos, atque Cythera,
Idaliæque domus."
Æneid, v. 61.

Hence the epithets Cyprian, Paphian, Idalian, &c., applied to Venus. It is alleged that the ladies of the island are still devotedly attached to the worship of the goddess.

After the fall of the western empire, Cyprus formed part of the Byzantine empire, from which it was taken by the Saracens. Isaac, a prince of the Comneni family, having usurped the sovereignty, was dethroned, in 1191, by Richard I., king of England. The latter having conferred the island on Guy de Lusignan, to indemnify him for the loss of Jerusalem, it continued in possession of his family for three centuries, or till 1480, when, on default of heirs, it fell to the Venetians. The Turks took it from them in 1571. Bregadino, the gallant defender of Famagusta, after exhausting every resource, at last capitulated on honourable terms. No sooner, however, had the place been delivered up than the capitulation was disregarded; and Bregadino himself was killed alive and impaled. A dreadful augury of what the population was to suffer under the dominion of such barbarous ruffians. It is now in the possession of Mehmet Ali. (See *Mariti's Travels in Cyprus*, passim; *Clarke's Travels*, iv. 11—80; *Kinnelr's Journey through Asia Minor*, pp. 176—197, &c. &c.)

CZEGLÉD, a large market town of Hungary, between the Danube and Theiss, co. Pesth, on the high road between that city and Debreczin, 89 m. S.E. the former, and 84 m. W. S.W. the latter. Pop. 14,659 (*Beyrhams*), chiefly Protestants. A great deal of ordinary red wine is made here, as well as beer. (*Oesterr. Nat. Ency.*, &c.)

D.

DACCA, or DHAKA, an inland city of Hindostan, prov. Bengal, formerly very extensive, populous, and rich, and still one of the principal cities of the Bengal presidency, and the seat of a court of circuit and appeal for the seven E. distr. of Bengal. It extends, with its

suburbs, for 6 m. along a river which, uniting with the Ganges on the one hand and the Brahmaputra on the other, affords the greatest facilities to commerce: lat. $23^{\circ} 42' N.$, long. $90^{\circ} 17' E.$, 157 m. N.E. Calcutta, and 116 E.S.E. Moorshedabad. Pop. probably about 300,000. Like other native towns, it is a mixture of brick, thatch, and mud houses, with narrow and crooked streets. The bulk of the houses are so very combustible, that they are usually burned down once or twice a year; but bamboos, mats, and thatch being extremely cheap, to rebuild them costs only a few rupees! According to Heber, Dacca is like the worst part of Calcutta, near Chilpoor, but with some really fine ruins intermingled with the huts, which cover three fourths of its area. There are few European houses, and these mostly small and mean, compared with those of Calcutta. Some Greek buildings, which were the favourite residence of the late nabob, were ruined a few years ago by the encroachments of the river. In the 17th century Islam Khan built a palace and fort here, the ruins of which form an imposing object; and toward the end of the same century a grandson of Aurungzeb commenced and finished a magnificent palace, now also in ruins. The pagoda is few and small, owing to the ascendancy of Mohammedanism, and almost every brick building has its Persian or Arabic inscription. There is a small but pretty Gothic English church; and a burial ground about a mile from the city, containing some handsome tombs, both Christian and Mussulman. There are several obelisks in and around the city; and about 4 m. off is a beautiful Gothic bridge, said to have been constructed by a Frenchman, but, like most of the other public edifices, in a state of ruin. All the buildings beyond the inhabited portion of the city are surrounded by ruins and rank vegetation; and the castle, factories, and churches, of the Dutch, French, and Portuguese, have all fallen into decay. English goods and manufactures, or imitations of them, are to be met with in the bazaars; but no vessels larger than small country-built brigs come up the river, and the trade is reduced to the fiftieth part of what it was. The striped and flowered muslins of Dacca were formerly regarded as invaluable, and were in great request at the Mogul court, and other native and alien courts, as well as at the old court of France. The manufacture was hereditary in several families, but has been annihilated by the destruction of the native courts and the wealthy native nobles. Its loss has been very generally ascribed to the importation of the cheaper muslins of England, but this is an entire mistake; it was wholly suppressed before a yard of British muslin or calico found its way to India. The manufacture, in fact, was never carried on upon a large scale; and being one of luxury only, it fell with the fall of the wealthy class, who alone purchased its products. (See *anc.* p. 387.) The cotton grown in the district is now mostly exported to England. There are some respectable Greek, Portuguese, and Armenian merchants, but Englishmen are not numerous at Dacca: the Serampore mission has, however, had a station here since 1816; schools have been established at different times, and in 1836 the government school was attended by 149 pupils. At the beginning of the present century, the proportion of Mohammedans to Hindoos was 145 to 130. The country round Dacca being always covered with verdure during the dry months, it is comparatively free from violent heats, and is reckoned one of the healthiest stations in Bengal.

Dacca is comparatively modern: it is not mentioned by Abul Fazel. From 1608 to 1639 it was the metropolis of Bengal, and again attained to that dignity in 1657, the commencement of the era of its greatest splendour, when, judging from its ruins, it must have lived in extent and wealth with the largest cities of India. Its decline began with the disorders consequent to the invasions of Nadir Shah. In 1744 the establishment of a provincial council helped to revive it, but on the removal of this its decay recommenced. (*Hamilton's E.I. Gaz.*, i. 477, 478; *Mod. Trav.*, ix. 134-145; *Rennet's Memoir*, p. 61., &c.)

DACCA, and DACCA JELALPORE, two districts of Hindostan, prov. Bengal, chiefly between lat. 23° and $24^{\circ} N.$, and long. $89^{\circ} 30'$ and $91^{\circ} E.$; having N. the distr. Mymensing, E. Tipperah, S. Backergunge, and W. Jessore and Rajshahy. Subjoined is a statement of the area of these districts, with their pop. and revenue at the undermentioned periods:—

	Area.	Pop. (1822).	Land Rev. (1829-30).
Dacca	1,870 sq. m.	512,585	} 40,836
Dacca Jelapore	2,585	663,375	
Total	4,455 sq. m.	1,095,960	40,836

The country is almost a dead flat, studded with lakes, and intersected by the two great rivers, Brahmaputra

and Ganges. During the rainy season it exhibits the appearance of an inland sea, over which the villages, raised on artificial embankments, are scattered like so many islands. The land fertilized by such extensive inundations is extremely productive; but a large proportion of it is covered with jungle, and infested with elephants, tigers, and other wild animals, which do considerable damage to cultivation. These, however, are much less numerous now than formerly; and a great deal of the land that had been overgrown with jungle has latterly been cleared, and brought into cultivation. The banks of the Comorcolly river, one of the arms of the Ganges, are populous, and well cultivated, producing rice, sugar, cotton, and indigo; a species of cotton called banga, though not of a superior quality, very well adapted for the fine striped muslins, for which this prov. was long famous, used to be grown in large quantities. The land is subdivided into extremely small estates; and the constant shifting of the river-courses alters their extent and boundaries so much, that the assessment and collection of the revenue have always been matters of much difficulty. Dimities, cloths resembling diaper, and damask linen, are now the chief manufactures. About half the pop. are Hindoos, and Mohammedans. Slavery is pretty prevalent. These districts had formerly an unenviable notoriety, from the number and enormity of the crimes committed in them, but in this respect they have lately very much improved. There are numerous Hindoo schools, for instruction in the Bengalee language, religion, and laws. Chief towns, Dacca, Narraingunge, Soonerong, and Rajanagur. (*Hamilton's Hindostan*, i. 180-183; *E.I. Gaz.*, i. 474-476; *Mod. Trav.*, ix. 133; *Reports on Affairs of the E. I. Comp.*)

DAHOMÉY, a country of Africa, on the Guinea coast, of which the boundaries are far from being well defined, but which is supposed to extend between about 6° and 9° or $9^{\circ} N.$ lat., and from 10° to perhaps $35^{\circ} E.$ long., having W. Ashantee, E. Yarriba and Benin, and S. the Atlantic Ocean. As far as has been hitherto discovered, this country is destitute of any hill whatever, and consists of an immense plain rising gradually from the sea to the Kong Mountains, which are here from 150 to 200 m. inland. The Volta and Loka rivers bound it on the W., but, except these, there seems to be no stream of any considerable importance. The country is, however, well watered, and interspersed with small marshes. The soil is wholly alluvial; not a stone is to be met with; the surface is covered with a vegetation of unbounded luxuriance; and the beauty and excellence of the country are spoken of in terms of the highest admiration. (See the statements of Bosman, Phillips, &c. in the *Histoire Générale des Voyages*, iv. 274, &c.) Oranges, limes, guavas, and other tropical fruits, melons, pine-apples, yams, &c., grow abundantly; and maize, millet, and other grains, potatoes, indigo, cotton, sugar, tobacco, and spices, are successfully cultivated. In some parts the country is covered with dense forests, the retreat of lions, hyenas, leopards, elephants, and overgrown serpents. Deer and domestic animals are plentiful. Previously to the early part of last century this country was divided into a number of petty states, and is represented as having been populous and well cultivated. The Dahomans, by whom it was overrun and laid waste, came from the Interior of the Continent. They are said to be hospitable to strangers, brave and resolute; and these, if they exist, would appear to make up the whole amount of their good qualities. Their disposition seems, from their conduct, to be a compound of that of the tiger and the spaniel, exhibiting the utmost ferocity and thirst for blood with the most abject servility. All the most arbitrary forms of eastern despotism seem to be mild and free, when compared with that established in this wretched country. It is singular, too, that this despotism is not founded upon force and terror, nor is it connected with any thing that the enemy too numerous; the latter replied, "I think of my king, and then I dare engage I of the enemy myself." He declared his indifference whether he survived or not; adding, "It is not material; my head belongs to the

king, not to myself; if he pleases to send for it, I am ready to resign it; or if it is shot through in battle, it is no difference to me, I am satisfied." After such statements, the reader will not be surprised to learn that human skulls form the favourite ornament in the construction of the palaces and temples. The king's sleeping chamber has the floor paved with the skulls, and the roof ornamented with the jawbones, of chiefs whom he has overcome in battle. Every year a grand festival is held, which lasts for several weeks, and during which the king waters the graves of his ancestors with the blood of hosts of human victims. The bodies of those unhappy men are not even interred, but are suspended by the feet to the walls, and left hanging till they putrefy.

Perhaps, however, the most extraordinary fact connected with this barbarous horde is, that all the women are monopolised by the sovereign; and that no individual can possess himself of either a wife or a concubine except by gift of, or purchase from, the king; and whether the lady be young or old, handsome or the reverse, she must be equally acceptable to the slave to whom she is given or sold! The king keeps, of course, a goodly seraglio for himself; and at his death his wives and concubines fall to murdering each other, till the carnage be stopped by the interference of the new king. After these statements, it will only appear consistent and natural that the tiger should be the principal *fetiche*, or object of worship, among the Dahomians!

We are glad to have to add that, despite their ferocity, this most detestable of barbarian hordes has been checked in its devastating course. A number of the petty states it had subdued have emancipated themselves; and it appears probable that the sovereign of Dahomey is now tributary to the sovereign of Yarriba.

Next to Abomey, the cap. and residence of the king, about 80 m. inland—Whydah, Ardian, Aoon, Calma, &c., are the chief towns or villages. (*Review of Africa; Dahomian History of Dahomey; Senedick, &c.; Norri's.*)

DALECARLIA, a prov. of Sweden, which see.

DALKETH, a bor. of barony and market-town of Scotland, co. Mid-Lothian, on the road from Edinburgh to Coldstream, 54 m. S.E. Edinburgh, on a peninsular neck of land between the N. and S. Eaks, which unite about a mile E. from the town, and fall into the Frith of Forth at Musselburgh. Pop. (1838) 5,345. It is a clean, well-built town; the principal street, which is wide and handsome, runs from E. to W., and there are several subordinate streets. Its public buildings are,—a parish church (an old Gothic edifice, used as a collegiate church before the Reformation), three chapels belonging to Presbyterian dissenters, and one belonging to the Independents. An elegant new parish church is now being built (1839). Dalketh has long been eminent for its educational institutions, particularly its classical school. A subscription library established in 1798, contains 2,800 vols. In 1835 a scientific association was formed for procuring the delivery of popular lectures on science, which has hitherto been eminently successful. This town, like other burghs of barony, was originally under the exclusive management of the baron or superior and his bailie; but, in 1759, an act of parliament was obtained, appointing certain trustees to superintend the paving, cleaning, and lighting the streets, to supply the burgh with water, and to provide a revenue for these purposes by imposing a small tax on the ale, porter, and beer consumed in the parish. The power of the baron or his bailie is now very limited both as to civil and criminal matters. Dalketh is chiefly celebrated for its grain market, which is held every Thursday, and is reckoned the largest market of the kind in Scotland. The quantity of the different kinds of grain exposed for sale in the market for the year ending July 1. 1835, was as follows:—wheat, 10,300 quarters; barley, 15,800 do.; oats, 43,530 do.; peats and beans, 1,821 do.; in all, 71,478 quarters. The sales this year, however, were greatly below the average, which is about 100,000 quarters. There is another market of considerable extent held here every Monday for the sale of meat, flour, and pot-barley. There are in the town or immediate vicinity, extensive flour and corn mills, both on the N. and S. Eaks, a brewery, an iron-foundry, a tannery, and currying works. There are no fewer than five branch banks in the town. The burgh is distinguished by the number of its shops and the extent of business done in them; circumstances that result from the eminence of its grain and other markets. The Dalketh and Edinburgh railroad, which connects these towns, was commenced in 1827, and opened for goods and passengers in 1831. Branch lines have since been formed, leading to Fochabell and Leith on the one hand, and Fisher-row, near Musselburgh, on the other. The Duke of Buccleuch has, at his own expense, brought the Dalketh line into the centre of the burgh, and is prolonging it, by a splendid viaduct over the N. Eak, that it may communicate with coal mines in that quarter. The average number of passengers carried

DALMATIA.

annually on this railroad is 300,000. The average amount of coal so conveyed is 120,000 tons. Coal abounds throughout the whole neighbourhood of Dalketh. Dalketh Falace, the principal residence of the Duke of Buccleuch in Scotland, is within 300 yards of the E. termination of the town. This palace, which formerly belonged to the Douglasses Earls of Morton, was acquired, in 1642, by the noble family of Buccleuch, who still retain it, and are superiors of the burgh. Anne, heiress of Buccleuch, was married to the famous Duke of Monmouth, a natural son of Charles II., and who was beheaded for rebellion in 1685. George IV., on his visit to Scotland in 1822, resided in Dalketh House. The parliamentary electors of the burgh unite with the county constituency in returning a member to the H. of C. (*Obtained from local information.*)

DALMATIA (an. pag. of *Illyricum*), a marit. country of Europe, being the most S. prov. of the Austrian empire comprising a long and narrow territory lying along the N.E. shore of the Adriatic, and numerous islands in that sea, between lat. 42° 8' and 44° 55' N., and long. 14° 30' and 19° E., having N. Hungarian Croatia; E. Turkish Croatia, Herzegovina, and Montenegro; and S. and W. the Adriatic: length of the continental portion, N.W. to S.E., 240 m.: breadth greatest towards the N., where it averages nearly 40 m.; but it tapers thence gradually to its S. extremity, and in its lower half is never more than 15 m. in width. Area about 5,800 sq. m. (2717 Germ.). Pop. (1837) 382,365. Dalmatia is generally mountainous. The Dinaric Alps bound it on the E., and the whole country is intersected in a direction parallel to the coast by some of their subordinate ranges, the highest point of which, Mount Blocova, near lat. 43° 30', is 4,856 ft. in elevation. Here, as elsewhere, the Dinaric Alps are chiefly of calcareous formation, and full of clefts and ravines; they are rugged, and often destitute of soil, in consequence of which the country has in most parts a sterile and desolate aspect. Narrow valleys are abundant, but plains of any extent are rare. There are numerous small lakes, and one of a tolerable size, near Zara; but, generally speaking, Dalmatia is ill watered. The principal river, the Narenta, in the S. has not a course of more than 15 m. in the Austrian territory; the other chief rivers are, the Zermagna, Kerka, and Cetina, but none of any great size. The Cetina is remarkable for a fine cascade, 170 ft. in altitude. The coast is indented with numerous harbours, of which those of Cattaro, Sebenico, and Ragusa, are the best; it has also numerous headlands, and is fringed by a great number of elongated islands, lying in a direction parallel to the shore. The principal are, Arbe, Pago, Isola Grossa, Brazza, Lesina, Curzola, Lissa, Meliada, &c.; they are mountainous, and present the same general aspect as Continental Dalmatia. The climate is warmer than in any other part of the Austrian dominions. In the S. the date-palm flourishes in the open air, and the olive grows in the lowlands every where throughout the country. Frost and snow are almost unknown in the plains and valleys, and are of very short duration in the mountains; the mean temperature of the year is 57° 2' Fahrenheit. The winter is limited to six weeks of pretty constant rain; yet, on the whole, less rain falls in Dalmatia than in any other prov. of the empire, and the country often suffers from excess of drought. Except in the marshy tracts along the shore, the air is pure and salubrious. In 1837, there were 225,719 acres of arable land, 140,702 acres in vineyards, and 40,060 acres in meadows and gardens. Agriculture is in every respect extremely backward. Maize and barley are the principal kinds of grain cultivated; but not two thirds of the corn necessary for home consumption is grown; the rest of the quantity required comes mostly from Turkey and Hungary. The Dalmatian wines are strong and deep-coloured, but are apt to acquire a taste from the leathern flasks in which they are kept. They, however, bear transport well, and considerable quantities are sent to Fiume, Trieste, and Venice. The total quantity produced annually, is officially estimated at 8,238,000 gallons. Fruits are abundant and excellent. Figs may be considered the chief staple of Dalmatia; they grow with culture all along the coast, but the best are those of Lesina. During their period of maturity, figs make a large part of the food of the village pop., and about 845,000 *libbre* are annually exported. The climate is highly suitable for the olive, and the oil is better than that produced in most parts of Italy. Nearly 17,000 cwt. are annually obtained. Cattle-breeding is not pursued to any great extent, and the breeds are mostly inferior. The stock in 1837 has been estimated at 14,000 horses, 91,000 black cattle, 718,000 sheep, and 450,000 goats. The wolf, wild dog, fox, and lynx, are amongst the wild animals; game (excepting deer) abounds, as do waterfowl and birds of prey. The anchovy and tunny fisheries are important, though not so much so as during the last century: at present they furnish employment to about 6,000 inhab. Dried and salted fish form an important article of commerce. There are some coral fisheries, of which that

near Sebenico is the chief. The fish caught in the lakes, &c. form a chief part of the subsistence of many of the inhab. Excellent timber for ship-building and other purposes abounds in the interior; but is next to useless from the absolute want of roads, canals, or navigable rivers, to convey it to the sea. The large forests which formerly existed on the coast have been cut down, and that part of the country is now almost bare of wood. The attention of the Austrian government is now, however, directed to the forest economy of the prov. In the view of supplying the dock-yards at Fiume and Venice with Dalmatian timber. Coal is found in several parts, and considerable quantities are exported to Trieste. Ship-building, and the distillation of *maraschino* and *rosoglio*, are the chief branches of manufacturing industry. Maraschino is extensively consumed at Vienna, and it is well known in this and most other countries. Besides these, a few articles of primary necessity only are manufactured; for all others, the inhab. are obliged to have recourse to the neighbouring countries. This prov. enjoys the important advantage of being placed with the Austrian customs line, the duty on foreign goods imported being only 2½ per cent. *ad valorem*. But the strictness with which quarantine regulations are enforced have gone far to nullify the important benefits that would otherwise have resulted from this valuable privilege. The Dalmatians are amongst the best sailors of the Adriatic. In 1837 they had 410 vessels, of the burden of 14,435 tons, of which about two thirds belonged to Ragusa. This country is divided into four circles, named after their respective capitals, Zara, Spalatro, Ragusa, and Cattaro: the last two circles are separated from the rest of Dalmatia, and from each other, by two narrow slips of land belonging to Turkey, which stretch down to the sea-coast. The other chief towns are, Sebenico, Traù, and Macaraca. Zara is the cap., and seat of the governor and council of the prov.

In 1837, the pop., with the marriages, births, deaths, &c., in these circles, were:—

Circles.	Pop.	Pop. per Ger. sq. Mile.	Mar.	Births.	Deaths.
City of Zara	6,744	-	62	518	283
Circle of Zara	126,649	935	1,167	4,656	3,490
Spalatro	136,927	1,683	1,062	4,983	3,841
Ragusa	49,458	1,960	349	1,530	848
Cattaro	23,801	889	195	896	669
Military	8,806	-	10	18	109
Total	363,285	1,707	2,845	12,521	8,740

The inhab. of Dalmatia are Slavonians of the same race with the Croats, Servians, and Bosnians. The names of their rivers, mountains, &c. are all Slavonic, and that of the country itself expresses *the most remotely situated tribe*.^{*} The vicinity of, and constant intercourse with, the Italian harbours, has introduced the use of the Italian language amongst the commercial part of the inhab., as German is the principal tongue heard amongst the civil and military official circles. The number of Italians settled in the country is estimated by Blumenbach at 37,000. Some descendants of Hungarian families are found amongst the nobility of the N. circles, and the Jews, who are not very numerous, are said to descend from the exiles of that nation driven from Spain in 1502. Near Verik, and in other parts, *zinzari*, or gipsies, are found. Even amongst the Slavonic inhabitants different tribes are distinguishable. The most backward, in point of civilisation, are the Morlacchi, the mountaineers of the circles of Zara and Spalatro. They are addicted to a nomadic kind of life, and wander about as shepherds, sleeping in summer in the open air. The comforts of the agricultural and shepherdmen are few, as is usually the case in warm climates: their houses are small and badly built, and furniture is mostly dispensed with. Fish and vegetables are the chief articles of nourishment, and both are abundant. The dress of the inhab. of the coast consists in blue tight pantaloons, a blue waistcoat, and in winter a spencer, with a coarse brown cloak shaped like that of the Italian boatmen. The mountaineers wear a linen dress in summer, and in winter throw their sheepskins about their shoulders, which are proof against all the vicissitudes of the weather. The inhab. are generally active, courageous, and of quick perception; but, until they came under the Austrian sceptre, were not only neglected, but living on terms of constant warfare with their Mussulman neighbours, from which state of things the recent border feuds are an inheritance. The large knife and pistols which the Morlacchi still wear in their girdles, and the gun which the shepherd slings over his shoulder from custom, remind the stranger no less strongly than the shaven heads of some of the mountaineers, of the affinity, in descent and in manners, existing between the Slavonic tribes that inhabit both sides of the mountains.

^{*} See Murray's Origin of Languages, &c.

The inhab. are Rom. Cath., except about one fifth part who belong to the Greek church, and a few Jew gipsies, &c.; there are no Protestants.

It would appear, judging from the returns, that this is the most priest-ridden country of Europe. It has, besides a whole army of regular clergy, no fewer than 6,261 monks, and 1,719 nuns! The consequences are precisely what might have been expected; education and morality being at a lower ebb here than in any other part of the Austrian empire! In 1837, the prov. had

2 Colleges (1 theological, and 1 of arts)	with 90
3 Grammar-schools	- - - 288
1 Ladies' school	- - - 12
1 Boarding-school for boys	- - - 23
1 Ditto for priests	- - - 14
51 Primary schools for both sexes	- - - 3,624

Number of children who in that year were returned as able to go to school, 17,978; so that those at school do not amount to 1-4th part of those who should be there!

The criminal accusations in 1837 amounted to 628; making, with the remainder from the previous year, 960. Of these only 574 were decided during the year, of which 261 were acquittals. Of 2,575 persons convicted, the proportion of the principal crimes to 100 convictions was as follows:—Outrageous conduct, 10; abuse of authority, 1; thieving and swindling, 32; robbery, 6; rape, 1; breach of sanitary regulations, 3; murder, 7; cutting and maiming, 11; arson, 14; other crimes, 22.

Dalmatia differs from the other provs. of the Austrian empire, in having no provincial diet or representative assembly; but certain of its towns and some districts, especially that of Poplizza near Spalatro, retain their own jurisdiction, and the same privileges they possessed before their union with Austria. The highest authority in Dalmatia is the governor, who resides at Zara, the seat of the *Gubernium*. In this city the court of appeals, and the highest criminal court are established, with dependent courts in the four circle towns, Zara, Spalatro, Ragusa, and Cattaro. Each circle has several districts, the chief magistrate of which is named *podestà*, and takes cognizance of judicial and police affairs, besides directing the rural economy of the district. The districts divide into greater and lesser parishes or *communes*, under headboroughs (*Capi villa* and *Podestà*) who receive no salary, but are exempted from the *Robot* (public service work), as are also the *Sardari*, a description of *gens-d'armes*, formed by the government out of the armed peasantry which, during the war, had lived upon a very independent footing.

The guarding of the frontiers towards Turkey is an important charge in Dalmatia, and a strict watch is also kept along the coast. For purposes of trade, 6 bazars or markets are held on the frontier, and 7 rastells, or parlatoria, at intervening stations. Lazarets are established at Zara, Spalatro, Ragusa, and Castelmono.

Dalmatia formed, from the commencement of the 12th century down to 1419, a portion of the kingdom of Hungary; at the last-named epoch it passed under the sway of the Venetians, who had made themselves masters of Ragusa nearly 100 years previously. During the 16th and 17th centuries this province was the constant seat of war between the Venetians and Turks, until it was finally conquered by the latter, who held it till 1797, when it was ceded to Austria. In 1805, Austria gave up Dalmatia to the French, who incorporated it into the kingdom of Italy. Napoleon made it a duchy, and conferred the title of duke of Dalmatia on Marshal Soult. On the downfall of Napoleon it reverted to Austria. (*Oesterr. Nat. Encyc.*; *Fortis's Travels*; and *private information from Vienna*.)

DAMASCUS (called by the natives *Es-Sham*, an. *Dimshk*, Heb. *Damasck*, Greek *Asparurus*), a city of Syria, cap. of an important pachalic of the same name, and the virtual metropolis of Syria, in a plain at the E. foot of the Anti-Libanus, about 180 m. S. by W. Aleppo; lat. 33° 27' N., long. 36° 25' E. Pop. from 130,000 to 150,000, of whom 12,000 are Christians, and as many Jews. A splendid mosque of great antiquity, the construction of which is disputed by Christians and Mussulmans, is the chief architectural ornament. The form of the building (a cross), with a similarity in arrangement to the sacred edifices of Italy, seems to evince its Christian origin, while the abundance of Saracenic ornaments prove that the Arabs, if not its founders, have contributed extensively to its decoration. It is 650 ft. in length, by 150 in width; a fountain plays in the midst of a magnificent court, and the pillars and other ornaments are superb. A skull, said to be that of the Baptist, and his sepulchre, give such sanctity to this mosque, that it is death for even a Mohammedan to enter the room where the relics are kept. A Christian is liable to the bastinado for merely looking into the court; and the western world is indebted for its knowledge of the interior of the building to the works of Ali Bey and Buckingham, who, in their character of Mussulmans, were allowed to inspect what no known Christian is per-

united to approach. There are many other mosques, according to Ali Bey (ii. 206.) and Addison (ii. 151.), they are unworthy of notice; but Robinson (ii. 224.) says they are only less splendid than those of Constantinople. The bazaras are extremely numerous, and well supplied with merchandise; but the private residences of the gentry are, after all, the most striking objects to a stranger, not for their exterior appearance, which presents nothing but a gloomy wall of mud, or sun-dried bricks, but for the combination of convenience, magnificence, and taste, which mark the interior arrangements, and realise all that can be imagined of eastern splendour. 300,000 piastres (2,000*l.*) is sometimes expended on the fittings up of a single apartment. There are 31 khans, or establishments for the reception of merchandise, and that of Hussein Pacha, built of alternate layers of black and white marble, with its fountain, arcades, and corridors, is a very beautiful and imposing object. A mosque of dancing dervishes deserves notice, less as one of the principal edifices of the town, than from the singular contrast in the occupations of its inmates, who, every Friday (the Mohammedan Sunday), pirouette and twirl themselves about from morning till night, while, during the other six days, they are industrious silk weavers. There are 10 Greek, 10 Maronite, Syrian, and Armenian churches, 3 convents of Franciscan monks, and 8 Jewish synagogues. Hospitals numerous; the principal, in which great numbers of sick and lame poor are lodged and fed gratuitously, is a fine building, with a mosque belonging to it. There are about 20 large schools for children, a great number of smaller ones, besides which public lectures are given daily in the great mosque, and in some others, but education is confined to the religion and laws of Mohammed. The *serai*, or palace of the pacha, is a large fortified building in the centre of the city. The latter is surrounded by walls and towers, but they are in a half ruinous state, and pressed upon by extensive suburbs on every side.

Damascus is essentially a commercial town; 200 merchants are permanently settled in it, besides which there are 129 tanners, 47 painters, 22 printers, and 25 dyers of various stuffs; 120 silk dyers (all Jews), 34 silk-winders, 748 dealers in damask cloth, 211 grocers, 19 warehouses of cotton thread, 83 tobacco-manufacturers, 73 saddlers, 11 tent-makers, 47 carpenters, 11 iron-mongers, 64 ferrars, 70 furriers, 98 joiners, 140 bakers, 56 millers, 34 corn-merchants, 122 coffee-houses, 32 confectioners, 129 butchers, 124 barbers, 71 tailors, 6 watch-makers, 6 bookbinders, 6 paper-merchants, 43 pipe-manufacturers, 200 dealers in handkerchiefs and fancy articles, 150 dealers in tobacco and coffee, 4 glass-houses, 4 soap-makers, 143 weavers, 500 public cooks, 59 public baths, and 19 armourers. In regard to the last, it may be remarked that the ancient celebrity of Damascus sabres has very much declined, but they still bear a good name. Saddlery, cutlery, work in jewelry, and silk, are now the staple manufactures. Foreign trade is carried on, by the great Mecca caravan, which, in peaceable times, departs once a year; the Bagdad caravan, which usually performs 2 or 3 journeys a year; the Aleppo caravan, 2 or 3 times a month; and by several small caravans to Beltrout, Tripoli, Acra, &c., which arrive and depart daily. Beltrout is reckoned the port of Damascus. This city is watered by 2 rivers, the Barrada and Fihes, which, after uniting, divide again into 7 branches, again re-unite, and finally deposit their waters in a lake (Lake of the Meadow), which has no outlet. This abundant supply and natural diffusion of water has rendered the neighbourhood of Damascus very fertile. The inhabitants do not remember a year of scarcity; wheat, barley, hemp, with every kind and variety of fruit, are produced in almost unlimited abundance, and the gardens, or enclosures, form a forest of trees, and a labyrinth of hedges, walls, and ditches, of more than 21 m. in circ. The natives speak with delight of the beauty of their home, especially as seen from the hills behind Salahieh, a large village on the N.; but according to Dr. Richardson (ii. 481.), the scenery is inferior to that seen from the summit of Highgate, Hampstead, and Richmond hills. The climate of Damascus is mild; the summits of the Anti-Libanus are covered with perpetual snow, which sometimes falls in the city. The people are said to enjoy good health, but blindness is frightfully prevalent, and leprosy, fever, and dropsy, are common. The plague, however, is almost unknown, and the ordinary duration of life is said to be from 70 to 80 years, but that, no doubt, is exaggerated. Damascus is very ancient; it is mentioned in Gen. xiv. 15. as existing 1913 years B.C., and was then, as subsequently, probably the capital of an independent Syrian kingdom. It was subdued by David (2 Sam. viii. 6.), but recovered its independence, if not earlier, at least during the reign of Solomon. (1 Kings, xi. 24.) It

• *Almut Rey*, the son of a pacha, and a reputed philosopher among the Damascenes, gravely inquired of Lord Belmore his opinion as to the motion or stability of the earth. (*Richardson's Travels*, ii. 464.)

then became the capital of the kingdom of Ben-hadad and his successors (1 Kings, xv. 18.), and remained so till its subjugation by Tiglath-Pileser, about 742 B.C., a little before the downfall of its rival Samaria. (2 Kings, xvi. 9.) From this time it followed the fortunes of the rest of Syria, falling successively under the power of the Persians, Greeks, and Romans. As a Roman city, it attained great eminence, and figures very conspicuously in the history of the apostle Paul. (Acts, ix.)

Damascus was taken by the Saracens in 632, after a siege of 7 months, and was for many years the cap. of the khilafate. It was unsuccessfully besieged by the crusaders in 1148, captured by Timur Bec or Tamerlane in 1400, and destroyed by an accidental fire in the following year. In 1516 it fell into the hands of the Turks, who retained it till 1832, when it was captured by Ibrahim Pacha, in whose hands it now remains.

Damascus is remarkable as being the only city of the East which has not dwindled from its former greatness. Its pop. seems to be as great now as ever; while Babylon, Nineveh, Palmyra, &c. have wholly vanished, and Antioch, Aleppo, &c. are, as it were, the shadows only of their ancient glory.

Damascus is one of the sacred cities of the Mohammedans, and its inhab. have the character of being the most intolerant and fanatical of all the prophet's followers. Till within these 6 years, the appearance of a Frank costume was the signal for a riot. Christians and Jews were alike prohibited from riding any beast but an ass (in 1807 even this was forbidden); and the appointment of an English consul in 1831 caused an insurrection, which lasted several months. The conquests of Ibrahim Pacha have produced a great change, if not in the feelings of the people, at least in their mode of exhibiting them. Christians of all sects and Jews walk in procession, openly rejoicing in the avowed protection of the present government, exposed only to the impotent threats of those who, retaining the will, have lost the power to annoy them. In spite, however, of their general intolerance, most travellers bear honourable testimony to the hospitality of the Damascenes. (*William of Tyre*, p. 303. *et seq.*; *Adrichomius, Ter. Sanc.*, pp. 81-84.; *Abul-Feda, Tab. Syr.*, pp. 100. 171.; *Maundercl.*, pp. 164-179.; *Volney*, ii. 226-232.; *Ali Bey*, ii. 261-282.; *Richardson*, ii. 460-497.; *Michaud et Poujoulat, Cor. d'Or*, vi. 148-235.; *Robinson*, ii. 217-230.; *Hugge*, ii. 1-80.; *Addison*, ii. 92-196.)

DAMAUN, a wharf town of Hindostan, prov. Gujrat, belonging to the Portuguese, 83 m. N. Bombay, and 43 m. S.S.W. Surat; lat. 20° 25' N., long. 72° 58' E. Pop. 6,000. It stands on the banks of a small river, which in spring tides, during the S.W. monsoon, has from 18 to 20 ft. water. The buildings of the town are mostly whitened, and give it a handsome appearance from the sea: its walls are incapable of defence, and its streets narrow and dirty. It contains several churches and convents, and a Parsee temple, in which it is affirmed a sacred flame brought from Persia has been kept up for 1,200 years. It has a roadstead, where vessels lie 3 m. off shore in 8 fathoms water. Damaun is most celebrated for its docks and ship-building: its ships wear well, and sail well before the wind, but some time since they were too short for their breadth, so that they laboured in a head sea. Damaun was taken by the Portuguese in 1531, and has belonged to them ever since. (*Hamilton's E. I. Gaz.*, i. 479.; *Dict. Geographique*.)

DAMAUN, a large district of Afghanistan, now subordinate to the Maharajah of the Punjab, but formerly belonging to Caubul; between lat. 31° and 34° N., and long. 69° 30' and 73° E., bounded S. by Singur, in Sindh, W. by the Solimaun Mountains, N. by the salt range diverging from the latter, and E. by the Indus. Along the banks of the latter the country is a plain bare of grass, the soil apparently composed of the slime deposited by the river, by which it is regularly inundated; in the S. parts, especially, a good deal of this flat ground is overspread with low, thick tamarisk jungles, abounding in wild boars, hog deer, and game of all sorts. Round the villages large woods of date trees are often seen, but no other trees of any size; where there is cultivation the country is rich, but by far the greater part of it is waste. The central parts are composed of arid sandy plains, divided by hill-ranges, and depending entirely upon rain for cultivation: the more uneven country skirting the W. mountains is more fertile, and produces wheat, bajree, jowaree, and other Indian grains. The winter in Damaun is cooler than in Hindostan, but the heat of summer is extreme. This distr. is inhabited by various turbulent clans, principally Juts and Belooches, living in perpetual contention with each other, and who, having been at a distance from the seat of government, had never rendered much more than a nominal obedience to the Caubul sovereign. Some of the Damaun tribes are nomadic, others fixed agriculturists, and many are shepherds, the country in many parts yielding good pasture land. (*Elphinstone's Caubul*, i. 53-72.)

DAMIETTA, a town of Lower Egypt, the third in

DAMIETTA (OLD).

rank, pop., and importance in the country, on the E. bank of the branch of the Nile bearing its name, 6 m. S. from its mouth (the anc. *Phatmicitum* (*Ostium*), 80 m. E. Rosetta, and 97 m. N.N.E. Cairo. Lat. $31^{\circ} 25' 43''$ N., long. $31^{\circ} 45' 30''$ E. Pop. has been stated at 30,000; but this is probably much overrated. The inhab. are principally natives of Egypt, with a few Syrians and Levant Greeks. A bend in the river gives to the town a somewhat crescent shape. It is irregularly and ill built; though there are some good mosques, several bazaars, and some marble baths. Some of the better sort of houses, which are of brick, have terraces and pavilions; and such as are near the Nile, have little ports, whence to embark on the water; but there are no open spaces, nor buildings, worthy of much notice, and, generally speaking, it is but a collection of miserable mud hovels. The Pacha has lately established a school for Infantry officers, with 400 pupils; as well as an extensive collection of buildings for drying, husking, and cleaning rice, some mills, and a cotton factory. The latter supplies a great deal of coarse cotton cloth, which forms the wear of the labouring classes. The bar at the mouth of this branch of the Nile prevents the access of any large vessels to the town; so that merchant ships have to lie outside the bar, and load and unload by means of small Greek craft, Egyptian *djermes*, and other vessels of from 30 to 60 tons burthen. But, despite these difficulties, Damietta, previously to the away of Mehemet Ali, had a considerable trade: his commercial system has, however, transferred the greater part of it to Alexandria. Its chief article of export is the rice grown in its neighbourhood, which is the best in Egypt. Dried fish of the Lake Menzaleh, dates from the numerous plantations round the town, wild coffee, beans, and linen, are the other principal articles of export. Most European nations still retain vice-consuls here. It has a governor, and a municipal administration similar to that of Cairo and Alexandria.

DAMIETTA (OLD) (anc. *Thamitis*), from which the present town originated, stood about 4 m. to the N., where some of its ruins are still distinguishable. Under the Saracens, it was one of the most commercial and wealthy towns of Egypt. It was thrice taken by the Christians;—by Roger, king of Sicily, by John of Brienne, and the crusaders; and by Louis IX. of France in 1249. Louis being soon after made prisoner by the Saracens, the town was delivered up for his ransom; upon which, the Saracens, to prevent future attacks, partially blocked up the mouth of the river by sinking vessels laden with stones in the channel; and having levelled *Thamitis* with the ground, forced its inhabitants to remove to the present town. (*MS. Account of Damietta*, *Dic. Géographique*, &c.)

DANTZIC (Germ. *Danzig*; Pol. *Gdańsk*), an important commercial city, sea-port, and stronghold of the Prussian states, Prussia Proper, cap. reg. and circ. of same name, on the left bank of the Vistula, about 3 m. from its mouth; lat. $54^{\circ} 20' 48''$ N., long. $18^{\circ} 38'$ E. Pop. (*ex. military*) in 1834, 55,400; in 1838, 56,257.

DANTZIC.

673

It is traversed by the small rivers Motlau and Ro-daune, and is very strongly fortified. It is ill built, and the streets are narrow, irregular, and gloomy. The cathedral church of St. Mary is the principal public building; it was finished in 1608, and has a fine brass font and a magnificent picture of the last judgment. The town-house, arsenal, and the *Arthusschloß* or exchange, also deserve notice. There are 15 Lutheran churches and chapels, 4 Catholic churches and a chapel, 2 synagogues, an English church, &c., with several monasteries and convents. It has a gymnasium, two grammar-schools, and many inferior schools, with schools of navigation, midwifery, and commerce; a school of arts and trades, a good public library, an observatory, a museum, a society of natural philosophy, &c., an orphan and foundling hospital, a large workhouse, and various hospitals. Within the last few years a number of friendly and charitable societies have been established.

Dantzic is the seat of the provincial authorities, of a court of appeal for the circle, a council of admiralty, a tribunal of commerce, a provincial board of taxation, &c. It has a vast number of distilleries and breweries, the latter of which produce the black-beer in such general demand; it has also large establishments for grinding flour, with dye-works, sugar-refineries, and manufactures of fire-arms, tobacco, silks, vitriol, &c., and some jewellery business. The harbour, called *Neufahrwasser*, is at the mouth of the river; but vessels drawing 8 or 9 ft. come up to the city. Being the emporium of the extensive and fruitful countries traversed by the Vistula and its affluents, Dantzic has a very extensive commerce; and is at the head of all the corn-shipping ports, not of Europe only, but of the world. Wheat forms the principal article of export; it is of the best quality, and very large quantities are exported, as many as 800,000 quarters having been shipped in a single year. There is also a large exportation of flour, rye, barley, pease, and oats, with timber inferior only to that of Memel, linseed and rapeseed, staves, pearl ashes, bones, zinc, flax and hemp, linens, feathers, deer and spina, wool, &c. The principal articles of import consist of woollens, cottons, and other manufactured goods, colonial produce, dye-stuffs, wine, oil, spice, fruit, salt, furs, &c. The usual depth of water at the river's mouth is from 13 to 14 ft.; but in the roads, which are protected by the long, low, narrow tongue of land called the Heel, there is good anchorage for ships of any burden. The greater part of the trade of Dantzic is in the hands of foreigners, particularly the English. In 1834, there belonged to the port 60 ships of the burden of 13,292 Prussian lasts; and during the same year 359 foreign ships (of which 38 were British) arrived at, and 351 cleared from, the port. The granaries for storing the corn brought down the Vistula are generally seven stories high; and these, with the warehouses for linens, ashes, hemp, &c., are all situated on a small island surrounded by the Motlau. They are, or recently were, guarded by powerful dogs.

During the year 1833, the exports of corn, flour, and seeds, from Dantzic, were as follows:—

Countries to which exported.	Wheat. Lasts.	Rye. Lasts.	Barley. Lasts.	Oats. Lasts.	Pease. Lasts.	Flour. Barrels.	Linseed. Lasts.	Rapeseed. Lasts.
Great Britain, Jersey, and Guernsey	37,197	3,160	5,641	774	4,337	44,426	637	190
Holland	2,633	5,136	7	-	133	-	252	276
Belgium	-	231	-	-	4	-	116	5
Denmark, Sweden, and Norway	41	3,300	632	24	139	172	-	-
Hamburg, Lubeck, and Bremen	45	378	-	-	19	-	-	-
Hanover	-	190	-	-	-	-	25	-
French ports	-	118	-	-	-	-	113	-
Pomerania	-	274	-	-	16	253	-	11
America	-	-	-	-	-	400	-	-
Totals	39,910	12,787	6,280	798	4,648	45,251	1,143	482

Taking the last at 10½ imp. quarters, this would give, exclusive of flour, an export of 412,403 quarters of wheat, which cost, free on board, from 45s. to 55s. a quarter. Of this amount, 37,197 lasts, or 384,369 quarters, and no fewer than 44,426 barrels of flour, were shipped for England. The grain in warehouses at Dantzic on 31st December, 1833, amounted to 13,819 lasts; of which 7,010 were wheat. During the same year, there were exported 4,719 cwt. black-beer and 15,952 cwt. salted meat; 30,885 casks of ship-bread; about 6,000 barrels of ashes; 37,897 cwt. zinc, and 19,050 cwt. bones; besides vast quantities of timber. The export of corn from Dantzic in 1838 was still more considerable.

The notions current in this country as to the extreme low price of wheat in Dantzic, have no good foundation. No considerable demand from abroad can be met without resorting for supplies to the markets in the S. parts of Poland and Galicia, from 500 to 700 m. inland. The corn is thence brought to the city by water in flat-hot-tomed boats suited to the navigation of the rivers; but, owing to the uncertain supply of water in the rivers, their usual shallowness, and the difficulty of their navi-

gation, its conveyance is both very tedious and expensive.

Mr. Consul Gibson, who had the best means of acquiring accurate information, estimated the expense of conveying wheat and rye thither, including the duty at Thorn and the charges of turning on the river, till put into granary at Dantzic, according to the distance, as follows:—

	s.	d.	d.
If from the upper provinces on the Bug, a distance of from 700 to 500 m., per quarter	9	2	7 10
From the provinces of Tracow, Sandomir, and Lublin, 550 to 350 m.	6	6	5 4
From Warsaw and its neighbourhood, about 240 m. at Thorn, and the charges of turning on the river, till put into granary at Dantzic, according to the distance, as follows:—	4	2	3 5
From Graudenz, a distance of about 70 m., there being in this case no duty at Thorn, and when returned on the river	0	10	0 9

It is essential, however, to observe that these are the ordinary charges; and that they are very decidedly higher when there is any unusual demand for exportation, that is, when there is a demand for 200,000 quarters and upwards.

The Bug has many windings, and its navigation, which is slow and difficult, can only be attempted in the spring, when the water is high. It is the same, though in a less degree, with some of the rivers that fall into the Vistula before it reaches Warsaw; and towards Cracow the Vistula itself is frequently unnavigable, especially in dry seasons, except in spring and after the midsummer rains, when the snow melts on the Carpathian Mountains. In 1833, the navigation of the Polish rivers was more than usually bad. The corn from the upper provinces did not reach Dantzic till from two to four months later than usual, and was burdened with a very heavy additional expense. The fact is, that the supply of grain at Dantzic depend quite, much on the abundance of water in the rivers, or on their easy navigation in summer, as on the goodness of the harvest.

"There are," says Mr. Jacob, "two modes of conveying wheat to Dantzic by the Vistula. That which grows near the lower parts of the river, comprising Polish Russia, and part of the prov. of Plock, and of Masovia, in the kingdom of Poland, which is generally of an inferior quality, is conveyed in covered boats, with shifting boards that protect the cargo from the rain, but not from pilfering. These vessels are long, and draw about 15 inches water, and bring about 150 quarters of wheat; they are not, however, so well calculated for the upper parts of the river. From Cracow, where the Vistula first becomes navigable, to below the junction of the Bug with that stream, the wheat is mostly conveyed to Dantzic in open flats. These are built on the banks, in seasons of leisure, on spots far from the ordinary reach of the water, but which, when the autumnal rains, or the melted snows in spring, fill and overflow the river, are easily floated. These flats, which are very rudely constructed, usually carry down from 180 to 200 quarters; but though they only draw from ten to twelve inches water, they are frequently ground.".

During the period from 1770 to 1819, the average price of wheat at Dantzic was 45s. 4d. a quarter. The demand was very limited from 1820 to 1829, and the price proportionally low. The same cause reduced the price from 1833 to 1837; but whenever there is any considerable demand for Dantzic wheat, or for 150,000 quarters and upwards, the price invariably amounts to from 40s. to 50s. or 55s. a quarter. We incline to think that from 40s. to 45s. a quarter would be about the average price of wheat in Dantzic in ordinary years, were the British ports always open under a fixed duty of 5s. or 6s. a quarter. It is, at all events, abundantly certain that its price would not be under 40s. a quarter. But taking it at only 38s., if we add to this 10s. or 12s. as the cost of conveying a quarter of wheat from Dantzic to London, and putting it into granary here, including insurance and profit, and 5s. or 6s. for duty, it is immediately seen that it is the greatest imaginable error to suppose that our agriculturists should be sensibly injured by the importation of Dantzic wheat. Under the circumstances supposed, it could not, in ordinary years, be offered for sale in this country for less than from 55s. to 58s. a quarter, a price more than sufficient to insure the continued progress of British agriculture.

Dantzic was probably founded in the 10th century. It was occupied by the knights of the Teutonic order in 1310, and was held by them till 1454, when it emancipated itself from their yoke, and became a free independent state, under the protection of Poland. For a lengthened period Dantzic was a principal member of the Hanseatic Confederacy, and had under it several dependent cities. During its independence, the citizens were engaged in frequent contests with the Poles, Swedes, &c. and, notwithstanding the protection of England, Holland, and Prussia, Peter the Great exacted from them considerable contributions. The pretension of Dantzic to the exclusive navigation of the Vistula, or to demand a toll from such ships as passed in and out of the river, was at all times submitted to with reluctance. After the first partition of Poland in 1772, Frederick the Great, having acquired a large accession of territory on the Vistula, approaching almost to the gates of Dantzic, claimed for his subjects the right to the free navigation of the river. This having been refused by the Dantickers, gave rise to some acts of hostility, and to lengthened negotiations. These, however, were cut short in 1793 by the second partition of Poland, when Dantzic was assigned to Prussia. During the late war, the city was occupied for several years by a French garrison, and suffered much from the hostilities and exactions to which she was exposed; but since the peace of 1815 she has recovered much of her ancient prosperity. The fortifications have been also greatly strengthened and improved, and magnificent works have been constructed, by which the whole adjacent territory may be laid under water.

During the independence of Dantzic, there were attached to it the *Wędrzy*, or alluvial island formed by the Vistula and the Motlawa, and the *Frische Neuhung*, or long narrow tongue of land between the Frische Hafl and

the sea. The former is very fertile, but the latter consists principally of sand. (*Beschreibung, Geogr.* ii. 907. ed. 1795; *Zedler's Statistics of Prussia*, ii. 485. in Germ.; *Private Information*.)

DANUBE (an. *Danubius*, and in the lower part of its course *Iter*, Germ. *Donau*, Hung. *Duna*), a celebrated river of Central and S.E. Europe, being, though inferior in point of size to the Wolga, in every other respect the first among European rivers. Its general course is from W. to E.; it extends between long. 8° 10' and 29° 40' E., its extreme N. point of lat. being 49° 2', and its extreme S. point 43° 38' N. Its total course from its source to its mouth, on the W. shore of the Black Sea, is from 1,750 to 1,800 m.; during which it passes through the territories of Baden, Württemberg, Bavaria, and the Austrian empire, and divides Turkey from Wallachia, Moldavia, and Russia. It is said to receive 30 navigable and a vast number of inferior tributaries, the principal being the Igar, Inn, Drave, Save, Theiss, Morava, Sereth, and Pruth. The cities of Ulm, Ratisbon, Passau, Linz, Vienna, Presburg, Comorn, Gran, Waitzen, Buda, Pesth, Peterwaradin, Neusatz, Semlin, Belgrade, Semendria, Widin, Nicopol, Slatow, Rustchuk, Silistria, Brahamov, and Galacs, are situated upon its banks.

The basin of the Danube and its tributaries has been estimated to comprise about 1-13th of the entire surface of Europe. (*Dict. Geog.*) It is bounded S. by the Alps and the Balkan; and on the N. at first by the Black Forest and some minor alpine ranges, and afterwards by the Bohemian Forest and Carpathian mountains. It includes the plains of Bavaria, Hungary, and Turkey in Europe; and the course of the Danube has been generally considered under three grand divisions, each embracing one of these plains. As this division is not only natural but convenient, we shall adhere to it in the following statements.

The Danube originates in two streams, the Bregach and the Bregg, which have their sources on the E. declivity of the Black Forest, in the grand duchy of Baden, in about 48° 10' N. lat., and 6° 15' E. long. These streams having united at Donaueschingen, where they are augmented by a spring sometimes regarded as the head of the river, the united stream takes the name of the Danube. It thence proceeds at first S.E., but afterwards in a N.E. direction as far as Ratisbon, near which city it attains its extreme N. lat. It then runs again in a S.E. direction to about long. 15°, and from that point mostly E. to Vienna, where the first division of its course may be said to terminate. Within this division it receives on the right hand the streams of the Iller, Gunz, Mindel, Lech, Isar, Inn, Traun, Ens, &c.; many of which are navigable for a considerable distance. Its affluents on the opposite side are, on the contrary, generally small; and indeed, throughout the whole upper half of its course, the principal tributaries of the Danube (excepting the Theiss) are from the S. or right side, while in the lower division, those from the N. or left side are by far the most considerable. It receives, however, from the N. in the first division of its course, the Sava, Altmühl, Naab, and Regen, all of which are navigable streams. At its source the Danube is 2,178 ft. above the level of the sea, and runs through an alpine country to Ulm, where its elevation is 1,533 ft. From Donauewürtz to Passau it traverses the Bavarian plain; its height above the sea being at the former 1,125 ft., and at the latter 836 ft. At Passau it leaves the Bavarian dom., and thence to Vienna, intersects a second mountainous region. At Linz its elevation is 735 ft., and at Vienna 512 ft. At Linz, the Danube first becomes navigable for flat-bottomed vessels of from 50 to 100 tons burden, and in that division there measures little more than 7 ft. and its breadth little more than 100 ft. Through the Bavarian plain its average depth is 10 ft. This increases considerably when it becomes again enclosed between the mountains at Passau; but above Vienna its navigation is rendered difficult, not only by its general shallowness, but by its rapidity and the frequent rocks, shoals, and whirlpools in its channel.

In the second division of its course, the Danube at first runs generally E. to Presburg, next through the lesser Hungarian plain S.E. to its confluence with the Raab, and then E. to Waitzen. At this point it turns S. through the great Hungarian plain, and runs parallel with the Theiss for nearly 2½° of lat. to its junction with the Drave, about lat. 45° 30'. Here it turns S.E., in which general direction it continues to Orsova, where it leaves the Austrian dom.; the second division of its course terminating at the cataract or pass called the "Iron Gate," about 4 m. lower down. It is within this division that the Danube receives its largest and most important tributaries, including the Raab, Drave, Save, and Morava on its right, and the March, Waag, and Theiss on its left side. At Presburg, its waters are 321 ft. at Buda, 280 ft. and at Belgrade, 255 ft. above the level of the sea. From Vienna to the mouth of the Drave, the Danube runs through an expanse of plain country broken

only in a few places, as at Presburg, Buda, and Waitzen. Near the latter it passes through a ravine formed in a chain of mountains, separating the two Hungarian plains. From its union with the Drave, its S. banks in Slavonia and Servia are usually mountainous, while its N. continue low and marshy as far as Moldavia. Previously to its reaching Buda, it is about 700 yards wide; soon after passing that city it attains a width of upwards of 1,000 yards; and by the time it has arrived at Belgrade it is considerably more than $\frac{1}{2}$ of a mile across. (*Dict. Géog.*) From Vienna to Pesth, its bed is sprinkled with rocks, but they are not such impediments to navigation as in the upper portion of its course. Shifting sand-banks, which prevail all down the river as far as Moldavia, are greater obstacles; but when the water is tolerably high, they may generally be avoided by good pilotage. (*Austria and the Austrians*, i. 337.) At Gönyű, 70 m. above Pesth, the Danube first becomes navigable for vessels drawing more than from 2 to $\frac{3}{4}$ ft. water. Near Moldavia, a mountain range from the Balkhan, and another from the Carpathians, begin to confine the river on either side as far as Gladova in Servia. Throughout this distance, about 80 m., it is greatly contracted in width, about $\frac{1}{2}$ mile, and the rocks are numerous. Near the termination of this defile, a short distance below Orsova, is the famous pass of the "Iron Gate" (*Türk., Demi-Kapt*), already alluded to. This is a gorge about 2,000 yards in length, enclosed on either side by a mountain of micaceous slate, a material very difficult to break or blast, through which the river rushes with great velocity, over an inclined plane, with a fall of about 15 ft. a mile. The rocks here divide it into three channels. The centre one is of considerable width, and vessels of 400 tons may pass down it, when the river is very full; the two others are but shallow; and that on the Wallachian or E. side is never used. According to Strabo (vii. 212.), it was here that the *Danubius* ended, and the *Ister* commenced; but there is a great discrepancy as to this point among the ancient authorities.

In the third division of its course, the Danube runs at first generally S. by E. to Widin; thence its direction is mostly E. by S. to near Slatow, where it attains its most E. lat.; and thence proceeds N. E. to Bassoava. It then turns to Galacz, and finally runs from thence town generally E. to its efflux in the Black Sea, about lat. 45°. As far as Galacz, it forms the boundary between Turkey and Wallachia and Moldavia; and between Galacz and the sea it is the boundary between Russia and Turkey, its principal N. and central mouths being included within the Russian territory. While the Danube is running S. by E., its right bank is mountainous, but the elevated lands soon afterwards recede from its banks, and throughout the rest of its course the river flows through low plain, which E. of Silistria becomes marshy. In this division it receives on its left side the Schyl, Aluta, Vode, Argis, Jalomnitzza, Sereth, and Pruth. Its affluents on the opposite side are much less considerable; the principal are the Isker, Osma, Taban, &c. In its progress through Turkey, the Danube varies in breadth from 1,400 to 2,100 yards; and its average depth is upwards of 20 ft. Ships of large size ascend as far as Silistria. About 50 m. from the Black Sea, it divides into three principal arms, besides giving origin to a considerable lake (Hasseln) on its S. side, from which several minor arms proceed. The delta of the Danube is a vast swampy flat, interspersed with lagoons covered with bulrushes, the resort of vast flocks of water-fowl. The N. principal arm of the river (*Kitia*) and the S. (*Edrillia*), which forms the boundary between the Russian and Turkish dominions, are shallow and of little value; but the middle one (*Sudinek*) has from 10 to 12 ft. water over the bar at its mouth. This is said, however, to be gradually filling up from the deposit of mud brought down by the river, which the current has not sufficient strength to clear away, its fall and rapidity being very much diminished during the last 200 m. of its course.

Were it not for the rapids between Moldavia and Gladova, the Danube would be at all times navigable from Ulm to its mouth. Great efforts have been made to overcome this interruption; and it is worthy of remark that the most illustrious of the Roman emperors, Trajan, alive to all the advantages to be derived from the free navigation of the Danube, constructed, with great labour and sagacity, a road along the edge of the Servian side of the river, to facilitate the towing of ships against the current. Some remains of this extraordinary work still exist, with part of an inscription in honour of Trajan. In more recent times, attempts have been made to deepen the channel of the river, and to cut lateral canals in the most dangerous places; but these owing to the almost insuperable obstacles to be overcome, have had but little success. Looking at the map, the best way would appear to be to cut a navigable canal from opposite Moldavia to Berza Palanka, below the "Iron Gate," which would not only avoid the

rapids, but shorten the distance, by avoiding the great bend of the river by Orsova. But the nature of the ground is said to oppose insurmountable obstacles to such a project, though probably it would admit of the construction of a road. The Hungarian government has lately constructed an excellent and very expensive road from Moldavia to Orsova, along the left bank of the river. Unfortunately, however, it terminates above the "Iron Gate;" and passengers going down the river, unless when it is sufficiently high to admit of flat-bottomed boats going through the "gate," have to be ferried over to the Servian side of the river, where, after a land journey of about 8 m., they re-embark. Those ascending the river have also to cross at Orsova.

The Danube abounds with islands. They are especially numerous and large in the middle part of its course. The Great Schlitt isl. extends between two arms of the river, from Presburg to Comorn, a distance of 64 m. The Czepli and Margutai isl., below Buda, formed in a similar way, are also of considerable size. The Danube has been said to wind more than other European rivers; this is peculiarly the case in its progress S. through the great Hungarian plain. It is also one of the swiftest rivers in Europe; its rapidity is such that some places to which any navigation against its current is impossible, except by the agency of steam. According to Mr. Quin, it rushes through the "Iron Gate" at the rate of not less than 8 m. an hour (i. 210.); but it is clear that the velocity must vary materially with the volume of water. This rapidity has prevented the erection in modern times of any stone bridge on the Danube below Ratibon; nor was there a permanent bridge of any other kind below Linz previously to the commencement of that now, we believe, in the course of construction at Buda. There are flying bridges at Presburg and Comorn, and bridges of boats at Pesth and Peterwarden; beyond the latter place no direct communication between the opposite banks exists. In antiquity, however, it was very different. About 3 m. below Gladova, Trajan constructed his famous bridge, the remains of which are still visible, and form one of the most interesting and remarkable monuments of the most brilliant era of imperial Rome. This great structure consisted of 30 or 32 stone piers, with wooden arches. The greatest depth of the river at here is 18 ft., and the length of the bridge between the pillars is 3,100 ft. still remain on either bank was about 3,100 English feet. (*Page*, ii. 136.) But the breadth of the river is less than this; and is said at present not to exceed 2,800 feet. (*Murray*.) This, in fact, is one of the widest parts of the river; and was no doubt selected for the site of the bridge partly on account of the ample channel that was thus afforded to carry off the sudden floods to which the river is subject; its bed is here also sound, and its depth less than in most other parts. When lowest, the heads of some of the piers are seen above the surface of the water. This noble work was destroyed by Adrian, the successor of Trajan, lest the barbarians should overpower the Roman troops in Dacia, and make use of the bridge to invade the empire. (*Entrop in Adrian*.) But it was not Adrian, but Aurelian, who abandoned Dacia.

The steam navigation of the Danube is of paramount importance. This undertaking was first actively commenced by Count Szechenyi, who, in 1830, established a joint stock company for the purpose, of which he was the managing director. The Austrian government soon afterwards took up the scheme, greatly enlarged the plans of the company, granted it a charter for the exclusive navigation of the river for 15 years (which has been since extended to 25), and accorded it the privilege of drawing, gratuitously, the necessary supplies of coal from the Imperial mines of Moldavia, on the banks of the river. The first steam-boat was launched on the Danube, at Vienna, in 1830. The company, in 1839, possessed 10 steam-vessels plying between Presburg and Constantinople, the largest of which, the *Rosa*, used between Pesth and Orsova, was 60 ft. in length, 26 ft. across, and of 525 tons burden. In 1839, 4 relays of steam-boats conveyed goods and passengers to and from Presburg to the Ottoman capital, running continuously from the former place to Pesth; Pesth to Moldavia; Gladova to Galacz; and from Galacz to the end of the journey. Some small iron boats, drawing but little water, have been built to run between Presburg and Vienna. From Moldavia to Gladova, a distance of about 50 m. by land, travellers and luggage are mostly conveyed by the new road already alluded to on the left bank of the river, thus avoiding the rapids and "Iron Gate."

The success of the Austrian Steam Navigation Company led to the formation, in 1836, of a Bavarian company, which, in 1839, had two steamers plying between Ratibon and Passau, or Linz. The barges and ordinary packet-boats on the Danube are unwieldy flat bottomed boats, covered with sheds of rough planks; the rafts in use are large and clumsy affairs of the rudest kind; sails are unknown on the Upper Danube; and the boats are steered only by paddles. Passage

boats ply, on fixed days as high as Ulm; but, beyond that town, the principal utility of the Danube is to assist the manufacturing industry of Wirtemberg and Baden. (*Austria and the Austrians*, 1. 324.)

So far back as the 8th century, Charlemagne contemplated uniting the Danube and the Rhine, by means of a canal; and the remains of a work commenced with that view are still visible at Wessenberg. After the lapse of more than 1,000 years, an undertaking of a similar kind is now in progress, under the auspices of the Bavarian government; the canal having been commenced which is to run from Diefelfurth, on the Altmühl, to Bamberg on the Mayn. A railroad from the vicinity of Lins to Budweis, on the Moldau (Bohemia), already connects the Danube with the Elbe; another railroad is opened from Lins to Gmunden on the Traun; a third from Vienna to Brunn will, perhaps, be continued to Bochnia in Galicia, forming a communication between the Danube and the Vistula; a fourth line is in progress from Vienna to Raab, the most important corn-market in Hungary; and the especial attention of the Austrian government is now directed toward the formation of a fifth line to connect the Danube with the Adriatic. (*Turnbull*.)

The steam navigation of the Danube and the concurrent works above mentioned will doubtless materially augment the resources, and contribute efficiently to the improvement of the Austrian empire. By these means new markets will be opened for the hitherto all but unsaleable produce of Hungary, Transylvania, &c.; and these countries will in consequence be brought nearer to the position they should occupy among European nations. That Russia, whose strength in part derived from the weakness of Austria, should look with jealousy on the Danube steam navigation is not to be wondered at; and some of the obstacles which have been thrown in its way may without difficulty be traced up to this source. At one period, in opposition to the treaty of 1814, an attempt was made by the Russians to exact tolls from the vessels belonging to the Austrian Steam Company, and other ships passing the mouth of the Danube; but, on this being related by Austria and other European powers, it was dropped. Facilities, however, exist in the nature of the country for obviating such attempts on the part of Russia. The elbow of the Danube at Rassova is only 30 m. from the Black Sea, within which distance a deep lake, 13 m. in length, intervenes. A ship-canal, not half so long as that from Amsterdam to the Helder, might, it is believed, be easily constructed, which would not only shorten the navigation of the Danube 200 m., but would pass through a territory nearly 100 m. S. of the frontier at present occupied by Russia. The most ample information connected with the natural history and antiquities of the Danube may be found in the rare and valuable work of Count Maréchal on that river, published in 1726, in 6 vols. folio. The original work, which is in Latin, was translated into French, and published in 1744. (*See Oesterr. Nat. Encyc. art. Donau*; *Bruguière, Géographie de l'Europe*, p. 401.; *Dict. Géog.*; *Page's Hungary*, &c.; *Turnbull's Austria*, 1840; *Quin, Steam Navig.*, &c.; *Murray's Handbook for S. Germany*.)

DARABJERD, a town of Persia, prov. Fars, 155 m. S.E. by E. Shiraz. It is finely situated on the banks of a river, and in an extensive plain surrounded with groves of orange and lemon trees, which yield such an abundance of fruit that the juice is exported to all parts of Persia. Though much fallen off its former splendour, and partially in ruins, it has still a pop. of from 15,000 to 20,000. The culture of tobacco is here carried to a great extent. (*Künnehr*.)

DARDANELLES (an. *Hellespontus*), the narrow strait

"*Longus in angustum qua clauditur Hellespontus*," connecting the Sea of Marmara with the Ægean, and separating part of the S.E. coast of Europe from the most W. part of Asia. Its modern name is derived from the castles, called the Dardanelles, built on its banks. Its general direction is N.E. and S.W. Length about 40 m.; breadth unequal, but where least, not more than $\frac{1}{2}$ m. across. Being, as it were, the key to Constantinople and the Black Sea from the W., this strait is pretty strongly fortified. The entrance is $\frac{1}{2}$ m. wide, and defended by a fort on either side; that of the Asiatic coast (*Koum Kalessi*) mounting 80 guns and 4 mortars, and that on the European side (*Serit Bahr Kalessi*) mounting 70 large guns and 4 mortars. The adjacent heights are also crowned with batteries, and about 3 m. above the New Castle of Europe there is one mounting 12 guns. Proceeding onward, 12 m. above the New Castles, are the Dardanelles, or Old Castles of Europe and Asia; these defend the narrowest part of the strait, which is here only $\frac{1}{2}$ m. wide. The *Sultanieh Kalessi*, or Asiatic castle, is the strongest, and is the residence of the seraskier pacha whose authority extends over the forts on both sides. It has 2 connected forts, and 192 guns, 18 of which are of the largest calibre. The European castle is built in the form of a crescent,

and in 1832 was furnished with 64 guns: it has 2 collateral batteries recently built; the most S. of which mounts 48, and the N. 80 guns. $\frac{1}{2}$ m. further on the Asiatic side is a battery of 46 guns; and 3 m. above the European castle is a battery called *Kiamieh Bouyoum*, with 30 guns, near the small town of Malto, supposed to occupy the site of the ancient *Mydus*. The last forts on both sides are *Bonali Kalessi*, on the site of the ancient *Seras*, and *Nagara*, near *Abydos*, which see. The direct distance between them is about 14 m. A strong current runs always from the Sea of Marmara, through the Dardanelles, at the rate of from 2 to 4 m. an hour, according to circumstances. The wind also generally sets in the same direction. There are shoals in some places; but deep water is every where to be found in some part of the channel. The Asiatic shore presents the most beautiful scenery; that of Europe is, on the contrary, generally steep and rugged. To each of the Dardanelles a town is attached: the Asiatic is the larger, and contains 2,000 houses, but the streets are narrow, ill paved, and dirty, and almost all the buildings are of wood. It has manufactures of pottery. Gallipoli is the principal town on this strait, which see. This strait has been famous from the remotest period. It derives its name from Helle, daughter of Athamas, king of Thebes, drowned in it. (*Hygin. Poet. Astron. lib. 2.* § 20.) It is also memorable as the scene of the death of Leander, and of the impotent rage of Xerxes, whose ill-fated host crossed over it on a bridge of boats between Sestos and Abydos. (*Andréossi*; *Dict. Géogr.*; *Purdy's Sailing Directory*, 1834, pp. 151, 167.)

DARFUR, a country of central Africa, between 11° and 16° N. lat., and 26° and 30° E. long. It lies between Bornou and Abyssinia; almost due S. from Egypt, and W. of Senaar, whence it is separated by Kordofan. Standing, however, like an oasis in the midst of the Great Sahara desert, Darfur is situated at a great distance from all the above-named territories. The country is of the most dreary character, without rivers, lakes, or much cultivable land, with a few mountains rising from its sandy plains.

Of the *topography* and real extent of Darfur we possess but limited information, and only one authority for the little we do know (W. G. Brown). The principal town appears to be Cobbé, in lat. 14° 11', and long. 28° 8', which is 2 m. in length, from N. to S., but very narrow; each house being separated from the others by a cultivated enclosure. The inhab. are supplied with water from shallow wells dug, in most instances, beside their houses, but so unskillfully that the soil often collapses, and the same well is seldom of use longer than four months at a time. This place is chiefly inhabited by merchants, and from it a caravan starts at irregular intervals to Cairu. 6,000 persons are said to reside at Cobbé. A neighbouring village, called El Fasbar, is the residence of the sultan and his court. Sweini, another Farian town, lies almost N. of Cobbé, at the distance of about 2 days' diligent travelling, and in the direct road to Egypt; hence it is principally resorted to by merchants. Its environs are more fertile than those of Cobbé, and when the *jelabs* (traders) remain there, it boasts of a daily market. (Culcabia, due W. from Cobbé, at a distance of $\frac{1}{2}$ days, is a more considerable place, being the dépôt of merchandise brought from the W. It has also a manufactory for leather and of *kokes*, a coarse cotton cloth from 5 to 8 yards long, and about 22 in. wide, which form the covering of all the lower class of both sexes. The other towns are Ril, Cours, Shoba, Giddid, and Gellé. (*Broune's Travels*, pp. 266—276.)

The inhab. of Darfur, which have been estimated not to exceed 200,000 in number, are a mixture of Arabs and Negroes. They are governed by a sultan, whose power is not altogether absolute, he being, in some degree, amenable to the *kukaras*, or ecclesiastics; and frequently standing in some awe of his own troops. His power is delegated in the prov. to governors, called *meliks*. Though the Farians are bigoted Mohammedans, they do not abstain from intoxicating liquors; the crime of drunkenness, committed by means of a decoction of hemp, is frequent among them. Snuff and tobacco appear to be almost necessities of their existence; but for the endurance of hunger and thirst they are unequalled even by the inhab. of surrounding arid regions, among whom such a qualification is so essential. They are not remarkably cleanly in their persons; and, having no baths, rub their bodies with a kind of fatuccoon paste as a substitute. The Farians are, unlike other muslims, jovial, and even licentious, in their manners, and are particularly fond of dancing, each tribe having a dance peculiar to itself. At Cobbé education is in some degree provided for by four or five *meclébs* (schools), where reading and writing are taught. A *kukara* also lectures occasionally on the Koran, and what they call *clim*, philosophy. The language is a dialect of the Arabic peculiar to the Farians.

Agriculture in Darfur is at a very low ebb; indeed,

the soil which was presented to Mr. Browne's observation, consisting of bare rocks, sand, a small portion of clay, and a still smaller part of vegetable mould, seemed to offer no encouragement in that respect. Entirely devoid of rivers or lakes, the country solely derives irrigation from heavy periodical rains, which are preserved in numerous water-courses. At the commencement the farmer digs innumerable holes in his fields, into which he throws the seed, and, covering it over with his foot, leaves it without further care until the grain becomes ripe. (*Ibid.*, p. 291.) The harvest is gathered by women and slaves, who break off the ears with their hands; so that the farming implements of the Fûrians are few and rude. The grains chiefly raised are wheat, *dokn* (*Holcus duchna* Forskål), *kassob*, and *sesameum* (*simsin*, Arabic term); the pulse consists of kidney-beans, a bean called *fût*, and another denominated *shâh*, together with other leguminous plants peculiar to that part of Africa. The occasional drought is not favourable to water-melons, though many are grown. Tamarinds, dates of an inferior quality, the *Rhamnus nabecca* of Forskål, and tobacco, which is said to be indigenous, are all cultivated in Darfur. (*Browne*, pp. 300—313.)

Commerce.—Although the Fûrians have but a limited variety of articles to exchange for those necessities of life which their own country does not produce, yet commerce, from their central situation, affords the chief means of support to the nation. Many of their towns are entirely peopled by merchants. The caravans from Egypt, Sennaar, &c. are laden with jewellery, swords, fire-arms, coffee, raw and manufactured silks, shoes, writing paper, Syrian soap, French and Egyptian cloths, with Indian muslins and cottons, wire, brass, silver, &c. For these the Fûrians give in exchange slaves, camels, ivory, ostrich feathers, gum, pimento, tamarinds, leather sacks for water (*ray*), others for dry articles (*geraub*), parquets, monkeys, and guinea fowls. (*Browne*, pp. 316, 349.)

The climate of Darfur is chiefly influenced by the perennial rains, which fall from the middle of June till September with frequency and violence, and suddenly invest the face of the country, till then dry and sterile, with a delightful verdure. July appears to be the hottest month, for, according to Browne's meteorological journal, kept during the years 1794—5, the thermometer never sunk below 90° at 3 p.m.; but more frequently rose to 98°. In the April of 1794, however, it ranged from 94° to 101°, while the same month of the succeeding year exhibits an average far below that of either of the July months. The thermometer seldom sunk, according to Browne's register, lower at 3 p.m. than 70°, or at 7 a.m. below 58°, which happened most frequently in February; December and January, also, exhibit low degrees. N. and N.W. winds are those which blow with the greatest frequency over Darfur. (*Appendix to Browne's Travels*, pp. 581—684.)

Among the animals to be found in Darfur are horses, of which there are not many; sheep, which also are scarce, yield meat of a poor quality; goats are more numerous; but horned cattle form the chief wealth of the Fûrians, as in the more S. African nations. The milk of the cows is not very palatable; but the beef is good. Camels of every variety of breed are exceedingly numerous; but the *Gerab* camel is much subject to the mange; the males are sometimes castrated. Dogs are employed both in hunting the antelope and for guarding sheep; the household cat is also met with. The wild animals are the lion, leopard, wolf, jackal, wild buffalo, &c. Elephants assemble in large herds of four or five hundred; though they are much smaller than the Asiatic elephant, the animal is a source of great profit to the Fûrians, who make a lucrative sale of his tusks, hold his flesh in great esteem as food, and manufacture the fat into a much-used ointment. Several sorts of monkeys, and the civet-cat, are also mentioned by Browne. Ottriches, vultures, parquets, partridges, pigeons, and quails, were also seen by him. Locusts, hooded-serpents, mosquitos, and white ants, infest the country in large numbers. (*Travels*, pp. 293—304.)

Of the minerals found in Darfur, the best is copper; but iron is produced in the greatest abundance, and is formed into domestic utensils and arms. All the silver, lead, and tin is brought from Egypt. The other geological features of Darfur are scarcely known. Rocks of grey granite and fossil salt only are mentioned by Brown. (*Ibid.*, pp. 304—306.)

DARËN. *See PANAMA* (ISTHMIUS OF).

DARLINGTON, a market-town and bor. of England, co. Durham, Darlington Ward, S. div., on the Skerne, an affluent of the Tees, and on the great N. road from London to Edinburgh, 215 m. N. by W. London, and 17 m. S. Durham. Area of township, 3,470 acres. Pop. (1831) 8,574. The town consists of several well-built and well-lighted streets, which branch out from a spacious market square. The river is crossed by a bridge of 3 arches. The church, formerly collegiate and dedicated to St. Cuthbert, was built about 1160; it has a fine tower and spire 180 ft. high. The Prim. and West. Methodists,

Independents, R. Catholics, and Soc. of Friends, have places of worship. A grammar-school was founded by Q. Eliz. in 1567, and a blue-coat school by Lady Calverley in 1716. There are also Lancasterian, national, and Sunday schools, a dispensary, lying-in charity, and 2 almshouses. A mechanic's institute, with a library, has been formed here. It is a bor. by prescription, governed by a bailiff appointed by the bishop, who holds a court twice a year for the manor of Bondgate, and a bor. court also twice a year, at both of which debts under 40s. are recoverable. Petty sessions are held on alternate Mondays in the town-hall, a neat building having a house of correction connected with it. The election for members for the S. division of the county is held here. The manufacture of linen, which was formerly carried on to such an extent as to give employment to 500 looms, has declined, but it is still pretty considerable. The manufacture of woollen yarn employed, in 1839, 3 mills, with 405 hands; in the same year there was 1 flax mill at work, with 93 hands. A good many persons are also employed in wool-combing; and there are several tan-yards, ropewalks, breweries, and iron and brass works. The Stockton and Darlington railway, one of the first in the kingdom, commences at Wiltton Park Colliery, near W. Auckland, and proceeds by Darlington and Yarm to Stockton, a distance of 24½ m. It has 2 fixed engines, which work 4 inclined planes, ¼ m. long each. Markets, Mondays; cattle markets, on alternate Mondays. Fairs on the 1st Monday in March, Easter and Whit-Monday, and 10th Oct.; statute fairs on 13th May and 23d Nov. The Darlington Joint Stock Banking Co., a branch of the National and Provincial Bank of England, and a savings bank, and a savings' bank are established here. (*Surveys Hist. of Durham*; *Bailey's Agr. View of Durham*; *Parl. Papers*.)

DARMSTADT, a town of W. Germany, cap. of the grand duchy of Hesse-Darmstadt, seat of the gov. and residence of the sovereign, prov. Starkenberg, in the great Rhenish plain near the N.W. extremity of the Odenwald, and on the *Bergstrasse*, or high road between Frankfurt-on-the-Maine and Heidelberg (*see* HESSE-DARMSTADT), 17 m. S. the former city, 58 m. N. by E. Carlsruhe, 8 m. E. by N. the Rhine; lat. 49° 56' 24" N., long. 8° 24' 49" E. Pop. about 23,000, though it is said, at the beginning of the present century, to have been under 9,000. (*Berghaus*.) It is rather dull, has little trade, nor, for a capital, does it present much deserving of notice. It consists of an old and a new town; both encircled by walls: the former is ill built, and its streets are narrow and dark; while the latter has broad, straight, and handsome streets, and good houses, many of which stand singly. The town is well lighted at night. It has 3 or 4 suburbs, 72 streets, 12 squares, 4 churches, 6 entrance-gates, 3 of which are handsome structures, and 53 public edifices; amongst the latter are the opera-house, which, in the time of the late grand duke, was one of the most celebrated throughout Germany for its performances; it is built in the Italian style, and is 230 (Rhenish) ft. in length, by 158 ft. broad. The riding-school, now converted into a dépôt for artillery, 319 ft. in length, by 157 ft. in breadth, is another conspicuous object. The grand duke resides in a new palace of no great architectural pretensions. The old ducal palace, surrounded by a dry ditch which has been changed into a shrubbery and garden, is a structure of the various ages from the 16th to the 18th century, and contains a picture-gallery with about 600 paintings, but mostly second-rate, a museum of natural history with some valuable fossils, a museum of ancient and modern sculpture, a hall of antiquities, collection of cork models, armoury, and a library of 120,000 vols. open to the public. The remaining principal buildings are—the palaces of the hereditary prince and the Landgrave Christian; the Catholic church, which, at the interior of which is an elegant and imposing rotunda, 173 ft. in diameter, 123 ft. in height, and surrounded by pillars 50 ft. high; the *Casino*, in which the commons of the duchy meet; the military hospital, royal stables, orphan asylum, ducal chapel, synagogue, &c.

Darmstadt is the seat of the high court of appeal for the grand duchy, and various other judicial tribunals and government offices. It has a gymnasium, a teachers' academy, a practical school of arts and sciences (*Realschule*), schools of artillery and military duty, of sculpture and drawing, &c. It has manufactures of tobacco, wax-candles, carpets, silver articles, coloured paper, cards, and starch: coaches are built in the town, and there are numerous mills and kitchen-gardens in the vicinity. The majority of the inhab. depend, however, for subsistence on the presence and expenditure of the court. A daily communication is maintained with Strasburg, Frankfurt, and other considerable towns from 50 to 100 m. distant. (*Berghaus, Allg. Länder und Völkerkunde*, iv. 351.; *Conradt, Lehrbuch*, p. 476.; *Murray's Handbook for Germany*.)

DARTFORD, a town and par. of England, co. Kent, 14½ m. Sutton-at-Hone, hund. Axton, Dartford, and

Wilmington; on the Darent, about 4 m. from its embouchure in the Thames, 16 m. E.S.E. London. Area of par. 4,160 acres; pop. of do. (1821), 3,593; (1831), 4,715. The town, situated in a narrow valley, consists chiefly of one main street, along the road from London to Dover, and of 2 smaller ones branching from it. The river is crossed, at the E. end of the town, by a bridge of the era of Edw. III., widened and repaired about 60 years since. The church is a large structure, with 2 burial-wards, one surrounding it, the other on the summit overlooking its tower. There are several dissenting chapels; a free grammar-school, founded in 1576, for 8 boys; a national school, and 2 sets of almshouses. There is a co. bridewell near the town, and sessions for the upper div. of the lathe are held in it. During the reign of Elizabeth, the co. assizes were frequently held here; and at present a court of requests for debts under 5*l*, whose jurisdiction extends over the town of Gravesend and 4 adjoining hundreds. Market, Saturday; fair, August 2, for horses and cattle. The chief business of the town is caused by the numerous large gunpowder, paper, oil, and flour mills on the Darent; there is also a large steam-engine manufactory, and a foundry connected with it, employing together between 200 and 300 hands. The river is navigable for boats to the town, where there is a small wharf, whence there are daily passage-boats to London. The Roman Watling Street is traceable near the town. In one of the chalk hills between which it stands are several ancient excavations, supposed to have been scooped out for granaries during the Saxon period. There are some remains of an Augustine nunnery, subsequently made a royal residence by Henry VIII. and by Elizabeth. Dartford was the source of the insurrection headed by Wat Tyler, who, being a blacksmith in the town, killed the poll-tax collector by a blow of his hammer, for an insult offered to his daughter.

DARTMOOR. See ENGLAND.

DARTMOUTH, a parli. bor., town, and sea-port of England, co. Devon, hund. Coleridge; 170 m. (direct distance) W. S.W. London, and 26 m. S. by W. Exeter. Pop. (1831) 4,485; (1841), 4,597. Area of parli. bor. 1,850 acres. The town is situated on the W. bank of the estuary of the Dart, near its embouchure in the English Channel, where it forms a spacious harbour, capable of containing several hundred sail of vessels of the largest size. The entrance to the harbour is narrow, and protected by a battery on its W. side, on the site of an ancient castle, from which to a castle on the opposite bank (now in ruins) a chain used to be extended, for the purpose of defence. The streets, which are narrow and irregular, rise from the margin of the river, and parallel with it, one over another, over a steep acclivity, being mostly connected by flights of steps; houses mostly antique, with projecting upper stories; the whole is paved, well supplied with water, and partially lighted with gas. There are 3 churches—St. Saviour's, built 1372, a curious old structure, usually called the Mayor's Chapel; Town-hall Chapel, on the summit beyond the town, with a tower forming a sea-mark; and St. Petrox's, adjoining the battery at the entrance to the harbour. There are also 3 dissenting chapels, 2 sets of almshouses, one of which, founded 1815, is for dejected mariners; and several minor charities. Market, Friday, in a spacious market-place, built 1829. At present there are no fairs. There are large tide-docks, adapted for the repair and building of vessels, but they have been unoccupied for many years; ship-building, however, has recently been revived at another establishment, and some remarkably fine vessels have been launched. There are also establishments for sail and rope-making, a spacious quay, and several private wharfs. The exports consist chiefly of woollen goods and cider, and thither from the interior, and shipwise, and of various articles of general supply for the Labrador fisheries, in which several vessels belonging to the port are directly engaged, though this trade has greatly declined from its ancient importance. There are regular sailing-vessels and one steamer, for goods and passengers, between Dartmouth and London. There belonged to the port on the 1st of January 1836, 395 ships, of the burden of 27,140 tons, manned by 1,760 seamen. In ancient times, however, its mercantile marine was comparatively much more considerable, as is evident from the fact of its having furnished 81 vessels for the 787 seamen to the fleet of Edward III. against Calais. The port is a bonding one, its jurisdiction extending about 40 m. along the coast (from the Teign to the Erme), and up the Dart, to Totness bridge (10 m.). The Dart is navigable thus far for vessels of 160 tons, the channel having recently been deepened and improved: a small steamer plies daily between the two towns, and several other passage-boats; a flying bridge connects the town with the opposite bank at the higher part of the harbour; and there is a horse-ferry to Kingswear, at the lower part. An annual regatta takes place in the harbour. It claims to be a bor. by prescription, under the name of Clifton-Dartmouth, Nardness, &c.

It regularly sent 2 m.e.s. to the H. of C. from the 14th

Edw. III. down to the Reform Act, which deprived it of one mem. The elective franchise had been previously vested in the corporation and in the freemen made by them, the inhab. of the bor. not being entitled to their freedom in right of birth, servitude, or residence. (*Boundary Report*.) But the Reform Act, besides giving the franchise to the 10*l*. householders, extended the limits of the bor. to the dimensions already stated. Registered electors, 1837-38, 262. The agricultural part of the parli. bor. is excluded from the municipal bor., which is now governed by a mayor, 4 aldermen, and 12 councillors. The income of the corporation, chiefly derived from lands and houses, is about 1,100*l*. a year. The scenery around Dartmouth is extremely picturesque. Flavel, an eminent Calvinistic writer, and Newcomen, the inventor of the atmospheric engine, were natives of this town; which also gives the title of earl to the Legge family.

DAVENTRY, a town and par. of England, co. Northampton, hund. Fawley. The town, situated on the high road from London to Birmingham, near the source of the Nen, is 68 m. N.W. of the former, and 12 m. W. Northampton. The par., which comprises 4,090 acres, had in 1831 a pop. of 3,046, of whom 3,566 belonged to the town. "It is clean and respectable in appearance, with some good houses and shops. The chief or only trade is that of shoe-making, which, however, is not carried on to any extent." (*Municipal Boundary Report*.) It has a good modern church; a free school founded in 1576; it has also some educated by means of a legacy of Lord Crew, bishop of Durham, and 12 at the expense of the corporation. The remains of a priory founded in 1080 are now occupied as dwellings by the poor. Though incorporated at an early date, the bor. does not appear ever to have been represented in the H. of C. Market-day, Wednesday. On a neighbouring lofty eminence, called Brough hill, is an encampment occupying the whole of the summit. A spring rises in the outer ditch of the encampment, which, according to Dr. Stukeley, is one of the highest in England. (*Stukeley's Itinerary, Curium*, ii. 18.) (*Boundary Report*, &c.)

DAVID'S STRAITS, a small sea-coast city of Wales, co. Pembroke, hund. Dewisland, near the extreme W. point of the principality, on a small stream called the Allan, about 1 m. from the Sea, and 16 m. N.W. Milford Haven. The par., an extensive one, had in 1831 a pop. of 2,388, of which the city had about 1,000. A bishopric was established here at a very early period; and to that circumstance the place is most probably indebted for its origin. The cathedral, the bishop's palace, St. Mary's college, and other buildings appropriated to purposes connected with the establishment and the residence of the clergy, are enclosed within a lofty wall above 1,200 yards in circ. The cathedral, which occupies the site of one more ancient destroyed by the Danes, was completed in the reign of King Jolin. It is a cruciform structure, 307 ft. in length within the walls, with a square tower at the W. end; it has many interesting monuments, but is in great part in ruins. The bishop's palace, reckoned one of the most magnificent edifices of the kind in the kingdom, is also in ruins; as is St. Mary's college, founded by John de Gaunt in 1365. The cathedral contains the tomb of St. David, the patron saint of Wales; Giraldus Cambrensis, bishop Avelin, &c.; and these, and the great antiquity of the place, conferred on it a peculiar sanctity, which in the middle ages made it be resorted to by crowds of pilgrims. The bishop now resides at Abergwilly, near Caermarthen: his nett revenue amounted, at an average of the 3 years ending with 1831, to 1,897*l*. a year: the revenue of the dean and chapter amounts to 1,362*l*. The town is at present inhabited by the few clergy who perform the duties at the cathedral, and by the farmers and others who hold lands in the immediate vicinity. There is a little trade, and the place may be said to be neither increasing nor falling off. The country round is poor and unimproved, and the access to it is very bad. The poor's rate is high, but house rent is extremely low; so much so that a house that would bring 150*l*. in the vicinity of London would not let here for 8*l*. The inhab. elect a mayor annually, whose duty it is to see that no encroachments be made on a common held under lease from the bishop and chapter, and to collect a rate for payment of its rent. (*Beauties of Wales, Boundary Report*, &c.)

DAVIS'S STRAITS, the stretching N.N.W. and S.S.E., and uniting Baffin's Bay with the N. Atlantic Ocean, having Greenland on its E., and Cumberland Island on its W. side. Where narrowest, under the arctic circle, it is from 150 to 160 m. across; but its length is not accurately determined. It derives its name from Davis, by whom it was discovered between 1585 and 1587. Strong currents set towards the S. from this strait, which is also much encumbered with ice and icebergs. It has been for many years past the principal resort of the ships engaged in the N. whale fishery; the wh. has having been nearly exterminated in the sea round Spitzbergen, the original seat of the fishery. (See art. DAVIS'S BAY.)

DAUPHINE*, one of the provs. into which France was divided previously to the revolution. It is now distributed among the depts. of Isère, Drome, and Hautes Alpes.

DAX, AX, or AGS, a town of France, dép. Landes, cap. arrond. in a fertile plain on the Adour, 25 m. S.W. Mont-de-Marsan. Pop. (1836) 4,776. It is pretty well built, is surrounded by walls of Roman construction, and has an ancient episcopal palace, cathedral, hall of justice, and prison. Dax is, however, chiefly celebrated for its numerous hot saline springs, accounted efficacious in rheumatism, paralysis, &c.; and which being known to the Romans, they gave it the name of *Aqua Augustæ*. The principal of these springs pours its waters into a large basin in the centre of the place, and the evaporation from it is so great, that in cool mornings the whole town is sometimes involved in a fog. There are several bathing establishments contiguous to the town. Dax communicates by a bridge across the Adour, with a suburb on the opposite side of the river. It has a tribunal of primary jurisdiction, a chamber of commerce, a communal college, and a theatre. Manufactures of earthenware, pitch, oil, thread, vinegar, leather, &c., and some trade in corn, wine, brandy, and wood. Dax was erected into a bishopric as early as the 5th century, was taken by the Saracens in the 10th, and held by the English from the 12th till the 15th century. (*Hugo, art. Landes; Dict. Géog.*, &c.)

DEAD SEA (Lat. *Lacus Asphaltites*, Arab. *Bahr Lout*), a lake of Palestine, celebrated in scripture history, between 31° 5' and 31° 52' N. lat., 35° 26' and 35° 48' E. long. Its dimensions have been variously stated, but it is probably about 55 m. in length, and 20 in extreme width. On the E. and W. it is bounded by exceedingly high mountains; on the N. it opens to the plain of Jericho and the valley of the Jordan; on the S. the valley of El-Ghor extends, as if it were a continuation of its bed, to the gulph of Akabah. (See *Jordan*.)

Nothing can be more dreary than the scenery round this famous lake; the soil, impregnated with salt, is without vegetation, the air is loaded with saline particles, and the bare crags of the surrounding mountains furnish no food for either beast or bird. Hence its neighbourhood is deserted by animated beings, and the dreary stillness of the place is increased by the nature of the lake itself. Intensely salt, its waters are not moved by a gentle breeze, and, owing to the hollowness of its basin, being seldom affected by a strong one, its usual appearance is that of stagnation, agreeing well with the death-like stillness and desolation around.

This absence of life has given to the lake its popular designation of Dead Sea, and is the source of the common tradition that its waters are fatal to fish, and its exhalations to birds and other animals. This is, however, incorrect; straggling birds fly over its surface uninjured; and Maundrell found upon its shores some shells, which seemed to imply that it was not altogether tenanted. The water is very limpid, but extremely bitter and nauseous, the substance held in solution amounting to one fourth part of its whole weight.* It has also a strong petrifying quality, which accounts for the want of any great variety of fish; and it is peculiarly buoyant, though the assertion that nothing sinks within its bosom is wholly fabulous. Asphaltum (whence its classical name) floats in great quantities on its surface; and a bituminous stone, very inflammable, and capable of receiving a high polish, is found upon its shores.

The Dead Sea is one of the class of lakes that have no visible outlets; it receives six streams besides the Jordan, but gives forth none; the surplus water being carried off by evaporation. Its depth varies in the dry and rainy seasons, but is never very great; at its narrowest part, about 8 m. from its S. extremity, it is usually fordable.

Its Arabic name, *Bahr-Lout* (Sea of Lot), refers to the connection between the history of this lake and that of the nephew of Abraham, in whose days its bed, then the fertile vale of Siddim, was considered by the sacred historian as worthy to be compared with the "garden of the Lord." (*Gen. xlii. 10*.) It certainly contained 5 cities (*Gen. xiv. 2*); and according to Stephen of Byzantium (*art. Zabozus*) 10, and Strabo (*xvi. cap. 2. 764*). 13. In the visitation by which they were all destroyed, with the exception of Zoar (*Gen. xix. 23, 24*), the neighbouring country underwent an extraordinary change; so much so, that Moses in another place (*Deut. xlix. 23*) describes it as "a land of brimstone, and salt, and burning," characteristics by which it still continues to be marked. Ruins of the overthrown cities are said to have been seen on the W. side of the lake, but the fact

has not been authenticated. In Scripture this collection of water is called the Salt Sea (*Gen. xiv. 3*; *Deut. ili. 17*; *Josh. xv. 5*); the Sea of the Plain (*Deut. ili. 17*); and the East Sea (*Ezek. xlii. 18*; *Joel. ii. 20*). (*Maundrell, pp. 112-114*; *Volney, i. 288-290*; *Ruechardt's Syria and the Holy Land*, pp. 338-339; *Robinson, i. 64-69. 265*.)

DEAL, a par. bor. and sea-port town of England, co. Kent, lathe St. Augustine, hunds. Cornilo and Bewsborough. It is also a member of the cinque port of Sandwich. Area of par., 1,130 acres; pop. of ditto (1821), 6,811; (1831), 7,268. The town, situated on the E. coast of Kent, opposite the Goodwin Sands, and about half-way between Ramsgate and the S. Foreland, is 66 m. E.S.E. London: it consists of Upper, Middle, and Lower Deal. The latter, containing the great bulk of the pop., is built, principally in three parallel streets, close to the shingly beach, extending along the roadstead called the Downs. Streets mostly narrow and irregular, but paved and lighted. A row of houses connecting the lower with the upper village constitutes Middle Deal: in these last the houses are detached, and are mostly occupied by the wealthier class. The par. church is in Upper Deal: there is a chapel of ease in the lower town, 4 dissenting chapels, and a national school. Walmer forms a continuation of Lower Deal, and owes its rise to the naval arsenal, hospital, and barracks, &c., which were erected in the last war. Its pop. in 1831 was 1,779. Since the Municipal Reform Act, it has been included in the bor. of Deal (of which it forms a ward); and the Reform Act conferred on both parishes, in conjunction with Sandwich, the privilege of returning 2 mem. to the H. of C. Deal was probably annexed to the cinque ports soon after the Conquest; a decree exempting it from co. taxation shows it to have been so in 1229; a charter of 11th Wm. III. made it a bor. independent of Sandwich. Previously to the Municipal Reform Act, the corporation consisted of about 370 free men, and the government vested in the mayor, 12 jurats, and 24 common-councilmen, the jurisdiction being co-extensive with the par. Walmer is now included; and there are 3 wards governed by 6 aldermen and 18 common-councilmen. There is a court of requests for debts under 40s., whose jurisdiction comprises Deal and 9 other par. Market, Tuesday and Saturday: two small fairs, April 5, Oct. 12. There are no manufactures, the inhabitants being mostly shopkeepers, pilots, fishermen, boatmen, &c., mainly dependent on the export of shipping to its famous roadstead, the Downs. The latter is a spacious and convenient anchorage, bounded seaward by the Goodwin Sands, and tolerably safe, except in heavy gales from the N. and E. Most outward and homeward-bound vessels touch here to take or land pilots, letters, passengers, &c. This business, however, has greatly fallen off since the last war, when the Downs was much resorted to by men-of-war and merchantmen waiting for convoy; and, in consequence, the town is in a very depressed state, and many houses are unoccupied. Coals form almost the only article of import. Of late years, Walmer has been resorted to as a sea-bathing place, and there are several good lodging-houses for the reception of visitors during the season. Deal Castle, on the W. side of the town, is a round tower, built by Hen. VIII., with a moat and drawbridge; Sandown and Walmer castles are on either side of it, close to the sea, at the extreme limits of the bor. Deal is supposed by some to be the spot where Cæsar effected a landing, but this is doubtful.

DEBRECZIN, a town of Hungary, and next to Pesth, the largest in the kingdom, cap. co. Bihar, in a flat, sandy, and arid plain, 114 m. E. Pesth, and 110 m. N.W. Clausenburg; lat. 47° 30' N., long. 21° 6' 15" E. Pop., together with its suburbs, 45,730 (*Encyc. 1835*), nearly 44,000 of whom are Calvinists. This is one of the most singular places in Europe. Notwithstanding its size, its general appearance is rather that of a large village than a town; and notwithstanding its manufactures and trade, both of which are considerable, none of the advantages ordinarily met with in large commercial cities are here to be found. Its streets are broad, unpaved, and in rainy weather a mass of liquid mud. "Scarcely any of the houses are above one story in height, and few are built on any regular plan. The greater part are thatched, which has rendered Debreczin subject at various times to severe ravages from fire. In the spring of 1811 not fewer than 2,000 habitations were reduced to ashes in the course of six hours." (*Bright's Trav. p. 200*.) There are, however, 8 churches, 3 hospitals, 2 infirmaries, an orphan asylum, and a town-hall. The principal college of the Calvinists in Hungary, with a library of 20,000 vols., and upwards of 3,000 students (*Pagel*), is at Debreczin. It has also a Plarist college, a Catholic high-school, and a monastery. Shoes are manufactured in large quantities, there being as many as 500 master-workmen; tobacco pipes to the number of 11,000,000 (*Cannabick*), red clay pipe-bowls about 1,800,000, prepared sheep-skins about 25,000 annually; coarse woollen cloth, a spongy kind of soap greatly es-

teemed throughout the Austrian empire, with leather, furs, combs, coopers' and turnery wares, are amongst the principal manufactures. There is an extensive market for all these articles, as well as for oxen, sheep, horses, hogs, wheat, millet, wine, tobacco, water-melons, lard, wax, honey, and various other kinds of produce, especially at the fairs held at Debreczin every three months. On these occasions the country round the town is covered to an extent to which the eye can scarcely reach, with flocks and waggon, bales and cases, tents and huts, round which thousands of people are constantly gathered; presenting, in fact, all the appearance of an immense herd of nomades. A great deal of business is transacted at these fairs. Debreczin is, indeed, the great mart for the produce of the N. and E. parts of Hungary. By far the greater part of the pop. are Magyars; and it is here that the true Magyar character may be most advantageously studied. "The language is here spoken in the greatest purity; the costume is here worn by rich as well as poor; and those national peculiarities which a people always lose by much admixture with others, are still prominent at Debreczin." (*Page's Hungary and Transylvania*, ii. 20, &c.; *Czaplowska Gemalde von Ungarn*, i.; *Bright's Travels in Lower Hungary*, &c.)

DECCAN (Dak-hina, the South), a term of Sanscrit origin, and formerly applied to the country comprising all that part of India to the S. of the Nerbudda river; but since the Mohammedan invasion, the term has been restricted so as to apply only to the countries between the Nerbudda and Krishna, that is, between the parallel of lat. 16° N. and 20° N., extending from the Arabian Sea to the Bay of Bengal, and including the provs. Candahar, Aurangabad, Beeder, Hyderabad, Belajoor, Berar, Gundwanah, Orissa, and the N. Circars. British Decan comprises the collectorates of Candahar, Ahmednuggur, Poonah, and Darwar, under the presidency of Bombay; and the ceded districts on the Nerbudda under the presidency of Bengal. The remainder of this region is mostly comprised within the dominions of the rajah of Berar, the nizam, the rajah of Sattarah, the gulcowar, and schudla. For farther particulars, see the various provs., districts, and states referred to under their respective heads.

DEB, a river of England, which has its source in Bala Lake, co. Merioneth, N. Wales. At first it pursues an easterly course through the beautiful vale of Llangoollen, till it passes Wynnestay. It then takes a northerly direction, and forms the line of demarcation between the cos. of Denbigh and Flint in Wales, and Cheshire in England. It nearly encompasses the ancient city of Chester, and is thence conveyed by an artificial channel, about 8 m. in length, to its spacious estuary on the Irish Sea. Its principal tributary is the Alwyn, which unites with it at Holt. Its estuary is much encumbered with sand banks.

The Dee is also the name of two considerable Scotch rivers, one of which falls into the N. Sea at Aberdeen, and the other into the Irish Sea at the Little Ross, about 6 m. below Kirkcubright. The latter is navigable as far as Tongland-bridge, 2 m. above Kirkcubright, for vessels of large burden.

DELAWARE, one of the U. S. of America, and, excepting Rhode Island, the smallest of the Union. It occupies a part of the peninsula, lying between the bays of Chesapeake and Delaware; extending from lat. 38° 30' to 39° 50' N., and long. 74° 55' to 75° 47' W.; having N. Pennsylvania, W. and S. Maryland, and E. Delaware bay and river. Length, N. to S., 95 m.; average breadth about 22 m. Area, 2,068 m. Pop. (1830) 76,748, of whom 3,292 were slaves. Surface hilly in the N., more level in the S., and low alluvial, and marshy along the coast. One of the most elevated ridges in the peninsula passes through this state, dividing the waters that flow into either bay. The chief river, the Delaware, rises in New York, runs mostly S., and, after dividing that state and New Jersey from Pennsylvania, falls into the Bay of Delaware, near the N. extremity of the state, after a course of about 310 m. It receives several tributaries, and is navigable for ships of the greatest burden to Philadelphia, 55 m. from its mouth; and for small steam-vessels and boats, to nearly 135 m. higher. The other rivers are inconsiderable. There are no harbours on the sea-coast; the only one in the state is that of Newcast, 5 m. above the mouth of the Delaware river. The climate is healthy; but the degree of cold experienced in the N. is much greater, compared with that of the S., than could be expected from a difference in lat. of only 10° 20'. The soil in the N. is a rich clay; in other parts, and especially along the shore, it is sandy, and of inferior fertility; but it is every where well cultivated, at least for America. Principal crops, wheat, Indian corn, rye, barley, oats, flax, buckwheat, &c. The flour is of superior quality, and much esteemed for its softness and whiteness. The Cypress Swamp, a tract 12 m. in length and 6 in breadth, in the S. part of the state, has supplied a great deal of fine timber. Few minerals have been met with, excepting large masses of bog iron along the banks

of the smaller streams. Manufactures have made considerable progress. The mills situated on Brandywine Creek are considered the finest in the U. States; vessels are built, and there are iron-foundries and other extensive works at Wilmington. Wheat and flour are the principal articles of export. The foreign trade of this state is quite inconsiderable.

The state is divided into three cos. Dover is the cap., but yields to Wilmington and Newcastle in size, trade, and pop. There is no college in the state; one planned in 1803 at Wilmington has not come into operation; but there are good academies in this and in several of the other towns. The state has a fund for the support of free schools, which in 1834 had a capital of 170,000 dollars; and the objects of which are assisted by voluntary contributions from the different districts. A railroad, 16 m. long, from Newcastle to Frenchtown, was completed in 1832; and another, 33 m. in length, between Wilmington and Susquehanna, which communicates with the Baltimore and Port-Deposit railroad, was finished in 1837. A canal 14 m. in length, and navigable for small sea-vessels, unites the Delaware river near its mouth with the head of Chesapeake Bay.

The legislature consists of a senate and house of representatives, each co. sending 3 senators and 7 representatives; the former are elected for 4, and the latter for 2 years, by all the free white male citizens above 21 years of age who have resided in the state for a year, and paid taxes for six months preceding the election. The executive power is exercised by a governor chosen by the electors, who retains office for 4 years, but is not re-eligible. Judges retain office during approved conduct." Most of the pop. are Presbyterians and Methodists.

Delaware was colonized by the Swedes in 1637. In 1655 it was acquired by the Dutch; and in 1664 came into the possession of the British. In 1704, when under the proprietorship of the celebrated W. Penn, it became a separate colonial establishment, and as such remained until the independence of the States. Its constitution, formed in 1776, was amended in 1831. It sends 1 rep. to Congress.

DELAWARE BAY is an arm of the sea between the states of Delaware and New Jersey, 65 m. in length, and about 20 m. in width in its centre, and 18 at its mouth, between Cape Henlopen, lat. 38° 47' N., long. 75° 0' W., and Cape May, lat. 38° 57' N., long. 74° 52' W. It has deep water throughout, and a line-of-battle ship may ascend the river Delaware to Philadelphia, 55 m. above the head of the bay, and 120 m. from the ocean. A magnificent breakwater has been commenced at the entrance of Delaware Bay, near Cape Henlopen, to form an artificial harbour for the protection of vessels from the winds from the E. to the N.W., round by the N., and from the floating ice descending the bay from the N.W. This breakwater, which is to consist of two parts, one 1,400, and the other 500 yards in length, will, when completed, be a very great, as well as a most useful work. It is formed, like the breakwaters of Plymouth and Cherbourg, by sinking blocks of granite in the sea. (*Encyclopaedia Americana*; *Darby's View*, &c.; *American Almanack*, &c., 1834-1840.)

DELFT, a town of S. Holland, on the Schie and on the canal between Rotterdam and the IJlaque, 4 m. S.S.E. the former, and 8 m. N.W. the latter town; lat. 52° 0' 46" N., long. 4° 21' 46" E. Pop. (1837) 15,987. "Delft is an old-fashioned brick town, as Dutch as possible in its appearance, with old gateways, and lines of trees and havens in the middle of the streets. You at once see that the place is not what it has once been—no shipping, no trade, and no bustle in its almost empty thoroughfares. Its lines of leafy trees, once prized for their delightful shade, now bend over green-matted pools undisturbed by traffic, and only apparently kept up for the fashion of the thing, or for the accommodation of a passing *Treckschuit*. But with all its dullness, the town is both neat and cleanly in a very high degree." (*Chambers*.) It contains few places or buildings interesting to strangers: the principal are—the palace, in which William I., the most illustrious of all the princes of the house of Orange, and the founder of the independence of his country, was assassinated, July 10, 1584; it is a plain brick building within a court yard, and is now used as a barracks. The new church, at the E. end of the market-place, is a fine old Gothic edifice, with a conspicuous lofty tower, and one of the best peals of bells in Europe: this church contains the tomb of William I., one of the most magnificent objects of art in Holland. "It consists of a highly ornamented canopy, supported by a number of black and white marble pillars. In the centre, on a sarcophagus, lies the figure of the prince, in his robes, beautifully sculptured in white marble; and at his feet lies the figure of his faithful dog, which on one occasion saved his master's life in a midnight attack. There are several good figures in bronze round the tomb: that which is most admired is a figure of Fame blowing a trumpet, and

resting lightly on one toe, as if about to take its flight. Beneath, is the burial vault of the present royal family of Holland." (*Chambers.*) Adjacent to this superb monument is that of the most illustrious individual Delft ever produced, Hugo Grotius, born here on the 10th of April, 1583. It was erected in 1781, at the expense of his descendants, and is inscribed with a Latin epigraph written by the younger Burman.* "The Oude Kerk, or old church of Delft, is a structure remarkable for its extreme antiquity and huge size. It is situated in a mean street, and on approaching it the stranger is amazed at the enormous mass of brick, grey with age, which meets his eye. It is some 700 or 800 years old, and seems indebted for its protracted existence to the clusters of parafical houses and shops built within the recesses of its buttressed walls." (*Chambers.*) It contains the tombs of the famous admiral Van Tromp; of Heem, another admiral who fell in battle at Tromp's side; of the naturalist Leewenhoek, a native of this town, &c. The large building once occupied by the Dutch E. India Company faces one of the main streets, and extends along one of the havens for a considerable length; but its windows and doors are now closed, and it is used as a depot for military stores.

Delft was in former times the great seat of the manufacture of the common kind of earthenware, which was thence known by its name. England, however, has long since acquired a decided ascendancy in this branch of industry, and but very few persons are at present engaged in it in Delft. In fact, nearly all the "Delft ware" in use in Holland, and over the greater part of the Continent, is exported from England. Delft has a large woollen cloth factory, and others of carpets, coverlets, soap, &c., besides several distilleries and breweries. Its trade, however, is languishing, and it has little intercourse, except with Rotterdam and Delfshaven, a little town of 2,600 inhab. on the Maese, at the mouth of the canal which connects it with the Hague.

Delft was founded in 1074; it suffered severely from fire in 1536. Besides the eminent natives who have been already mentioned, it has produced many painters of celebrity, amongst whom was Beck, a pupil of Vandyk. (*See Chambers's Tour in Holland, &c. in 1838,* which has an excellent account of this and of the principal Dutch towns.)

DELHI, a prov. of Hindostan, presid. Bengal; chiefly between lat. 28° and 31° N., and long. 75° and 80° E.; having N. the prov. of Lahore, Gurwal, &c., E. Gurwal and Inde, S. Agra, and W. Ruyootana. Like the other Mohammedan soubas of India, this prov. is not a modern subdivision under the British rule; the collectorates which have been formed out of it are subordinate to the court of Bareilly, the judicial capital in the upper or W. provinces. (*See BENGAL, PRESIDENCY OR.*) The jurisdiction of Delhi at present extends only over the country W. the Jumna. Most of this prov. is flat; but at Wuseerabad, near Delhi city, begins the long range of hills that extends through the Macherri down towards Jyepoor. The chief rivers are the Ganges, Jumna, Caggar, Chitlung; and, in the N.W., the almost extinct Sereswall, formerly a distinguished stream; the principal of these run through the prov. in S.E. direction. The land is mostly arid and sandy, and in the W. suffers greatly from drought in the hot season, when the water, which is of a brackish quality, from the natron and other salts with which the ground is impregnated, can be procured only at from 120 to 200 ft. below the surface. Still, however, no part of Hindostan is susceptible of greater improvement by irrigation. The British government has lately directed much attention to the restoration of ancient canals and the construction of new ones in this prov. The canal of Ali Merdan Khan, which had been previously choked up for 100 m., was re-opened in 1820, at an expense of 22,500*l.*; and, as its waters gradually advanced, the country for 5 or 6 m. on either side became fertilised in a most astonishing manner, and numerous wells, previously thought useless, became again serviceable. The canal of Sultan Feroze Shah, the bed of which passes from the former W. through Hurreah to the frontiers of Bikanere, has been also surveyed preparatory to its restoration. A considerable tract between the Jumna and Ganges, though now sterile and waste, was formerly highly cultivated and populous, having been fertilised by the great Doab canal. Between the Jumna and Sutlege mango trees are numerous, and the soil produces wheat, barley, and other dry grains, but the periodical rains are not sufficient to insure a crop. During the rainy season the temporary streams overflow, after which the pasture is good, and the climate tolerably healthy and temperate; but in the hot season the heat becomes so oppressive, that the natives are often obliged to seek refuge from it in underground habitations. The land is assessed under a modification of the village system; but the *mocuddim*, or head man, is not responsible

for the payment, but is merely the agent for the rest of the village, removable at their pleasure, and not holding his office by any kind of hereditary tenure. Neither does he derive apparently any emolument from his office, nor is he analogous to the *zemindar* in the lower provinces, or the *potdar* in other parts; there being here no middle man to enjoy any portion of the land-tax, standing between the people and the government, which last receives from one fourth part to a half perhaps of the produce of the land, according to circumstances, after the shares of the village functionaries and certain other village expenses have been deducted. The *punchayet* system of arbitration is in common use. In the sillah courts the European judges are assisted by both Mohammedan and Hindoo law-officers, but the people in this prov. do not seem so disposed to litigation as in some others; they are, on the contrary, contented, orderly, and prosperous. At the commencement of the British rule in 1803, there were about 600 villages deserted, the inhabitants of most of which had before 1821 returned, and claimed and cultivated the lands they formerly possessed; and both the pop. and revenue had at that period very considerably increased. Mohammedans are most numerous in Delhi city, but Hindoos every where else, except in the N.W., where the Sikh religion is predominant, and the country is almost entirely occupied by petty Sikh states. The chief towns are Delhi, Bareilly, Phillibet, Shahjehanpur, Rampoor, Moradabad, Annapoohr, Meerat, &c. (*Hamilton's E. I. Gaz.* 1. 489-490; *Reports on the Affairs of the E. I. Comp.*)

DELHI (Sanscrit, *Indraprastha*), a celebrated city of Hindostan, presid. Bengal, lieutenantancy of Agra, cap. of the above prov., and anciently the metropolis of the Patan and Mogul empires, on the Jumna, 112 m. N.N.W. Agra, 425 m. N.W. Benares, and 830 m. in the same direction from Calcutta; lat. 28° 41' N., long. 77° 8' E. Pop. about 200,000. That Delhi, in its period of splendour, was a city of vast extent and magnificence, is sufficiently evinced by its ruins, which are scattered over nearly as large a surface as London, Westminster, and Southwark. The present inhabited city, E. and N. the ruins, built by the emperor Shah Jehan, and called by him Shahjehanabad, about 7 m. in circuit, is situated on a rocky range of hills, and is surrounded by an embattled wall, with many bastions and intervening martello towers, faced along its whole extent with substantial masonry, and recently strengthened with a moat and glacis by the British government. It has many good houses, chiefly of brick; the streets are in general narrow, but the principal are wide, handsome, and, for an Asiatic city, remarkably clean; the bazaars have a good appearance. There were formerly two very noble streets; but houses have been built down their centre and across, so as to spoil them: along one of these, running from the palace S. to the Agra gate, is the aqueduct of Ali Merdan Khan, re-opened by Captain Blaine in 1820. The principal public buildings are, the palace, the *Jumna Masjid*, or chief mosque, many other mosques, the tombs of the emperor Humayoon and of Seifid Jung, the Cuttuh Minar, &c., and within the new city, the *Shah Jahan* and *Shah Jahan* did palaces belonging formerly to the great dignitaries of the Mogul empire. Almost all these structures are of red granite, inlaid in some of the ornamental parts with white marble: the general style of building is simple, yet elegant; those of Patan architecture are never overdone with ornaments so as to interfere with their general severe and solemn character. The palace, as seen from a distance, is a very high and extensive cluster of Gothic towers and battlements towering above the other buildings: it was built by Shah Jehan, is surrounded by a moat and an embattled wall, which toward the street in which it stands is 60 ft. high, and has several small round towers and two noble gateways. Heber states that, as a kingly residence, it far surpasses the Kremlin at Moscow; but, except in the durability of its materials, it is inferior to Windsor Castle. When Heber visited the emperor, he proceeded first through "a long vaulted aisle like that of a Gothic cathedral, with a small open octagonal court in its centre, all of granite, and all finely carved with inscriptions from the Koran, and with flowers." This ended in a ruinous and exceedingly dirty stable-yard, beyond which a richly carved, but ruinous, gateway led into a very handsome and striking court, with low but richly ornamented buildings. Opposite to us," continues the bishop, "was a beautiful open pavilion of white marble, richly carved, flanked by rose-bushes and fountains, and some tapestry and striped curtains hanging in festoons about it, within which was a crowd of people, and the poor old descendant of Tamerlane seated in the midst of them." The small apartment in which the bishop was divested of the robes the emperor had given him was entirely lined with white marble, inlaid with flowers and leaves of green serpentine, lapis lazuli, and porphyry, and evidently the work of an Italian artist: in the hall of public audience, also, a splendid pavilion of marble, on a wall behind the throne, a small group representing Orpheus playing to the beasts, surrounded

* This is the statement of the *Biographie Universelle*, art. *Grotius*: Mr. Chambers says that it is simply inscribed *Hugo Grotius sacrum*.

by mosaic paintings of birds, animals, and flowers, indicates itself as the work of European hands. The inner or chief hall of audience, which is open on one side to the court of the palace, and on the other to the gardens, is a fine quadrangular arched terrace of white marble; its pillars and arches richly carved and ornamented with gilt, inlaid flowers, and inscriptions in the most elaborate Persian character: the marble floor, where not covered by carpets, is inlaid similarly to the other apartments: this part of the palace is in tolerable preservation. The Shahjahan gardens, so highly extolled in "Lalla Rookh" were also formed by Shah Jehan, and are said to have cost a million sterling; but "laughing Ceres has reassumed her reign," the gardens having been reconverted to agricultural purposes. The *Jumma Musjeed*, the largest and handsomest place of Mussulman worship in India, was built in six years by Shah Jehan, at an expense of 10 lacs of rupees. It stands on a small rocky eminence, scarped for the purpose: the ascent to it is by a flight of 35 stone steps, through a handsome gateway of red stone, the doors of which are covered with wrought brass. The terrace on which it is built is about 1,400 yards square, and surrounded by an arched colonnade with octagon pavilions at convenient distances. In the centre is a large marble reservoir, supplied by machinery from the canal. On the W. side is the mosque itself, of an oblong form, 261 ft. in length; its whole front coated with large slabs of white marble, and compartments in the cornice inlaid with Arabic inscriptions in black. It is approached by another flight of steps, and entered by 3 Gothic arches, each surmounted by a marble dome. At the flanks are 2 minarets, 130 ft. high, of black marble and red stone alternately, each having 3 projecting galleries, and their summits crowned with light pavilions of white marble, the ascent to which is by a winding staircase of 180 steps of red stone. This truly noble structure is in good repair, being maintained by a grant from the British government for that especial purpose. Not far from the palace is a mosque of red stone, surmounted with 3 gilt domes, in which Nadir Shah sat and witnessed the massacre of the unfortunate inhabitants. There are above 40 other mosques; one, erected by the daughter of Aurangzeb, contains the tomb in which she was interred in 1710; some bear the marks of great antiquity; especially the *Kala Musjeed*, or black mosque, built of dark-coloured granite by the first Patan conquerors. It is exactly on the plan of the original Arabian mosques. The prospect S. the Shahjahan gardens, as far as the eye can reach, is covered with the remains of extensive gardens, pavilions, mosques, and sepulchres, connecting the village of Cuttub with the new city of Delhi, from which it is nearly 10 m. distant S.W., and exhibiting one of the most striking scenes of desolation to be any where met with. The celebrated Cuttub Minar is a very handsome round tower rising from a polygon of 27 sides, in 5 stages, gradually diminishing in circumference, to the height of 243 ft.: its summit, which is crowned by a majestic cupola rising from 4 arcades of red granite, is ascended by a spiral staircase of 384 steps, and between each stage a balcony runs round the pillar. The old Patan palace, a mass of ruin larger than the others, has been a solid fortress in a plain and unornamented style of architecture: it contains a high black pillar of cast metal of Hindoo construction, and originally covered with Hindoo characters, but which Feroze Shah afterwards enclosed within the court of his palace, covering it with Arabic and Persian inscriptions. The tomb of Humayoon is of Gothic architecture, surrounded by a large garden with terraces and fountains, nearly all of which are now gone to decay. The garden is surrounded by an embattled wall and cloister, and in its centre, on a platform ascended by four flights of granite steps, is the tomb itself, a square building, with a circular apartment within about as large as the Radcliffe library at Oxford, surmounted by a dome of white marble. From the top of this building, the desolation is seen to extend to the W., in which direction Indraprast stood, apparently to a range of barren hills 7 or 8 m. off.

The soil in the neighbourhood of Delhi is singularly destitute of vegetation; the Jumna annually overflows its banks during the rains; but its waters in this part of its course are so much impregnated with natron, that the ground is thereby rendered barren rather than fertile. In order to supply water to the royal gardens, the aqueduct of Ali Merdan Khan was constructed, by which the waters of the Jumna, while pure and wholesome, are conducted for 150 m. to Delhi, immediately after the river leaves the mountains. During the troubles that followed the decline of the Mogul power, the channel was neglected; and when the English took possession of this city, it was found choked up in most parts with rubbish. It is the sole source of vegetation to the gardens of Delhi, and of drinkable water to its inhab.; and when re-opened in 1820, the whole pop. went out in jubilee to meet the stream as it flowed slowly onwards, throwing flowers, ghee, sweetmeats, and other offerings into the water, and calling down all manner of blessings on the British go-

vernment. The deficiency of water is the greatest drawback upon the city and its prov., since Delhi is otherwise well fitted to become a great inland mart for the interchange of commodities between India and the countries to the N. and W. Cotton cloths and indigo are manufactured, and a shawl factory, with weavers from Cashmere, has of late been established here. Shawis, fruits, and horses, are brought from Cashmere and Caubul; precious stones and jewellery are good and plentiful; and there are perhaps few, if any, of the ancient cities of Hindostan which at the present time will be found to rival modern Delhi in the wealth of its bazars, or the activity of its pop. At the S.W. extremity of the city stands the famous observatory, built, like that of Benares, by Jye Singh, rajah of Jyepoor, and formerly containing similar astronomical instruments; but which, together with the building itself, have been since partially destroyed. Near the Ajmeer gate is the *Medressa*, or college of Ghazez-ud-Deen-Khan, an edifice of great beauty, for the repair of which, and the revival of its functions, the government has very liberally contributed. The Delhi college is now divided into the Oriental and the English departments; astronomy and mathematics are taught on European principles; and in 1830 there were 287 students. According to Abul Fazel, no less than seven successive cities have stood on the ground occupied by Delhi and its ruins. Indraprast'ha or Indraput was the first, and the residence of the Hindoo rajahs before 1193, when the Afghans or Patans conquered it: it was the seat also of the first eight sovereigns of that dynasty. Sultan Balen built another fortified palace; Moaz-ud-deen another, on the banks of the Jumna; and others were built in different parts by succeeding sovereigns, one of which was near Cuttub; and lastly, Shah Jehan, towards the middle of the 17th century, chose the present spot for its site, which is certainly more advantageous than that of any of the preceding cities. In 1011 Delhi was taken and plundered by Mahmood of Ghilznee; in 1398 by Timour; in 1525 by Baber, who overturned the Patan dynasty, and commenced that of the Moguls; in 1736 the Maharattas burned the suburbs; and in 1739 Delhi was entered and pillaged by Nadir Shah, who did not retain possession of it. Since 1803, together with its territory, it has virtually belonged to the British, and is the seat of a resident who has exclusive charge of the emperor and royal family; conducts all the ordinary negotiations with the states in the N.W. of India; in the judicial and revenue departments possesses all the powers of the sudder court; and also of the revenue board within the five divisions of the Delhi territory. The annual stipend of the Delhi emperor and family amounts to 150,000*l.* (*Hamilton's E. I. Gaz.* 1. 491-501; *Mod. Trav.* x. 5-23; *Reports on the Affairs of the E. I. Company*).

DELOS, a small, and now barren and deserted, but once famous island of Greece, in the strait between Mycone and Rhenea, or the greater Delos, almost in the centre of the Cyclades, lat. 37° 25' N., long. 25° 15' E. This island was regarded in antiquity with peculiar veneration, from its being supposed to be the birth-place of Apollo and Diana, to whom it was sacred. Magnificent temples were erected in honour of these deities. The temple of Apollo, of which the ruins still remain, raised at the joint expense of the Grecian states, is celebrated as having been one of the most splendid in the ancient world; and his oracle here was second only to that of Delphi. Pursuant to a practice begun by Theseus, a vessel sailed annually from Athens to Delos with offerings, conveying at the same time deputations appointed to perform sacrifices in honour of Apollo and Diana, and choruses of youths and virgins, who danced and sung hymns in their praise. Quinquennial games were also celebrated with great pomp, and were attended by deputations from all the Grecian states and islands. Delos was repeatedly purified; and to keep it from all pollution, neither births nor deaths were allowed to take place within its sacred precincts; but all women about to be confined, and all sick persons, were conveyed to the greater Delos. Such was its character for sanctity, that it commanded the respect even of barbarians; and the Persian admirals, who laid waste the other islands, would not touch at Delos. After the Persian war, the Athenians made it the treasury of the Greeks, and all meetings relative to the affairs of the confederacy were held in it.

Its sacred character, the security which it consequently enjoyed, its good harbour, and central position, made Delos a favourite seat of commerce as well as of religion and pleasure. Its festivals were attended by the merchants of Greece, Asia Minor, Phœnicia, Egypt, Italy, &c., who brought thither the products of their respective countries. On the destruction of Corinth, many of its principal merchants sought an asylum in Delos, which acquired a large portion of the traffic that had been driven from the former. It was a principal seat of the ancient slave trade; and Strabo states that thousands of slaves were brought thither from Cilicia, and sold in its

markets. Cicero says of it, *Insula Delos tam procul a nobis in Egei Mari posita, quo omnes universi cum mercibus adeo oneribus commebant, referta divitiis, parva, sine muro nihil timebat.* (*Pro Lege Manil.* § 18.) A hill in the centre of the island was called *Mons Cynthus*, and hence the epithets *Cynthus* and *Cynthia* so frequently applied to Apollo and Diana. The heaps of marble, and the fragments of columns, architraves, &c., which are every where met with, attest the ancient grandeur of this famous island. But it has been long since deserted; and Tournefort states that, in the early part of last century, the inhab. of Myconos were in the habit of holding the greater Delos for the purpose of pasturage, paying for it to the grand seigneur a rent of 20 crowns a year! (*Tournefort's Voyage du Levant*, i. 290-325.; *Ancient Universal History*, viii. 335-341., 8vo. ed.; *Voyage d'Anacharsis*, &c.)

DELPHI, DELPHOS, or PYTHO (at present *Castri*), a famous city of ancient Greece, the cap. of Phocis, and the seat of by far the most celebrated oracle of the ancient world (*comune* *Isunt generis oraculum*, Liv. lib. 38. § 48.), at the S. foot of Mount Parnassus, 45 m. N.W. Corinth, and 84 m. N.E. from the nearest point of the Crisean Sea (Gulf of Lepanto). Delphi had every attribute that could invest it with interest and inspire awe. It was supposed to be situated in the centre of the world, was built on the declivity of the mountain on successive terraces formed of Cyclopean masonry, and rising above each other like the seats in a theatre; overhanging the city on the N. rose the two famous peaks of Parnassus, the chasm between them affording an outlet for the waters of the *Castalian* spring, the source of poetical inspiration. If we add to these natural advantages, the fact that Delphi was the chosen abode and principal oracle of Apollo; that she was the seat of the council of the Amphictyons, and the place where the Pythian games* were celebrated, we need not wonder at the extraordinary respect and veneration in which she was held. She was not fortified by walls, but by precipices, and the especial protection of Apollo; so that the ancients reckoned it doubtful *utrum munimentum loci, an majestas dei plus hic admirationis habuit.* (*Justin.* lib. 24. § 6.)

The origin of this famous city, and of the oracle to which it owed all its glory, are buried in impenetrable obscurity. The most probable account seems to be, that a mephitic vapour, similar in some degree, perhaps, to that of the *Grotto del Cane* at Naples, having issued from one of the clefts of the rock, violently affected those by whom it was inhaled, making them utter strange incoherent sayings. On this narrow foundation was built one of the most extraordinary fables ever raised by superstition, fraud, and imposture. The ravings of those affected by the vapour were believed to be indications of future events; they were said to be inspired, and the ejaculations which they uttered were affirmed to have been owing to their being filled with the breath or spirit (*divinus afflatus*) of Apollo, the guardian god of the place! The fame of the oracle rapidly increased, and it was soon seen how rich a harvest might be derived from it. The sacred cavern was forthwith enclosed; a tripod was placed over the chasm whence the vapour issued; priests and priestesses were appointed for the service of the god; and a series of temples, each more magnificent than its predecessor, were erected in his honour. States and princes were anxious to learn their fate, or the success of any contemplated enterprise, from the responses of the oracle; and private individuals crowded to the city for the same purpose. The answers of the god were not gratuitous; and it would seem that an opinion had early gained ground that the nature of the responses was to a considerable extent dependent upon the value of the offerings! Hence there arose a kind of competition among those consulting the oracle who should be most liberal, and the wealth so accumulated at Delphi came, in the course of time, to be prodigiously great. The responses were, apparently at least, delivered by a priestess. After being purified by bathing in the Castalian spring, she mounted the tripod, and having inhaled the intoxicating or stupefying vapour, she became violently convulsed—

"Subito non vultus, non color unus;
Non comitæ mansere comas: sed pectus anhelum,
Et labæ fœra corda tument; majorem videri
Nec mortale sonum: afflata est numine quando
Jam propere del." *Æn.* 4, vi. line 46. &c.

The incoherent scraps of sentences which the Pythia uttered during this paroxysm having been collected and arranged in verses by the priests, formed the desired response.

The responses of the Pythia were said to be comparatively precise; and she was sometimes resorted to in order to clear away the mystery in which those of other oracles were involved. It may, indeed, be reasonably enough supposed that superior address and information

* These were games instituted in honour of Apollo, and in commemoration of his victory over the serpent or tyrant Python.

on the part of the Delphic priests might enable them in many instances to give pretty distinct responses, that could not fall frequently to square with the event. But, even if no evidence of the thing had come down to us, we might have been assured that, speaking generally, their responses would be ambiguous, and so contrived that, however the event might turn out, the credit of the oracle would be preserved; and this, in point of fact, was the case. The answer of the oracle to Cæsus, that in making war upon the Persians he should destroy a great empire (*Herod.* i. § 53.), is an instance of this; as it is plain the credit of the oracle would be equally secured whether Cæsus conquered or was himself conquered by the Persians! The answer of the oracle to Pyrrhus is another instance of this sort of ambiguity—

"Alto te, Eacida, Romanos vincere posse."

as it might, either be interpreted in favour of or against Pyrrhus! This equivocation was not, however, the worst feature of the imposture carried on at Delphi. The oracle was at once ambiguous and venal. A rich or a powerful individual seldom found much difficulty in obtaining a response favourable to his projects, how unjust or objectionable soever. Herodotus states distinctly that the Alcmeonidae, who rebuilt the temple at Delphi, bribed the Pythia to recommend the Spartans to assist in delivering Athens from the tyranny of the Pisistratidae (v. § 60. 90.); and such were the base motives that made the oracle falsely pronounce Demaratus, king of Sparta, to be illegitimate, and obtained responses favourable to Lysander when he endeavoured to change the succession to the Spartan throne. This also was, no doubt, the sort of inspiration that dictated the responses favourable to Philip, which made Demosthenes declare that the Pythia *philippised!* But such and so powerful is the influence of superstition, that this threadbare system of fraud and quackery maintained a lengthened ascendancy; and that the responses of frantic girls, interpreted by venal priests, frequently sufficed to excite bloody wars, and to spread desolation through extensive states.

The credit of the oracle had been materially impaired before Christianity obtained an ascendancy in the ancient world; and the triumph of the latter was destructive of this as well as other oracles. Constantine carried off some of the finest and most costly ornaments of the Delphian temple to decorate his new capital. And there is still to be seen in Constantinople the brazen pillar, formed of three serpents twisted together, that supported the golden tripod which, after the defeat of Xerxes, was consecrated in the temple of Delphi by the victorious Greeks. (*See* *CONSTANTINOPLE*; *Gibbon*, cap. 17., &c.)

The vast wealth of the temple of Delphi exposed it to many attacks. A party sent by Xerxes to plunder the sacred edifice are said to have been defeated by the manifest interposition of Apollo himself. (*Herod.* viii. § 37.) But on other occasions, the god was less vigorous or less successful. The fane was successively plundered by the Phocians under Philomelus, by the Gauls under Brennus, by Sylla, &c.; and Nero is reported to have deprived it of no fewer than 500 bronze statues! And yet, despite all these deductions from its ancient stores, it had, when visited and described by Pausanias, a vast number of statues and ornaments of all sorts. But its treasure had disappeared long previously; and the rich offerings of Gyges, Alyattes, Cæsus, and Midas, were no longer to be seen.

Except its grand natural features, every thing at Delphi has undergone a total change. Not a vestige remains of the great temple, by which to form even a satisfactory conjecture as to its position. The prophetic cavern is searched for in vain: *antæque moenia silent, inconvulsa recessus.* The village of *Castri*, that occupies a part at least of the site of the ancient city, is poor and miserable, and does not contain above 400 or 500 inhab.

"Tantum ævi longinqua valet mutare vetustas!"

(Besides the authorities referred to above, see *Dodwell's Greece*, i. 170-188.; *Clarke's Travels*, vii. 225-254. 8vo. ed.; *Voyage d'Anacharsis*, cap. 22.; *Cramer's Ancient Greece*, ii. 164. &c.; *Potter's Grecian Antiquities*, &c.)

DELVINO, a town of Turkey in Europe, prov. Albania, cap. of a *sancjak* or distr., 43 m. W. N. W. Yanina. Pop. 10,100 (*Müller*, 1840.) Its vicinity contains some orange plantations; but is chiefly noted for its olive cultivation. The trade of the town is chiefly in oil, and other agricultural produce.

DEMERRARA. *See* GUIANA (BRITISH).

DEMONTE, an isl. town of N. Italy, k. Sardinia, div. and prov. Coni, cap. mand., on the Stura, 13 m. S. W. Coni. Pop. about 6,000. The town is commanded by a fortress placed on an isolated height, and contains three churches and an hospital. It was formerly fortified, but its works were demolished by the French in 1801.

DEMOTICA, or DIMOTIKA, a town of Turkey in Europe, prov. Roumelia, on the Maritza, at the foot of a

conical hill, crowned by a citadel, containing a palace, occasionally occupied by the Turkish emperors during the period that Adrianople was the cap. of the empire, from which city Demotica is distant 24 m. S. by W. Pop. about 8,000. The town is tolerably well built; it contains a mosque, and several Greek churches, schools, and public baths. The citadel is supplied with water by an aqueduct. It is the residence of a Greek archbishop, and has manufactures of silk and woollen stuffs, and earthenware. Charles XII. of Sweden resided in this town for more than a year subsequently to the battle of Pultawa. (*Dict. Géog. & B. Hist.*, &c.)

DENAIN, a village of France, dép. du Nord, in the cant. of Bouchain, 6 m. S.W. Valenciennes, famous in modern history as being the scene of the decisive victory gained in 1712 by the French under Marshal Villars over the allies under Prince Eugene. This victory, which is partly to be ascribed to the improvidence of the allies, and partly to the skillful combinations of Villars, saved Louis XIV. from the disgrace of having the terms of peace dictated to him in his own capital. It changed, in fact, the whole aspect of public affairs; and brought the negotiations at Utrecht to a speedy conclusion. A monument erected near Denain in 1761, by Louis XVI., in commemoration of this great victory, was inscribed with the following couplet from the *Henriade*:—

"Regardez dans Denain l'audacieux Villars
Disputant le tonnerre de l'angle des Césars."

(See *Siccle de Louis, XIV., par Voltaire*, cap. 23.)

DENBIGH, a marit. co. of N. Wales, having N. the Irish Sea, E. the co. of Flint and Cheshire, S. Salop, Montgomery, and Merioneth, and W. Caernarvon. Shape very irregular. Area, 405,120 acres. Surface and soil much diversified; for the most part, however, it is rugged, wild, and mountainous; but it has some very fertile tracts, particularly in the far-famed vale of Clwyd, on both sides the river of that name, lying mostly in this co., and which is eminently beautiful and fertile, "producing the necessities of life not only in abundance for the inhab., but in ample sufficiency to spare to supply the wants of their neighbours." The vale of Llangollen, in the E. part of the co., though inferior in point of richness to that of Clwyd, is notwithstanding pretty fertile, and there is a considerable extent of good land in the vicinity of Wrexham. The climate in the valleys is remarkably mild, but rain is very prevalent, and considerable damage is sometimes done by the overflowing of the rivers. Agriculture, though a good deal improved, is still very backward. Barley, oats, and potatoes are the principal crops; wheat, beans, and pease being also raised in some of the more fertile districts. There is no regular rotation of crops; whichever grain happens to be most in demand is sown. It is also a frequent practice to burn the surface both of fresh enclosed lands and old clover leys; but this, though at the time it yields good crops of oats and turnips, impoverishes and ultimately exhausts the land. Farms are usually very small; and being let only by the year, and without any conditions as to management, we need not wonder at the low state of agriculture. Average rent of land, in 1810, 9s. an acre. The hills are depastured by large flocks of sheep, and large herds of cattle are found in the valleys. The dairy husbandry is carried on to considerable extent, particularly in the E. parts of the co., adjacent to Cheshire. The minerals are valuable, coal, lead, and iron mines being wrought in different parts of the co.; it also furnishes slate and mill-stones. The woollen manufacture is carried on to some extent, and gloves and shoes are produced in considerable quantities in Denbigh. It is bounded E. by the Dee, and W. by the Conway, and is traversed by the Clwyd, Ewby, &c. Denbigh is divided into 6 cantrefis or hundreds, and 57 parishes. It returns 3 mems. to the H. of C., viz. 2 for the co., and 1 for Denbigh and its contributory bors.: county constituency in 1838-39, 3,689. In 1831 Denbigh had 16,368 inhab. houses, 17,150 families, and 83,629 inhab., of whom 41,618 were males, and 42,011 females. Sum paid for the relief of the poor in 1838, 24,800. (*Kennedy and Grainger on Tenancy of Land; Davies's N. Wales*, &c.)

DENBIGH, a town and parl. bor. of N. Wales, cap. of the above co., hund. Yule, near the middle of the vale of Clwyd, at the base and on the side of a steep hill, crowned with the magnificent ruins of its old castle; 22 m. W. Chester, and 180 m. N.W. London. Pop. 3,780. It consists of 3 principal and some smaller streets and lanes; it is well paved and lighted, but many of the houses have a dilapidated appearance, and it is but scantily supplied with water, and is deficient in cleanliness. The parl. church, 1 m. E. from the town, has many interesting monuments; but it is in a ruinous condition, and divine service is performed in a chapel of ease within the precincts of the latter. It has also a Catholic and 4 dissenting chapels; a town-hall, free grammar-school, with a small endowment, a blue-coat school, a national school, and several Sunday-schools supported by the various sects; a reading-room, and a literary society. There is

also a dispensary for the poor of the town and neighbourhood. The staple trades of the town are shoemaking, glove-making, and tanning, particularly the first; but the glove trade has greatly declined, and the town has been for some time past in a depressed state. The limits of the parl. bor. were the subject of much dispute till they were definitively fixed in 1826. They were not affected by the Boundary Act, and include a space of 742 acres. Denbigh, with Ruthin and Holt, has returned 1 mem. to the H. of C. since the 27th of Henry VIII., the right of voting being in the resident burgesses. The Reform Act added Wrexham to the contributory bors. Registered electors in the Denbigh district in 1838-39, 928. The present municipal bor. is restricted to the space immediately contiguous to the town; and had, in 1831, a pop. of 2,800. The governing body consists of 4 aldermen and 12 councillors. The waste lands of the parl. belong to the corporation, whose annual average revenue from these and other sources is about 242l. There is a lock-up house common to the bor. and co., in which offenders are temporarily confined, till committed to the co. gaol at Ruthin. The Easter and Michaelmas quarter sessions of the co. are held in the town, which is a polling place for the co. The castle, both from its situation and structure, was anciently of great importance. It was founded in the 2d of Edward I. by Henry Lacey, earl of Lincoln. A magnificent pointed archway, with a statue of the founder, is still in tolerable preservation; but the rest is entirely ruinous. There is a bowling-green and several cottages within the enclosure. The prospect from the castle is extensive and magnificent. In the last civil war the castle withstood a siege by the parliamentary forces in 1645; and thither the king retreated from Chester. It was taken in the following year, and soon after dismantled.

DENDERAH (the *Tempra* of the Greeks), a ruined town of Upper Egypt, celebrated for its temple, the best-preserved of all the remains of antiquity with which Egypt, particularly the Said, abounds; near the W. bank of the Nile, 31 m. N. Thebes, lat. 26° 10' 20" N., long. 32° 40' 27" E. The town, 1½ m. E. from the temple, stands in an extensive and well-cultivated plain, which expands on both sides the Nile, and is surrounded by mountains, so as to give it the appearance of a beautiful circular basin, shaded by thick groves of palm trees. The temple stands on the dry verge of the Libyan desert, the encroachments of which have buried a large portion of the buildings under heaps of sand; but enough is still visible to indicate its magnitude and magnificence, and to impress the spectator with the deepest sense of the wealth, power, and civilisation of the illustrious but long extinct people by whom so noble a fabric was raised. The temple and the buildings appertaining to it, with the exception of one propylon, are enclosed within a square wall of sun-dried bricks, each side measuring 1,000 R., and in some parts 35 ft. high, and 15 ft. thick. After passing a small stone building, and a gateway or propylon entirely covered with well-executed sculptures and hieroglyphics, the spectator, proceeding through the *dromos* (avenue lined on each side with sphynxes) arrives at the temple. It is nearly in the form of the letter T; and its simplicity, vastness, the durability of its structure, and its ornaments and sculptures, in perfect preservation, though no longer intelligible, excite the strongest feelings of awe and astonishment. The front of the *pronaos*, or portico, is adorned with a beautiful cornice, supported by six square columns, with capitals formed of colossal heads of Isis. Within, 24 cylindrical columns, ranged in six rows of four deep, support the roof: the capitals of these columns are quadrangular, and exhibit on each face the representation of a temple with a divinity under the portico of the sanctuary; between the capital and the shaft, heads of Isis again appear; including their base and capitals, the height of the columns is about 46 ft.: the shafts are sculptured with hieroglyphics and figures in basso-relievo, as are the front and ceiling; the designs on which last have been supposed to be intended to represent a zodiac. Indeed there is no where in the whole apartment a space of 2 ft. that is not covered with sculptures in low relief, of human beings, animals, plants, emblems of agriculture or of religious ceremony. The temple, which is equally enriched with sculptures, consists of several apartments, partially lighted by circular holes cut in the ceiling. The sanctuary is, however, quite dark. Access is provided to the roof by means of a staircase, with steps so low that priests might convey up and down the weighty paraphernalia of sacrifice. But the most remarkable object, in the estimation of Europeans, belonging to the temple, was the ceiling of the upper chamber, exhibiting in twelve compartments, like that of the *pronaos*, a variety of mythological figures, which correspond very closely with the Greek signs of the zodiac: it was enclosed within three concentric circles, and supported by eight male figures kneeling, and four females standing, most harmoniously grouped. The remains of a smaller temple stand to the right of the propylon, supposed to have been dedicated to the malignant deity,

Typhon. (*Richardson's Travels*, i. 185—220.; *Belzoni's Operations and Discoveries in Egypt*; *Notice sur le Zodiaque de Denderah*, par M. St. Martin, Paris, 1822.)

A great deal of curious and learned discussion has taken place with respect to the antiquity of the zodiac of Denderah. Dupuis, Fourier, and other writers, concluded, from the places of the present figures of the constellations on it, compared with their present places, and the precession of the equinoxes, that it had been constructed about 15,000 years ago! But Lettrow, Playfair, and some other learned astronomers, inferred from the same data, and with infinitely more of probability, that the age of the zodiac did not exceed 3,222 years. Subsequent researches by Visconti, Letronne, St. Martin, and others, have, however, gone far to show that the calculations referred to had no real foundation, and that the figures on the so-called zodiac are probably astrological or mythological representations, and have nothing of an astronomical or scientific character. At the same time, however, it must be admitted, that the purpose of the supposed zodiac, and its antiquity, are still involved in the greatest uncertainty. With respect to the temple itself, it would seem, from its being one of the most perfect and beautiful in the country, to belong to the period of the later Egyptian kings, when the arts had attained to their highest perfection; but there are not, perhaps, any really good grounds for the notion that it is of so late a date as the era of the Ptolemies, though alterations may then have been effected in it. The zodiac, or planisphere, that gave rise to these discussions, is now in Paris. The Pacha having consented to the desecration of the temple, this extraordinary monument was skillfully cut out, and conveyed to France, in 1822, by a M. Leloir. It has since been purchased by the French government for 15,000 fr., and appropriately placed in the Museum. (Besides the authorities already referred to, see the arts, on this subject in the *Conversations Lexicon*, and the *Encyclopédie des Gens du Monde*, and the authorities there referred to.)

DENDERMONDE (Belg. *Ternonac*), a fortified town of Belgium, prov. E. Flanders, cap. arrond., on the Scheldt, at the point where it is joined by the Dendre, 16½ m. E. Ghent. Pop. (1846) 7,652. It has 4 churches, 5 chapels, a town-hall, an hospital, lunatic and orphan asylums, 2 convents, a college, 14 schools, and a prison. It is defended by a citadel constructed under the Duke of Parma in 1584; is the seat of a court of original jurisdiction; and has manufactures of woollen stuffs, cotton yarn, hats, lace, tobacco, soap, oil, and earthenware; bleaching and dye-houses, breweries, distilleries, and flour and other mills; with a considerable trade in corn, hemp, flax, oil, &c. It is believed to have been founded no earlier than the 8th century, though many Roman antiquities have been dug up in it at different periods. It was unsuccessfully besieged by Louis XIV. in 1667, but fell into the hands of the French in 1745. It suffered severely from an inundation in 1825. (*Vandermueren, Flandre Orientale*.)

DENHOLM, a manufacturing village of Scotland, co. Roxburgh, 4 m. N.E. Hawick, on a rising ground in E. from the river Teut. Pop. 560. The mills are almost entirely engaged in the weaving of woollen stockings, on account of the Hawick manufacturers. There is a flour-mill here; as also a dissenting chapel, and a subscription library. Dr. John Leyden, the celebrated poet and linguist, was a native of this place.

DENIS (ST.), a town of France, dép. Seine, cap. arrond., in a fertile plain near the Seine, and on the canal which unites that river with the canal of Ourq, 5 m. N. Paris. Pop. (1836) 9,332. It is chiefly remarkable for its abbey-church, built in the 7th century by Dagobert I., who was buried within its walls, since which time it has been the customary burial-place of the kings of France. It was materially improved by Suger, abbot of St. Denis, in 1130, and has been further improved by different sovereigns in succeeding ages, so that it has a great variety of architectural style; it is, however, an imposing Gothic edifice, in the form of a cross, 14½ ft. in length, by 106½ ft. broad, and 85 ft. high. (*Hugo*.) Its front has two towers, one of which is surmounted by a spire. Most of the tombs of the kings of the first, second, and third races are in a subterranean vault. In 1793, during the revolutionary phrensy, many of these tombs were destroyed, and the remains they enclosed, not excepting even those of Henry IV., were thrown together and buried under a heap of earth in the environs of Paris. The demolition of the building itself was subsequently ordered, but this was not effected. Napoleon contemplated making St. Denis the burial-place of the princes of his own line; and since the restoration of the Bourbons, the previous arrangement of the interior has been as far as possible restored. The town has some good infantry barracks, an establishment for the education of 500 girls, orphans of members of the Legion of Honour, founded by Napoleon, which occupies the celebrated abbey of St. Denis, founded by Dagobert I. in 613; a *dépôt de mendicité*, public library, and theatre. St. Denis is well built: it is the seat

of a sub-prefect; has manufactures of woollens, cottons, leather, &c.; and a brisk trade in flour, wine, vinegar, wool, timber, &c. (*Hugo*, art. *Seine*; *Dict. Géog.*; *Guide du Voyageur*.)

DENMARK, one of the secondary European kingdoms, on the south side of the entrance to the Baltic, between 55° and 58° N. lat., and 8° and 13° E. long. It consists partly of the peninsula, stretching from Lauenburg on the Elbe to the Skaw or Skagen, the most northerly point of Jutland, comprising the prov. of Jutland, and the duchies of Sleswick, Holstein, and Lauenburg; and partly of the Danish Archipelago, or of the islands of Zealand, Funen, Laland, Falster, &c., between the Baltic and the Cattegat, and the island of Bornholm, in the Baltic. Except on the S. and S.E., where it is bounded by Hanover, and the territory of Hamburg and Mecklenburg, continental Denmark is every where surrounded by the sea, having E. the Baltic, the Little Belt, and the Cattegat; N. the Skagerrac; and W. the North Sea. Iceland, the Feroe Isles, part of Greenland, and some possessions in the E. and W. Indies, belong to Denmark. But, exclusive of these, the kingdom contains an area of 21,856 sq. m., and had in 1835 a pop. of 2,033,265.

Surface and Soil.—There are no mountains in Denmark, and the few hills by which it is marked, especially in parts of Holstein and Sleswick, are little more than undulations. It is generally low and level, the coasts being seldom elevated much above the sea. In parts, indeed, of the W. coast of Jutland, and along the whole W. coast of Sleswick and Holstein, the country, which has partly been wrested from the sea, is defended, as in Holland, against its irruptions by immense mounds or dikes, managed by a government board. Soil very various. In extensive dists., particularly in Holstein, Sleswick, and the S.W. part of Jutland, it is exceedingly fertile, being very rich marsh-land, producing the finest pasture and excellent crops. In other parts, more especially in central and N.W. Jutland, and to a less extent, also, in the central parts of the duchies, the soil is arid, sandy, and barren, large tracts being heath. The soil of the islands consists of clay mixed with sand and lime. They are not so fertile as the better parts of Holstein and Sleswick, but are little, if at all, inferior to the average of these provs.

Rivers and Lakes.—Denmark having no mountains, and every part of it being within a short distance of the sea, has no rivers of any magnitude. The largest is the Eyder, and next to it the Guden, Trave, &c. The Elbe rises, for a considerable distance, along the S. frontier of the kingdom. Fresh water lakes numerous, but not large. The most remarkable feature in the physical geography of Denmark is the number and extent of the inlets of the sea, or rather lagoons, by which the continental part of the country is intersected. The principal of these lagoons, the Lynmfjord, formerly communicated only by a narrow channel with the Cattegat, stretching thence in a W. direction, with long windings, and expanding in various places into immense sheets of water, comprehending large islands, across the peninsula of Jutland and to the North Sea. In 1825, however, during a violent storm, the isthmus between the North Sea and the Lynmfjord was broken down in two places, so that it now isolates the N. portion of Jutland; but it is to be regretted that the newly opened channel is too shallow to be of much use for the purposes of navigation, and the depth of the opening to the Cattegat has also decreased so as only to admit vessels of comparatively small burden. There are other fords; but none so extensive as this. They, as well as the bays and rivers, are well stocked with fish, the fishery being a principal business and dependence of the inhab.

Animal and Vegetable Products.—These are almost the same in Denmark as in Great Britain, except, perhaps, that wild boars may be occasionally met with in the forests of the former. The horses and cattle of Holstein, Sleswick, and W. Jutland, are amongst the best that are any where to be met with; those that belong to the islands and N. Jutland are of a smaller breed, but strong and active. Great numbers of the former are annually exported; the horses to Germany, France, and Russia, and the cattle to Germany. The wool of the sheep is short and coarse; but lately it has been a good deal improved by crossing with merinos. The marsh-land oxen supply the excellent beef so well known, when slightly smoked and salted, by the name of "Hamburg Beef." The feeding of pigs is prosecuted to a great extent, and quantities of bacon are yearly sent to Norway, Holland, &c. Poultry is so abundant that their feathers make an article of export. All the common grasses, with potatoes, flax and hemp, madder, tobacco, &c., are raised in Denmark. The forests are not very extensive. They lie principally along the eastern shores of Jutland, Sleswick, and Holstein, and in Zealand and Funen; consisting principally of birch, but also of ash, alder, and oak. Fine and fir are rare.

Mineral Products, in Denmark, are but of little value.

The subsoil chiefly consists of sand and clay, and no metals have been discovered that would repay the expense of working. There is a brine spring near Oldenrode; but it does not furnish salt sufficient for the consumption of the kingdom. The want of coal is in part compensated by the abundance of turf.

Climate.—Being almost every where surrounded by the sea, the climate is humid, and in its principal features approaches pretty closely to that of Scotland. The transition from winter to summer, and from summer to winter, is, however, a good deal more abrupt, so much so, indeed, that spring and autumn, particularly the first, are but faintly marked; the heat of the summer is, at the same time, greater than in Scotland, and the cold of the winter more severe. These differences arise from the greater proximity of Denmark to the continent. The winds not being broken by any mountains, often sweep along with great violence. The N.W. wind, called *Skei*, which is especially felt in May and June, is so severe on the W. coast of Jutland, as to wither the tops of the trees. The Sound is sometimes frozen over; but this is said to arise more frequently from the drifting of ice formed in higher latitudes than from the intensity of the cold at the place. In 1659, the Swedes marched an army on the ice across the Sound to besiege Copenhagen. Fogs are very prevalent.

Agriculture; State of the Occupiers of Land, Labourers, &c.—In Denmark, as in most other European countries, the peasantry or occupiers of the soil were at no very distant period in the most depressed state imaginable. "In Zealand," says Lord Molesworth, and the same observations apply to the rest of the kingdom, "they are all as absolute slaves as the negroes are at Barbadoes; but with this difference, that their fare is not so good. Neither they, nor their posterity to all generations, can leave the land to which they belong; the gentlemen counting riches by their stocks of boors, as here with us by our stocks of cattle, and the more they have of them the richer they are. In case of purchase, they are sold as belonging to the freehold, just as timber trees are with us. There is no computing them by numbers of acres, but by numbers of boors; who, with all that belongs to them, appertain to the proprietor of the land. Yeomanry, which is the name of a spring land, is a state not known nor heard of in Denmark; but these poor drudges, after they have laboured with all their might to raise the king's taxes, must pay the overplus of the profits of the lands and their own toil to the landlords, who are almost as poor as themselves. If any of these poor wretches prove to be of a diligent and improving temper, who endeavours to do a little better than his fellows, and to that end has repaired his farm-house, making it convenient, neat, and pleasant, it is forty to one but he is presently transplanted from thence to a naked and uncomfortable habitation, to the end that his griping landlord may get more rent by placing another on the land that is thus improved: so that in some years 'tis likely there will be few or no farm-houses, when those already built are fallen through age or neglect."—(*Account of Denmark* in 1692, 4th ed. p. 54.) In 1761, the queen Sophia Magdalen had the honour of being the first to set a better example to the Danish proprietors, by publicly enfranchising the peasantry on her estates; and the example was soon after followed by Count Bernstorff and others. At this period about a sixth part of the land was supposed to belong to the crown; but the crown estates were soon after divided into farms of a moderate size, and a large portion of them disposed of to any one who chose to become a purchaser. Previously to this period very few peasants were proprietors; but their number now began speedily to increase, partly in consequence of the sale and division of the crown estates, and partly of their purchasing up their leases from their lords. In 1788, the peasantry of Denmark Proper, or of Jutland and the islands, were finally emancipated from all political bondage; and a commission was at the same time appointed to regulate the rents and services to be paid by those tenants holding hereditary leases, or leases for lives, where the parties could not come to an agreement. In 1791 and 1799 fresh ordinances were issued on the same subject, having for their object to reduce the number of such tenants, by converting them, under equitable conditions, into proprietors, and for restraining the right of free way, &c. The peasantry of Holstein and Sleswick were never in the same state of bondage as those in Denmark Proper; but they also have been completely enfranchised, and placed on a footing of perfect freedom.

In consequence of these measures a very great change has taken place in the distribution of property in Denmark. Large estates have been so much broken down, that at this moment half the kingdom is supposed to belong to petty proprietors!—(*Foreign Communications on the Poor Laws*, p. 268.) The peasantry are all anxious to become proprietors. "The first thing a Dane does with his earnings is to purchase a clock; then a horse or cow, which he hires out, and which pays a

good interest. Then his ambition is to become a petty proprietor; and for this sufficient reason, that this class of persons is better off than any other in Denmark."—(*Foreign Com. Poor Laws*, loc. cit.)

The principal drawbacks upon agriculture are, the want of capital, and the consequent too small size of the rented farms and of the petty estates. Rents are still paid in services, but oftener in a portion of the produce, on the *metayer* principle. The work on the estates of large proprietors and of considerable farmers is mostly executed by *corvée* labourers, or by labourers for hire, such as the farm servants in England. The first class get a house, having a piece of land (generally from 1 to 3 acres) attached to it; and for this they pay from 30 to 40 days' work. But this work being executed in seed time and harvest when labour is most valuable, it forms a pretty heavy rent. The landlord can neither alienate these possessions, nor assume them into his own hands. The hired servants are much better off than the *corvée* labourers. They are generally hired by the year, and live and board in the farmer's house.

The average earnings of ordinary agricultural labourers in Denmark may vary from 1*g*. to 30*s*. a year. Their situation is decidedly comfortable. Mr. Macgregor, the British consul at Elsinour, an intelligent and careful observer, gives the following details illustrative of their command over necessities and comforts:—

"The Danes are great eaters, and they eat at all times of the day. The following quantities of food are usually allowed to male farm servants per month: bread 60 lbs., potatoes, half a bushel; groats, half a bushel; butter, 4lb.; bacon, 10 lb.; meat, 4 lb.; salted herrings, 30; fish, 2 lbs.; beer, 50 quarts; milk, *ad libitum*. The Danish peasantry make 6 meals a day in summer. Early in the morning they have, 1st, breakfast, consisting sometimes of coffee, but generally of warm milk and bread; 2d, at 9 o'clock, follows bread and butter and a dram; 3d, at 12 o'clock, dinner, the introduction to which consists of spoon-meat, such as milk porridge, beer soup, curds with warm milk or beer, or of fish, boiled greens, cheese, greens or dried peas, after which follows fresh or dried fish, bacon or meat, with potatoes or other vegetables, or boiled or poached eggs, or pancakes; 4th, at 5 o'clock, bread and butter and a dram or two, especially in harvest time; 5th, supper, after sunset, soup, groats, curds, with milk or buttermilk. In winter, when they get up later, they have one breakfast, and, consequently, they only make 4 meals a day. The poorer families seldom boil their kale upon meat, but upon a piece of hog's lard or bacon. In most of the cottages a sheep or a lamb is killed before the winter. The more substantial peasants kill a pig, a cow, or an ox, and they dispose of what they do not require themselves to their neighbours. They also kill a certain number of geese and ducks, salting them down for the winter, and using the feathers for their beds. This mode of living applies chiefly to peasants in districts of a middling soil, but where it is richer, they have more of bacon, meat, and fish, in lieu of other dishes; also is the beer they drink of greater strength. Fish is almost their diurnal food in villages adjacent to the sea, and they often use dried fish instead of bread, especially where the rye crops have failed, when their rye bread is often found mixed with barley. Amongst the poorer cottagers who have no land, it would sometimes happen that they must content themselves with a crust of dry bread, and milk and water in lieu of beer; but such cases are not of frequent occurrence, at least all the reports on the agricultural state of the country which have been published these later years concur in stating that the generality of peasants are well off, and that there is plenty of employment in the country for all labourers that choose to work.

"I shall conclude these observations by stating the annual expenditure of a labourer with a wife and three children in this neighbourhood (Elsinour), the several items reduced into sterling:—

	£	s.	d.
House rent and taxes	-	-	0 10 0
Turf for fuel	-	-	0 12 0
Rye for bread, $\frac{3}{4}$ quarters, at 1 <i>s</i> . 6 <i>d</i> .	-	-	2 6 6
Barley for bread and groats, $\frac{1}{4}$ quarters, at 10 <i>s</i> . 6 <i>d</i> .	-	-	2 7 3
Meat and bacon 30 stone, at 1 <i>s</i> . 5 <i>d</i> .	-	-	2 12 6
Potatoes 12 quarters, at 2 <i>s</i> . 3 <i>d</i> .	-	-	1 7 0
Coffee $\frac{1}{4}$ lb., sugar $\frac{1}{4}$ lb., per week	-	-	2 2 0
Butter $\frac{1}{4}$ firkin, cheese 120 lb.	-	-	2 6 0
Milk 8 quarts per week, at $\frac{1}{4}$ d.	-	-	0 17 4
Soup, candles, and groceries	-	-	3 18 0
Clothing, brandy, and lottery tickets	-	-	3 2 0
School rate 5 <i>d</i> , books 2 <i>s</i> . 2 <i>d</i> .	-	-	0 2 7
Religious teaching	-	-	0 3 4
	£	19	6 6

"This is nearly what the amount of their joint labour would produce, provided they be employed during an average number of days in the year. At a certain dis-

tance from the large towns, the items of coffee, sugar, and brandy, must in a great measure be omitted, by which the whole expenditure would be reduced to about 18*l.* sterling per annum."

The agriculture of Denmark, particularly of Holstein and Sleswick, has been wonderfully improved during the last half century, and is at present more advanced than that of many parts of the Continent. There are excellent meadows, and in many places good hedges. Artificial grasses and herbage plants enter into most rotations; and rye-grass is more sown, perhaps, in Holstein than any where else, except in Great Britain. The badness of the roads, a consequence in some measure of the difficulty of procuring proper materials for their construction, is a considerable obstacle to agricultural improvement. The great road from Hamburg to Kiel, which is macadamised and excellent, must, however, be excepted from this remark.—(*Loudon's Encyc.* § 563; *Jacob, 2d Report*, p. 2, &c.)

Barley, oats, and wheat are largely cultivated. Wheat, though plump, is coarse and damp; the barley of Holstein is heavy, but that of the islands is inferior; oats of a medium quality; rye, being the principal bread corn of the country, especially of Jutland, is grown in large quantities; this also is the case with rape, beans, tares, buck-wheat, and potatoes, particularly the first, which is a leading article of export to Holland and England. But the principal attention of all the more extensive and intelligent Danish farmers is directed to grazing, fattening, and the dairy. The pastures in many parts are little, if at all, inferior to those of Lincolnshire. Horses, cattle, salted pork and beef, butter, wool (which has been much improved), and other animal products are, in fact, in ordinary years, the principal article of export from the country. The stock of horses is estimated at about 550,000 head, that of horned cattle at about 1,600,000, and that of sheep at about 1,300,000. The dwelling-houses of the farmers and their office houses are generally contiguous in the same building, but they are notwithstanding sufficiently distinct; and the houses of the better class of farmers are neatly and comfortably furnished.

[A Table, showing the quantity and value of the principal articles of export, is inserted in the opposite column.]

Manufactures in Denmark are not prosecuted on a considerable scale, nor is their condition at all prosperous. The peasantry in most parts of the kingdom spin and weave linens and woollens, and knit stockings for their own use; and the women in Sleswick employ themselves in making lace. Woollens, silks, cottons, and linens are manufactured at Copenhagen, Altona, and other towns; but the business is languishing and unprofitable. Distillation and brewing are prosecuted to a great extent, and with more success than any other branch of industry, in the capital, Altona, Flensburg, Odensee, &c. Coarse earthenware is made in various places, and a porcelain manufacture is carried on upon account of the crown, and, as might be expected, to its loss. There are also sugar refineries, paper mills, soap works, tanneries, hat manufactories, &c. With the exception of the same buildings of cannon and arms at Frederickswork and Hellebæk, the iron and hardware works are quite unimportant. Within these few years numbers of flour mills have been constructed, and large quantities of flour are now exported from Copenhagen, Flensburg, &c.

The low state of manufacturing industry is ascribable partly and principally to natural, and partly to political causes. Denmark is essentially an agricultural country. Being nearly destitute of coal, of water power, and of the useful minerals, she has no natural facilities for the successful prosecution of manufactures; and, in addition to this, she has little capital, and is deprived of the indispensable stimulus of domestic competition. All, or nearly all, the branches of industry carried on in the kingdom are subjected to the government of guilds or corporations. No person can engage in any business until he has been authorised by its particular guild; and as this is rarely obtained without a considerable sacrifice, the real effect of the system is to fetter competition and improvement, and to perpetuate monopoly and routine. "*Nos ouvriers*," says Cateau "*à son cher, travaillent lentement, et souvent mal et sans goût; leur éducation est négligée. On ne les forme point à penser, et l'apprenti suit machinalement ce qu'il voit faire au maître.*" (*Tableaux des États Danois*, li. p. 260.) And yet government attempts in the teeth of all this, by excluding foreign manufactured products, and loading them with oppressive duties, to bolster up manufactures at home! But they could not rationally expect to succeed in this Quixotic attempt, and they have not succeeded. Manufactures have made no progress since the peace of 1815 (*Foreign Commerce, Poor Laws*); and the prohibitory regulations merely obstruct the commerce of the country, and encourage sloth and smuggling. These regulations were, however, somewhat modified in 1838; and the education of mechanics is beginning to be improved by the formation of mechanic's institutes, &c.

ACCOUNT of the Quantity and Value of the principal Articles, the produce of Denmark and her Dependencies, exported from that Kingdom and the Duchies of Sleswick and Holstein, in 1836.

Articles.	Danish Weights and Measures.	British Weights and Measures.	Approximate Value.
I. AGRICULTURAL PRODUCTS.			
Wheat -	156,232 tonder	75,507 grs.	150,704
Flour -	161,021 -	29,433 -	-
Rye -	100,477 -	72,380 -	-
Flour -	6,334 -	3,061 -	71,570
Barley -	408,631 -	197,505 -	-
Flour -	2,980 -	1,440 -	-
Oats -	23,103 -	11,107 -	178,704
Flour -	30,226 -	14,609 -	-
Malt -	176,347 -	85,234 -	44,885
Meal -	674 -	326 -	-
Grouts -	1,256 -	752 -	-
Huckwheat -	26,968 -	12,986 -	-
Flour Grouts -	3,311 -	1,600 -	18,856
Pease -	64,607 -	31,251 -	-
Fares -	12,396 -	5,991 -	55,301
Beans -	45,361 -	21,847 -	-
Hops-seed -	194,375 -	35,932 -	230,368
Flax and other Seeds -	18,007 -	8,703 -	16,673
Clover-seed -	318,890 lbs.	300,768 cwts.	5,167
Brussels of Wheat -	2,095,852 -	25,496 cwts.	15,460
Oil Cakes -	-	-	14,814
Hutter -	66,665 barrels	-	295,092
Cheese -	956,649 lbs.	9,495 -	11,074
Pork, salted -	5,167,136 -	60,907 -	-
Beef, salted -	803,088 -	7,912 -	87,171
Beef, smoked -	2,508,061 -	24,710 -	26,282
Tallow -	178,016 -	1,754 -	5,297
Candles -	322,624 -	3,179 -	7,842
Horses -	7,566 head	-	84,067
Oxen -	28,323 -	-	-
Cows -	5,009 -	-	231,610
Calves -	6,903 -	-	-
Wine -	15,028 -	-	14,476
Sheep and Lambs -	15,242 -	-	5,534
Corn Brandy -	4,755 hhds.	-	15,230
Hides -	-	-	-
Horse, Ox, and Cow Skins -	2,249,136 lbs.	22,159 -	28,638
Calves, Sheep, and Lamb -	1,453,903 -	14,324 -	40,387
Honey -	52,656 -	514 -	2,794
Wax -	20,978 -	305 -	-
Quills, writing -	14,579 -	-	1,845
Bones -	22,568 sh. lbs.	70,928 -	12,050
Wool -	5,979 -	18,797 -	83,955
Potatoes -	119,496 tonder	57,756 -	15,490
Wood for Fuel -	10,708 fathms.	-	7,821
Turf -	-	-	8,000
Total			1,880,667
II. PRODUCE OF THE FISHERY.			
Herrings -	1,779 barrels	-	4,390
Fish, salted or smoked -	-	-	-
Oysters -	2,221 -	-	-
III. PRODUCE OF THE COTTONS.			
(a) Of Iceland, the Faroe Islands, and Greenland.			
Eider down -	3,759 lbs.	4,155 lbs.	-
Feathers for beds -	1,056 -	1,161 -	-
Lub Fish -	643 sh. lbs.	2,084 cwts.	-
Flax Fish -	659 -	1,977 -	-
Walrus Skins -	100 pieces	-	-
Sheep and Lamb Skins -	41,517 -	-	-
Reindeer Skins -	3,433 -	-	-
Fox -	2,407 -	-	-
Seal -	52,342 -	-	62,052
Svaleris -	10,800 -	-	-
Tallow -	302 sh. lbs.	949 cwts.	-
Train Oil -	5,526 barrels	-	-
Wool -	2,420 sh. lbs.	7,606 -	-
Worsted Jackets -	25,148 pieces	-	-
Stockings -	147,218 pairs	-	-
Mittens -	32,488 -	-	-
Whalebone -	11,416 lbs.	112 -	-
(b) Of the Islands of St. Croix and St. Thomas.			
Sugar -	-	-	12,000
Stain -	-	-	-
Total			1,959,116

REMARKS. The approximate value of the articles is not official, but has been computed according to the medium prices prevailing at the end of the year. The exchange is calculated at the rate of 2*sd.* per riga-bank dollar. The exportation of corn is greatest in years when the crops are deficient and prices high in this country. Were it not that its importation is prohibited, it is probable that considerable quantities of Holstein beef would be introduced into our markets.

Commerce and Navigation.—The piratical expeditions of the Danes during the middle ages are familiar to every one; and being favourably situated for maritime commerce, it might have been expected that they would

have made a respectable figure in the commercial navigation of more modern times. But notwithstanding their advantageous situation, they could hardly, having but a little native produce to export, engage extensively in any branch of foreign trade, except as carriers for others, and in this department they were far surpassed, first by the Hanse Towns, and afterwards by the Dutch. But since the peace of Stockholm, in 1720, the commerce and navigation of Denmark have gradually improved. During the late war between France and Great Britain, down to 1807, the neutrality enjoyed by the Danes gave them great advantages, and occasioned a considerable increase of their mercantile navy. But the attack on Copenhagen by the English in the last-mentioned year, and the hostilities in which the Danes were consequently involved, deprived them of these advantages, and materially depressed their trade. The loss of Norway, at the general peace of 1815, though it detracted little, if any thing, from the real strength of the monarchy, greatly diminished the importance of Denmark as a naval power. Her commerce has been rather improving since the peace. In 1830 she possessed, exclusive of vessels under 30 tons, 3,696 ships, of the burden of 124,984 tons; of which about 200 were employed in the carrying trade of the Mediterranean.

The exports from Denmark consist principally of agricultural products, as already specified, with fish, spirits, beer, and a few other articles. The imports consist of most sorts of manufactured goods, as woollens, cottons, linens, silks, &c.; with hardware, colonial produce, wine, oil, fruit, timber and iron, salt, coals, hemp, &c.

Colonies.—In the West Indies, the Danes possess the small but well-cultivated island of St. Croix, producing annually about 25,000,000 lbs. of sugar, and 1,400,000 galls. of rum. Previously to 1803, when the Danes, much to their honour, suppressed the slave trade, they had a considerable intercourse with Africa, which has since nearly ceased. In the East Indies they possess the settlements of Tranquebar and Serampore. The trade with the East was formerly in the hands of an exclusive company, which was dissolved in 1838; under the company it was very inconsiderable, but will now most probably be increased.

Canals.—To avoid the long and tedious navigation

round the N. of Jutland, the Danish government has excavated a canal joining the navigable river Eyder with Kiel Bay. It is 10 ft. deep, and is used by large numbers of the smaller class of vessels, and would be still more frequented but for the difficult navigation of the Eyder from the sea to Rendsburg, where the canal commences. The canal of Stecknitz, in the duchy of Lauenburg, joins the Elbe to the Baltic by the Trave. There is also a canal in Funen, forming a communication between Odensee and the sea; and a canal in Zealand, opening a channel between the navigable lake Bavelse and the Baltic. Except in Zealand, the roads, as already stated, are generally bad.

Money, Weights, &c.—The marc or Rigsbank dollar is worth £s. 3s. 4d. sterling. But little specie is in circulation. Paper money used to be generally at a heavy discount; but latterly a good deal of it has been extinguished, and it is now on a par with coin. 100 lb. Danish is equivalent to 110½ lb. avoirdupois. The foot is equal to 12½ inches. One Danish mile is equal to 4,684 Eng. miles.

Races.—Population.—The provs. of Jutland and Sleswick received in antiquity the name of *Cimbria Chersonesus*, from their earliest inhab. being Cimbric or Celts, the ancestors of the Welsh. The Goths, in their progress from the N. and E., took possession of the country of the Cimbric; and the expatriated inhab., having been joined by some other displaced tribes, were wandering in quest of settlements, when they were met and entirely defeated by Marius in two great engagements, about 100 years before the Christian æra. After the expulsion of the Cimbric, the peninsula, was parcelled among several Gothic tribes, of whom the Angli, who afterwards gave their name to England, were one. A tract of country called Engeland, in the E. part of Sleswick, is believed to be the original seat of Hengist and Hlora. (*Pinkerton's Geog.*, art. *Denmark*; *Biographie Universelle*, art. *Marius*; *Jacob's 3d Report on the Agriculture of the N. of Europe*, &c.)

The Danish and German languages, both dialects of the Gothic, are spoken, the first in the islands and Jutland; the latter, in the greater part of Sleswick, and in Holstein and Lauenburg.

The extent, pop., &c. of the different provs. of the Danish monarchy, are as follows:—

Divisions.	Area in Eng. sq. m.	Pop. 1801.	Pop. 1854.	Births to Pop. 1801-54.	Marriages to Pop. 1801-54.	Deaths to Pop. 1801-54.	
Prov. Zealand, including the island of that name, with Funen, Langeland, Laland, &c.	5,010	531,832	692,821	} 1·31	1·119	1·41*	
Jutland, including the dioceses of Aalborg, Viborg, Aarhus, and Ribe	9,483	393,142 (1803)	530,976 (1835)				
Duchy of Sleswick	3,451	276,339	334,192	* N.B. From 1814 to 1829, the mortality in Denmark Proper was only 1 in 47; but in 1829 and 1831 the mortality, from ague, &c., was unusually great.			
— Holstein	3,508	325,748	435,596				
— Lauenburg	404	—	35,680				
Total	21,856	1,527,061	2,033,265				

It appears from the above table, that the increase of population in Denmark Proper, from 1801 to 1834, was 32·3 per cent., or nearly at the rate of 1 per cent. per annum. In the duchies the increase, though not quite so rapid, was still very great, having been, between 1803 and 1835, 28½ per cent. This increase is principally to be ascribed to the emancipation of the peasantry; the breaking down of large estates, and the consequent increase of small properties and farms; the enclosure of commons and the progress made in agriculture; the introduction of vaccination; and the improved condition of the bulk of the people. The increase of pop. in the townships has exceeded that in the merely rural districts; but the town pop. is not very considerable. In fact, if we except Copenhagen (119,292), Altona (28,200), and Flensborg (16,500), no town in the kingdom has 12,000 inhab., and but very few approach nearly to that amount.

Government.—Previously to 1660, the crown of Denmark was elective. The supreme legislative authority was vested in a diet, or assembly, composed of deputies chosen by the nobility, clergy, and commons. But the influence of the nobles predominated very much in this assembly; and they also shared the executive power with the king, and enjoyed many immunities. The dissatisfaction of the people with this distribution of power, and still more with the oppressions they too frequently suffered at the hands of the nobles, was greatly inflamed, at the period referred to, by the humiliating treaty concluded in the course of the year with Sweden, and by the refusal of the nobles to submit to bear an equal share of the burdens required by the state of public affairs. In this crisis the partisans of the crown prevailed on the deputies of the clergy and the commons to make a voluntary surrender of their rights, and, as the only way of putting an end to the existing dissensions, and of

rescuing themselves from the tyranny of the nobles, to confer absolute hereditary power on the sovereign. The nobility, taken by surprise, and unable to make any effectual opposition, were reluctantly compelled to concur with the clergy and the commons. "And thus," to use the words of Lord Molesworth, "this great affair was finished, and the kingdom of Denmark, in four days' time, changed from an estate little differing from aristocracy to as absolute a monarchy as any is at present in the world!" (*Account of Denmark*.)

This has been thought by some to be an overcharged statement; but the following fundamental article of the Royal Law of Denmark, promulgated at the epoch of the revolution, shows that it is strictly correct:—"The hereditary kings of Denmark and Norway shall be in effect, and ought to be esteemed by their subjects, the only supreme head on earth; they shall be above all human laws, and shall acknowledge, in all ecclesiastical and civil affairs, no higher power than God alone. The king shall enjoy the right of making and interpreting the laws; of abrogating, adding to, and dispensing with them. He may also annul all the laws which either he or his predecessors shall have made, excepting this Royal Law, which must remain irrevocable, and be considered as the fundamental law of the state. He has the power of declaring war, making peace, imposing taxes, and levying contributions of all sorts, &c. (*Cox's Travels in the North of Europe*, ed. 1809, vol. v. pp. 116-132.)

It is due to the sovereigns of Denmark to state that they have exercised these great powers with singular moderation, and there can be no question that the mass of the people were great gainers by the revolution of 1660. The privileges and immunities formerly enjoyed by the nobles have been much restricted. The law has been simplified, established on equitable principles, and reduced into a code by Christian V. It is uniformly,

cheaply, and steadily administered; and the slavery of the peasants has been totally abolished. Government has also, particularly within the present century, made the most praiseworthy exertions to diffuse good and useful education; and in addition to this, his present Majesty has, by ordinances issued in 1834, established provincial states in the four provinces of the monarchy; that is, in the islands Jutland, Sleswick, and Holstein. The greater and smaller landholders, the cities and market towns, have each representatives in these states. The members are elected for six years, and receive a salary and travelling expenses; but are not re-eligible. They deliberate on all public measures; and their consent is necessary to the enacting of all laws affecting the imposition of taxes, or the rights or property of individuals. The initiative is not reserved to the crown, but each member may propose whatever measures or modifications he conceives to be necessary or expedient. Reporters are not admitted to hear the debates, but a condensed report of the proceedings is printed. This plan of representation, though in many respects defective, will no doubt lead to many important and salutary reforms in the government and administration of the country. The duchies of Holstein and Lauenburg form part of the Germanic Confederation, and in virtue of this, the king of Denmark has the right of nobility still enjoy considerable privileges, particularly in Holstein and Lauenburg. The highest class derive their nobility from their fiefs, which are consequently inalienable, and descend according to the law of primogeniture. The lowest class are personally ennobled. To hinder improper marriages several free nunneries or sanctuaries are established, where unmarried noble ladies may live in retirement. Public functionaries are selected indiscriminately from the persons best qualified for the performance of their duties, without respect to birth or rank.

The supreme government is conducted, under the king, by a privy council, and by departments or colleges, each having a minister at its head, in which the public business is transacted. In respect of the provincial administration, it is necessary to distinguish between Denmark Proper, or the islands and Jutland, and the duchies. They are all divided into *sifters* or dioceses, and these again into *amter* or bailiwicks; but in the first the government and the administration of justice is committed to different parties, whereas the baillie, *amtman* (prefect), or chief of the administration in the duchies, is also chief judge in their civil and criminal courts. The lowest courts consist of a judge and a secretary, chosen by the proprietors of the district, and confirmed by the king. From these an appeal may be made to the provincial courts, of which there are five; and thence either (for Denmark Proper) to the supreme court of appeal at Copenhagen, or (for the duchies) to that at Kiel. But in order to diminish the expenses of justice, all civil cases must in the first instance be carried before a *commission of conciliation*, composed of the most intelligent and respectable men of the vicinage. Its sittings are private. If both parties agree to abide by the decision of this commission, it is registered, and has the effect of law: If not, either is at full liberty to proceed in a court of justice. The proceedings of the commission are upon unstamped paper, and must be concluded within 15 days. We do not know that any institution could be better devised to secure substantial justice, and discourage rash and precipitate appeals to courts of law. And as a proof of its excellence, it is sufficient to mention that more than 5-6ths of the suits that occur in the kingdom are disposed of by its means.

Religion.—The Lutheran is the established religion; and though the most perfect toleration be practised, the numbers attached to other sects is quite inconsiderable. The bishops, of which there are at present 8, are nominated by the crown. There are 1,536 subordinate clergymen, of whom 495 belong to the three duchies, and the rest to Denmark Proper, or to Jutland and the islands.

Education in Denmark is very widely diffused, there being very few persons, even among the lowest classes, unable to read and write. Besides the universities of Copenhagen and Kiel, there are gymnasia or colleges at Soroe and Altona, with grammar schools and academies in all the considerable towns. Parochial schools are almost every where established; and here, as in Prussia, attendance at school is not optional; for, by a late law, all children from the age of 7 to 14 years must attend some public school. Children whose parents are unable to pay the usual school fees are educated at the public expense. In 1822 the system of mutual instruction was introduced into the elementary public schools, and it is now adopted in above 2,000 out of above 4,000, the total number of these establishments. The instruction in these schools includes, besides reading, writing, and arithmetic, history, geography, and natural history. The elementary schools were attended in 1835 by 278,590 pupils. The grammar and parish schools in Denmark Proper are under the superintendence of a royal college or commission, consisting of three assessors and a

president. This commission regulates the course of study, and appoints all professors in the university of Copenhagen as well as the masters in the grammar schools. The university of Copenhagen was founded in 1479, by Christian I., and has been augmented and amply endowed by his successors. It is divided into theological, medical, juridical, and philosophical faculties. The professors are either ordinary or extraordinary, their total number being generally about 30. The examinations are strict, and the proficiency of the pupils very considerable. It is attended by about 600 students.

The university of Kiel, founded in 1685, is less richly endowed than that of Copenhagen, and is not so flourishing. Its government, as well as that of the grammar schools in the duchies is placed under a particular department.

There is also an asylum for the education of the deaf and dumb in Copenhagen, and another in Sleswick, with two seminaries for the education of schoolmasters, and two for cadets.

Army and Navy.—The army consists partly of regular troops, and partly of a militia or *landwehr* that is only occasionally called out to be exercised. The peasantry are all, with few exceptions, liable to compulsory service in the army for 6 years, during 2 of which they are constantly on duty; while during the other 4 they are only on duty for a month each year. At the end of the 6 years they may be enrolled in the militia. A certain number of soldiers are annually chosen by lot, in each district, according to its population, and the exigencies of the state. At present the regular army nominally amounts to 32,781 men; but, in reality, it is much less considerable, not exceeding 6,000 or 8,000.

The navy consisted in 1835 of 7 ships of the line, of which 5 carried 84 guns, 8 frigates, 5 corvettes, 36 gunboats, &c.

Finances.—The revenue and expenditure of Denmark for the year 1835 were as under.

An Account of the Public Revenue and Expenditure of Denmark and the Duchies, in 1835.

Revenue.		Amount of each of the several Branches.
<i>Ordinary.</i>		<i>L.</i>
1. Land tax	-	865,549
2. House tax	-	54,374
3. Customs and Excise	-	406,003
4. Woods & forests, & other property of the Crown	-	180,185
5. Lotteries	-	53,199
6. Miscellaneous	-	145,914
<i>Extraordinary.</i>		
1. Income derived from property of the Crown	-	46,882
2. Produce of Crown property sold	-	191,901
3. Bond toll	-	177,292
4. Miscellaneous	-	44,240
		1,675,601
Deduct loss in the exchange of paper money and small coin		21,809
Total nett revenue, 1835		1,653,792
Expenditure.		Amount of each of the several Branches.
<i>Public Expenses.</i>		<i>L.</i>
1. Establishment of the king and the royal family	-	158,547
2. Public departments, exclusive of the Customs	-	147,273
3. Army	-	300,557
4. Navy	-	127,202
5. Pensions and allowances	-	616,519
6. Public works	-	58,439
7. Industry and trade	-	6,493
8. Arts and sciences	-	24,591
9. Charitable institutions	-	14,555
10. Miscellaneous	-	51,494
<i>Public Debt.</i>		
1. Interest upon the same	-	538,816
2. Payments to the sinking fund	-	106,553
Surplus of Income to be carried over to next year		70,755
		1,653,792

It is seen, from the above table, that about a fifth part of the revenue of Denmark is derived from a land-tax. With respect to this tax it may be worth while to observe, that it is charged according to the quantity and quality of the land which each cultivator possesses, and which is measured in *tons of hardcorn*. The Danish acre, or ton of land, is equivalent to 86,000 sq. Danish ft., and 4 such acres are equal to a standard ton of hardcorn, one of the latter being consequently equal to 54 English acres. But as the same amount of tax is laid on such ton of hardcorn, the size of the latter varies according to the fertility of the land, from 234,000 ft. to 2,240,000 ft. The ton of hardcorn is, therefore, in fact, an imaginary measure, which contracts as the quality of the land to which it is applied improves, and expands as it deteriorates.

The principal of the public debt amounted on the 1st of January, 1836, to 129,935,000 rix-dollars, or 14,603,000*l.*, the interest payable on it being rather above 3*½* per cent.

Provision for the Poor.—A compulsory provision for the support of the destitute poor was introduced into Denmark early in the present century. Each market-town, of which there are 65, and each parish, forms a separate poor district, the affairs relating to the poor of which are managed by a particular board. Every man residing for three years in a parish acquires a settlement in it, and a right to be supported in the event of his becoming unable to support himself; but the principle of the law is, that the pauper shall be supplied only with those things that are absolutely necessary for his support. All begging is strictly prohibited. Opinions differ as to the influence of this law. It took effect in 1803, and the rate is said to have since progressively augmented. The too great multiplication of cottages has been specified as one of the principal causes of the multiplication of the poor. But the probability seems to be, now that the feudal system has been subverted, and that a large portion of the country has got into the hands of small proprietors, that the increase of cottages would have been greater had there not been an assessment for the support of the poor.

According to the last census, there were in Denmark Proper, that is, in the islands and Jutland, 43,576 poor persons, exclusive of 1,470 inmates of bridewells and houses of correction. In Sleswick and Holstein there were 45,677 paupers, exclusive of 967 inmates of bridewells and houses of correction.

Savings' banks were introduced into Denmark in 1816; and since then upwards of ten millions of dollars, or above one million sterling, has been lodged in them. It very rarely happens that any one of the petty proprietors either solicits or obtains parish relief.—(*Foreign Communications, Poor Law, art. Denmark.*)

History.—The early history of Denmark is obscure and uninteresting, at least to Englishmen. In 1385, Margaret, daughter of Waldemar king of Denmark, and wife of Haquin king of Norway, succeeded the throne of these kingdoms; in 1390, she was chosen by the Swedes their sovereign, the three crowns being united, it was supposed, for ever, in 1397, by the treaty of Calmar. This great princess, who has been styled the Semiramis of the North, and whose reign is the most glorious in the annals of Denmark, died in 1412. After her death the Swedes began to evince their discontent with the union with Denmark; and after a lengthened struggle finally emancipated themselves from the Danish yoke in 1523. In 1448 the race of the ancient kings of Denmark having become extinct, Christian I., of the house of Oldenburg, was raised to the throne, which his posterity still possess; and by this means the valuable provinces of Sleswick and Holstein have been united to the crown, the first immediately, and the latter in 1761 and 1773. The reformed faith was established in Denmark with little difficulty. Lutheranism having been introduced in 1523, Catholicism was suppressed in 1537, the church lands being at the same time annexed to the crown. We have already noticed the memorable revolution of 1660, which had been preceded by a disastrous war, and the loss of the provinces previously held by the Danes in the south of Sweden. From that period down to the present time, there is little of interest in Danish history, other than the introduction of the reforms already alluded to, and the events of last war. The attack on Copenhagen by the British in 1807, which ended in the capture of the Danish fleet, was an act of very questionable policy on our part, and of which no sufficient justification either has been or perhaps can be made. From this period down to the general pacification in 1815, the Danes were amongst our bitterest enemies. At the conclusion of the war Norway, which had been so long united with Denmark, was assigned to Sweden; the former obtaining in exchange the duchy of Lauenburg and a sum of money. The Danes felt this sacrifice very acutely; but it was one of apparent rather than of real power. Since that period the Danish government has steadily exerted itself to draw forth the resources of the country, and to improve the condition of the inhabitants. (*Revised Encyclopædia.*)

DENNY, a market town of Scotland, co. Stirling, 7 m. S. Stirling, and 14 m. N.E. Glasgow, on the S. bank of the river Carron, which falls into the Frith of Forth at Grangemouth. Pop. 2,400. It is irregularly built. The only public buildings are, a parish church and a dissenting chapel; but it is a flourishing place, and is eminent for the various manufactures or public works carried on either within its bounds or in its vicinity, viz., paper-mills, print-fields, mills for spinning wool, one for preparing dye-stuffs, and collieries. Handloom weaving, in connection with the Glasgow market, is also carried on to a considerable extent. (*Nimmo's Hist. of Stirlingshire*, 1817, p. 614.; *Chambers's Gazetteer of Scotland.*)

DEPTFORD, a town and naval arsenal of England, mostly in co. Kent, lathes Sutton-at-Hone, hund. Blackheath, a small part being in co. Surrey, hund. Brixton, on the Havensbourne, at its confluence with the Thames, 4 m. E.S.E. Lond. Pop. (1821), 20,818; (1831), 21,380; houses, 6,349. It is contiguous to Greenwich, the two appearing to make only one large town. The lower town, next the river, has narrow irregular streets, and is meanly built, but the upper town is much superior in these respects, and has many handsome modern houses; the whole is lighted by gas, is partially paved, and supplied with water from the Kentish water-works. The old church of St. Nicholas was rebuilt in 1687; that of St. Paul, a handsome structure, in the Grecian style, was built in 1730, at which period Deptford was divided into 2 par. There are also 4 dissenting chapels; 2 charity schools, educating and clothing, respectively, 10, and 95 boys and girls; a dispensary for the poor of the town and neighbourhood; a savings' bank; a mechanics' institute; and 2 sets of almshouses for decayed pilots and masters, or their widows; one founded in the reign of Hen. VIII., with 26 dwellings; the other at the end of the century, with 66. The latter is a spacious quadrangular structure, in which the master and brethren of the Trinity House hold their annual meeting. This society was incorporated by charter in 4th Hen. VIII. when the ancient rights and privileges of the company of the mariners of England was confirmed to them, and they were styled the master, wardens, and assistants of the guild of the Holy Trinity, in St. Clement's, in Deptford Strand. Other charters were granted them by Eliz. and Chas. II. They are now governed by a master, 4 wardens, and 18 other elder brethren; the master and 2 wardens being chosen annually from among the elder brethren, who are elected for life. The number of younger brethren is unlimited, any master or mate sufficiently skilled in navigation being admissible; but they take no part in the business of the corporation, though, like the elders, they enjoy certain immunities, such as exemption from serving on juries, &c. The principal chartered functions of the society are—the examination of the mathematical students of Christchurch, and of masters in the royal navy; the appointment of pilots for king's ships, as well as for allocating merchant-vessels on the several coasts and ports of England, except such as are specially placed under other jurisdiction (such as those of the cinque ports, the Bristol Channel, &c.) and of fixing the rates of pilotage; the erection and maintenance of lighthouses, beacons, buoys, and other sea-marks (with the exceptions previously stated); and the hearing and determining complaints between merchant officers and seamen, the appeal from them being to the Admiralty Court. They have also the power, under certain circumstances, of licensing seamen to ply on the Thames. Their revenue is derived from ancient endowments, contingent benefactions, and lighthouse and other dues, and the surplus, after defraying the expense of maintaining these and other sea-marks, and other necessary expenses, is, by their charters, to be appropriated exclusively to the relief of decayed seamen and their widows. Between 2,000 and 3,000 is the usual number annually receiving periodical, or casual relief, to various amounts. Their affairs were conducted at Deptford till 1787, when the Old Trinity House was pulled down, and they removed to the present structure on Tower-hill. The government dockyard is an enclosed area of 31 acres, with a double and single tide-dock, 3 building-slips, 2 masts-ponds, a masts-house, smithy for forging anchors, several ranges of storehouses, dwellings for the officers, &c. The victualling office is close to the Thames, and has extensive buildings annexed for baking, brewing, slaughtering cattle, curing meat, cooperage, &c. During the war, 1,500 artificers and other workmen were employed in the dockyard, but this and the other establishments have since been greatly reduced, and the town, which was mainly dependent on them, has suffered much in consequence. There are three private docks, in the largest of which several line-of-battle ships were built during the war. The Ravensbourne forms a small estuary at its entrance, called Deptford Creek, over which is a bridge connecting the lower town with Greenwich. The Surrey Canal locks into the Thames at the N. end of Deptford, whence a branch extends from it to Croydon; a railway, raised on brick arches, and extending from London Bridge to Greenwich, crosses the upper town. There is an earthenware manufactory, a foundry for gun-barrels, &c., and a large establishment, with a laboratory, and several furnaces, for refining the precious metals, making sulphuric and other acids, &c. The Estuary Act included Deptford in a par. bor., comprising also Greenwich, Woolwich, and part of Charlton, which returns 2 mems. to the H. of C.; and had in 1831 a pop. of 65,917. Weekly sessions for the district are held by the co. magistrates in the town, which is in the jurisdiction of a court of requests for debts under 40*l.*, held at Greenwich. It was anciently called West Greenwich, and after Deepford Strand, and was a small fishing vil-

lage previously to the establishment of the dockyard in the 4th Hen. VIII. At Saye's Court (the site of the present workhouse), Evelyn, the author of the *Sylva*, &c., resided, who lent it to Peter the Great in 1698, when that monarch passed some time in Deptford dockyard. (*Hasted's Kent*; *Parl. Papers*, &c.)

DERA ISMAEL KHAN, an Inl. town of Afghanistan, cap. distr. Damaun, now belonging to the Maharajah of the Punjab, about 100 yards from the W. bank of the Indus, and 200 m. W. Lahore; lat. $31^{\circ} 50' N.$, long. $70^{\circ} 32' E.$ It stands in a large wood of date trees, and, when Mr. Elphinstone visited it, was surrounded by a ruined wall of unburned bricks about 14 m. in circ. Its inhab. are mostly Beelooches; but some are Afghans and Hindoos. (*Elphinstone*; *Cantab.*)

DERBY, one of the central cos. of England, having N. Yorkshire and a part of Cheshire; E. the cos. of Nottingham and Leicester; S. the latter, Stafford, and a small part of Warwick; and W. Chester and Stafford. Length, from N. to S., about 55 m.; breadth very various. Area 687,920, acres, of which about 500,000 are arable, meadow, and pasture. The Pennine mountain chain (see ENGLAND) terminates in this co., and occupies great part of its N. and E. districts. The hund. of *High Peak*, comprising the N. W. angle of the co., is one of the most celebrated mountain districts in England; for though its hills do not soar to the height of those of Cumberland, Westmorland, and Wales, nor afford the romantic beauties of lakes, cascades, and hanging woods, yet its situation in a more central part of the island, and its extraordinary caving, perforations, and other curiosities, have made it an object of the greatest interest and attraction. (*Aikin*.) The S. parts of the co. are comparatively flat, and consist generally of strong, heavy land. The climate varies with the elevation of the land, and the nature of the soil; but, speaking generally, it is rather cold and bleak. Agriculture is in a backward state: farms generally small, and mostly held at will: there is everywhere a great want of drainage, and there are no restrictions on the mode or frequency of cropping. In the N. and some of the W. parts of the co., the dairy is the principal dependence of the farmer. Oats is the principal crop in the High Peak; and wheat and beans in the S. The drill is but rarely used; and there is a great waste of horse labour in ploughing. No particular breed of cattle is preferred. Stock of sheep estimated at about 360,000 head. Average rent of land in 1810, 18s. 10gd. an acre. Derby is famous for its minerals and manufactures. The coal-field is of great extent and value; and both lead and iron mines are wrought to a considerable extent; zinc and copper are also obtained, though in no great quantity; and the spars, which are very elegant, are wrought into a variety of ornamental articles. Silk and cotton manufactures are extensively carried on at Derby, Belper, Chesterfield, Hope, Glossop, and other places. In 1838 there were in the co. 22 silk-mills, employing 3,226 hands; and 39 cotton do., employing 5,874 hands. The flax and woollen manufactures are inconsiderable. Porcelain, of a superior quality, is made at Derby; and next to hats, &c., in various parts of the co. Principal river the Derwent, which traverses nearly the whole extent of the co. from N. to S., dividing it into two pretty equal parts. The Trent crosses the S. angle of the co., and the Dove forms, for a lengthened distance, the line of demarcation between it and Staffordshire. Derbyshire is divided into 6 hund. and 139 parishes: it returns 6 mems. to the H. of C., viz. 4 for the co., and 2 for the bor. of Derby. Registered electors for the co. in 1838-39, 12,102; viz. 5,627 for the N., and 6,575 for the S. division of the co. Principal towns, Derby, Belper, and Chesterfield. In 1831, Derbyshire had 46,098 inhab. houses; 48,320 families; and 237,170 individuals, of whom 117,740 were males, and 119,430 females. Sum paid for relief of the poor in 1838, 48,335*l.* Annual value of real property in 1815, 883,370*l.*; profits of trade and professions in do., 210,583*l.*

DERBY, a town and bor. of England, in the above co., of which it is the cap., being locally in the hund. of Morlston, but possessing separate jurisdiction, on the Derwent, in a fine valley, m. S. S. E. Manchester, 110 m. N. N. W. London; lat. $52^{\circ} 55' 32'' N.$, long. $10^{\circ} 28' 18'' W.$ Area of the parl. and municip. bors., which coincide, 1,660 acres. Pop. in 1831, 23,627, of whom 11,269 were males, and 12,358 females. Inhab. houses, in the above year, 4,842, ditto building, 44. At present (1839) the pop. is probably 37,000. Assessed rental in 1837, 74,023*l.* 3*s.* 6*d.*; actual ditto, 94,054*l.* 12*s.* 6*d.* Besides the Derwent, the town is traversed by the Markeaton brook, both of them being crossed by several handsome bridges. This is a very thriving place, and has of late years been much improved. The streets in the older parts are narrow and crooked; but all of them are clean, well paved, and well lighted with gas. There is here a county hall, rebuilt about 10 years ago, a town-hall, assembly-rooms, a co. gaol, which is one of the best in the kingdom, an infirmary, theatre, &c. The most extensive, and one of

the finest buildings in Derby, has been very recently completed: it stands in the centre of the town, is of Grecian architecture, has two fronts, one of 98, and one of 185 feet; and comprises a new post-office, an hotel, with a large room for public meetings, dinners, &c.; the office of the Derby and Derbyshire bank; a museum, &c. The market-place is a large open space in the centre of the town, and there is also a good covered market. There are 8 churches. All Saints' Church is the principal architectural ornament of the town: the body is a Roman Doric edifice; the tower, erected about the time of Henry VIII., is in the perpendicular English style, 178 ft. high. (*Hutton*.) The original church of St. Werburgh is supposed to have been built prior to the Conquest. The new church of St. John's, is a fine Gothic building; and 2 handsome new churches (Thimble and Christchurch) have been recently erected by subscription. There are chapels for most classes of Protestant dissenters, and the Catholics have a chapel with a fine Gothic tower just finished. Derby has received many charters: the first, from John; its last (prior to the passing of the Municipal Reform Act) governing charter, from Charles II. It claims to be a bor. by prescription. Under the new municipal act, it is divided into 6 wards, and has 12 aldermen and 36 councillors. The assizes for the co. are held here, and the Epiphany, Easter, and Michaelmas sessions. The midsummer sessions are held at Chesterfield. The bor. sessions of the peace are held quarterly, before the recorder. A petty sessions is held daily, and there are courts of record and requests. Derby has sent 2 mems. to the H. of C. since the 23d Edward I. Previously to the Reform Act, the right of voting was vested in the freemen and sworn burgesses. Registered electors in 1837-38, 1,731; of whom 424 were registered as freemen. Derby is also the place appointed for the election of the mems for the S. div. of the co.

This town has to boast of many excellent charitable, educational, literary, scientific, and other institutions. Amongst the first, may be enumerated the infirmary; — this, which is a very fine structure, erected by subscription, at a cost of about 18,000*l.*, was opened in 1800, and is replete with every convenience; the self-supporting charitable and parochial dispensary; a lady's charity for assisting poor women during their confinement; several friendly societies and benefit clubs; almshouses, some of which were founded by the Countess of Shrewsbury, in 1590, for 8 men and 4 women; others by R. Wilmot, in 1638, for 6 men and 4 women, now for 4 of each; Large's Hospital, founded 1708, by Edward Large, for 5 clergymen's widows; subsequently enriched by sundry donations, and 13 neat and substantial almshouses, erected from the fund of a charity bequeathed 300 years ago, by Robert Liversage, to the par. of St. Peter; with various benefactions for different purposes. There is a Lancastrian school for boys, and a separate one for girls; and there is also a national school for boys and girls; 24 Sunday schools, giving instruction to 3,198 children, viz. 1,182 boys, 1,326 girls, and 720 children, sex not mentioned; 3 infant schools, and a free school, founded in the reign of Henry II., which is said to be one of the most ancient endowments of the kind in England. It was formerly in a very substantial state; subsequently, however, it fell off very much; but it is now (1839) getting into somewhat better repute. The literary and scientific institutions are, the Philosophical Society (originally held in the house of Dr. Darwin), with a good library, a collection of fossils, and mathematical and philosophical apparatus; the Town and County Library, which has been lately much enlarged, and has a public news-room and museum attached to it; and the Mechanics' Institute. This institution is in a flourishing condition: the building contains a number of rooms for classes, library, &c., besides the spacious and handsome hall, which has been lately added, and which is used for lectures and public meetings. Two weekly newspapers are published in the town.

Manufactures.—This town is remarkably well situated for manufactures, having an extensive command both of water power and coal; and various mills for the manufacture of silk and cotton have been established either in or at its immediate vicinity. Early in the beginning of last century, Mr. John Lombe, who had, at considerable risk, and by dint of great ingenuity and application, made himself acquainted with the machinery in Italy, erected at Derby a mill (now the property of the corporation) for throwing silk, on a very large scale; and the town has ever since continued to be a principal seat of the silk-throwing business. Seventeen silk-mills, of 182 horse-power, employing 3,004 hands, viz. 996 males and 2,008 females, were at work here in 1839. (*Factory Inspector's Returns*.)

The scale of wages varies very little, and ranges at for children of 8 to 12 years old, from about 1*s.* 6*d.* to 3*s.* 6*d.*; 12 to 14, 3*s.* 6*d.* to 5*s.*; young women, females more advanced in life, 6*s.* to 8*s.*: in all cases differing, of course, according to the skill of the parties. In some cases, the hands, when engaged, are contracted with for a certain term, ranging from 3 to 4 or 5 years. It was

stated in 1835, by one of the largest manufacturers in Derby, that there were few, if any, towns in the kingdom in which employment generally was more abundant, and wages more uniformly steady; and that there had been very little alteration for some years. The cotton manufacture is not carried on to nearly the same extent as that of silk, there being only 2 cotton-mills, at Darley, about a mile from the town, employing 142 horse-power, and 643 hands.

This was formerly a great wool mart, and the art of dyeing woollen cloth was supposed to be practised here with peculiar advantage, in consequence of the water of the Derwent being specially adapted for that purpose. Hosiery has long been an important business in Derby. There are also large manufactures of bobbin-net; and the weaving of silks and velvets has been introduced of late years. The manufacture of porcelain was originally established here about the year 1780. The ware is not, perhaps, of equal fineness with the French and Saxon, but its workmanship and ornaments are at least equal. The manufacture of figures and ornaments, in what is termed *birocini*, is extensively carried on. The floor spar, or "blue John," of the Derbyshire is much used for various ornaments; and the black marble of Ashford into vases, columns, chimney-pieces, &c. Various other manufactures, besides those which have been specified, are conducted here on a large scale: viz., a patent shot manufactory; an establishment for the construction of steam-engines; a mill for slitting and rolling iron; a furnace for smelting copper ore, with a machine for hammering and rolling the copper into sheets; a mill for making tin plates; an iron furnace; red lead, colour, and varnish works; bleaching-grounds, in which the processes are performed by chemists; tanneries; soap-eries; extensive malting concerns; and corn-mills.

The municipal corporation commissioners say the increase of the town has been in proportion to the increase of manufactures. One of the best proofs of its prosperity is the fact that, though the population has fully doubled since 1811, it being at that time only 13,043, the poor-rates have been reduced 30 per cent.

Derby communicates by canals with all parts of England. The river was, several years since, made navigable from the town to its junction with the Trent, but since the opening of the Derby Canal, the navigation has been disused. This canal branches from the Trent and Mersey Canal at Swarkestone, a few miles S. of Derby, runs N., and intersects the Derwent at Derby; a towing bridge being thrown across that river. The Derby Canal supplies the town with coals, building stone, gypsum, and other things. Three railways meet at Derby:—1. The Derby and Birmingham; 2. The Midland Counties Railway, which connects Derby and Nottingham with each other, and both with the London and Birmingham Railway at Rugby; 3. The North Midland Railway, which connects Derby with Leeds. Of these, the Derby and Birmingham Railway, and that part of the Midland Counties, which connects Derby and Nottingham, are now (1839) open.

Many learned persons have either been natives or inhabitants of this town; among whom may be specified Dr. Thos. Linacre, a learned physician in the reign of Henry VIII.; Joseph Wright, an eminent painter; William Hutton, an industrious antiquary and topographer; Flamstead, the celebrated astronomer, said to have been educated in the free school; the first Earl of Macclesfield, who, after practising here as an attorney, rose to the highest rank in his profession, having been Lord Chancellor; John Whitehurst, a scientific mechanist; and the celebrated Dr. Darwin. In the vicinity are many elegant seats and mansions, and the country round is fertile, well wooded, and plentifully supplied with water. Market-day, Friday, Jan. 25. Friday in Easter week, third Friday after 1st of May, Tuesday in Whitsun week, and July 25., for horses, cattle, and sheep; and March 21., 22., and 23., and Sept. 27., and two following days, for cheese. A cheese-market, or fair, is also held on the last Tuesday in August. Markets for cattle every Friday in May, and for fat cattle every alternate Tuesday throughout the year. (*Hutton's Hist. Derby; Glover's Hist. Derbyshire; Municipal and Boundary Corporation Reports; Private Information.*)

DEREHAM (EAST), or MARKT DEREHAM, a town and par. of England, co. Norfolk, hund. Mitford. Area of par., 5,650 acres. Pop. of do., 3,946. The town 15 m. W. by N. from Norwich, nearly in the centre of the co., having suffered much from fires at different periods, has been rebuilt on an improved plan, and is neat and clean. The church, a very ancient structure, with a tower in the centre, has some interesting relics; and in it were deposited, in 1800, the remains of Cowper the poet. Market-day, Friday; and there are two annual fairs.

DERG (LOUGH), a lake of Ireland, in the S.E. angle of the co. Donegal, about 9 m. in circ. This lake, or rather a small island in it, is famous in the history of Irish superstition. In this island there was formerly a

cave, called St. Patrick's Purgatory, a pilgrimage to which was long held to be of the greatest efficacy. The cave was, however, shut up in 1680, by order of government, the chapel on the island demolished, and the monks dispersed. It was supposed that this rough treatment had put an end to the delusion; and Boate, writing soon after, says that "the pilgrimage to purgatory has quite come to nothing, and never hath been since undertaken." (*Boate's Nat. Hist. of Ireland*, p. 75. ed. 1682.) But if so, the practice revived at no distant period, and the island continues, down even to the present day, to be annually visited by crowds of pilgrims. Nor is this greatly to be wondered at, seeing that Pope Benedict XIV. wrote a sermon recommending the pilgrimage; and that, in 1830, the Catholic bishop of the diocese publicly notified that he would hold a "station" here. The "station," or period for the resort of pilgrims, begins on the 1st of June, and terminates on the 15th of August. Mr. Inglis, who visited the island in 1834, estimated the average annual number of pilgrims at from 18,000 to 20,000. At present the rites are not performed in a cave, but in a chapel. (*Anglic Ireland*, li. 169—181.) A vessel called Derg falls into this lake.

DESSAU, a town of N. Germany, cap. of the duchy of Anhalt-Dessau, residence of the duke and seat of government, on the left bank of the Mulda, near its confluence with the Elbe, 67 m. S.W. Berlin, and 33 m. N. by W. Leipzig; lat. 51° 50' 6" N., long. 12° 17' E. Pop. (1837) 11,749, of whom 743 were Jews. It is walled round, except on the side next the river, which is here crossed by a fine bridge. Dessau is divided into the Old and New Towns, the Sand, and 3 other suburbs, one of which is on the opposite side of the Mulda. It is one of the best-built cities of Germany, and contains 5 public squares, and upwards of 30 good streets, which are well lighted at night. The ducal palace, a part of which was built in 1340, contains a theatre, a good collection of paintings, and other works of art; the palace of the dowager-duchess, the high school, Amelia asylum, riding-school, Catholic church, 3 Lutheran churches, and the synagogue, are the other public edifices most worthy of notice. Dessau is the seat of the high court of appeal for the duchy and other judicial courts. Its public schools are numerous, and include a gymnasium, teacher's seminary, citizens' primary and female schools, academies of music and singing, the Louisa school of industry, a high female school, and a celebrated Jewish commercial school with which a Jewish classical seminary is united. There are many public charities. The inhab. mostly derive their subsistence from employments connected with the court; but they also manufacture woollens and hats, and have tanneries, distilleries, and an extensive trade in corn. The public cemetery of Dessau is very handsomely laid out, and in the vicinity of the town are the ducal country residences, *Luisium* and *Georgium*, surrounded by extensive gardens. Dessau was the birthplace of the philosopher Mendelssohn, born in 1729, deceased in 1784. (*Berghaus; Ritter.*)

DETMOLD. See LARPE-DETMOLD.

DETROIT, a city of the U. S. of America, cap. Michigan; on the W. side of the strait or channel uniting lakes Erie, St. Clair, and Huron, and consequently in one of the best positions for commanding a large share of the internal navigation of America, 18 m. above the W. extremity of Lake Erie; lat. 42° 19' 53" N., long. 82° 58' W. Pop. (1838) 9,278. It is irregularly built, mostly of wood; but there are some large brick edifices. Three of the streets are each 200 ft. wide, the others vary from 60 to 120 ft. in width, and cross each other generally at right angles. There are several squares, and some good private mansions. In 1838 Detroit had 8 churches, beside the cathedral, built of granite, with a cupola, and one of the largest organs in the U. S. Among the other public buildings are the state-house, city hall, 4 banks, 3 markets, a theatre, museum, state penitentiary, co. gaol, mechanics' hall, and various public offices. There are several extensive manufactures, including 3 iron-foundries, a brass-foundry, 3 breweries, &c. Shipbuilding forms an important branch of industry. The city is the great commercial mart and emporium for the state. The markets are usually well supplied; the fish-market, especially, is one of the best in the W. states. Among numerous charitable institutions there are 2 orphan asylums, several free schools, an hospital, and a poorhouse. There are scientific and literary societies, and good male and female academies. The aggregate burden of vessels belonging to the district of Detroit, during the year ending Sept. 30., 1837, was 7,098 tons. Of the various nations which compose the pop., the most numerous are the French, by whom the city was founded in 1670.

The Detroit river, or strait, between lakes Erie and St. Clair, is 25 m. long, and upwards of a mile broad. The French settlements extend for a considerable distance along its banks, which are fertile and well cultivated. (*Blot's Gaz. of Michigan*, 1838; *Peck's Guide to Emigrants.*)

DETTINGEN, a small village of Bavaria, on the Mayn, 8 m. N.W. Aschaffenburg. Here, on the 26th of June 1743, the allied British and Hanoverian army, under George II. and the Earl of Stair, defeated a very superior French force under Marshal Noailles. The latter lost above 5,000 men killed and wounded; the allies about 2,000.

DEUX-PONTS (Germ. *Zwei-brücken*), a town of Rhenish Bavaria, formerly the cap. of the duchy of the same name, and at present of the Bavarian circle of the palatinate, on the Erbach near its confluence with the Serre, 42 m. W. by N. Landau, and 47½ m. S.S.E. Strasburg. Pop. 7,300. It is pleasantly situated and well built. Here are the ruins of the ancient palace of the duchy, formerly one of the most magnificent residences in Germany, but which was for the most part destroyed by the French. What remains of it has been converted into a Catholic church. The cathedral and Lutheran church are amongst the other chief edifices. There are here two bridges across the Erbach, whence the town probably derives its name. Deux-Ponts is the seat of the high court of appeal for the circle, and contains a lyceum and a gymnasium. It has manufactories of woollen cloth, leather, cotton twist, and tobacco. Here, in 1779, was commenced the publication of the series of editions of the classics, known by the name of the Bipont edition. The undertaking was not, however, completed here, but at Strasburg.

Deux-Ponts and its duchy successively belonged to its own counts, to Sweden, and Bavaria, previously to the French revolution. It was afterwards taken by the French, and formed a portion of the dep. of Mont-Tonnerre; but since 1814 it has again belonged to Bavaria. (*Berghaus*; *Cannabich*; *Encyc. des Gens du Monde*.)

DEVENTER, a fortified town of Holland, prov. Overijssel, cap. arrond., on the Yssel, 18 m. S. Zwoll; lat. 52° 19' N., long. 6° 9' 29" E. Pop. 13,639. A cathedral, 6 other churches, and a town-hall, are amongst its chief public buildings. It is the seat of a court of assize, a tribunal of primary jurisdiction, and several associations of public utility, and the residence of a military commandant. It has manufactories of stockings, carpets, and linen fabrics, an iron foundry, and considerable trade in cattle, corn, butter, and other goods; and sends 7 members to the states of the prov. Deventer has sustained numerous sieges, and been several times taken. (*Cannabich*; *Dict. Géogr.*)

DEVIZES, a parl. bor. and town of England, co. Wilts, hund. Potterne and Cannings, on an eminence near the N. limit of Salisbury Plain, on the principal road from London to Bath, and nearly in the centre of the co.; 8½ m. W. by S. London. Pop. (1821), 4,208; (1831), 4,562; houses, 883. It consists of several wide streets, branching from a large market-place. The houses are mostly well built, and the town "appears in every respect wealthy and prosperous." (*Boundary Report*.) It is well paved, and lighted with gas; but has an inadequate supply of water, obtained from wells sunk through the sandstone strata. There are 2 ancient churches, affording interesting specimens of the Norman and pointed styles, with some curious monuments. There are also 5 dissenting chapels; a charity school, educating and apprenticing 40 boys; Lancasterian, national, and Infant schools; a town-hall, with a circular front and Ionic columns; and a handsome cross, erected in 1815, by Lord Sidmouth, formerly the recorder, and one of its representatives in the H. of C. Markets, Monday and Thursday, the latter for corn, and one of the largest in the W. of England. Fairs—Feb. 14, for horses; Holy Thursday, horses, cattle, and sheep; April 20, ditto, a very large one; July 5, wool; Oct. 2, sheep and hogs—very large. Malting is extensively carried on; and there is a large snuff manufactory, and three others for silk, employing between 300 and 400 hands. The woollen business, formerly the most important of any, has wholly declined. The Kennet and Avon Canal passes the town, giving it a water communication with Bristol and London. Devizes claims to be a bor. by prescription, but has several charters. It has returned 2 mems. to the H. of C. since the 4th of Edward III. Previously to the Reform Act the elective franchise was vested in 36 burgesses and an unlimited number of free burgesses; but of these few were made. The Boundary Act extended the limits of the parl. bor., which had, in 1831, a pop. of 6,267, and in 1837-38, 266 registered electors. The present municipal coincides with the parl. bor. It is divided into 2 wards, and has 3 aldermen and 18 common-councillors. Average revenue of the corporation, between 400£. and 500£. Estimated rack rental of the bor. in 1835, 23,670£. Petty sessions for the division are held in the town, and quarter sessions for the co., alternately with Salisbury, Warminster, and Marlborough. There is a large co. bridewell and a house of correction near it, built in 1810. The co. coroners are elected, and the co. members nominated and returned, at Devizes; and it has a weekly newspaper. The origin of the name (in old records, *Disiac*, *Divisic*, &c.) is supposed to be

from the division of the place between the king and the bishop of Salisbury. The town owes its rise to an important castle or fortress built here in the reign of Stephen, of which nothing but the mound remains. (*Sir R. C. Hoare's Wills*; *Parl. Papers*, &c.)

DEVON, a marit. co. of England, forming part of its S.W. peninsula, and having E. the cos. of Dorset and Somerset, N. the Bristol Channel, W. Cornwall, and S. the English Channel. It is a triangular shape, area, 1,654,400 acres, of which about 1,200,000 are supposed to be arable, meadow, and pasture. Surface and soil very various. A great portion of the W. district of the co., from Okehampton on the N. to Ugborough on the S., and from Ilminster on the E. to near Tavistock on the W., is occupied by Dartmoor, one of the most barren and worthless tracts in the kingdom. It includes a space of above 280,000 acres, and is said to have a mean elevation of more than 1,700 ft. above the level of the sea, but we suspect this to be an exaggeration. Its surface is, in most places, extremely rugged; the soil, where it is not encumbered with broken fragments of rock, is thin and poor; and in the most elevated part of the moor there is an immense morass, covering about 80,000 acres, and which is, in parts, incapable of supporting even the lightest animals. That part of the moor, called the Forest, is parcel of the duchy of Cornwall; and on this, and some other of the less barren portions, some improvements have been effected, particularly in the way of planting. But, with the exception of this and a few other tracts of very inferior dimensions, the country is alike beautiful and fertile. The vale of Exeter, comprising from 120,000 to 130,000 acres, is one of the richest in the kingdom; and the district called the *South Hams*, extending from Torbay round to Plymouth Sound, is frequently called the garden of Devonshire, and is finely diversified, and very productive. Climate mild but moist, though not so much so as in Cornwall. Agriculture, though much improved, is still very backward; there is throughout the co. a great want of a regular system of cultivation, and the crops are inferior. Potatoes are extensively cultivated; cyder is largely produced, especially on the W. parts of the co., and is a common beverage; but it is harsh and acid; and these qualities, and the freedom with which it is drunk, are said to occasion the colic prevalent among the natives. Devon is principally a grazing and dairy co. The breed of cattle is excellent: they are of a high red colour, fatten easily, and yield capital beef; are well adapted for field labour, being, though rather light, docile, and ready to exert themselves to the utmost. The dairy farmers not very frequently let their cows to dairymen at so much a head. Stock of sheep estimated at between 600,000 and 700,000 head. Property much divided. Farms of all sizes from 10£. to 500£. a year; but the great majority small. Average rent of land, in 1810, 14s. 8½d. an acre. Minerals important and valuable; copper and tin mines are wrought to a considerable extent; and lead, iron ore, and manganese are met with. About 28,000 tons of clay, raised near Kingsteigun, Bovey, and other places in that part of the co., are annually shipped for Staffordshire and other seats of the china-ware manufacture. The woollen manufacture, though a good deal fallen off, is still carried on to a considerable extent: there were in the co., in 1839, 39 woollen-mills, employing 1,810 individuals, with 3 flax and 3 silk mills. Principal rivers Exe, Dart, Tamar, Taw, and Torridge. Principal towns, Plymouth, Devonport, Exeter, Tiverton, Tavistock, &c. Devonshire is divided into 33 hund. and 465 par.: it returns 22 mems. to the H. of C., viz. 4 for the co.; 2 for the city of Exeter; 2 each for the bors. of Plymouth, Devonport, Tiverton, Barnstaple, Honiton, Tavistock, and Totness; and 1 each for the bors. of Ashburton and Dartmouth: registered elector for the co., in 1838-39, 18,432, viz. 7,871 for the N., and 10,561 for the S. division of the co. Devonshire had, in 1831, 81,989 inhab. houses, 101,911 families, and 494,478 individuals, of whom 238,789 were males, and 255,689 females. Sum paid for the relief of the poor, in 1828, 167,443£. Annual value of real property, in 1815, 1,924,912£. Profits of trades and professions in ditto, 767,444£.

DEVONPORT, a sea-port town and parl. bor. of England, co. Devon, par. of Stoke-Damerall, formerly called Plymouth Dock. It adjoins that portion of Plymouth called Stonehouse, on the W.; but though it received its present distinctive appellation in 1824, has a separate municipal government, and returns 2 mems. to the H. of C. It is quite as much a part of Plymouth as the bor. of Mary-le-Bone is of London. We shall, therefore, describe it, with the dock-yard, breakwater, &c., under the head **PLYMOUTH**.

DEWSBURY, a thriving manufacturing town, par., and township of England, W. riding co. York. The par., which contains 9,620 acres, is situated principally in the wapentake of Aybryg, but partly also in that of Morley: the township of Dewsbury, however, which contains 1,330 acres, is wholly in the former. Pop. of township

In 1801, 4,866; in 1831, 8,272; and now (1839), about 10,000. The town, situated at the foot of a hill, on the Calder. Is 8 m. S.S.W. Leeds, 9 m. S.E. Bradford, and 9 m. N.E. Huddersfield; in the very centre, in fact, of the clothing district. The approach to the town by the London road, cut through a deep chasm, has a fine effect: the town lies, as it were, at your feet; and the smoke of the factories in the distance give it an enlarged appearance. It has a good market-place, with some good streets; and is well lighted with gas and supplied with water. All Saints, the principal church, is of great antiquity: it was rebuilt in 1766, but a good deal of the interior was preserved. Churches have recently been erected at Dewsbury Moor, Earls Illeaton, and Hanging Illeaton, under the millon act, and there are 3 Methodist chapels, and a Friends' chapel. A charity school was founded here in 1760; it has an endowment of about 1084. a year, and about 80 boys are educated as free scholars. Wheelwright's free-school, conducted on the national system, was founded in 1727, and is attended by 100 boys, and as many girls. There are here 3 almshouses; but excepting these, the other charities are of little importance. A mechanics' institute was attempted to be set on foot without success.

Dewsbury is at the head of what is called the *Shoddy* trade. Our readers are aware that some of the most useful and beautiful fabrics, partly made out of the vilest materials, as refuse linen and cotton rags, cotton bagging, &c. Perhaps, however, they are not so generally aware that refuse woollen rags are subjected to the same sort of metamorphosis; but such is the fact. They are collected at Dewsbury in vast quantities from all parts of the kingdom; and, after undergoing certain preparations, are torn to pieces, and reduced to their original state of wool, by the aid of powerful machinery; and this wool, being re-spun, is again made into cloth! Formerly, shoddy cloth was used only for padding, and such like purposes; but now blankets, flannel, druggets, carpets and table covers, cloth for pilot and Peter-sham great coats, &c., are either wholly or partly made of shoddy. The clothing of the army, and the greater part of that of the navy, consists principally of the same material, which, in fact, is occasionally worn by every body. Large quantities of shoddy cloth are exported. Great improvements have recently been effected, not only in the fabric of the cloth, but also in the dyes; this is especially seen in the cloth for soldiers' uniforms, which is no longer of a brick-dust colour, but makes a much nearer approach to scarlet. The beautiful woollen table cloths are made wholly of shoddy, being printed by *aqua fortis* from designs drawn in London and Manchester, and cut on holly and other blocks on the spot. The whole trade, in fact, is one of the greatest triumphs of art and civilisation: it is of comparatively recent origin, and is rapidly extending itself. It is most active in summer, and is comparatively dead in winter. About 1,200 men, and as many women and boys, are employed in the mills, and in the manufactures of shoddy in Dewsbury. Wages vary from 7s. 6d. to 30s. a week. No power looms are employed in the manufacture. Dewsbury is connected by canals with Hull on the one hand, and Liverpool on the other.

Petty sessions held every alternate Wednesday. Dewsbury is the centre of a poor law union. (*Private Information.*)

DEZPHOUL, a town of Persia, in Kuzistan, in a fine plain, on the Abzal, 24 m. W. by N. Shuster. Pop. 14,000 or 15,000. Its only ornament is a noble bridge of 22 arches, constructed by command of Sapor. The piers are of stone, and the arches and upper parts brick. It is 450 paces in length, 20 in breadth, and about 40 in height. (*Kinnel's Persian Empire*, 99.)

DHAR or DIARANUGGUH, an ancient ind. town of Hindostan, prov. Malwah, cap. of a small Maharatta state under British protection; 28 m. W.S.W. Indore, and 1,908 ft. above the level of the sea; lat. 22° 35' N., long. 75° 24' E. At one period it is said to have contained 20,000 houses; in 1820 there were less than 5,000, but the pop. was rapidly increasing. It is surrounded by a mud wall, and contains some good buildings, and several tanks. The fort, detached from the town, is surrounded by walls about 36 ft. high, with round and square towers. This town is of great antiquity; its rajahs are of a most distinguished Maharatta family, and formerly had precedence of both Scindia and Holcar. (*Hamilton's E. I. Gaz.*)

DHOLPOOR, an ind. town of Hindostan, prov. Agra, cap. of a small Hindoo principality under British protection, 34 m. S.W. Agra, 26 m. N. Agra, and 1 m. N. the Chumbul river; lat. 26° 42' N., long. 77° 44' E. It is frequently mentioned by the Emperor Baber in his memoirs, and is still of considerable size; its environs are rich and productive.

DIAMOND HARBOUR, a harbour in the river Hooghly, Hindostan, 34 m. below Calcutta, where the Company's ships usually unload their outward, and receive on board the greater part of their homeward cargoes. Here are government warehouses for ships' stores,

rigging, &c., protected by an embankment from foundation; and about thirty years ago an excellent brick road was constructed from hence to Calcutta. The place is very unhealthy; but the adjacent rice lands are in a high state of cultivation. (*Hamilton's E. I. Gazetteer*, i. 510.)

DIARBEKH, a city of Turkey in Asia (Armenia), cap. pachalik of same name, on the Tigris, by which it is nearly encircled, in a noble plain or table-land, 160 m. S.S.W. Erzeroum; lat. 37° 55' 30" N., long. 39° 52' E. Pop. probably about 40,000. (Brant says about 8,000 families; of which, 5,300 are Turks, 1,500 Armenians, 85 Catholics, 70 Greeks, and 80 Jews.) "It is surrounded by a prodigious wall of black stone, which, for height and solidity, is far superior to any thing of the kind I have seen, either in Europe or Asia: it has, however, been much neglected, and is now in ruinous condition. The houses are of stone, and have a good appearance; but the streets, though paved, are narrow and filthy. The castle is on the N. side of the town; it is also surrounded by a strong wall, and divided into many courts and handsome buildings. The bazaar is well supplied with corn and provisions; and the adjoining country is fruitful and well cultivated; cotton, silk, copper, and iron are manufactured, and sent to Bagdad and Constantinople. When viewed from a distance, it has a fine appearance. The elevation of the surrounding mountains, the windings of the Tigris, and height of the walls and towers, with the cupolas of the mosques, give it an air of grandeur far above that of any city which I have visited in this quarter of the world. The river is generally crossed on a bridge of 12 arches, about 4 m. below the town."

Such is the account of this city given by Mr. Kinnel (*Memoir of Persian Empire*, p. 334.) in 1813. But according to Mr. Brant, by whom it was visited in 1835, its condition would appear to have materially deteriorated in the interval. He states that its manufactures had greatly declined; that the trade with Bagdad was annihilated, and that with Aleppo reduced to insignificance; that the villages in the plain had been destroyed; and that no one dared venture beyond the walls of the city, except in company of a caravan. These disastrous results had been occasioned by the depredations of the Kurds, which the government was too feeble or careless to restrain. (*Journal Geog. Society*, vi. 203.)

This city was founded, or, more probably, restored, by the emperor Constantine, anno 349. It is sometimes called *Amud* or *Emut*, and is described under this name by Abulph.

DIEP (an. *Dea Vooconitum*), a town of France, dep. Drôme, cap. arrond., on the Drôme, 26 m. S.E. Valence. Pop. (1836) 3,900. It is surrounded by a wall flanked with numerous towers; is clean and well built; has a cathedral, an ancient episcopal palace; many Roman remains; and silk fabrics, tanneries, rope-walks, and paper-mills. In the 16th century the Calvinists were very numerous, and had a university here. (*Hugo*, art. *Drôme*.)

DIEP (SAINT), a town of France, dep. Vosges, cap. arrond., on the Meurthe, 24 m. E.N.E. Epinal. Pop. (ex. com.) 5,732. It is well situated on a well built; is surrounded by an ancient wall; and has a communal college, and a public library with 9,500 vols. It is the seat of a sub-prefecture, court of original jurisdiction, and a bishopric, of which the dep. Vosges forms the diocese. There are some fabrics of cottons, handkerchiefs, stockings, and potash. (*Hugo*; *Dict. Géog.*)

DIEPPE, a marit. town of France, dep. Seine-Inférieure, cap. arrond.; at the mouth of the Arques, on the British Channel, nearly opposite Beachy Head, from which it is distant 67 m. S.S.E. 31 m. Rouen, and 92 m. N.W. Paris; lat. 49° 55' 24" N., long. 1° 4' 44" E. Pop. (1836) 16,820. It is well built: streets broad, regular, and one of them 3-4th m. in length; houses mostly of brick, and ornamented with balconies. It consists of two parts,—the town properly so called, and its suburb of *Le Petit*, separated from it by the port, but communicating with the town by a flying bridge.* It is well supplied with water, which is conveyed by an aqueduct excavated in solid rock for 3 m., and distributed to 68 public and above 200 private fountains. Its port, enclosed by two jetties and surrounded by quays, is capable of accommodating a great number of vessels of from 60 to 800 tons; but it dries at low water, is with difficulty kept from filling up, and is rather of dangerous access from its narrowness and the rapidity of the current both inwards and outwards. It is protected by an old castle on a cliff to the W. of the town, and by some batteries. It has two churches, from the steeple of one of which, St. Jacques, the English coast may be seen. Since 1829, when a handsome establishment for sea-bathing was formed, Dieppe has become a favourite watering place, and the number of visitors has continued to increase. It is the seat of a court of original jurisdiction; has a communal college with a public library containing 4,000 vols., a school of navigation, an hospital,

* This is the statement of the *Encyclopédie des Gens du Monde*: the *Guide du Voyageur*, p. 183., says the bridge is of stone, and has seven arches.

and a theatre. Ivory articles are made here in greater perfection perhaps than in any other part of Europe; and there are some sugar-refineries, tanneries, rope-walks, and building docks for trading vessels. The manufacture of lace, for which this town was once distinguished, has now much diminished. Dieppe is an entrepôt for salt and colonial produce, and has considerable trade; but by far the greatest portion of the inhab. depend for support on the fisheries, especially those of mackerel, herrings, and of commerce, and of a bishopric; and is the headquarters of a military division. It has an *académie universitaire*, with faculties of law, science, and literature, a royal and 7 other colleges, a superior school of the fine arts, a secondary school of medicine, a primary normal school, and numerous learned societies. It has some fabrics of linen, cotton, and woollen stuffs, vinegar, mustard, for which it is famous, wax-candles, hats, earthenware, soap, &c.; besides sugar and wax refineries, tanneries, and breweries; but its principal dependence is on its wine trade, it being the principal depot and market for the sale of Burgundy. This town existed previously to the period of Roman domination, it was fortified, and, according to some, rebuilt by Marcus Aurelius; and enlarged and embellished by Aurelian, anno 274. In 1137, it was burnt down, but soon rose from its ashes: it was annexed to France, with the rest of Burgundy, in 1447. It has produced many very distinguished men; among others may be specified Bossuet, the great glory of the Gallican church, born here on the 27th of Sept. 1627; Cressillon, Piron, Longepierre, Leubenton, Guyton de Morveau, &c. *Encyc. art. Côte d'Or; Guide du Voyageur, &c.; Encycl. des Gens du Monde.*

DIEST, a town of Belgium, prov. S. Brabant, cap. cant., on the Demer, and on the railway from Antwerp to Liege, 32 m. E.N.E. Brussels. Pop. (1836) 6,963. It is about a league in circ., but this space is in great part occupied with fields and gardens. It has a college, manufactures of stockings, toolories, &c., and some excellent breweries; and sends 2 depts. to the states of the prov. It was taken by the Duke of Marlborough in 1706, but retaken and dismantled by the French in the same year. *(Cannabich; Dict. Géogr.)*

DIGNE (an. *Dina* or *Dénia*), a town of France, dép. Alpes-Basses, of which it is the cap.; at the foot and on the declivity of a hill, on the Bléone, 55 m. N.E. Aix, 78 m. S.S.W. Grenoble, and 373 m. S.E. Paris; lat. 44° 5' N.; long. 6° 14' 10" E. Pop. (ex. com.) 3,545. It is encircled by ancient walls flanked with square towers. Streets generally narrow, crooked, and filthy, and the houses mean. In its vicinity are some saline baths, serviceable in rheumatic, paralytic, and cutaneous affections, and gunshot wounds. One of the avenues to the town is planted with trees and bordered with handsome houses. Digne is the seat of a court of primary jurisdiction, a court of assize, a tribunal of commerce, a communal college, and a bishopric; but neither its principal church nor episcopal palace deserves notice. It has a public library with 3,000 vols., a society of agriculture, departmental nursery grounds, tanneries, and some trade in prunes, almonds, corn, hemp, cloth, and leather. *(Hugo, art. Alpes-Basses; Guide du Voyageur, &c.)*

DIJON (an. *Divio*), a celebrated town of France, dép. Côte d'Or, of which it is the cap., as it was formerly of the duchy and prov. of Burgundy, in a fertile plain at the foot of the Côte d'Or Mountains, on the Ouche, at the confluence of the Suzon, 105 m. N. Lyons, and 160 m. S.E. Paris; lat. 47° 19' 25" N., long. 6° 25' E. Pop. (1856) 24,344. It is surrounded by ramparts planted with trees, and is for the most part very well built. Its streets are broad, well paved, and clean; and it contains several large and fine squares. Its environs are extremely beautiful, and few towns in France possess such fine public walks. The Suzon, running in various subterranean channels through different quarters, contributes to the cleanliness for which Dijon is conspicuous. In the *Place Royale*, constructed in the form of a horse-shoe, is the palace which has succeeded to the ancient castle of the dukes of Burgundy, the greater part of which was destroyed by fire in 1602. A large square tower formerly belonging to this castle, and called *La Terrasse*, now serves as an observatory; the palace, which was finished in 1784, was destined for the reception of the states of the province, and for the residence of the princes of Condé, who, under the old régime, were its hereditary governors; its magnificent suite of apartments is now occupied by the museums of painting and sculpture. The castle of Dijon, commenced by Louis XI., and terminated under Louis XII. in 1519, became in the 18th century a state-prison, in which the Duchess of Maine, Mirabeau, and other distinguished persons were confined; it now serves for the quarters of the *gens-d'armes*. Several of the churches are well worthy of notice. That of St. Bénigne, in which the installation of the dukes of Burgundy took place, was founded in the 5th century, and rebuilt in 1106. It suffered materially during the Revolution; but its spire is still standing, and reaches to the height of 98 metres, or 324 ft. above ground. The churches of Notre Dame and St. Michael are remarkable alike for their antiquity, the beauty of their architecture, and the magnificence of their ornaments. The church of St. Anne is an elegant modern structure, with a fine dome. The hall of justice is a large ancient edifice, and the theatre is, next to that of Bordeaux, the handsomest in France out of Paris. There are two pub-

lic libraries, one of which has 40,000 printed vols., and 500 or 600 MSS.; a cabinet of natural history, and a botanic garden, 2 hospitals, an orphan asylum, 2 prisons, a town-hall, hotels of the prefecture and academy, and many private residences built during the independence of the duchy, which give to the city a venerable and interesting appearance. Dijon is the seat of a royal court for the dépts. Côte d'Or, Haute Marne, and Saône et Loire, a court of assize, tribunals of primary jurisdiction and of commerce, and of a bishopric; and is the headquarters of a military division. It has an *académie universitaire*, with faculties of law, science, and literature, a royal and 7 other colleges, a superior school of the fine arts, a secondary school of medicine, a primary normal school, and numerous learned societies. It has some fabrics of linen, cotton, and woollen stuffs, vinegar, mustard, for which it is famous, wax-candles, hats, earthenware, soap, &c.; besides sugar and wax refineries, tanneries, and breweries; but its principal dependence is on its wine trade, it being the principal depot and market for the sale of Burgundy. This town existed previously to the period of Roman domination, it was fortified, and, according to some, rebuilt by Marcus Aurelius; and enlarged and embellished by Aurelian, anno 274. In 1137, it was burnt down, but soon rose from its ashes: it was annexed to France, with the rest of Burgundy, in 1447. It has produced many very distinguished men; among others may be specified Bossuet, the great glory of the Gallican church, born here on the 27th of Sept. 1627; Cressillon, Piron, Longepierre, Leubenton, Guyton de Morveau, &c. *Encyc. art. Côte d'Or; Guide du Voyageur, &c.; Encycl. des Gens du Monde.*

DINAGEPOOR, an incl. distr. of Hindostan, prov. Bengal; between lat. 24° 48' and 26° 18' N., and long. 88° 1' and 89° 11' E.; having W. and N. the distr. Purneah, E. Rungpoor, and S. Rajshayee; length N. to S. 105 m., breadth, 82 m.; area, 8,374 sq. m.; pop. (1822) 2,341,420, nearly two-thirds of whom are Mohammedans. This was one of the districts specially surveyed by Dr. Buchanan Hamilton, by orders from the government, in 1808, but he found no mountains, and even hills, and the surface is undulating: it is every where intersected by rivers, the principal of which are the Mohanonda, Atreyi, and other tributaries of the Ganges. There are no lakes, but in the rainy season some of the rivers swell out into extensive marshes; and as they are constantly changing their courses, their deserted channels often contain a considerable expanse of stagnant water. The winds are more variable here than in any other part of India, but for the most part E. The rainy season commonly lasts from the middle of June to the middle of Oct. Towards the end of this season the nights are hot and oppressive, but the maximum heat is not so great as at Calcutta. From Nov. to Feb. the natives often suffer much from cold, and fires are agreeable to Europeans. The E. winds are accounted very unhealthy; and intermittent and other fevers annually destroy a great many of the pop. The soil is in some parts a red and stiff clay, unusual in Bengal; but by far the larger portion is light and ash-coloured. Nitre was formerly made in this district, but the soil is not peculiarly adapted for it, and its manufacture has been removed to more favourable situations. The banyan, mango, areca, &c., flourish; palms, generally, do not thrive. There are some small salt forests; but, generally speaking, timber is inferior, and useless for boat-building. There are few tigers or leopards, no wolves or hyenas, and the wild elephant or rhinoceros is very rarely seen. Deer, hares, porcupines, chinchillas, otters, &c., are very plentiful; and wild hogs and buffaloes do much damage to the crops. Birds are abundant, and so are fish; the last form by far the greater part of the animal food consumed. Crocodiles are numerous, but are little dreaded; tortoises, and some lizards, are eagerly sought for as articles of diet; insects are not very troublesome. About two-thirds of the land is fully occupied and cultivated; rice is the principal article of culture, but is inferior to that of Patna; wheat, barley, millet, legumes, and oily seeds, are successively the produce next in importance. The cotton raised in the N. is very bad, but that of the S. is finer than that imported from the W. of India; the sugar-cane is largely cultivated, and is of a good quality; indigo and tobacco are also raised, but the latter not in sufficient quantity for home consumption. The husbandry of the district is deplorable; the plough is without a coultter or mould-board, and in some parts wants even the share, all the other farm implements are nearly as bad; and 6s. will buy all that are deemed necessary for the culture of five acres of land. Both the oxen and horses are wretched, except a breed of ponies from Boodan; all cattle are, however, ill fed, and on none but natural pastures. There are very few carts or conveyances of any kind in the district. The farms are generally small; about one farmer only in sixteen may rent from 30 to 100 acres; estates are also generally small; most of the land belongs to Hindoos. There are, however, very few individuals in a state of beggary, and such as are so are readily relieved, the disposition of

the people generally being charitable. Except those of Europeans, and some Mohammedans, no houses have any other than a thatched roof; mud walls are most common; but, in some instances, the huts are wholly constructed of straw and reeds. The furniture of both Mohammedans and Hindoos is nearly alike, and the whole, amongst the labouring classes, not worth more than a rupee. Most of these classes sleep on sackcloth or mats on the ground. They are generally very ill-clothed, but both Hindoos and Mohammedans wear many ornaments; the women of both races colour their eyelids with lamp-black. For food, the people are generally better off than for lodging, furniture, or clothing; and few are distressed by hunger, although their food is seldom very nourishing; the lower classes are obliged to use the ashes of the plain-tain root, &c. for salt, and often want for tobacco, their favourite and almost only stimulus. Slaves are few, and servants, especially female ones, scarce; for early marriages are so universal, that nearly every woman is married by the period of puberty. The poor are subject to a stigma. The imbecile, as might be expected from their poverty, are feeble, sickly, and subject to various diseases; and are also ignorant, mendacious, and occasionally rapacious. Dacoity was formerly a very prevalent crime. Education has proceeded to very little more than rudimental instruction among about 1 in 16 of the male sex. Christianity has made but little progress. (For copious particulars respecting this district, see *F. B. Hamilton's Statistics of Dinajpur*. Calcutta, 1833.)

DINAGEPOOR (*Dinajpur*, the *abode of beggars*), an incl. town of Hindostan; cap. of the prov.; but, of the British judicial and revenue courts; between two tributaries to the Ganges; 65 m. E.S.E. Purneah, and 86 m. N.N.E. Moorshedabad: lat. 25° 37' N., long. 88° 43' E. Pop. 30,000, chiefly Mohammedans. It is, as its name implies, a very poor place; its houses are chiefly thatched huts, there being, according to the latest accounts, but eight brick dwellings out of 5,000, exclusive of the European residences, public offices, &c., which are built in the worst Anglo-Indian style. Its most densely peopled portion has near its centre a square surrounded with shops, &c.; in the English quarter, and other portions, the houses are detached from each other, and intermixed with gardens and pasture lands. What may be considered the port of the town, on the bank of the Punabhaba, is occupied by merchants, warehouses, &c. It is clean and well watched, but not lighted; the roads round it are kept in good repair by convicts, but bridges are wanted. It contains no public building of any importance, excepting the house of the late rajah, built in 1780, a strange mixture of European, Moorish, and Hindoo styles, surrounded by a ditch and ramparts; but now in great measure gone to decay. The vicinity of Dinagepoor has a sandy soil, is ill supplied with water, and chiefly occupied by pastures. (*Hamilton; Buchanan; Dinagepoor; Hamilton's W. F. I. Gaz.*, i. 617.)

DINAN, a town of France, dép. Côtes-du-Nord, cap. arrond., beautifully situated on a height on the left bank of the Rance, 13 m. E. St. Briec. Pop. (1836) 7,356. It is surrounded by walls of extraordinary height and thickness, the works outside of which are now converted into gardens, and laid out as public walks. Streets mostly ill built, narrow, dark, and dirty; though of late years some parts of the town have been much improved. The principal public buildings are, — a castle, built about 1300, now used as a prison, two churches of Gothic architecture, the town-hall, clock-tower, hospital, and concert-hall. Vessels of from 70 to 90 tons come up to Dinan at high water: it communicates with Rennes by the canal of Ille and Rance, the river being navigable only as far as this town. Dinan is the seat of a tribunal of primary jurisdiction, and of a communal college. It has a good design, a public library, a society of agriculturists, &c., with manufactures of sail-cloth, cotton stuffs, flannels, shoes, and hats for the troops and colonies, leather, &c., beet-root sugar-factories; and has some trade in butter, hemp, thread, &c. (*Hugo, art. Côtes-du-Nord; Dict. Géog.*)

DINANT, a town of Belgium, prov. Namur, cap. arrond., on the Meuse, 14 m. S. by E. Namur. Pop. (1836) 5,033. It is built on the declivity of a rocky hill, on the summit of which is its castle. It is divided into the "Town-proper" and the "Island," and has a suburb, a Gothic cathedral, several other churches, 3 hospitals, and a Latin school. Its manufactures are chiefly those of woollens, hats, cutlery, cards, verjuice, mead, gingerbread, paper, and glass; but it has several oil, flour, and hemp mills, with mills for cutting and polishing marble, and numerous salt-refineries, tanneries, and breweries. It is the seat of a court of primary jurisdiction, and the residence of a military commandant. Dinant is very ancient. In the 14th century it was a prosperous commercial town; in 1460 it was sacked and burnt by Duke Philip of Burgundy; and again sacked in 1564 by the Duke of Nevers. (*Vandermaelen, Dict. Géog. de la Prov. Namur*, &c.)

DINAPPOOR, an incl. town, and British military station in Hindostan, prov. Bahar, on the S. side of the Ganges,

14 m. W. Patna; lat. 25° 37' N., long. 85° 5' E. The cantonments are large and handsome, with a fine quay, three extensive squares of barracks for the European troops, uniformly built, of one lofty ground story, well raised, stuccoed, and furnished with arcades; there are also large barracks for the native troops. The garrison consists, according to late returns, of 6,789 men, 1,104 of whom are Europeans. The town is well supplied with European goods; and in its neighbourhood, potatoes are largely cultivated by both Europeans and natives. (*Hamilton's E. I. Gaz.*, i. 517; *Mod. Trav.*, x. 237.)

DINGLE, a marit. town of Ireland, co. Kerry, prov. Munster, on a slope at the bottom of Dingle Harbour, on the N. side of Dingle Bay, 26 m. W. by S. Tralee. Pop. (1821) 4,538; (1831) 4,327; pop. of par. in 1834, 6,799, of whom 249 were of the estab. church, and 6,550 Rom. Cath. Many of the houses are built in the Spanish fashion, it having formerly maintained an intimate communication with Spain. The par. church and Rom. Cath. chapel are modern buildings; a second chapel is attached to a nursery; and a large national school-house has been erected. It has a dispensary, and is a constabulary and coast-guard station; and is much frequented during summer as a bathing place. The harbour is fit only for small vessels, which lie aground on mud at low water. The corporation, under a charter of Jas. I., in 1607, consists of a sovereign, 12 burgesses, and a commonalty. It has jurisdiction over a district of land extending 2 Irish m. in every direction from the par. church; and that of the sovereign, as admiral of the harbour, is determined by the flight of an arrow discharged from the harbours of Dingle, Ventury, Smerwick, and Ferris's Creek. It returned 2 mems. to the Irish H. of C. till the Union, when it was disfranchised. General sessions are held twice a year, and petty sessions on alternate Fridays. The linen manufacture, which formerly flourished here to a considerable extent, is now confined to that of coarse cloth in small quantities: grain and butter are the chief articles of trade. The fishery also, which had been very productive, large numbers of herring, flat and round fish, having been taken, is in a very depressed state, so much so, that the town supplied with curing fish from foreign markets. It has two flour-mills and a brewery. Post-office revenue in 1830, 2471; in 1836, 2831. (*Fishery Rep.; Railway Rep.*, &c.)

DINGWALL, a royal and parl. bor. and sea-port town of Scotland, co. Ross, on the W. extremity of the Cromarty Frith, 19 m. N.N.W. Inverness. Pop. (1801) 1,106; (1831) 1,715. It is built in the Dutch fashion, and is rather neat, consisting of one leading street, with several inferior ones branching from it. The harbour was originally at an inconvenient distance; but in 1818-17, a canal was formed (at an expense of £1,3654) by which vessels of considerable burden are now brought to the immediate vicinity of the burgh. The annual revenue derived from the canal is about 1301., which is not more than sufficient to keep it in repair. The beautiful valley of Strathpeffer, at the head of which is a famous mineral spring, stretches W. 5 m. from Dingwall. The town-hall is a venerable edifice, with a spire and clock; a plain parish church and a goal are the only other buildings worth notice. Dingwall is a place of little or no trade. There are but two small vessels belonging to it, and its exports consist exclusively of wheat and other country produce, and its imports of lime, coals, &c. The only bank in the town was introduced in 1824. The charter of its erection into a royal burgh was granted in 1227, by Alexander II. On the E. of the town may still be seen the remains of the Castle of Dingwall, a fortified place, long the chief residence of the noble family of Ross. Near the church, on an artificial mound, stands an obelisk, erected as a family burial-place by George, first Earl of Cromarty, secretary of state for Scotland, in the reign of Queen Anne. Dingwall unites with Wick, Kirkwall, Dornoch, Kirkwall, and Tain, in sending a member to the H. of C., and had, in 1824-39, 94 registered voters. (*New Stat. Account of Scotland*, art. Dingwall.)

DIOS, NOMBRE DE, a town of Mexico, state Durango, on the road between Durango and Sombrerete, 40 m. S.E. the former city, Pop. 7,000. Its chief source of wealth is an extensive trade in *Vino Mescal*, a spirit obtained from the American aloe.

DIZIER (ST.), a town of France, dép. Haute Marne, cap. cant., on the Marne, at the point where it becomes navigable, 47 m. N.N.W. Chaumont. Pop. 6,366. It was formerly well fortified, and in 1544 sustained a memorable siege by the emperor Charles V.; but its ramparts have been converted into agreeable promenades. It is a handsome town, with broad streets, and houses mostly of stone. The town-hall, of recent construction, is much admired. It has an hospital, the ruins of an ancient castle with cotton fabrics, iron-foundries, &c., and a considerable trade in wood. Many vessels are built here for the navigation of the Marne, the town being environed by a forest, whence the materials are easily procured. A part of the allied army which invaded

France in 1814, was defeated with great loss at St. Disier on the 27th Jan. and the 37th March by Napoleon. It was here also, after the breaking up of the congress of Chatillon, that the Duc de Vicenza (Caulaincourt) announced to Napoleon that he must abandon all hope of treating with the allied sovereigns. (*Hugo, art. Haute Marine.*)

DJEBAÏL or **GIBYLÆ**. (an. *Byblus*, *Βυβλος*), a coast town of Syria, S. by W. Tripoli; lat. 34° 7' N., long. 35° 37' E. Pop. according to Volney, 6,000, but this is probably exaggerated; the inhab., according to the older Maundrell, and more recent Robinson, being few. They are chiefly Maronite Christians. An old castle on the S., built with stones of an enormous size, and the wreck of a very handsome church of great antiquity, are the principal remains; but shafts, columns, and other ruins are scattered about in great profusion. The walls are 14 m. in circ., with square towers at intervals; an artificial harbour formerly existed, but has been long destroyed; and the town is evidently in a state of gradual, if not rapid decay. At a few m. distance on the S. flows the Nahr Ibrahim (an. *Adonis*), a short, but deep and rapid stream, over which is a well-built stone bridge of 1 arch. The surrounding soil is fertile, and peculiarly favourable to the growth of tobacco. The land of the Giblites (*Βυβλιται*) is mentioned in Josh. xlii. 5, and this town was evidently a place of considerable importance in the mercantile and maritime kingdom of Tyre. (*Rick. xxvii. 9.*) Byblos occupies a distinguished place in Syrian mythology, from its being the scene of the death of Adonis or Thammuz, and a principal seat of the religious rites connected therewith. It may be mentioned in reference to this subject, that wild boars are still very common in the surrounding mountains, and that the phenomenon mentioned by Lucian, of the river acquiring a reddish colour at certain seasons of the year, has been observed by Maundrell and other travellers, and is occasioned by the washing down of particles of red earth during heavy rains. Milton has beautifully alluded to this legend:—

“Thammuz came next behind,
Whose annual wound in Lebanon still lurd
The Syrian damsels to lament his fate,
In amorous ditties all a summer's day;
While smooth Adonis, from his native rock,
Ran purple to the sea, suppos'd with blood
Of Thammuz yearly wounded.”

Byblus was a considerable sea-port under the Greek kings of Syria, but the existing remains are mostly of the Roman period. It was a favourite with the emperor Adrian, who appears to have been peculiarly attached to the worship of Adonis (see *BETHLEHEM*), and to whom an inscription near the land-gate still exists in good preservation. At an early period of the crusades, it was captured by the Christians, who built its present walls; but in the furious wars of that fatal age, the port and trade of Djebail shared the ruin of the other cities of the coast. Still, in its decay, it was the cap. of the Kesraoun (the coast between Tripoli and Beirut) and the see of a Maronite bishop. (*Strabo*, xvi. 755.; *Lucian, De Ded Syrid*, 2.; *William of Tyre*, xi. caps. 9 and 14.; *Maundrell*, 44–46.; *Volney*, li. 148.; *Burckhardt's Trav. Syr.*, 179.; *Robinson*, ii. 49–52.)

DJIDDA, or **JIDDA**, a marit. city of Arabia, in El-Hedjaz, being the port of Mecca, and one of the chief entrepôts for foreign commerce in the peninsula. Lat. 21° 32' 45" N. long. 39° 6' E. Resident pop., according to Ali Bey, 5,000, but this number is often very much increased by the influx of strangers. The inhab. are nearly all foreigners, or settlers from other parts of Arabia; the only natives being a few sheriff families attached exclusively to the offices of religion and law. Five mosques, poor and mean, the governor's house, and a small castle, mounting 9 or 10 guns, are the only public buildings, except the khans, which are numerous and handsome. The houses in the town, built of stone and madrepore, are, from the perishable nature of the material, not very lasting; but in the suburbs they are mere huts, constructed of reeds and brushwood, inhabited principally by Bedouins. The streets are unpaved; but Djidda is, notwithstanding, cleaner, and in other respects superior to most Eastern cities of equal size. It is one of the holy places of Mohammedanism, and its sanctity is increased by the neighbourhood of the reputed tomb of Eve, a rude stone structure, about 2 m. to the N. The surrounding country is a bare desert, destitute of running streams; and though well water is easily procurable, it is generally bad. The inhab. collect the rain in cisterns, and the commonest necessities are brought from a distance. Corn, rice, butter, sugar, tobacco, oil, clothing, &c. are imported in very large quantities from Egypt, the Abyssinian coast, and (excepting butter) even from Persia and India. Djidda depends, therefore, for its existence upon trade, which is very extensive, and wholly of the transit kind: From the interior dates, and the celebrated balm of Mecca, are brought for shipment westward; musk, civet, and incense are procured from Aby-

sinia; muslins, cloths, cambrics, teak timber, cocoa-nuts, cocoa-nut oil, pepper, ginger, turmeric, shawls, tissues &c. are brought from India; the Malay Islands send spices and (what is not generally known) young females for sale at the Mecca market. The coffee trade, which, next to that of grain, was formerly the most important, has much declined of late, partly owing to the free admission of American produce to the Mediterranean, but principally to the impolitic exactions of the pacha of Egypt upon this branch of commerce. A trade in slaves is carried on with the Moabimite coast; and, altogether, it is calculated that the port of Djidda employs 250 vessels, great and small. The imported articles are conveyed by ships to Suez, whence they find their way to the Mediterranean ports, or by caravans to Mecca and Medina, from which cities they are again dispersed to Syria, Asia Minor, and Turkey. The caravans to Mecca start daily, those to Medina every 40 or 50 days; but besides these, Djidda carries on no land trade, except occasionally with N. Yemen for corn. The duties upon coffee were formerly 7½ per cent., they are now double that amount; those upon Indian goods are from 10 to 10 per cent. according to quality; the trade in grain is monopolised by the Egyptian government. Twice at least in every year Djidda is inundated with inhabitants; viz. on the arrival of the Indian fleet (about May), when merchants from all quarters pour in to purchase at the first hand; and during the hadj, when pilgrims come from all the African ports in vast numbers. In 1831 above 20,000 pilgrims landed either at Djidda or Yembo, but mostly at the former. There is no manufacture in the town; every thing for use as well as for consumption, is imported, and the occupations of the poorer as of the richer inhab. consist almost exclusively of barter.

Abul-Feda (*Ar. Decs.*, 60.) supposes Djidda and its neighbourhood to be the *Badeo Regium* (*Βαδων βασιλειαν*) of Ptolemy (vi. 7. vii. 6.); but Niebuhr with more reason believes the ground on which the city stands, to have been recovered from the sea within a short period. At some distance from the shore, he describes high sand hills, full of shells and corals; and the general appearance of the coast makes it impossible, in his mind, that the modern town could occupy the same site as its namesake, the city of Mohammed. “Djidda,” he says, “s'avancera de plus en plus vers l'ouest,” and in fact, although a city of this name has been, for ages, the port of Mecca, yet the town now existing is evidently of modern origin. The sultan sheriff of Mecca, as sovereign of the Beled-el-Harem (Holy Land), has possessed Djidda since the first days of Islamism; a pacha, first appointed by the caliphs, and then by the grand signor, as head of the Mohammedan faith, was indeed the nominal governor; and, professedly, the customs were to be divided equally between him and the sultan sheriff. The latter, however, in the declining days of Turkish power, paid little regard to this arrangement, and in the end expelled the Turks entirely from El Hedjaz. Scarcely was this effected when the growing power of the Wahabees became more formidable than that of the Porte. Mecca and Medina were taken, and the sheriff, shut up in Djidda, made a public but doubtful profession of the Wahabee faith. In 1811, Mehemet Ali established his power in El Hedjaz, the reigning sheriff was carried to Cairo, and his successor, appointed by the Egyptian pacha, retained only a shadow of authority, with a monthly stipend in lieu of the port dues. (*Abul-Feda, Ar. Decs.*, 59, 60.; *Niebuhr, Decs. de F. ar.*, 303–309.; *Voy. Ar.*, i. 217–228.; *Lord Valentia*, iii. 301–332.; *Ali Bey*, li. 40–46.; *Burckhardt*, i. 1–100.; *Wellsted*, ii. 268–289.)

DNIESTR (the *Borysthenis* of the ancients), a large river of European Russia. It has its source near the village of Dnieprosk, in the government of Smolensk, and, pursuing a S. course past Sindensk, where it becomes navigable, Mogheleff, Kie, Ekaterinof, and Kherson, unites with the Black Sea, about 60 m. below the latter, after a course of above 1,200 m. Its principal affluents are the Pripet, Beresina, and Desna. It is broad and deep, and may be navigated, with ease and safety, from Smolensk as far as Ekaterinofsk; but from the latter to Alexandrofsk it is interrupted by cataracts, which cannot be passed by any sort of craft, except in spring after the *débâcle*, and in the latter part of autumn. Works were begun in 1833 for obviating these obstructions, an object of vast importance to S. Russia; but we have not learned what has been their success. What is called the bar of the Dniestr lies about 15 m. below Kherson, and between it and the town the water is shallow, and the channel encumbered with shifting sands. There are valuable fisheries below Kherson, and in other parts of the river. (See *Kherson*; see also, *Hagemester's Report on the Black Sea*, p. 69., English trans.)

DNIESTR (the *Tyras* or *Danaster* of the ancients), a large river of S. E. Europe. It has its source in the Carpathian mountains in Galicia, and flowing in a S. E. direction along the E. frontier of Ressaabia, falls into the Black Sea between Ovidiopol and Akerman, after a

course of about 500 m. It has no very considerable affluents, and, being in most parts shallow and rapid, it is of little service to internal navigation, except during spring and autumn.

DODONA, a town of Epirus, famous in antiquity for its being the seat of an oracle of Jupiter, the most ancient in Greece, and second only to that of Delphi in celebrity and importance. It appears to have been instituted by emigrants from Egypt; at least this is the opinion of Herodotus, and seems to carry with it the greatest probability. (Lib. II. § § 52—58.) The temple was enriched by vast numbers of costly statues and other offerings, presented by the states and individuals who had consulted the oracle. Adjoining the temple was a grove sacred to Jupiter; and in it was a divine or prophetic oak, by which the responses of the god were sometimes manifested! The imposture carried on here was, in fact, even more gross and glaring than at Delphi. There the priests framed a response from the ravings of the Pythia; but at Dodona the priestesses went into the sacred forest, and listening to the cooing of the doves, or the rustling of the leaves or branches of the sacred tree, drew thence her auguries! Sometimes she deduced them from the sounds emitted by the clashing of copper basins hung round the temple, and from those emitted by a brazen vessel placed on the top of a column, and struck by the figure of a child put in motion by the wind! The responses, in ordinary cases, were, of course, characterised by the usual ambiguity, so that let the event be what it might, the credit of the oracle should be preserved; but here, as at Delphi and elsewhere, a rich or powerful individual had little difficulty in getting such an answer as he wished for. (See *Ancient Universal History*, x. 67., 8vo. ed.; *Voyage D'Anacharsis*, cap. 86., &c.)

The site of this famous oracle is now matter of dispute among the learned. It is fixed by some at Protopapas, near the lake Labeatis, 12 m. N.N.W. Yanina; but others place it a good deal nearer the coast.

DOHUD (*two frontiers*), an inf. town of Hindostan, on the boundary of Malwah and Gujrat; Holcar's dom.; lat. 22° 55' N., long. 74° 20' E. It is of some size, well built, and well supplied with grain and water; is much frequented by traders, being on the high road between Upper Hindostan and the Gulph of Cambay; and commands the principal pass into Gujrat from the N.E. It has a fort said to have been built by Aurangzeb.

DOL, a town of France, dép. Ille-et-Vilaine, cap. cant., on an eminence among marshes which have been dried, and are very fertile; 13 m. S.E. St. Malo, and 30 m. N. Rennes. Pop. 3,990. It is surrounded by walls and ditches, the remains of its old fortifications; it having formerly been a bulwark of Brittany against the invasions of the Normans. The glaciers of the ramparts has recently been converted into a fine promenade. It is ill built, and has but one tolerable street; but its cathedral is one of the largest and finest in the prov. Dol was a bishopric as early as the 5th century. (*Hugo, Ille-et-Vilaine; Guide du Voyageur*.)

DOLÉ, a town of France, dép. Jura, cap. arrond., finely situated at the foot of a hill planted with vines, on the Doubs, and on the canal between the Rhone and Rhine; 28 m. N. Lons-le-Saulnier. Pop. (ex cant.) 7,843. Streets narrow, crooked, and dirty; and the houses heavy and irregular. It was formerly fortified, but its defences have been long since destroyed. Its chief public buildings are the cathedral, with a large square tower and three lofty naves, supported by enormous columns; the new prison, *Hôtel-Dieu*, general hospital, tower of Vergy, hall of justice, barracks, the old college of the Jesuits, theatre, &c. The bridge over the Doubs, and the port on the canal, are also worthy of notice. Dôle has, also, several Roman remains, including those of an amphitheatre, some aqueducts, and part of the superb Roman road leading from Lyonnet, the banks of the Rhine. It is the seat of tribunals of primary jurisdiction, and of commerce; has a *dépot de mendicité*, an orphan asylum, a communal college, a gratuitous school of design, painting, &c., schools of geometry and music, a public library with 6,000 vols., and a society of agriculture; it has also, manufactures of straw-hats, leather, chemical products, and agricultural implements; and a considerable trade in agricultural produce. Dôle is very ancient: in the 12th century it became the occasional residence of the emperor Frederic Barbarossa, and in 1438 had a part, and university of its own. In 1479 it was taken by the troops of Louis XI., when most of its buildings were destroyed or damaged, and many of the inhab. put to the sword. It subsequently came into the possession of the Spaniards, and being rebuilt by Charles V., many of its houses preserve the Spanish style of architecture. Ultimately it was united to France, in the reign of Louis XIV. (*Hugo, art. Jura; Guide du Voyageur*, 1837.)

* This is Hugo's statement: the "Guide du Voyageur" says that it is *le lieu de naissance de Louis XVI.*

DOLGELLY or **DOLGELLEU**, a town of North Wales, co. Merioneth, on the Mynach, at the foot of Cader-Idris, 46 m. W. Shrewsbury. The par. of Dolgelly comprises 870 acres, and had, in 1881, a pop. of 4,067, of which the town had about 2,300. It is very irregularly built, but has some good houses; a bridge over the river, built in 1833, but repaired some years ago; a co. hall, erected in 1825, and a church with a handsome tower and large nave. The co. gaol, situated outside the town, was built in 1811, at an expense of 5,000. This town has long been noted for the manufacture of a coarse woollen fabric, called *webs*, principally shipped for America. Webs were formerly made in different parts of Montgomeryshire, but the manufacture is now entirely confined to this town and neighbourhood. Weavers earn about 9s. a week. The name of the town is derived from its situation in a dale, abundant in hazels.

DOLLAR, a village of Scotland, co. Clackmannan, 12 m. E. by N. Stirling. Pop. fluctuating, may be estimated at 600. It acquires its only importance from the erection and endowment of an academy by a Mr. M'Nab, a native of the place. The academy, a beautiful Grecian building, was erected in 1819. The branches at present taught in it, in addition to English, classics, arithmetic, and geography, are drawing, mathematics, natural philosophy, French, Italian, and German, Latin, Greek, and the Oriental languages. An infant and a female school are attached to the institution; and a library. The session commences on Oct. 1., and terminates on the third Wednesday of August. The academy has not been so successful as might reasonably have been expected. This is supposed to result from the nature of its management, the minister and kirk-session of the parish being its only patrons and governors,—an arrangement which vests the entire control over it in the minister, the elders, or other members of the kirk-session, instead of appointing by him, and not subjecting to any public responsibility.

DOMINGO (ST.). See **HAVTI**.

DOMINICA, one of the Windward Islands in the W. Indies, belonging to Great Britain, situated between the islands of Guadalupe and Martinique, 28 m. from either; in lat. 15° 12' to 15° 30' N., and long. 61° 17' to 61° 32' W. Length, N. to S., about 29 m.; greatest breadth 16 m.: area 186,436 acres. Pop. 18,830. At the last registration there were 14,388 slaves; on the emancipation of which the planters received the sum of 275,922 13s., being at the rate of 19l. 3s. 7d. for each slave. It is the most elevated of the lesser Antilles, and contains many high and rugged hills, interspersed with fertile and well-watered valleys. The soil is, however, generally very light, and more fitted for the growth of coffee than of sugar. Malze, cotton, cocoa, and tobacco are amongst the other staples. The higher parts produce abundance of rose and other woods used in cabinet-making. Hogs, poultry, and game are plentiful: the fisheries on the coast are very productive, and best supposed to have been introduced from Europe, abound in a wild state. The island bears unequivocal marks of volcanic action, and sulphur is found in great plenty. The principal imports into the United Kingdom, in 1835, 1837, and 1838, have been as follows:—

	1835.	1837.	1838.
Sugar, unrefined	25,011 cwt.	33,794 cwt.	48,290 cwt.
Item	7,308 galls.	9,543 galls.	17,010 galls.
Molasses	4,700 cwt.	3,961 cwt.	7,893 cwt.
Coffee	112,557 lbs.	248,175 lbs.	385,023 lbs.
Cocoa	685	1,916	1,054
Arrowroot	3,162 —	5,217 —	2,267 —

The total value of the exports from the colony in 1836 was 78,282; of imports in the same year, 68,077. 169 vessels, burden 5,961 tons, entered, and 170, burden 6,548 tons, left the ports of Dominica in 1836. The island is deficient in good harbours; that of Roseau on the W. coast, and Prince Rupert's Bay on the N. coast, are the only tolerable ones. Roseau and St. Joseph are the principal towns. Dominica was discovered by Columbus in 1493, ceded to England by France in 1763, retaken by the French in 1778, but restored at the peace of 1783. (*Parl. Reports*, 1836—1838; *Dict. Géogr.*)

DOMREMY LA PUCELLE, a small village of France, dép. Vosges, 7 m. N. Neuchâteau; celebrated as the birth-place and original residence of the famous Joan of Arc, born here in 1412. The house once inhabited by the heroine is still extant. It has been purchased by government, and is preserved with a kind of religious care and veneration. Opposite to it, in 1820, a handsome monument, surmounted by a colossal bust of Joan, and bearing an appropriate inscription, was erected to her memory by the dép.; and at the same time, a school of mutual instruction for young girls was founded in the village. This village also gave birth to a female of a very different character from Joan, Madame Dubarry, the mistress of Louis XV. (*Hugo, Vosges*.)

DON (the anc. *Tamais*), a large and celebrated river of

Russia in Europe. It rises in the distr. of Ephraïm, in the government of Tula; and passing by the town of Lebedian, flows S. to Voronege and Kaliva; it then turns to the E., till, at Katchalinsk, it approaches within about 36 m. of the Volga; here it takes a W. S.W. direction, which it pursues till, by various mouths, into the N.E. corner of the Sea of Azoff, a little below the town of the same name. Altogether, its course, which is very circuitous, may be about 1,000 m. Principal affluents, Donets, Sosna, Vorona, Medveditsa, &c. Its turbid and unwholesome waters are well stocked with fish. Its mouths are so encumbered with sand banks that they only admit of being entered by flat-bottomed vessels drawing from 6 to 6 ft. water; and in summer it is in most parts so very shallow that it is of little consequence as a channel of internal navigation, except during spring and autumn, when the products of the various provinces it traverses are brought down to Rostof, Nakhitchevan, and Taganrog. (*Hogemister on the Commerce of the Black Sea*, p. 30., English trans.) Peter the Great projected a canal between the Don and the Volga, where they approach nearest to each other; but, owing to the difficulty of the ground, it has not yet been accomplished. The former is, however, connected near its source by a canal with the Oka, an affluent of the Volga, and, consequently, by a very circuitous course with the latter. Europe is now generally and properly extended, on the S., to the ridge of the Caucasus; but in antiquity the Don (*Tanaïs*) was held, during the latter part of its course, to be the line of demarcation between Europe and Asia. Lucan notices this circumstance, as follows:—

"—quæ vertice lapsum
Rhipeo Tanais diverſe nominis mundi
Impoſuit ripis, Aſiæque et terminis idem
Europæ, mediæ diſcrimina confine terre,
Nunc hunc, nunc illum, quæ ſecutur ampliat orbem."
lib. iii. lin. 275.

DONAGHADEE, a sea-port town of Ireland, co. Down, prov. Ulster, on the nearest point of the coast to Portpatrick, in Scotland, from which it bears S.W., distant 22 m. Pop. in 1831, 2,596; pop. of par. in 1834, 8,055; of whom 554 were of the estab. church, 7,217 Prot. diss., and 284 Rom. Cath. The town is built like a crescent, on one side of the harbour, which has been much improved by a new pier carried out so as to have a depth of 16 ft. at low water, and having a wharfbrook at its extremity. The par. church is an ancient cruciform structure; and there are two meeting-houses for Presbyterians, and one for Methodists, an infirmary, and a dispensary. A manor court, with jurisdiction to the amount of 20*l.*, is held in the court-house, as are a court leet annually, and petty sessions every Wednesday. The constabulary and coast-guard have stations here. The embroidering of muslin is carried on to a considerable extent, and there are numerous flax-mills in the neighbourhood. The post-office revenue, in 1830, was 317*l.*; in 1835, 266*l.* The port is a creek to Belfast, and a steam-packet station for steamers to Portpatrick, the voyage being usually made in less than three hours. In 1836 the value of the exports, chiefly live cattle and potatoes, was 62,484*l.*; of the imports, chiefly coal, culm, and herrings, 7,570*l.*

DONCASTER, a handsome corporate and market town of England, W. riding co. York, on the Don, which, including a branch called the Cheswold, is crossed by two fine stone bridges, 162 m. N.W. W. London, and 35 m. S. by W. York. Pop. in 1821, 8,544; 1831, 10,801. The town, which is approached from the S. by a magnificent range of elm trees, is extremely well built, and the High Street, extending about a mile on the Great N. Road, has a remarkably fine appearance. It is a place of much importance both in its civil and ecclesiastical character, through the whole period of our national history. At the point where the town now stands, one of the great Roman highways crossed the river. This road connected two great stations, Lincoln and York; and was an improved British track-way, used for a communication between Lincolnshire and the interior of the Brigantian territory. It is the station *Danum* in the *Itinerary* of Antoninus. In the middle ages, it had a convent of Carmelites and White Friars; and received the grant of a charter from Richard I. The property belonging to the corporation of Doncaster amounts to nearly 9,000*l.* a year. During the old corporation it was greater. But that body having incurred a debt of above 100,000*l.*, the new municipal body sold the Hossington estate to James Brown, Esq. of Leeds, for the sum of 92,500*l.* to pay off the debt; the purchase was completed in 1839. The income is principally expended on objects of public utility, as the paving, lighting, cleaning, and watching of the town, and supplying it with water; the support of educational and charitable institutions; with the erection of buildings for the purposes of public utility and amusement, and the attraction of visitors. These give to Doncaster advantages seldom presented in provincial towns, and make it a desirable place of residence for persons of limited incomes. The par. church, dedicated to St.

George, is a large imposing structure, in part very ancient, with a beautiful square tower 140 ft. high. There is another church, built within these few years, by bequest from a private gentleman, John Jarratt, Esq., a native of the town, at an expense of 13,000*l.* The Wesleyans, Primitive Methodists, Unitarians, Independents, Quakers, and Catholics have also places of worship. Exclusive of the churches and chapels, the principal public buildings are,—the mansion-house, a handsome structure, erected in 1744, but improved in 1800; the town-hall, where the public business of the town is transacted, and public meetings held; the theatre, gaol, public library, and news-room, lyceum, &c., with the splendid betting-room, 90 ft. in length, which, except during the races, is used for concerts, lectures, exhibitions, &c. The old town-croft having been taken down, an elegant new cross has been erected in a commanding situation at the south entrance, which is approached by large gravel paths. Among the educational institutions are a grammar-school for the sons of freemen, supported by the corporation; a national school, a British school, and Sunday-schools, supported by subscription. Of the charitable institutions the principal are, St. Thomas's Hospital, founded in 1686, by Thos. Ellis, for decayed housekeepers, with a revenue in lands, &c. of about 350*l.* a year; Kay's, and Jarratt's charities, a dispensary, and a sundry minor ones. The Yorkshire Institution for deaf and dumb, a flourishing charity, is situated adjoining the race-ground; and the workhouse for the Doncaster union is near the town. There are two weekly newspapers, advocating whig and tory principles; and it is a polling place at elections for the W. riding. Under the Municipal Act, the town is divided into 3 wards, and has 2 aldermen and 6 councillors for each.

Doncaster is not a manufacturing town, but it has a large flax-mill and some small iron-foundries; a large water corn-mill on the Don bridge, and a steam corn-mill on the opposite bank. It is in the centre of a rich, populous, and highly cultivated district, possesses elegant shops, and has an extensive retail trade. Its corn-markets, held once a week, its wool-markets from June to August, and its four fairs, are extremely well attended, especially the corn markets. The Don is navigable as far as Sheffield by vessels of 50 tons burden. Doncaster used to derive considerable advantage from its situation on the Great N. Road, and the number of travellers, by coaching and otherwise, passing through it. But since the opening of the railway from London to Manchester and Preston, this source of emolument has been greatly diminished. The plan, however, of opening a railway from Doncaster to the North Midland, will give an additional impetus to the town, and more than compensate for the loss of the Great N. Road.

Doncaster is principally indebted for its celebrity to its matchless races, and the deservedly high station which they hold in the sporting world. The races were established in 1703, and since that time, beginning have become almost unrivalled: they are held in September, and have been zealously patronised by the corporation, the surrounding nobility and gentry, and the first names in turf annals. In 1776, the famous St. Leger stakes were established, by Colonel St. Leger, who resided at Port Hill, near the town: hence their name. The first race was won by the Marquess of Rockingham; and the list of winners includes the finest horses that have been bred in England. The race-course, about 1 m. S.E. from the town, adjoining the Great N. Road, is, in every respect, one of the finest in the kingdom. The course, nearly 2 m., is railed round: it is ornamented with a magnificent grand stand, for the accommodation of the principal company; the noblemen's stand, the stewards' or judge's stand, commodious booths, minor stands, rubbing houses, &c. The interest excited by these races is quite extraordinary: they attract visitors from all parts of Great Britain and Ireland, and even from foreign countries; and nowhere, perhaps, is there to be seen such a display of magnificent equipages, beauty, and fashion. Safe and convenient accommodations are provided for all classes; the management is of the best order; and the scene truly splendid. — (*Hunter's Decemery; Dibdin's Tour; Allen's Yorkshire; Baines's Direct.; Municipal Reports; and Private Information.*)

DONEGAL, a co. of Ireland, prov. Ulster, of which it forms the N.W. portion; having N. and W. the Atlantic, E. the counties of Tyrone and Londonderry, and S. Fermanagh and Donegal Bay. Area, 1,165,107 imp. acres, of which 644,371 are mountainous and bog. It is deeply indented by bays and arms of the sea, and its surface is, in most parts rugged, mountainous, and dreary. It has, however, some extensive tracts of good level land, which, under good management, would be exceedingly productive. Climate very wet, and unfavourable for the ripening of grain. Property in very large estates, but some of them are let on interminable leases: farms of various sizes, in the low grounds from 3 to 30 acres; in the mountainous districts from 30 to 800 do. Partnerships leases common, but on the decline

Agriculture in the worst possible state. Potatoes, oats, and flax the principal crops; the first being the main dependence of the farmer. More work is done with the *boy* or spade than with the plough. Average rent of land 6s. an acre, being the lowest of any in Ireland. Bulk of the people very badly off: English little spoken in some districts. The linen manufacture was widely diffused, but it is on the decline. Fishing carried on to some extent in some of the bays along the coast. The barony of Innishowen, famous for its smuggled whisky, occupies the N.E. portion of this co. between Lough Foyle and Lough Swilly. Donegal has 5 baronies, and 42 parishes; and returned 2 mem. to the H. of C., both for the co. Registered electors in 1838-39, 1,540. In 1831, this co. had 50,171 inhab. houses, 52,739 families, and 289,149 individuals, of whom 141,945 were males, and 147,304 females.

DONERAILE, an inland town of Ireland, co. Cork, prov. Munster, on the Awbeg, an affluent of the Blackwater, 6½ m. N.N.E. Malone, and 23 m. N. by W. Cork. Pop. in 1831, 2,652; pop. of par. in 1884, 8,308, of whom 418 were of the estab. church and 7,889 Rom. Cath. It consists of a long street, in which are the par. church, a spacious Rom. Cath. chapel, a nunnery, market-house, and dispensary. Kilcolman Castle, in the vicinity, was some time the residence of Spencer, the poet. The town, though not incorporated, sent 2 mems. to the Irish H. of C., but was disfranchised at the Union. Markets on Saturdays, and fairs on Aug. 12. and Nov. 12. It is a consular station. Post-office revenue in 1830, 2617, in 1836, 3765.

DONGOLA, a prov. of Upper Nubia, consisting of that portion of the valley of the Nile which lies between 18° and 19° 30' N. lat., bounded on the N. by Mahass, and on the S. by the country of the Sheygya negroes; but, like all the fertile districts rescued from the surrounding deserts by the inundations of the Nile, Dongola is extremely narrow, only in one instance exceeding 3 m. in breadth.

The Nile, which enters this prov. at about 18° 15', near Kortí, flows at first in a S. direction, but, immediately taking a circular bend to the W. and N., traverses the rest of Dongola parallel to its former course, and with but trifling deviations continues to follow the same line down to the Egyptian Delta. The widest portion is that nearest its first entrance into Dongola; and at "high Nile" the Reí, or low lands of the prov., are subject to inundations similar to those of Lower Egypt. The river makes its exit into the Nubian prov. of Mahass, at the island of Tumbos, whose rocky and rugged surface forms the third cataract, in lat. 19° 30'. (*Waddington's Visit to some parts of Ethiopia*, p. 40.; *Burckhardt's Nubia*, p. 66.; *Map of Nubia in Arrowsmith's Atlas*.) Navigation is exceedingly difficult in this part of the Nile, for, besides a strong current which the upward voyager has to contend against, the bed is shallow and bristles with rocks. (*Narrative of Ismael Pachá's Expedition to Dongola and Senaar, by an American in the service of the Pachá, passim*.)

The mountains of Dongola are a continuation of the same chains which, with slight interruptions, accompany both sides of the Nile during its whole course; perhaps the most extensive of these intervals occurs here, at the immense and fertile Dongolese plain, which forms the exception to the otherwise narrow breadth of the prov. A large, solitary hill, about 4 m. E. of the river, called Mount Arambo (many-coloured, or chameleon), has from time immemorial marked the boundary between Mahass and Dongola. The great plain then intervenes, and the mountains re-commence near New Dongola, and stretch beside the river without further interruption to the S. frontier; those on the E. bank being by far the most considerable. Here the mountains are 2 hours' journey in breadth, reach close to the river, and form a natural boundary to Sheygya. Granite and sandstone are the chief components of these hills. (*Waddington and Hanbury*, p. 61.; *Burckhardt's Journey in Nubia*, p. 68.)

The valley of the Nile lies for the most part in this district, on the W. bank; for the sands of the desert, encroaching close upon the water's opposite edge, render the E. side barren and unproductive, while the more favoured district has generally a harder surface. S. of the town of Haselek commences the great plain of Dongola, called Wady Jarjar, which can hardly be exceeded in richness and fertility. At the period of the inundation it presents a watery surface of from 12 to 15 m. in breadth (*Burckhardt*, p. 66.); while at low Nile, the river, hursting from its banks through small channels, seems as if it had divided itself into natural canals to irrigate as much ground as possible, and save man the trouble of cultivation. (*Waddington*, p. 43.) This plain is covered with acacia trees as far as the eye can reach. Further S. the mountains contract the valley, which to Wady Hennohah is fertile and separated into well-cultivated patches by rows of acacia. Ruins of towns and towns of Nuelem salins are frequently met with in this

portion of the valley, which is much infested with herds of the Nubian wolf (*Canis Anthus*, Rüppell). Wady Jebriah, situated towards the S. limit of Dongola, is overgrown with trees, amongst which cottages are thickly and irregularly strewn for some distance along the banks of the stream. Near Ambukol, about 8 m. W. of it, is a waste called Haagbarak. The superficial stratum here is a coarse sandstone, curious and interesting from its containing many siliceous fossil trees. "I observed," says Mr. Holroyd (*Journal of the Royal Geog. Soc.* ix. 164.), "five or six, the largest of which, situated twenty minutes' walk from the river, is 51 ft. in length, and 20 in. in diameter at its largest extremity. It is partially buried in the sand. The peasantry splinter off fragments, and use them for gun-flints and to strike a light."

None of the islands with which the river is studded in its course through Dongola is so celebrated as Argo, situated above the island of Tumbos, and a large granite rock called Hadjar-el-Dahab (the golden stone). Argo is upwards of 80 m. long, and is one of the most beautiful islands that spring up from the bed of the Nile. The scenery is highly picturesque, principally composed of small plains enclosed by rows of acacia trees. Several remains of antiquity are strewn over the island; the most remarkable of which are two colossal statues cut in grey granite, the headless form of a female sculptured out of black granite, and the figure of four hippopotami standing side by side. The colossi are broken into fragments, lying close together, and "reely look as white as clear, and as free from the injuries of time, as if they were of cow fresh from the hand of the sculptor" (*Waddington*, p. 46.) A peculiar breed of musquitoes, not so large nor so noisy as others, annoy the inhab. of Argo. Several other islands occur at short intervals, among which may be enumerated Sodgan, Tange, and Gurk, as the most important and fertile. At the island of Gartooni near Ambukol, the Dongolese country ceases.

The towns and villages are thickly scattered along the margins of the Nile, most frequently on the E. bank. The first of any consequence is the town of Hannek, opposite the island of Tumbos, where the cotton plant is said to be productively cultivated. But by far the most important is Marákán, or New Dongola (situated, according to Linant, in 19° 7' 30" N. lat., and 29° 51' 35" E. long.; but placed by Rüppell in lat. 19° 10' 15" N., and long. 30° 28' 15" E.), the present pop. of which has been estimated at 6,000, including 100 Copts. The bazaar is daily increasing, and is supplied from Cairo with shoes, printed cottons, calicoes, sugar, rice, cloth, hardware, &c.; but, on account of a heavy duty levied upon all articles of consumption, they are four times the price that they are in Cairo. Dongola boasts of a coffee-house and a manufactory for indigo; the government is also building baths. The thermometer on Christmas-day, 1836, stood in the shade, at 2 P.M., at 80°, and at 8 P.M. at 80°. (*Journal Geog. Soc.* ix. 164.) Property is valued according to the number of water-wheels an individual possesses, and he is taxed accordingly. (*Burckhardt's Nubia*, p. 66.) The chief places from New to Old Dongola, are the dilapidated town of Handek, Basleyn, and Rodool: between which numerous villages intervene, many of them in ruins. Tonga, Old Dongola, the cap. of what was once a powerful Christian kingdom, is now a miserable ruin, situated on a rock which slopes down to the water's edge; it is covered with sand, a large mass of which has evidently buried the centre of the town, and divided the remains into two sections; the S. part only is inhabited by about 300 persons. The sand is of a bright yellow colour, and has accumulated in such quantities that its surface is level with the roofs of many of the houses, the only entrance to which is through the collings of the roofs. (*Geog. Journal*, ix. 164.) There is a mosque, on rather an elevated site, which commands a good view of the surrounding country. This consists principally of drifted sand, with at rare intervals a few feet of cultivable soil. Ambukol, the last Dongolese town, is one of little importance.

Dongola is now an appendage to the Turkish pachalic of Egypt, together with Lower Nubia, which territories have been thus appropriated by the victorious arms of Mehmet Ali Pachá. It was formerly one of the numerous kingdoms divided between the Sheygya Arabs, amongst whom at their expulsion from Egypt, the Mamelukes sought refuge. The fugitives, however, had scarcely been a month at Argo, when, upon some slight pretext, they murdered their benefactor, the Sheygya king, and spread themselves over the country, establishing a government of their own at New Dongola. The pachá of Egypt, upon pretence of punishing this breach of justice and hospitality, sent an expedition into the country, and, meeting with little resistance, took possession of it, which he has quietly retained ever since 1820. (*Geog. Journal*, ix. 164.) The people possess the same characteristics as the rest of their countrymen (see NUBIA), except that they are un-

usually "dirty, idle, and ferocious" (*Narrative of Ismael Pacha's Expedition*, p. 189.); but they are also, in common with their neighbours, extremely hospitable. Mr. Waddington describes the women as ugly in person, and unfeminine in conversation and manners: they wear scarcely any clothing.

The *Dongolze horse* must not be passed over here without particular notice; though a natural history of this region must be sought for in the art. NUMA. This animal, so celebrated all over the East, possesses the beauty of the finest Arabian breeds, with greater size and more bone. The mares are seldom ridden, and the stallions fetch a high price; from five to ten slaves being the value usually given for them. Most of them are fed for ten months in the year on little else than straw, and in spring upon green crops of barley. (*Burckhardt's Nubia*, p. 67.)

DONOBEW, an anl. town of the Birme empire, Pegu, on the E. arm of the Irrawadi, 50 m. N.W. Rangoon; lat. $17^{\circ} 8' N.$, long. $95^{\circ} 55' E.$ In 1825, its stockade extended for nearly a mile along the bank of the river: in 1827, the British embassy found this place considerably enlarged and strengthened. It is noted for the action, in the first named year, in which Bundoola, the Birme leader, was killed by a stray bomb. (*Hamilton's E. I. Gaz.*)

DOONGURPOOR, an anl. town of Hindostan, prov. Gujrat, cap. of a small Rajpoot principal, under British protection, 8 m. N.E. Ahmedabad; lat. $23^{\circ} 54' N.$, long. $73^{\circ} 50' E.$ Little is recorded respecting this town or its territory; the mounds enclosing the Doongurpoor lake are said to be built of solid blocks of marble. The rajahs are acknowledged to be the senior branch of the reigning sovereigns of Odeypoor; the majority of their subjects are Bheels. Bands of Arabs and Sindies, previously in the service of the rajah, harassed and laid waste this district, till a stop was put to their ravages by the British to whom a small tribute is now paid. The country is fertile, recovering from the effects of a desolation. In 1824 the gross revenues amounted to 24,35*Rs.* (*Hamilton's E. I. Gaz.*)

DOOSHAK, a town of Persia, prov. Seistan, of which it is the cap. near the Helmand, and about 50 m. E. from Zurrak. lat. $31^{\circ} 8' N.$, long. $63^{\circ} 10' E.$ The modern city is small and compact, but the ruins cover a vast extent of ground. It is populous, has a good bazaar, and the inhab., who dress in the Persian manner, have a more civilised appearance than the other natives of Seistan. The co. in the vicinity is open, well-cultivated, and produces wheat and barley in sufficient quantities to be exported to Herat; the pasturage is also good and abundant. Its ruins show that it was formerly of much greater extent than at present; and is supposed by Mr. Kinneir, to whom we are indebted for these particulars, to be identical with the Zarangas of Ptolemy. (*Memoir of Persian Empire*, 191.)

DORCHESTER, a parl. bor. and town of England, cap. co. Dorset, div. Dorchester, hund. Uggeshcombe, on a gentle elevation adjoining the Frome, 15 m. S.W. by W. London. Pop. of old bor. in 1831, 2,892; but the existing parl. bor., the limits of which were enlarged by the Boundary Act, so as to include the suburb of Fordington and some additional tenements, had, in 1831, a pop. of 4,940. — (*Boundary Report*.) The town consists chiefly of 3 wide streets, diverging from a central area, in the direction of the lines of road to London, Exeter, and Weymouth. It is well built, partially paved, and lighted with gas; and is very clean. "Its appearance is highly favourable to its respectability; and there is almost a total want of the poorer sort of houses, the lower classes of inhabitants being confined chiefly to Fordington." (*Ibid.*) It is more than two thirds surrounded by a fine avenue, commanding extensive and diversified views. Fordington Field, an uncultivated tract of fertile land, 7 m. in circ., adjoins the town on the S.: it is partly arable, partly pasture, and held on lives from the duchy of Cornwall. There are 3 churches, — 2 modern, on ancient sites, and 1 old, with many curious monuments and a lofty pinnacled tower; 4 dissenting chapels; a free grammar school, founded in 1579, with 2 exhibitions to St. John's Coll., Cambridge, and one to either university; another charity school, for 5 boys; 3 sets of almshouses; a small theatre; a town-hall built in 1791, with a market place under it; a shire hall, in which the county assizes and quarter sessions are held, and a county gaol and house of correction, built on Howard's plan, at an expense of above 16,000*l.*, and occupying the site of the ancient castle. There are large barracks in the vicinity. Market, Sat. and Wed. Fairs, Candlemas day, Trinity Monday, St. John's day, St. James's day. These are large sheep and lamb fairs, large flocks of a valuable breed, named from the place, being kept on the extensive sheep walks of the vicinity. Formerly the town was a considerable seat of the woollen manufacture; but at present its chief dependence is on commercial business, and travellers passing through it. It has breweries noted for the superiority of their ale; and there are annual races in Sep-

tember. Dorchester has returned 2 mems. to the H. of C. from the 21st Edw. I. Previously to the Reform Act, the franchise was confined to inhabitants of the bor. paying to church and poor in respect of their personal estates, and to such persons as paid to church and poor in respect of their real estates within the bor. Registered electors in 1837-38, 397. Under the Municipal Act it is governed by 4 aldermen and 13 councillors; its municipal limits coincide with the parl. ones. It is the place where the 3 co. mems. are nominated and returned.

Dorchester was one of the principal stations of the Romans in England. It was called by them *Durnovaria* and *Dunium*, and has still to boast of many interesting relics of its Roman masters. They had surrounded it with a wall and a fosse; part of the former having been standing so late as 1802, and "great part" of it was standing in 1778, when visited by Stukely. Maiden Castle, about 1 mile S.W. of the town, is also supposed to have been constructed by the Romans as a summer camp, *castra æstiva*. It is an irregular ellipse, surrounded by double ditches and ramparts; the former of great depth, and the latter high and steep. The inner area comprises about 44 acres. Poundbury Castle, nearer the town, on its N.W. side, is also supposed to be a Roman work; but, though of the same character, it is of very inferior dimensions to Maiden Castle. But the most interesting Roman remain near Dorchester is the amphitheatre, about 4 m. S.W. from the town, the most perfect structure of its kind in England. The arena, or inner floor of the amphitheatre, is level with the surrounding plain; while the sloping sides, on which were seats for the spectators, and which are formed of masses of chalk, rise 30 ft. above it. Its dimensions are very large; the length of the longest external diameter being 343½ ft., and that of the shortest external diameter 339½ do.; its longest internal diameter is 218, and its shortest 163 ft. When complete, it is supposed to have been capable of accommodating about 13,000 spectators. In modern times, it has been occasionally used as a place of punishment; and on one occasion, on a woman being burnt in the arena, 10,000 persons are reported to have been congregated within the amphitheatre, to witness the horrible spectacle. It is to be regretted that this classical remain has not been preserved with due care; and that its arena has been repeatedly profaned by the plough. The assizes held at Dorchester in September, 1685, are famous, or rather infamous, for the judicial murders of Judge Jeffries. (*See Beauties of England and Wales — Dorsetshire; Haichin's History of Dorsetshire, &c.; Stukely's Itinerarium Curiosum*, p. 163, &c.)

DORDOGNE, one of the largest d'eps. of France, comprising the ancient prov. of Perigord and part of Guienne, between lat. $44^{\circ} 35'$ and $45^{\circ} 42' N.$, and long. 0° and $10^{\circ} 27' E.$, having N. Charente and Haute Vienne, E. Corrèze and Lot, S. Lot-et-Garonne, and W. Gironde, Charente, and Charente-Inferieure. Greatest length and breadth, about 70 m. each. Area 915,278 hectares. Pop. (1836) 497,502. Several hill-ranges intersect Dordogne, those in the N. belonging to the Limousin, and extending to the S. to the Auvergne mountain chains. The principal summits are in the S.E., but none is more than about 650 ft. high. Chief rivers — the Dordogne, Vézère, Isle, Dronne, &c., all of which have a S.W. course. The Dordogne, resulting from the union of the rivulets Dor and Dogne, rises in the *Mont d'Or*, Puy-de-Dôme, flows at first S.W. and afterwards due W. through Corrèze, Lot, Dordogne, and Gironde, and ultimately joins the Garonne, about 13 m. below Bordeaux, after a course of nearly 220 m., 67 of which are navigable. Climate rather damp, but upon the whole healthy; the winter and spring are rainy seasons; the summer is very dry; violent storms frequently occur. According to the *Official Tables*, there are but 46,400 hectares of rich land, principally in the valleys of the Dordogne and the other larger streams; the smaller valleys are for the most part narrow and unproductive, and a large portion of the d'ep. consists of arid heaths and wastes, over which the traveller may journey for leagues without seeing a single hamlet. Sufficient corn is, however, grown for home consumption; principally rye, maize, and millet. The chestnut crops are important, and a good deal of walnut oil is made. The culture of the vine is pursued to a considerable extent, the average annual produce of wine being about 650,000 hectolitres. The white wine of Bergerac is greatly esteemed, though it is mostly on the left bank of the Dordogne that the best white wines of the d'ep. are grown; the right bank is more famous for its red wines. There are few meadows; but in 1830 the d'ep. contained 118,000 black cattle, 584,000 sheep, and 13,000 goats. Game is very plentiful. Iron, copper, lead, cadmium, manganese, coal, and lignite, are mined; and marble, alabaster, granite, lithographic stone, &c., quarried. Working in metals, especially in iron and steel, and the manufacture of paper, are the chief branches of manufacturing industry. Coarse woollens, serges, leather, kid gloves, earthenware, good beer, liqueurs, brandy,

and blue vitriol, are, however, also made in the *dép.* The *pâtés* of Forgueux, and its truffled turkeys and other poultry, are held in the highest estimation both in France and other countries, and support a considerable trade. Dordogne is divided into seven arrond., and sends 7 mem. to the Ch. of Dep. Number of electors, 2,610. Chief towns, Périgueux the cap., Bergerac, and Sarlat. Total public rev. (1831) 7,960,468 fr. Périgord was from the 9th to the 15th century under the jurisdiction of its own counts: Henry IV., a part of whose patrimony it was, united it to the French crown. (*Hugo; France Pittoresque; Official Tables, &c.*)

DORKING, a market-town, and par. of England, co. Surrey, hund. Wotton, near the Mole, and on the high road from London to Brighton, 21 m. S.S.W. the former. Area of par., 10,150 acres. Pop. of do., 4,711, of which the town may have near 3,000. The latter is finely situated on the side of a sandstone hill, many of the houses having cellars excavated in the rock; it has wide streets, and is a well-built, well-paved, neat country town. The country round is remarkably beautiful; it is well wooded, and presents a succession of fine bold hills and rich valleys, with a great number of fine lakes. The church is a large ancient structure, and there is a good town-hall and some almshouses in the vicinity. Dorking has the finest breed of fowls in England; they have six claws, and the capons fatten to an immense size. The custom of *Borough English*, by which the youngest son succeeds to copyhold property, prevails in this manor. Market-day, Thursday.

DORNOCHE, a market town, and the on'y royal burgh in Sutherland, Scotland, on a low sandy beach, N.E. coast of the Dornoch firth, 33 m. N. Inverness. The sea approaches to about 180 yards of the town, yet does not confer on it the advantages of a sea-port, there being no harbour. Pop. (1834) about 500, but supposed to have once been greater: inhab. houses, 109. It is a mean-looking town, with many marks of poverty and decay. It has no source of municipal revenue, except the customs levied at six annual fairs; but as these are on the decline, the income of the town is suffering accordingly. It was made a royal burgh by Charles I. in 1628. But Dornoch is chiefly remarkable for its cathedral, and for having once been the seat of a bishopric. The cathedral is supposed to have been built by Richard Murray, bishop of the see, who died in 1245, and who was afterwards canonised. (*Keith's Scottish Bishops*, 1824, p. 209.) The remains of the buildings are extensive and insignificant. The present parish church consists of three aisles of the old cathedral; and underneath it is the burying-place of the noble family of Sutherland. A portion of the bishop's palace serves as the county court-room and gaol. A monastery of Red Friars was founded here by Sir Patrick Murray, in 1271, of which the ruins have entirely disappeared. (16, 307.) Dornoch unites with Wick, Cromarty, Dingwall, Tain, and Kirkwall, in sending a member to the H. of C. and had, in 1838-39, 2,361 registered voters. (*New Statist. Acc. of Scotland, § Dornoch.*)

DORPAT, or **DERPT** (Russ. *Jourig*), a town of Russia in Europe, gov. Riga, cap. distr., on the Embach, and on the high road between Riga and Petersburg, 150 m. N.E. the former, and 170 m. S.E. the latter city; lat. 56° 22' 44" N., long. 26° 42' 19" E. Pop. about 5,500. The town, which is well built, is divided into three separate portions—Dorpat Proper, and the suburbs of Riga and Petersburg. It has a fine market-place, a stone bridge over the Embach, and a cathedral now partly in ruins, but which formerly had a nave supported by 24 arches and surmounted by two towers. The old fortifications, with some of the ditches, have been converted into ornamental gardens, shrubberies, and public walks. It is surrounded by hills, which, as well as the banks of the river, offer many fine points of view.

Dorpat is the seat of a university, which in 1823 had 37 professors, and 830 students. The institution was originally founded by Gustavus Adolphus of Sweden in 1632. After suffering numerous vicissitudes during the wars between Sweden and Russia, and having been removed to Pernau, it was re-established in Dorpat in 1802 by the late emperor Alexander, in the building it at present occupies on the site of an ancient fortress. In 1823 the university possessed a library with 87,800 vols., a museum of arts, an observatory with some excellent instruments, cabinets of physical, chemical, mineralogical, zoological, and pathological subjects, an anatomical museum, a collection of agricultural models, and a botanical garden containing many rare plants: it has attached to it an hospital, theological and philological seminaries, and an institute for the education of professors. Though considered as especially belonging to this and the adjacent governments, it is much resorted to from many other parts of Russia. Some of its professors are highly distinguished, especially M. Struve, professor of astronomy. Dorpat also contains a gymnasium and a normal primary school.

This town is believed to have been founded in 1090. It was subsequently taken by the Teutonic knights, who

erected it into a bishopric in 1224. Its commerce now began to flourish, and at one period it ranked as one of the Hanse Towns. It was afterwards alternately in the power of the Poles, Swedes, and Russians; but the latter have retained possession of it since 1704. (*Schmitzer, La Russie; Dict. Géog.*)

DORSET, a marit. co. on the S. coast of England, having S. the British Channel, E. Hants, N. Wilts and Somerset, and W. Devonshire. Area, 643,840 acres. Surface beautifully diversified; climate mild and salubrious, not being so rainy as some of the districts more to the W. Soil principally chalk, sand, gravel, and loam. The vale of Blackmore, traversed by the Stour, containing 170,000 acres, and some other tracts in the W. part of the co. and along the coast, are eminently fertile and beautiful; but the distinguishing feature of the co. is the extent of its chalky downs, depastured by large flocks of sheep, and round Poole Harbour there are large tracts of heath. Agriculture in a medium state of advancement; but more improved in the E. than in the W. districts. Hemp and flax are a good deal grown, but less now than formerly. Water meadows extensive, and well managed, but not understood. The greater part of the co. is in grass. There are some very fine dairies; they are not generally looked after by the farmers, but let, at so much per cow, to dairymen, many of whom have made large fortunes. Stock of sheep estimated at between 600,000 and 700,000. Property in large estates. Farms of various sizes, but mostly large: they are let for 14 or 21 years, the rents, in most places, being paid once a year. Average rent of land, in 1810, 15s. 2½d. an acre. St. Paul's Cathedral, Somerset House, and others of the principal buildings in London, as well as the greater number of the towns in the S. of England, have been constructed of stone brought from the freestone quarries in the Isle of Portland in this co.; and the Isle of Purbeck supplies the potteries of Staffordshire with the clay used in the manufacture of the finer sorts of earthenware. There are considerable manufactures of flax and hemp at Beaminster, Netherbury, Bridport, &c. Shirt buttons are made at Shaftesbury and Blandford; silk is spun at Sherborne and Gillingham, and wool at Fordington and Lyme Regis. In 1839, there were in the co. 19 flax, 5 silk, and 3 woollen mills, employing in all 1,847 hands. Principal rivers, Stour and Frome. Principal towns, Poole, Shaftesbury, Weymouth, and Melcombe Regis. Dorset has 34 hundreds and 271 parishes, and returns 13 mems. to the H. of C., viz. 3 for the co., 2 each for the bors. of Brdport, Dorchester, Poole, and Weymouth, and 1 each for Shaftesbury and Wareham. Registered electors for co., in 1838-39, 6,366. In 1831, Dorset had 29,307 inhab. houses, 33,614 families, and 139,252 persons, of whom 76,636 were males, and 82,716 females. Sum contributed to the relief of the poor, in 1838, 63,531. Annual value of real property in 1815, 726,264. Profits of trade and professions in do., 241,634.

DORT, or **DORDRECHT**, a partially fortified town of S. Holland, on an island formed by the great inundation of 1421, on the S. side of the Waal, a branch of the Maese, 10 m. S.E. Rotterdam; lat. 51° 48' 52" N., long. 4° 39' 44" E. Pop. (1837) 19,614. Dort is a dull, though a tolerably well-built town: its streets are lined with houses of an antique fashion, the gables of which are turned outwards; they rise with many grotesquely ornamented windows and crow-steeps to a considerable altitude; while the practice of painting the bricks a bright red, and the ornamental stones and cornices a light colour, adds to their fantastic appearance. A number of the houses, as appears from the dates carved on their exterior, were erected during the period of Spanish occupation, previously to 1672. (*Chambers.*) The principal public buildings are the town-hall, a fine edifice, and the church, an old Gothic structure, 300 ft. long by 150 broad, with a heavy square tower capped with a dome of great distance. The latter building is paved entirely with flat monumental stones, some of which are of great antiquity; and its walls are surrounded with monuments, which the Dutch ingeniously preserved during the occupation of the country by the French, by concealing them with a screen of plaster. The church also contains a marble pulpit, highly ornamented with elaborate and elegant carving. The hall in which the famous synod of Dort held its sittings is still in excellent preservation, but is now degraded to the ignoble purpose of a low Sunday-evening theatre! Dort is surrounded on the land side with fortifications; on the side of the Waal it has several quays, and a good harbour, from which two canals lead into the middle of the town. It is the centre of a considerable trade in flax, which is grown in great quantities in its vicinity, and a good deal of which is shipped for England and Ireland. It has also a large trade in corn, salt fish, train oil, and timber; the latter article is floated down from the Upper Rhine in immense rafts, which, when sold, often realise from 25,000, to 30,000. There are many windmills for sawing deals in and near Dort, some sugar and salt refineries, linen-bleaching, tobacco, and white lead manufactories, build-

ing docks, &c. Dord is one of the oldest cities in the country; was the original residence of the counts of Holland, and, in 1072, the seat of the first meeting of the states at which the independence of the Seven United Provinces was declared; but the most memorable era in its history is that of—

THE SYNOD OF DORD, to which reference has been already made, held in consequence of a schism in the reformed church. James Arminius, professor of divinity in the university of Leyden, having rejected the doctrine of Calvin with respect to predestination and grace, obtained the support of Grotius, Barneveldt, and other learned and eminent persons, as well as of a considerable number of the middle and lower classes. His tenets were, however, opposed with extreme vehemence, and were represented as of the most dangerous description. The disputes that grew out of this controversy being not unfrequently attended with tumult and bloodshed, the States General at last agreed to refer the subject in dispute to a council or synod for its decision. This synod, which excited the greatest interest throughout Protestant Europe, assembled on the 13th of November, 1618, and continued its sittings till the 25th of May, 1619: it was attended not merely by all the most eminent divines of the United Provinces, but also by deputies from the reformed churches of England, Scotland, Switzerland, &c. The Calvinists having a decided majority in the assembly, all its decisions were in conformity to their views. The distinctive doctrines of Arminianism were pronounced to be pestilential errors and corruptions of the true faith; and this was followed up by the excommunication of the Arminians, the suppression of their religious assemblies, and the deprivation of their ministers!

These unjust and violent proceedings, being aggravated by political animosities, led to the most deplorable results. In the persecution to which they gave rise, the eminent statesman Barneveldt, though at the age of 72, lost his life on the scaffold; many distinguished Arminians were driven into exile; and even Grotius was condemned to a perpetual imprisonment, from which he was only extricated by the sagacity, courage, and devotion of his wife. But after the death of Prince Maurice, the great enemy of the Arminians, in 1625, this persecution relaxed; and most of the exiles were soon after allowed to return to Holland. The Arminian doctrine is now very widely diffused, even among those who profess to differ from it. (See *Mosheim*, iv. 439–466, 8vo. edit.; and the lives of *Arminius*, *Grotius*, &c., in the *Biographie Universelle*.)

DOUAI, a strongly fortified town of France, dép. du Nord, cap. arrond., situated very advantageously for commerce, on the Scarpe, 18 m. S. Lille; lat. 50° 22' 10" N., long. 3° 5' 4" E. Pop. (*ex. com.*) 18,890. It is well built, and the principal square is large and handsome: it is surrounded with old irregular walls, flanked with towers, and is farther defended by a fort on the right bank of the river, about 2 m. N. Douai. The town contains large establishments for tanning, a superb arsenal, and one of the three royal cannon-foundries in the kingdom. It is the seat of a sub-prefecture, of a royal court for the dépts. du Nord and the Pas-de-Calais, a tribunal of primary jurisdiction, a royal college with 262 pupils, a royal school of artillery, an *Académie Universitaire*, which has replaced its celebrated university, founded in 1562; with schools of design and music, a primary normal school, a public library with 28,000 printed vols., and 600 MSS., museums of painting and antiquities, cabinets of natural history and medical science, a botanical garden, 2 hospitals, an orphan asylum, and a theatre. Industry and the arts are alike thriving in Douai. It has fabrics of lace, tulle, gauze, cotton stuffs, thread, and earthenware, glass and soap works, and salt and sugar refineries; with a considerable trade in flax, which is extensively cultivated in its neighbourhood. Douai is very ancient, having existed previously to the invasion of Julius Cæsar. Its possession was guaranteed to France by the treaty of Utrecht. (*Hugo*, art. *Nord*; *Dict. Géogr.*; *Guide du Voyageur*.)

DOUBS, a frontier dép. of France, in the E. part of the kingdom, formerly comprised in Franche-Comté, having N. and N.W. the dépts. Haut-Rhin and Haute Saône, S.W. that of Jura, and E. Switzerland. Length, N.E. to S.W., about 60 m.; breadth varying from 20 m. in the N. to 50 m. in the S.: area 625,212 hectares. Pop. (1838) 276,274. Four collateral mountain chains belonging to the Jura system intersect the dép. in nearly its entire length, decreasing in height from E. to W., and naturally dividing the surface into a mountain, hill, and plain region. The loftiest summit of the E. range, Mount Suchet, is 5,283 ft. above the level of the sea: the principal elevation of the W. range rises to only 953 ft. The plain country to the W. of the latter range is the most fertile, and well fitted for the growth of all kinds of corn, and of the vine; the rest of the country is not generally productive. The mountains are all of cal-

careous formation, and abound with narrow gorges, grottoes, and caverns: the more elevated ranges are covered with pine forests, and in many parts with ice and snow for 6 months of the year. Chief rivers Doubs, Loue, and Ognon. The former rises at the foot of Mount Rixon, and, after a very tortuous course through the dép., it proceeds S.W. through that of Jura, and a part of Saône-et-Loire, and ultimately joins the Saône at Verdun. From Besançon to the Montebellard, the Doubs forms a part of the navigable canal between the Rhine and the Rhone. There are many small rivers and some large marshes. Climate variable and rather cold, but generally healthy. Wheat, rye, maize, hemp, pulse, fruits, wines, &c., are grown in the valleys and low country, which the inhabs. exchange with those of the mountainous districts for barley, flax, cheese, drugs, and timber. Agriculture very backward: fallows are so common as usually to occupy nearly a third part of the cultivable land,—a waste that might be wholly, or almost wholly, avoided by the substitution of green crops, at the same time that a great additional supply of food for cattle and of manure would be obtained. According to the official tables, 120,646 hectares of land were occupied in 1835 with forests: and this is one of the few French dépts. in which the planting of trees is actively going on. Meadow lands are extensive, occupying, in 1830, 158,924 hectares: in the arrond. of Montebellard they are well irrigated. The rearing of cattle is pursued to a considerable extent, as well as the manufacture of cheese similar to that of Gruyère. This branch of industry is mostly conducted either by the proprietors of from 40 to 60 cows, or by associations of small proprietors, whose share of the cheese is in proportion to the quantity of milk they respectively furnish. The total annual product of cheese is estimated at 2,500,000 kilogrammes, worth 1,650,000 fr.; of butter, 260,000 kilogr., value 260,000 fr. Iron, coal, and lignite are mined, and gypsum, marble, building-stone, &c. quarried. There are about 20 iron-works in the dép., which supply yearly 1,700,000 kilogr. of bar iron, 7,000,000 kilogr. of cast do., 2,400,000 kilogr. of iron wire, 150,000 kilogr. of *pointes*, 640,000 kilogr. of iron plates, and 30,000 chests of tinned ware. The establishment at Audincourt alone yields 5,000,000 kilogr. of cast and forged iron. Watchmaking employs about 9,000 artisans, and about 60,000 watches are made annually in Besançon. Cutlery, copper wares, paper, leather, liquors, bottles, and a few fabrics of different kinds, are amongst the other principal manufactures. The exports of the dép. are chiefly cattle, cheese, butter, timber, iron, hardware, watches, and agricultural implements; its imports corn, wines, brandy, cotton, woolen, and other fabrics. Doubs is divided into 4 arrond. It sends 5 mem. to the Chamb. of Dep. Number of electors 1,211. Chief towns, Besançon, the cap., Pontarlier, and Montebellard. Total public revenue (1831) 7,610,693 fr. About 25,000 of the pop. are Protestants. The dép. formed a part of the circle of Burgundy under Charles V.; it was annexed to the French crown by Louis XIV. in 1690. (*Hugo*, *France Pittoresque*, art. *Doubs*; *Official Tables*, &c.)

DOUGLASS, the principal town of the Isle of Man, on the E. coast of which it is situated, at the mouth of the Blackwater, on a circular bay, 80 m. N.W. Liverpool, lat. 54° 12' N., long. 4° 25' 47" W. Pop. 6,786. The town has some good streets and buildings; but, speaking generally, the former are narrow and dirty. It has, however, been a good deal improved of late years, in consequence of the influx of visitors from Liverpool and other places, in summer, attracted by the facilities for sea-bathing, and by the partial exemption from taxation enjoyed by residents in the island. (See *MAN*, *ISL. OV.*) The steam-packets to and from Liverpool, Belfast, and Glasgow, frequently touch at Douglass. Castle Mona, near the beach, a little N.E. from the town, formerly the property and residence of the dukes of Athol, has been sold, and is now converted into a hotel. There is here a pier 620 ft. in length, with a light-house at its head. The harbour dries at low water; but vessels drawing 10 ft. water may enter it at high-water neaps, and those drawing 14 ft. at high water springs. The anchorage in stormy weather is but indifferent. The parish church is 2 m. from the town; but it has 2 chapels, one of which is a handsome structure, with chapels for Catholics, Methodists, and Independents: it has also assembly-rooms, a public library, a Lancasterian school, and several charitable foundations. The custom-house is one of its best buildings.

DOULENS, or DOULLENS, a town of France, dép. Somme, cap. arrond., on the Authie, 16 m. N. Amiens. Pop. (*ex. com.*) 2,720. Its citadel, formerly considered one of the bulwarks of Picardy, was repaired by Vauban, and is very strong. The church of St. Martin is remarkable for beauty and lightness of style: the town has 2 hospitals, a theatre, and a large cotton-spinning factory. (*Hugo*, art. *Somme*; *Dict. Géogr.*, &c.)

DOUNE, a market town of Scotland, co. Perth, on

the N. bank of the Teith, a tributary of the Forth, 7 m. N.W. Stirling. Pop. 1,300. It consists of three streets, radiating from a centre where the market-cross stands. Its only public building is the parish church, a Gothic edifice with a handsome tower. It is famous for its annual cattle, sheep, and horse fairs, six in number, one of them lasting three days. The cattle and sheep are from the Highlands, and are lean, and purchased to be fattened either the Lowlands of Scotland or in England. The cotton manufactory of Deanston is within less than a mile of the town, on the bank of the Teith, and is driven by water. It belongs to a Glasgow company, and gives employment to 700 individuals in spinning, weaving, bleaching, &c. Doune Castle, which is within a few hundred yards of the town, on an elevated peninsula formed by the junction of the Ardoch with the Teith, was one of the strongest Scottish fortresses. It was originally the seat of the earls of Menteith. It was occasionally the residence of Mary Queen of Scots. It was, for a while, in the hands of the rebels in 1745. It gives the second title to the noble family of Moray, whose property it has long been. It has a square tower 80 ft. high; the walls are 10 ft. thick. The bridge of Teith, in the immediate vicinity of the town, was built in 1535 by Robert Spittal, tailor to Margaret, wife of James IV. and daughter of Henry VII. (*Nimmo's Hist. of Stirlingshire*, p. 584.; *Chambers's Gaz.*)

DOURO, (Span. DUERO, an. *Durius*), one of the principal rivers of Spain and Portugal, through the N. part of both which it flows. It rises in the Sierra de Olitón prov. Soria. Old Castle, about lat. 42° N. and long. 2° 50' W. At first it runs S.E. and then S. to near Soria, but thence onward its direction is generally W., through the kingdoms of Leon and Portugal to its mouth in the Atlantic: in lat. 41° 8' N., long. 8° 38' W., 2 m. W. Oporto. From near Miranda to beyond Torre de Moncorvo, however, it flows almost due S.W., forming the boundary between the Spanish prov. of Salamanca, and the Portuguese prov. of Trás-os-Montes. It afterwards enters the latter prov. Minho from Beirão. The length of its entire course is estimated at 500 m.: it receives the Pisuerga, Segulla, Esla (its principal tributary), Sabor, Tna, and Tamega on the right, and the Grado, Eresma, Tormes, Agueda, Coa, Tavora, Palva, &c., on the left side: its basin may be considered the most extensive in the whole peninsula. It runs for the most part through deep and narrow valleys; its bed is generally narrow, and its current very rapid. It is, however, navigable as far as San João de Pesequera, about 70 m. E. by N. Oporto; and since the Wine Company of the Upper Douro have partially removed some obstacles that existed at that point, it has been rendered available for flat-bottomed boats as high as Torre de Moncorvo, 100 m. from the ocean. It has a bar at its mouth, and its navigation is liable to be seriously affected by *freshes*, or sudden swellings, occasioned by rains, &c., to which it is very subject. (See Oporto.) Soria, Aranda-de-Duero, Toro, and Zamora in Spain; and in Portugal Miranda, San João de Pesequera, and Oporto, are situated on its banks. 16 stone bridges cross it at various points, besides which it presents numerous fords. At Oporto a bridge of boats connects that city with its suburb of Villa Nova on the opposite bank. (*Rabbi. Essai Statistique sur Portugal*, i. 81, 82.; *Dict. Géog.*, &c.)

DOVER (vulgarly DOVOH), a Cinque Port, parli. bor., and town of England, co. Kent, lathe St. Augustine, hund. Bexborough, on the S.E. shore of the co., on the Straits of Dover, in a valley formed by the depression of the chalk strata, 66 m. S.E. by E. London, 27 m. N.W. by W. Calais, and 91 m. from the nearest part of the French coast; lat. 51° 28' N., long. 1° 19' W. E. Pop. of town and port, 1831, 11,538; 1831, 14,381; but the limits of the existing parli. bor. being extended by the Boundary Act so as to include the greater portion of the par. of Buckland, it had, in 1831, a pop. of 15,298. It is traversed by a small stream, which empties itself into the harbour. The town consists of one principal street, extending upwards of a mile in the direction of the valley, shorter ones branching from it on each side, and ranges of houses on the shore. What may be called the New Town of Dover, built chiefly for the reception of occasional visitors during the bathing season, is under the castle cliff on the E.: the old part of the town is irregular, and the streets narrow and ill kept; but the whole is obviously improving, and building land is in great request. (*Boundary Report*.) In consequence of the increase of building, the villages of Charlton and Buckland have become continuous portions of the town. It is well paved, and lighted with gas. It has 2 ancient par. churches, St. Mary and St. James'; another recently built as a chapel of ease; a Catholic, and 7 dissenting chapels; a school, founded in 1789, for 45 boys and 34 girls, now incorporated with a national school, which educates 400 children; a girls' school of industry, established 1819; an infant school; a savings bank; a dispensary, and many minor charities; a town hall and

gaol; theatre and assembly rooms, built in 1790; public libraries, reading rooms, and baths, on the Marine Parade; and excellent lodging houses, &c., for the accommodation of visitors. The harbour, which is quite unworthy the ancient reputation of the port, is within the town: it is small, and the entrance to it being narrow, between two piers, great caution is required in entering in rough weather; it is only a tide harbour, and a few years ago, the bar at its entrance had accumulated so much that it was feared it would be entirely choked up; but great improvements have since been effected. By a charter of James I., the lord warden of the Cinque Ports, and 10 other commissioners, were appointed conservators of the harbour, under whose management it still continues. On an eminence bounding the S.E. side of the valley stands the castle, an immense collection of ancient and modern works, occupying an area of about 36 acres: it is approached by a bold ascent, but is itself commanded by the higher ground on the W. and S.W. There are remains of ramparts, and of a temple, bath, and Pharos, supposed to be of Roman construction. Previously to the last French war, the works were much dilapidated, but they were then repaired, and greatly augmented. There are upper and lower courts, surrounded (except towards the sea) by curtains and large dry ditches; in the centre of the former is a spacious keep, built by Hen. III., and now forming a bomb-proof magazine; the curtain of the lower court is flanked, at irregular intervals, by 10 towers of various construction, — the oldest built by Earl Godwin, the others at different times during the Norman dynasty: with these, subterraneous passages communicate from the ditch; there are also 4 or 5 ancient wells, excavated to the depth of 370 ft. The modern works consist of batteries with heavy artillery, casemates, covered ways, a large vault, &c., excavated in the chalk, barracks, &c., capable of lodging 2,000 troops. The lord warden of the Cinque Ports (at present (1839) the Duke of Wellington) is now always constable of the castle. The heights on the S. side the valley were also strongly fortified during the last war. An ancient hospital, called Maison Dieu, was converted to a victualling office in 1555: there is also a military hospital on the S. side of the town. Dover has a busy, thriving appearance, its chief traffic being derived from the influx of passengers to and from the Continent: of late years, also, its popularity, as a fashionable sea-bathing place, has considerably increased. There are large paper mills in the vicinity, and in the town a brewery and private docks, where ship-building is carried on to some extent, and rope, sail, and other establishments connected with the supply of shipping. The intercourse with Calais and other French ports, and also with London, is now almost wholly carried on by steamers. The coasting trade consists chiefly of corn exported to London, and coals imported from the northern counties. The port comprises the creek of Folkestone, and the stations of Hythe and Romney. About 120 vessels, of the aggregate burden of 5,500 tons, belong to the port. Markets, Wed. and Sat. There is also a daily market for poultry, fish, and vegetables. Fair, Nov. 23, continuing over 5 market-days.

Dover, under the Municipal Reform Act, is divided into 3 wards, with 6 aldermen and 18 councillors, and the parli. and municipal limits coincide. Previously to the act now referred to, the governing body consisted of a mayor, 12 jurats, and 36 common councillors, who, like the magistrates of the other Cinque Ports, enjoyed several peculiar privileges in the trial of crimes, &c.; but these are now either wholly done away with, or greatly abridged. The constable of the castle has still, however, the jurisdiction of a sheriff within the Cinque Port limits; writs from the superior courts are directed to him, and his warrant is executed by an officer called *Bodur*; the debtors' prison being in the castle: a court of *Lodmenage* is also still held for licensing and regulating pilots.

Dover has returned 2 mems. to the H. of C. from the 18th Edw. I. Previously to the Reform Act, the right of voting was in the freemen; the right of freedom being acquired by birth, by marriage (during the wife's life), by the possession of a freehold within the town and port, or by purchase. Registration of electors commenced in 1800. In 1835, there were 300 houses of the annual value of 10*l.* and upwards. The annual value of real property in the bor. in the same year was 52,011*l.*, but it has since rapidly increased.

Dover was a station of the Romans, by whom it was called *Dubris*; and being situated nearer to the Continent than any other town in England, it was long regarded as of the highest importance, and as being, in fact, the key of the kingdom. At Swinfield, near the town, are the remains of a preceptory of the Knights Templars, where K. John surrendered his crown, and received it back from the Pope's legate, in acknowledgement of superiority. In 1216, the castle was successfully defended against the Dauphin of France, by Hugh de Burgh, Earl of Kent. In the last civil war it was taken by stratagem, in 1642, by the Republicans.

Dover cliff lie both on the E. and W. sides of the town. The noble description in Shakespeare is applicable to the latter; but the cliff to which the poet alluded having been undermined and thrown down, those that remain do not quite come up to the description. (*Hastings, Kent, and Dover Guide*, *Boundary Report*, &c.)

DOWLETABAD (*The Fortified City of Hind. Deoghir*), an inland town and fortress of Hindostan, prov. Aurrangabad, and its original cap., dom. of the Nizam, 7 m. N.W. Aurrangabad; lat. 19° 57' N., long. 75° 25' E. The fortress stands upon an isolated conical granite rock, the summit of which is about 500 ft. above the plain below, and which has been scarped for one-third nearly of its height, so as to present all round the appearance of a perpendicular cliff. An outer wall of no strength surrounds the fort; but three other lines of walls and gates must be passed before arriving at the ditch, the causeway across which will admit of only two persons abreast, and which is defended by a building with battlements on the opposite side. The mode of access to this singular hill fortress is thus described by the Earl of Munster:—"The governor led the way through an excavation into the heart of the rock, so low that I was obliged to stoop nearly double. But after a few paces, a number of torches showed me I was in a high vault, and we began to ascend on a winding passage, cut through the interior of the body of the hill, the passage was about 10 ft. high, and the same broad, and the rise regular. At certain distances from this dismal gallery are trap-doors with flights of small steep steps leading to the ditch below, only wide enough to admit a man to pass, also cut through the solid rock, to the water's edge, and unexposed to the fire of the assailants, unless they were on the very crest of the glacis. We might have been in all ten minutes mounting by torchlight, and came out in a sort of hollow in the rock about 20 ft. square. On one side, leaning against the cliff, was a large iron plate, nearly of the same size as the bottom of the hollow, with an immense iron poker. On the besiegers having gained the subterraneous passage, this iron is intended to be laid down over the outlet, and a fire placed upon it." Near it is a perforated hole in the rock, intended to act as a bellows to the fire. The road hence to the summit is very steep; in some places it is covered with brushwood, in others with small houses, towers, and gates: it passes through the governor's residence, a good building, surrounded by a verandah with 12 arches. On the peak the Nizam's flag flies, and a large brass 24-pounder is mounted; but, excepting this, in the whole fortress there are but a few 2 and 3 pounders. The pettah presents the remains of many buildings of a rough dark-coloured stone; but is now in great measure deserted: the interior of the lower fort is a similar collection of ruins, and contains a column of great diameter and perhaps 160 ft. high, deformed, however, by a huge gallery, which encompasses it at about a fourth part of its elevation from the ground. From its natural strength, and the labour that has been bestowed upon it, this fortress is looked upon as an impregnable and as the plenty of water (one tank cut out of the rock is only about 100 yards from the summit), if properly defended, it could only be reduced by famine. Notwithstanding these advantages, it was one of the first fortresses that fell into the hands of the Mohammedans, who took it by surprise and plundered it of immense riches, A. D. 1293. Early in the 14th century, Mohammed III., who made it his residence, nearly ruined Delhi by the absurd project of making its inhabitants remove to his new capital. It was afterwards successively possessed by the dynasties of Ahmed Nizam Shah, Malik Ambar, Shah Jahan, and the French: since 1758 it has belonged to the Nizam's dom. The pagodas of Ellora (which see) are in the vicinity of Dowletabad. (*Hamilton's E. I. Gaz.* i. 526, 527; *Mod. Trav.* x. 282-285; *Rennell's Hindostan*, 213.)

DOWN, a marit. co. of Ireland, prov. Ulster, on its W. coast, having S. and E. the Irish Sea and the N. Channel, N. Belfast, Lough, and Antrim, and W. Armagh and Louth. Area, 611,404 imp. acres, of which 108,569 are unimproved mountain and bog. The mountains of Mourne, in the S. part of the co., are amongst the highest in Ireland; but, with this and a few other exceptions, the surface is abundantly level. Soil of a medium degree of fertility. There are some large estates; but there is also a fair proportion of those of medium size. Farms very small: those occupied by the better class of farmers run from 20 to 50, and a few to 100, acres; but the inferior holdings, which are the great mass, do not, perhaps, average 5 acres. The occupiers of the latter formerly depended, in a great degree, on the linen trade, but since its decline, or rather since the manufacture began to be principally carried on in factories, they have had nothing but the land to depend on, and the competition for the smallest patches is extreme. In this, as in most other parts of Ireland, a new tenant must not only pay the stipulated rent to the landlord, but he must also pay a sum to the previous occupier, whatever may have been the cause of his leaving the farm, to ensure his quiet possession. This latter sum is called the *tenant's right*; and

in Down it frequently amounts to 10l. an acre! (*Binn's Misceries and Beauties of Ireland*, i. 85, &c.) Still, however, a good many improvements have been introduced of late years, though where the holdings are so small, it would be absurd to suppose that agriculture can be far advanced. Potatoes, oats, and flax are the principal crops: turnips rare; potatoes mostly sown in "lazy beds" though drilling is now pretty common. The average rent of land, 16s. an acre. Cottages very generally white-washed and neat. The condition of the cottiers or peasantry is much superior to what it is in most other Irish cos.; and would have been much more so, but for that custom, the bane and curse of Ireland, of dividing and subdividing farms, which is no where more prevalent than here. Principal rivers, Bann, Lagan, and Newry. Principal towns, Newry, Ballymacarret, and Downpatrick. Down is divided into 8 baronies and 60 parishes, and sends 4 mems. to the H. of C., 2 for the co., and 1 each for Newry and Downpatrick: registered electors for the co. in 1838-39, 3,305. In 1831, Down had 62,629 inhab. houses, 66,233 families, and 362,012 persons, of whom 169,416 were males, and 192,596 females.

DOWNHAM (MARKET), a town and par. of England, co. Norfolk, hund. Clackclose, 78 m. N. by E. London, 11 m. S. King's Lynn. Area of par., 2,880 acres. Pop. in 1831, 2,198. The town, on an acclivity near the E. bank of the Ouse, which is here crossed by a bridge, has 3 streets of well-built houses, and is paved almost everywhere with water. The church, on the summit of the acclivity is an antique Gothic structure, with a low tower and spire, approached on the S. by a noble avenue, and on the N. by a flight of steps. There are also 3 dissenting chapels, a Lancasterian school for 65 boys, and a national school for 70 girls. Market, Sat., noted for the supply of fish and wild fowl from the fens. Fairs, March 8. for horses (one of the largest in the kingdom), May 8. cattle, and Nov. 13. There is an extensive bell-foundry in the town, and in the immediate vicinity is a large mustard manufactory: it is chiefly a dairy parish, and has been long celebrated for its supply of butter; but its famous butter market, held on Monday, has been removed to Swaffham. Petty sessions are held weekly, and a court baron and leet quarterly, by the lord of the manor.

DOWNPATRICK, a marit. town and parl. bor. of Ireland, co. Down, of which it is the cap., prov. Ulster, near the Quoyle, a short distance from its embouchure, in the S.W. angle of Lough Strangford, 21 m. S. by E. Belfast. Pop. in 1831, 4,779; pop. of par. in 1834, 9,008, of whom 2,220 were of the estab. church, 2,283 Prot. diss., and 4,505 Rom. Cath. It consists of four main streets, meeting in a confined valley, and extending up the declivities of the surrounding steep hills. Like other northern towns, it is divided into the English, Scotch, and Irish quarters. It is a thriving town, "and many persons are of opinion that it has more wealth in it than any other town of its size in Ireland. House rent is higher than in Belfast. There is a quay about 1 m. from the town, on the river, accessible to vessels of 100 tons (*Boundary Report*.) A new quay now in progress, about 1 m. nearer the lough, will be accessible to vessels of much larger burden. The town was formerly the seat of the bishopric of Down, but since the union of the see with that of Connor, the ecclesiastical business is transacted at Lisburn. The ruins of the ancient cathedral, and those of a neighbouring pillar tower, still remain. The new cathedral is built in the ancient style; besides which, there is a par. church, Rom. Cath. chapel, two meeting-houses for Presbyterians, and three for Methodists. The diocesan school for Down and Downpatrick dioceses is held here, as also a subscription school, the co. infirmary, fever hospital, dispensary, an almshouse, with schools annexed, endowed by the Southwell family, an asylum for clergymen's widows, a mendicity institution, and large barracks. A constabulary force is stationed here. In the immediate vicinity is a remarkable *raah*, or artificial mound, 60 ft. high, and surrounded by three ramparts, the outermost of which is nearly 1 m. in circ. Races are run every alternate July, on a course near the town, under the direction of a body of resident gentlemen, incorporated by the name of the Down Horsebreeders. About 2 m. distant, at the foot of the hill of Sleibh-na-Griddle, are the Struel wells, much frequented at midsummer by Rom. Cath. pilgrims for devotional purposes, and for the supposed miraculous efficacy of their waters. The corporation, which holds under an ancient charter, consists of a mayor, bailiffs, and commonly returned 2 mems. to the Irish H. of C. till the Union, since which they have sent 1 mem. to the imperial H. of C. The parl. bor. extends over a space of 1,486 stat. acres, the franchise having been vested, by an act passed in the 35th of George III., in householders occupying houses of the value of 5l. a year. Registered electors in 1838-39, 630. Manor courts, with jurisdiction to the amount of 10l., are held every third Tuesday; courts leet in spring and at Michaelmas. The co. assizes are held here in the court-house, an elegant modern

building; as are also general sessions in March and October, and petty sessions on Thursdays. The co. gaol, a spacious building, contains 900 cells, and 16 other rooms for prisoners. The linen manufacture is carried on in the neighbourhood: there are two breweries. Markets on Saturdays; fairs on the second Thursday in Jan., March 17, May 19, June 23, Oct. 29, and Nov. 19. The post-office revenue, in 1830, was 684*l.*; and in 1836, 922*l.* Branches of the Northern and Provincial Banks were opened here in 1834, and one of the Ulster bank in 1836. This is a very old town, being formerly the residence of the kings of Ulagh or Ulster.

DOWNTON, a bor. town and par. of England, co. Wilts, near its S. border, hund. Downton, on the Upper Avon, which here divides into 3 branches, each crossed by a bridge; 78 m. S.W. by W. London. Area of par., 11,420 acres. Pop. of do. in 1821, 3,114, in 1831, 3,552; the increase being ascribed (with what justice we know not) in the Pop. Returns, to "early and improvident marriages." The town has one irregular street, not paved or lighted, with a few respectable houses. Exclusive of the church—a large cruciform structure with a tower,—there is a chapel of ease in the parish, and 3 dissenting chapels. A free school, founded in 1679, educates 12 boys; and another, founded in 1797, 6 girls. Market discontinued. Fairs, April 23, for cattle, Oct. 2, for horses and sheep. The bor. returned 2 mems. to the H. of C. from the reign of Edw. I. down to the passing of the Reform Act, when it was disfranchised. This is a place of considerable antiquity. At its S.E. end is a conical mount, on which stood an ancient castle, whose encroachments are still visible. Standinch or Trafalgar House, a national gift to the heirs of Lord Nelson, is within 2 m. of Downton.

DRAGUIGNAN, an incl. town of France, dép. Var, of which it is the cap., in a fertile valley, on an affluent of the Artois, 40 m. N.E. Toulon, and 410 m. S.E. Paris; lat. 43° 32' 48" N., long. 6° 28' 38" E. Pop. (ex. com.) 8,774. Its climate is temperate and salubrious, and being situated in a basin, surrounded by vine and olive clad hills, it offers a delightful place of residence. Though without any particular beauty, the town is sufficiently well built, and has numerous public fountains. Chief public buildings—the hall of justice, prison, clock-tower, and hospital. Draguignan has a public library with 15,000 vols. (*Guide du Voyageur*; Hugo says 7,500 vols.), an excellent botanic garden, cabinets of natural history, medals, &c., and a society of agriculture and commerce; with tribunals of primary jurisdiction and commerce, a chamber of manufactures, and a communal college. There are fabrics of broad-cloth, thrown silks, stockings, and soap, and distilleries. (Hugo, art. *Var*; *Dict. Géogr.* &c.)

DRAMMEN, sea-port town of Norway, distr. Buskerud, on both sides of the river of the same name, near its mouth in the Christiania-fjord, and 20 m. S.W. Christiania. Pop. 7,684. "It is a long straggling place. Though to us it seemed to have little of the bustle of trade, it is said to export more timber, chiefly in logs, than any town in Norway. Its women are reckoned among the greatest beauties of the north; and we saw some who fully support its reputation in this respect. Most travellers, however, will recollect it better as the place in which is carried on the principal manufacture of the delightful little *carriole*." (*Bremer's Excursions*, p. 86.)

DRAVE (Germ. *Drava*), a river of Europe, and one of the principal tributaries of the Danube. It lies wholly within the Austrian empire, extending between lat. 46° 50' and 49° 30' N., and long. 12° 20' and 19° E. It rises on the Toblach-heath, near the E. extremity of the Tyrol, in what is called the *Foster-thal*, about 17 m. E.S.E. Brunnken, and runs a great N.E. to Lienz, whence it is separated by the Ial. From this point its course generally is E.S.E. to its mouth in the Danube, near the castle of Erdödy, 124 m. E. Essegg. It traverses Carinthia and Styria, and afterwards forms the boundary between Croatia and Slavonia on the S., and Hungary Proper on the N. It receives the Möhl, Gurk, Lavant, and Mur (its chief affluent) on the left; and the Gail, Dran, Bedyna, and some other rivers of minor importance on its right side. Lienz, Greifenburg, Spital, Villach, Völkermarkt, Marburg, Pettau, Warasdin, and Essegg, are the chief towns situated on its banks. It runs through a mountainous country and narrow valleys, as far as Warasdin, but thence onward its course is through a plain country. Its entire length is estimated in the *Oesterreichische National-Encyclopädie* at 290 m.; but by Cannabich and Berg-haus at 380 m.: the latter estimate is perhaps nearest the truth: the former appears intended to refer only to the navigable part of the river, which extends as high as Villach. In its upper part the Drave is extremely rapid; its navigation in many parts is greatly impeded by the number of trees torn down by its violence, which afterwards block up the current. At present this river is made but little use of for commercial purposes; but

in case of an extensive steam-navigation of the Danube its value as a means of transit would be greatly enhanced. It is said that the Austrian government has it in serious contemplation to form a communication between the Adriatic and one of the great tributaries of the Danube; and if so, this would probably be the one chosen, the country between the Upper Drave and the sea apparently presenting the fewest obstacles to such an undertaking. (See *Turnbull's Austria*, ii. 376, 377.) The author of *Germany and the Germans*, vol. iii. gives a spirited sketch and description of Hungarian peasants descending the Drave on rafts of empty barrels, after having disposed of their wine in the mountains of Carinthia. (*Borghaus*; *Paget*; *Turnbull's Austria*; *Dict. Géogr.*)

DRESDEN, a city of Germany, cap. of the kingdom of Saxony, on both sides the Elbe, 61 m. E.S.E. Leipzig, 233 m. E.N.E. Frankfurt on the Mayne, 220 m. N.N.E. Munich, 100 m. S. by E. Berlin, and 230 m. N.W. Vienna; lat. 51° 2' 50" N., long. 13° 34' E. Pop. in 1837, according to the official returns, 68,500, of whom 64,500 were Protestants, 4,355 Roman Catholics, and 647 Jews. It is more than 400 ft. above the level of the sea, and is delightfully situated in the midst of the Saxon wine district, occupying the most beautiful and richly-cultivated portion of the valley of the Elbe. The banks of the river have, however, a very different appearance. The right is abrupt, rocky, and woody, and, having a S. aspect, is in great part covered with vineyards. The left is more flat, presenting a succession of meadows, grass, gardens, and orchards, studded with numerous villages; the whole landscape gradually rising till it becomes united with the distant Erzgebirge mountains. The city itself has been termed the "German Florence," and is certainly, on the whole, very handsome; though, when examined in detail, the traveller's anticipations will, in many respects, be disappointed.

It is divided into the Old and New Towns,—the first on the right or S. bank of the river, and the latter on the left or N. bank; and has 4 suburbs, extending all round the Old Town, of which that called Friedrichstadt, lying to the W. of the small river Weiseritz, near its confluence with the Elbe, is the best built and most important. Immediately adjoining the town, are the *Neue Anlagen*, consisting of public walks and gardens; and N.E. from the latter is the *Neue Anbau*, with many projected streets and buildings, but not so compact as to deserve the name of suburb. The Old and New Towns are connected by a noble stone bridge of 16 arches, 1,420 ft. in length, and 36 ft. in width. This bridge, considered the longest and finest structure of the kind in Germany, has a foot pavement and an iron balustrade on each side; on its centre pier stands a bronze crucifix, with an inscription commemorative of the destruction of part of the bridge by Marshal Davoust, to facilitate his retreat in 1813, and its restoration in the same year by the Emperor Alexander of Russia. The Old Town was formerly provided with fortifications; but these were demolished by the French in 1810, and the place they occupied is now laid out in public walks. That portion of these walks facing the Elbe is called the Brühl Terrace, and is approached from the foot of the bridge by a grand flight of broad steps. From its own beauty, the grandeur and variety of the scenery it commands, it is at all times a favourite resort of the inhabitants. As in most other fortified towns, the streets in the Old Town are narrow, the houses lofty and gloomy looking, and the squares irregular. In the construction of the buildings, generally, which are chiefly of sandstone, strength has been more studied than elegance: the principal of the public edifices are, however, in this part of Dresden. The Schloss (castle), or royal palace, opposite the bridge, is a large antique and ungaily looking building, having the appearance of a fortress on its exterior, and of a residence; but, internally, it is in every respect worthy of its destination. It has halls of audience, ceremony, and various other state rooms, a royal library, the hall in which the Saxon legislature is opened, and a Catholic chapel with a tower 378 ft. high. It contains the celebrated state treasury, or Green Vault (*Grüne Gewölbe*), which occupies a suite of vaulted apartments on the ground floor. They contain an immense collection of precious stones, curiosities, and objects of *virtu*, and have doubtless cost an immense sum, though we do not suppose they are worth one, much less "several millions," sterling. Adjoining the royal palace is the Chamber of Archives, and near it the Palace of Princes, containing a handsome chapel, gallery of portraits, library, &c. On the opposite side of the royal palace, and also communicating with it, is the far-famed gallery of paintings, the grand attraction of Dresden, being not only the finest collection in Germany, but the finest, taking it as a whole, to be found N. of the Alps. Amongst its valuable specimens of art "not one of which can be pronounced bad, few mediocre, numbers good, and several incomparable;" are the celebrated *Madonna di San Sisto* of Raphael, the *Notte*, and five other works, by Correggio, in his best style; the *St. Cecilia* of Carlo Dolce; the *Christo della*

Moneta, and a *Venus*, by Titian; other paintings, by Paul Veronese, Annibal Caracci, Guido, &c.: altogether 356, by Italian artists. In the works of the later German and Flemish masters, this gallery is also extremely rich; it contains magnificent specimens of Rembrandt, Rubens, Vandyke, Teniers, Hans Holbein the younger, Ruysdael, Wouwermans, &c. Of the French school, there are several paintings by Claude, Nic. Poussin, &c.; and beneath the gallery there is a fine collection of plaster casts of the most famous statues, made under the superintendence of Raphael Mengs. This gallery, founded by the Elector Augustus II., has remained untouched and unharmed amid the innumerable revolutions that have, in the interval, convulsed Germany. When Frederick the Great bombarded Dresden, battered down its churches, and laid its streets in ruins, he ordered the artillery to keep clear of the picture gallery; and Napoleon treated Saxony with so much consideration, that not one of her pictures made the journey to Paris!

The Zwinger, erected in 1711, and originally designed as merely the vestibule to a new palace, intended to be built by Augustus II., is a fine group of buildings, surrounding an inclosure planted with orange trees, and forming a favourite promenade. It contains the armoury (second only to the Ambras collection at Vienna), cabinets of natural history, mineralogy, and mathematical and philosophical apparatus, and a gallery of engravings, which possesses at least 200,000 specimens of that art. (*Cannabich*.) Immediately contiguous to one of the wings of the Zwinger, is the grand opera-house, a building capable of accommodating 8,000 spectators. It communicates, by a covered way, with the Palace of the Princes, but is now only used for court festivities: theatrical performances take place in a smaller theatre, near the Catholic church; the latter, occupying a very prominent situation between the royal palace and the bridge, is a large structure in the Italian style. Externally it is profusely decorated, and generally considered deficient in taste; but internally it is chaste, elegant, and imposing. It contains an altarpiece by Raphael Mengs, and a fine organ by Silberman: the music in this church is celebrated throughout Germany. As a whole, however, it is decidedly inferior in elegance to the *Frauenkirche* (church of Our Lady, or St. Mary) in the new market, a beautiful stone building, adorned with a cupola, constructed on the model of that of St. Peter at Rome, 388 German ft. high. The other churches do not demand particular notice. The remaining principal edifices in the Old Town are the Brühl Palace, at present inhabited by Prince Maximilian, with a collection of 80 landscapes by Canaletto; the mint, arsenal, medico-chirurgical school, house of assembly, royal guard-house—a new and beautiful specimen of Grecian architecture, new post-office, trades' hall, hall for the annual exhibition and sale of the works of Saxon artists, &c. The town hall is the chief ornament of the old market, and the only regular square in the Old Town. The New Town is altogether much better laid out, and contains fine squares, spacious streets, and elegant faubourgs. In this quarter stands the Japanese palace, now called the *Augusteum*, in honour of its founder, Augustus II. This magnificent palace, now appropriated wholly to public purposes, is beautifully situated on the banks of the Elbe, amid pleasure grounds, which form a most agreeable promenade for the citizens. It contains the museum of antiquities and modern statuary, which occupies 10 saloons, and is enriched by some of the finest antique statues in Germany; a cabinet of coins; a public library with 250,000 volumes, 4,000 MSS., 100,000 pamphlets, and 20,000 maps; and the celebrated porcelain cabinet. The last is a collection of more than 60,000 pieces of China, including the finest Meissen, Chinese, Japanese, Italian, and Sèvres ware, and specimens of the manufacture of every country, altogether filling 18 apartments. Here are to be seen the three splendid Chinese vases that Augustus II. purchased of the Elector of Brandenburg, at the price of a regiment of dragons fully equipped!

Through the centre of the New Town runs abroad handsome street, planted with linden trees, near the upper end of which are some extensive infantry and cavalry barracks. The other chief public buildings are, the commandant's residence, several military academies, the town hall, and the church of the Trinity. The market place is embellished with an equestrian statue of Augustus II., in ancient Roman costume, with a tail-bottomed wig! The *Friedrichstadt* contains the Marcolini Palace, the Roman Catholic cemetery, &c.; but this quarter is mostly inhabited by the working classes. The Pirna suburb boasts of Prince Anton's handsome villa and extensive gardens; and the Wildruf suburb has the palace, gardens, and observatory of Prince Maximilian. Dresden has a great number of literary and scientific institutions, and establishments devoted to education. Among these are an academy of arts, two colleges, a

botanic garden; schools of medicine, surgery, and veterinary medicine; a high school, 2 normal schools, numerous free elementary schools, with schools for the reformation of depraved children, deaf and dumb, blind, &c.; it has also many charitable institutions, including orphan asylums of various kinds, a foundling hospital, and 5 other hospitals. Amongst other conveniences, this city possesses excellent public baths of all kinds, the prices of admission to which being low, the poorest person is able to indulge in the use of what is found to contribute materially to the public health.

Dresden has no very considerable external trade. It has numerous painters, designers, sculptors, engravers, and other workers in the fine arts; and some manufactures of woollen and silk, leather, gold and silver articles, carpets, scaling wax, macaroni, white lead, straw hats, artificial flowers, musical, mathematical, and philosophical instruments, with a bomb and cannon foundry, and a large sugar refinery. What is called Dresden china is not made in this city, but at Meissen, 14 m. distant. The greater proportion of its external commerce has hitherto consisted in its transit trade by the Elbe; its general trade is, however, increasing, and, since 1826, a wool market has been established.

Few European capitals have such pleasant environs as Dresden. Nearly all the roads leading out of it, and especially from the New Town and Friedrichstadt, are planted with rows of trees. The Elbe to the N.W. of the city is lined on either side with fine avenues for a considerable distance. S.E. of the Pirna suburb, is the *Grosse Garten*, a large park filled with fine trees, near which is the small village of Räcknitz, and the monument erected to Moreau on the spot where he received his death wound, 27th Aug. 1813. On the right bank of the Elbe is the *Linkbad*, a hotel surrounded by beautiful gardens, containing a theatre, &c. about 1 m. from the New Town; and 2 m. beyond is the *Fischlauer Vineyard*, a villa and grounds laid out with much taste by a deceased Scotch nobleman. To these different places people of all ranks delight to resort, which they do especially on Sunday afternoons, to take refreshments and dance, or listen to the excellent bands of music with which all the public places are provided.

Dresden and its environs have been the scene of some of the most important conflicts in modern warfare, particularly on the 26th and 27th of August, 1813, when Napoleon defeated the allies under its walls. This city has been the favourite residence of many distinguished literary men; in its immediate neighbourhood, Körner lived, Schiller wrote great part of his *Don Carlos*, and Weber composed his highly celebrated opera *Der Freischütz*. Its inhabitants generally are great lovers of the fine arts, and devoted to music; but they are not so much attached to literature or politics as the inhabitants of Berlin or Leipzig. Five newspapers are published daily, weekly, and several times a week in Dresden, but neither of them is political. The Germans are particularly remarkable for their industrious and orderly habits, and early hours; almost every body being in bed by half past ten at night, and up at six in the morning (*Berg-haus, Allg. Länder und Völkerkunde*, iv. 167, 168.; *Cannabich, Lehrbuch*, 356—358.; *Murray's Handbook*; *Strangs, Germany* in 1831; *Germany and the Germans* in 1834—1836.)

DREUX, a town of France, dép. Eure-et-Loire, cap. arrond., on the Blaise, a tributary of the Eure, which partly encircles it, 20 m. N.N.W. Chartres. Pop. (1826) 4,304. It stands at the foot of a hill, on which are the ruins of an ancient castle, which belonged to the counts of Dreux: it is well built, and has a fine promenade along the river's bank, an hospital, public baths, a theatre, town-hall, and church. Louis Philippe, when Duke of Orleans, built in the castle a chapel, which he intended for his family burial-place. It is the seat of tribunals of primary jurisdiction and commerce, and of a communal college. Near it, in 1662, was fought the celebrated battle in which the Prince of Condé, then at the head of the Protestants, was taken prisoner. Dreux was the native place of Jean de Rotrou the tragic poet, and of Philidor, the famous chess-player. (*Dict. Géogr. Univ.*)

DRIFFIELD (GREAT), a market-town and township of England, E. Riding, co. York, near one of the sources of the Hull, 27 m. E. by N. York. Area of township, 4,910 acres. Pop. of do., 2,752. The town, at the foot of the Wolds, consists chiefly of one long street, parallel to which flows the brook above noticed, which, at the S. extremity of the town, is enlarged into a navigable canal that joins the Hull below Frodingham bridge. All Saints' church is an ancient structure in the Gothic style. The Independents, Wesleyan, and Primitive Methodists, and Baptists, have places of worship. There is a national school for 100 children, and a dispensary. The chief officer is a constable appointed annually; a court for the recovery of small debts is held here. The town is a station for receiving votes in elections of members for the E. Riding.

* Authorities differ very widely as to the contents of this library—the above seem to be the numbers on which most reliance may be placed.

Market-day, Thurs., and well attended cattle markets every fortnight. Branches of the Yorkshire Agricultural and Commercial Bank, of the York Union Bank, and two private banking houses, are established here.

DROGHEDA, a pari. bor. and sea-port town of Ireland, being a co. in itself, but locally in the cos. of Meath and Louth, prov. Leinster, on the Boyne, 4 m. above its embouchure in the Irish Sea, and 35 m. N. Dublin. From the time the English settled in Ireland, this town, formerly called Tredagh, was considered of great importance. Parliaments have been frequently held in it, and it was made the site of a university, but the privilege was not acted upon. In 1649 it was stormed by Cromwell, who put its inhabitants to the sword, with the exception of a few that were transported to the American settlements. Pop., in 1821, 16,118; in 1831, 17,365. Of the latter number 15,663 were R. Caths., 1,437 Prot. of the estab. church, and 265 Prot. diss. Number of inhabited houses 3,206, giving a pop. of 5-416 souls to a house.

The Boyne divides the town into two unequal portions, the larger of which, on the N. bank of the river, is connected with the lesser by a bridge of 13 arches; part of the ancient walls, and the gate of St. Lawrence, still remain, but the buildings now extend considerably beyond them. "It is neither flourishing nor increasing, its manufactures having fallen off, and its pop. exhibits a decrease of nearly 800 within the 10 years ending with 1831." (*Boundary Report*.) The churches within the town are St. Peter's in the N. div., St. Mary's in the S., and a chapel of ease. The R. Cath. chapel of St. Peter, considered the cathedral of the archdiocese of Armagh, is a large and elegant building, as is also the prof. of St. Mary. There are friaries of the Augustin, Dominican, and Franciscan orders, and convents of the Dominicans and the Presentation. The Presbyterians and Wesleyan Methodists have places of worship. There are here a classical school on the foundation of Erasmus Smith, and 5 other public schools, which give instruction to about 1,000 pupils. It has also an infirmary, a mendicity house, a savings' bank, a building for the widows of Protestant clergymen, and an almshouse. There is an infantry barracks in the town, and another in the vicinity of Lillamond Port. It is generally pretty well built; the streets are paved, lighted, and cleaned, by a committee of the corporation; but its appearance is unfavourable; and a few years ago the streets swarmed with beggars. Water is supplied from a well in the town.

Drogheda originally consisted of two distinct corporations, one on the side of Meath, the other on that of Louth. These were united under Henry IV., who granted the newly formed bor. a charter, under which it is still regulated. It is a jurisdiction extending over 5,802 acres. The corporation consists of a mayor, 2 sheriffs, 24 aldermen, and an indefinite number of common-councilmen and freemen, which last class acquire their rights by birth, apprenticeship to a freeman of one of the seven trading guilds of the town, or by gift of the corporation. The mayor, recorder, two senior aldermen, and five other magistrates, nominated under an act of Geo. IV., are justices of the peace for the county of the town. The assizes are held twice a year, and general sessions of the peace by the mayor and recorder in January, April, June, and October. Petty sessions are held every fortnight. The gaol is a well arranged building. It has 6 wards and 16 cells, for an average number of 26 prisoners. The bor. sent 2 mems. to the Irish H. of C.; and since the Union it has sent 1 mem. to the imperial H. of C. Registered electors (1837-38), 606.

An extensive manufacture of coarse linens was formerly carried on here, which gave way to that of cottons; but the latter is also on the decline. A large mill for spinning flax is now in operation. The linen hall is a large brick building. Tanning was still in vogue here, as is the soap and candle manufacture. There are in the town 2 foundries, salt-works, a distillery, 3 breweries, and several large flour-mills, which last are in constant work. Drogheda also is in much demand both in England and in the foreign market.

The chief trade, which consists in the export of agricultural produce and of linen and cotton cloth, is carried on with Great Britain by means of steamers, 5 of which ply regularly between the port and Liverpool or Glasgow. The cross-channel trade and coasting trade employ also many sailing-vessels. The greatest part of the foreign trade is with the British colonies in N. America: timber is the principal article of import. The harbour and river have undergone several improvements, by means of which vessels of 300 tons may now discharge at the bridge, and barges of 70 tons may proceed inland as far as Navan by means of the Boyne navigation. The customs' duties in 1836 were 12,383*l.*; the excise duties for 1834 were 75,008*l.*; the post-office revenue in 1834 amounted to 204*l.*, and in 1835 to 2,063*l.*

An act of parliament has been obtained for a railroad from Dublin. The markets are on Thursdays and Sa-

turdays. The corn-market is an elegant building. Fairs are held on March 10., April 11., May 10., June 23., Aug. 26., Oct. 29., Nov. 21., and Dec. 19. Horses and wool are the chief articles for sale.

Account of the Quantities and Value of the Articles exported from Drogheda in 1835.

Articles.	Quantities.		Estimated Value.
	Number.	Tons, Cwt.	£.
Corn, meal, and flour -	-	23,513 4	236,852

DROITWICH, a bor. and market town of England, famous for its salt springs, co. Worcester, 7 m. N.E. by N. Worcester, 118 m. N.W. London. Pop. 1831, 2,487. Though locally in the upper division of the hund. of Halfshire, it has exclusive jurisdiction, and is pleasantly situated on the side of a narrow valley, at the bottom of which runs the Salwarp, on the road from Birmingham to Worcester. It has 3 parishes, and 3 churches, of which St. Andrew, rebuilt after being destroyed by fire, in 1233, is the most ancient and interesting. The town was originally incorporated by charter from John, confirmed by Henry III., and some of his successors, previously to the charter of *Inapp-zimus*, granted by James I., which is the governing charter. The corporate body consists of 2 bailiffs, burgesses, a recorder, 2 justices, a town clerk, and other officers under the title of the Corporation of the Salt Springs of Droitwich. The bailiff, his predecessor, and the recorder, are justices of the peace within the borough and bailiwick of Droitwich. A court of record is held every Thursday before the bailiff and town clerk, for the recovery of debts under 10*l.*, and sessions quarterly by the bailiff, recorder, &c. The bor. returned 2 mems. to the H. of C. under Edward I., and to the parliaments held in the 2d and 4th Edw. II., from which period the privilege ceased until 1554, since which time it regularly returned 2 mems. until the passing of the Reform Act, which deprived it of one of its members. Its boundaries were at the same time considerably extended, and the new pari. bor. had, in 1831, a pop. of 5,949. Registered electors in 1837-38, 326: the bailiffs are the returning officers. The election of members for the E. division of the co. is held here. There are 3 chapels: a chapel of ease, 1 for Independents, and 1 for Wesleyans; an hospital for 38 aged men and women, founded by Henry Coventry, in 1686; and a charity school for 40 boys and 40 girls, who are educated and clothed, and on leaving school apprenticed. The salt trade is the main support of the place; malling and tanning are also carried on, and there are some mills for grinding corn.

Droitwich has been celebrated from a very remote period for its brine springs, or *wich*, a name of Saxon origin, though its meaning be not well known. (*Campbell's Political Survey*, i. 76.) Reference is made to these springs in Domesday book, and it is certain that they were known, and that salt was obtained from them, long before its compilation, as is evinced by the grants by different Saxon kings to the church of Worcester, in all which the *wiches* are specially mentioned. (*Camden's Britannica*, Gibson's ed., i. 160.) Most probably indeed they had been known to, and wrought by, the Romans. The springs are in the middle of the town, and the salt is obtained by boiling and evaporating the brine. About a century ago the usual depth of the brine-pits was about 30 ft., but now they are generally sunk to a much greater depth and a far more copious supply of brine is obtained. An ounce of brine is said to contain 140*g.* grains muriate of soda, 23 grains sulphate of lime, 23 grains sulphate of soda, and a trace of muriate of magnesia. In 1820, when a high duty was laid on salt, the produce of the Droitwich springs was about 10,000 tons a year; but it has since materially increased. A canal from the Severn to Droitwich is used in the conveyance of the salt for shipment, and of the coals made use of in the works.

DROME, a dep. of France, in the S.E. part of the kingdom, formerly a part of the prov. of Dauphiny, having N. and E. Isère, E. the Hautes and Basses Alpes, S. Vaucluse, and W. Ardèche, from which last it is separated by the Rhone. Length, N. to S., about 86 m.; greatest breadth, 50 m. Area, 653,557 hectares. Pop. (1826) 303,500. This dep. is naturally divided into two portions, an easterly or mountainous, and a westerly or plain region. The former includes about 400,000 hectares, or nearly two thirds of the total surface, and is inter-

sected by ramifications of the Alps, with a mean elevation varying from 4,000 to 5,000 ft. The loftiest summits attain to about 5,760 ft. The chief rivers, after the Rhone, are the Isère and Drôme, but the latter is not navigable. There are a number of streams, which, though usually small, become during the melting of the mountain snows devastating torrents. In the elevated parts it is almost always cold, while along the banks of the Rhone the summer heats are very overpowering: the climate is, however, generally healthy. In the lower parts of the dep. there are about 100,000 hectares of rich land, the rest being generally of inferior fertility. In 1834, the cultivable lands comprised 269,100 hectares; vineyards, 23,936 do.; and forests, 269,100 and wastes, 308,560 do. Wheat, maize, and oats are the chief kinds of grain cultivated; but the corn grown is insufficient for home consumption. The other articles of culture are very various, including pulse of different kinds, hemp, walnuts, olives, chestnuts, almonds, madder, and other dyeing plants and fruits. The vine culture is perhaps the most important branch of rural industry, and about 150,000 hectolitres of wine of the best quality are exported annually. The finest growths are the red wines of *Hermitage*, *Crozes*, *Mercurat*, *Gervant*, &c., and the white wines of *Mercurat* and *Chamosson*; and the *Chateau de Drom*, *de la Cour d'acier*, vin, doux, spiritueux, et d'un goût agréable, mousse comme le champagne, mais il ne conserve ces qualités que pendant deux ans." (*Julien*). The genuine *Hermitage* bears a comparison with the finest growths of the Bordeaux and Upper Burgundy. The hills, called *Mas*, which produce it, have a S. aspect, and are mostly covered with a thin calcareous soil: they are so steep, that the mould has to be sustained by rows of low walls. The best growths of *Hermitage* are said by M. Julien to be "corré mouelleux, fins, et déliés; ils ont une triebelle couleur, beaucoup de spiritueux, avec une sève et une bouquet aromatique très-prononcés et de plus agréable." (*Topographie*, p. 190.) The wine of the *Mas* of Besas, which differs in several respects from the others, is principally bought up by the Bordeaux merchants to give body and flavour to the secondary clarets. The rearing of silkworms is carried on to a great extent, and in 1834 there was a greater number of mulberry trees in Drôme than in any other dep. of France, Gard alone excepted. The quantity of cocoons obtained in 1835 amounted to 1,475,029 kilogr. A great many bees are kept, and the honey is of very good quality. The middle mountain region is covered with woods of oak, beech, fir, &c., supplying excellent timber; above these there are extensive pasture-lands, feeding in summer numerous flocks of sheep and goats, many of which come from Provence. In 1830 the dep. had 377,000 head of sheep. Mines of iron, lead, and coal, and quarries of marble, granite, rock-crystal, limestone, &c., are wrought. Manufactures not very important; the chief are those of woollen cloth, serge, silk, and silk-crist, coloured linens, stockings and gloves at Valence, hats, paper, leather, brandy, oils, steel articles, chemical products, and earthenware. The trade is principally in the products of the soil, which include excellent truffles. Drôme is divided into 4 arrondissements, and sends 4 mem. to the Cham. of Dep. No. of electors, 1,385. Chief towns, Valence, the cap., Montelimart, and Crest. Total public revenue (1831), 6,013,156 fr. Drôme was annexed to France in 1848. (*Hugo*, art. *Drôme*; *French Official Tables*.)

DUBHOY, or DUBBOI, an Inl. town of Hindostan, prov. Gujrat, dom. of the Gulcowar, cap. of a pergunnah containing 84 villages, 38 m. N.E. Barrooch; lat. 22° 9' N., long. 73° 25' E. Toward the end of the last century it contained 40,000 inhab., a few of whom were Mohammedans, and none Parsees. It is nearly an exact square, and has been elaborately fortified, though only a portion of its works remains in any degree of preservation. The ancient walls have been built entirely of large square stones: the city gates are all strong and beautiful, especially the E. portal, called the "Gate of Diamonds," which, together with the temple connected with it, present a most complete and elegant specimen of Hindoo taste. "In proportion of architecture, and elegance of sculpture," says Mr. Forbes, "it far exceeds any of their ancient structures I have met with, and the groups of warriors on horseback, on foot, and on fighting elephants approach nearer to the classical bas-reliefs of Greece than any performances in the excavations of Elephanta." Within the walls there was a magnificent tank, 4 m. in circuit, lined with hewn stone, and with a flight of steps all round, and partly supplied with water by means of a stone aqueduct from receptacles without the walls. In the district around Dubhoi the soil is generally rich and loamy, producing fine crops of rice, jowaree, bajree, &c.; various legumes, cotton, sesamum, palma Christi, sugar-cane, hemp, flax, ginger, plants for dyeing, &c. (*Hamilton*, v. 528; *Mod. Trav.* x. 162-164.)

DUBLIN, the metropolis of the co. of Ireland, on the E. coast of the island, having E. the Irish Sea, or St.

George's Channel; S. Wicklow; W. Meath and Kildare; and N. Meath. Area, 348,581 imp. acres, of which 10,512 are unimproved, mountain, and bog. Principal river, the Liffey, by which Dublin is intersected. Surface mostly flat or undulating; soil shallow, and naturally poor, the subsoil being a retentive clay. Agriculture is by no means in an improved state; there is a want of a proper rotation and drainage, and white crops still not unfrequently follow each other. A good deal of land in the vicinity of Dublin is appropriated to garden culture. Average rent of land, exclusive of that portion called the co. of the city of Dublin, and of country houses, 18s. an acre; being as high an average rent as is paid by any co. in Ireland. Property a good deal subdivided. Farms near the city small, but larger at a distance. In 1831 Dublin had 30,861 inhab. houses, 72,029 families, and 380,167 individuals, of whom 173,856 were males and no fewer than 206,311 females.

DUBLIN, a city and sea-port of Ireland, of which it is the cap., co. Dublin, on the E. coast of the island, at the mouth of the Liffey, by which it is intersected; 292 m. W. N. W. London; 138 m. W. Liverpool; 60 m. W. Holyhead; lat. 53° 20' 38" N., long. 6° 17' 30" W.

Pop. in 1682, 64,463	Pop. in 1813, 176,610
1724, 146,075	1821, 185,581
1753, 128,870	1831, 203,650
1777, 134,208	1834, 240,300
1798, 182,370	

Of the population in 1834, as returned by the commissioners of public instruction, 61,800 were members of the estab. church, 3,500 Prot. dissenters, and 175,000 R. Catholics. The city is supposed to be the *Eblana* of Ptolemy, and was called by the native Irish *Balyath-clath*, "the town on the ford of hurdles;" and by the Danes *Divelin* or *Dubblin*, "the black pool," from its vicinity to the muddy swamps at the mouth of the river. At the period of the English invasion under Strongbow, A. D. 1169, the city was of very limited extent; its buildings being confined to the summit and declivities of a hill on the S. side of the Liffey, and enclosed by a wall little more than 1 m. in circ. For many years afterwards its increase in extent and population was extremely slow. At the commencement of the 17th century its suburbs extended but a very short distance beyond its ancient walls. In the wars of 1641, the additional works thrown up for the defence of the place lay between the castle and the college, which was then considered as outside the city. After the Revolution, the progress of improvement was comparatively rapid: new lines of streets were opened, particularly to the N. and E.; many of the confined old avenues were enlarged; several squares were laid out, and the buildings, both public and private, were constructed with greater regard to architectural elegance as well as internal convenience. An avenue, called the Circular Road, which nearly surrounds the city, encloses an area of 1,964 acres; of which, 785 are on the S., and 478 on the N., of the Liffey. The communication between its two divisions is maintained by 9 bridges; 7 of stone, and 2 of iron; one of which is for foot passengers only. The river is bordered on each side by broad and well-constructed quays.

The figure of the city is elliptical, its longer axis extending along the line of the river, from W. to E., 2½ m.; its shorter, from N. to S., nearly 2 m. Sackville Street, on the N. side, is remarkable for its great width and for its buildings; St. Stephen's Green, the largest of the squares, has in its centre an equestrian statue of George II.; College Green, an irregular and confined area near the centre of the city, where most of the main avenues meet, contains some of the finest public buildings, and has in its centre the equestrian statue of William III., so famous in Irish party history. The only other

public monuments of note are, Nelson's Pillar, in Sackville Street; the Wellington Memorial, a lofty obelisk in the Phoenix Park; and an equestrian statue of George I., at the mayoralty house.

Dublin Castle stands on the E. verge of the hill upon which the city was primarily built. It was originally a square fortress, with towers at the angles; it now consists of a quadrangle, 280 ft. by 150, surrounded with buildings containing the state apartments of the lord-lieutenant, and accommodations for the meetings of the privy council and other public functionaries. Attached to it is the vice-regal chapel, a small but elegant structure of florid Gothic architecture. Offices for the ordnance and quartermaster-general's departments, and for the constabulary, are also attached to it. A guard of honour, of cavalry and infantry, is mounted here daily. The lord-lieutenant's usual place of residence is in the Phoenix Park, an enclosed tract of about 1,000 acres, laid open for the recreation of the citizens, and serving also as a place of exercise for the troops of the garrison. In it is a powder magazine, a barrack, the offices of the trigonometrical survey of Ireland, an institution for soldiers' orphans, a military infirmary, and residences for some of the inferior officers of the government. Near its centre is a pillar, surmounted by a phoenix rising out of the flames.

The head-quarters of the military establishment for Ireland are at the Royal Hospital, Kilmannham, originally a priory of the Knights Templars, which, after the suppression of that order, was granted to the Knights of St. John of Jerusalem; and, having become the property of the crown on the dissolution of the monasteries, was converted by Charles II. into an hospital for superannuated and disabled soldiers. The building is a large square, three sides of which contain the lodgings of the veterans, and the fourth a chapel, a dining hall, and a suite of apartments for the commander of the forces.

The principal barracks are on the N. side of the city, near the Phoenix Park. They consist of several large quadrangles, containing accommodations for a general officer and his staff; and for 2,000 men, cavalry and infantry. There are also barracks at Fortobello, for cavalry; at Richmond Bridge, the recruiting depot, at St. George's Street, for infantry; and at the Pigeon-house Fort, and Island Bridge for artillery; containing in all accommodations for 5,500 men. The military infirmary in the Phoenix Park, near its W. entrance, can receive 250 patients.

The supreme courts of justice are held in a large building on the N. Quay, consisting of a central edifice, which contains a circular hall, opening into the courts of Chancery, Rolls, Queen's Bench, Exchequer, Common Pleas, Nisi Prius, and Admiralty; and wings in which are record repositories, and offices for the despatch of legal business. The King's Inns, or Inns of court, which are at the N. extremity of the city, contain halls for meetings and dining; the courts, offices, and record repositories of the Prerogative and the Consistorial courts of the see of Dublin, and the Registry of Deeds; near the main building is the library, containing a large collection of books. The privilege granted it under the Copyright Act of receiving a copy of every work published in the United Kingdom has been commuted for an annual grant, applicable to the purchase of books, at the discretion of the benchers. The number of barristers on the rolls of the courts is about 800, and of solicitors and attorneys, 1,600; but many of those whose names are entered never practised, and many others have withdrawn from the active duties of their respective professions.

The municipal boundary of the city differs considerably from that of the police and electoral franchise. On the E. side it extends to the village of Blackrock, 5 m. from the centre of the city; while on the N., W., and S. are several parts of parishes, in close contiguity with the rest of the city, are beyond it. The extent of the franchise, which was accurately laid down at a very remote period, is still ascertained by means of a triennial perambulation by the civic authorities. The limit on the sea side is determined by the place where a javelin, thrown by the lord mayor standing at low-water mark, falls into the water.

The rights and privileges of the corporation are secured by a long series of charters, commencing with that granted by Henry II. soon after his arrival, which is still preserved among the city muniments. The ruling body consists of the lord mayor, 24 aldermen, 2 sheriffs, 144 common councilmen, and an indefinite number of freemen. The lord mayor is chosen annually from among the aldermen, by the joint election of that body and the common council, the next in succession to the acting mayor being almost always nominated: he is the civil and military governor of the city, in which he ranks next after the lord-lieutenant; is admiral of the ports of Dublin

and Baldoyle, and a justice of the peace; he presides at the court of city quarter sessions; sits on the bench at the commission of Oyer and Terminer; holds a separate court for trial of petty offences; is chief judge of the lord mayor and sheriffs' civil court; and has the regulation of the public markets, and the inspection of weights and measures. He is personally distinguished by wearing a gold chain, called "the collar of S.S.," and has a cap of dignity, and a sword and mace, borne before him on public occasions; he also receives an annual salary of 1,320*l.*, Irish currency, besides fees from various sources to a considerable amount. His residence is a plain old-fashioned brick building; attached to which is a large circular hall, erected for the purpose of entertaining George IV. in 1821, but without any pretensions to exterior architectural beauty. The aldermen are elected for life, from among that part of the common council called sheriffs' peers; they form a kind of upper house, in which the lord mayor presides, and the sanction of which is essential to the validity of all corporate acts, with a few exceptions; they are also justices of the peace within the city. The sheriffs are chosen annually, by the board of aldermen, out of a list of four candidates named by the common council. They preside at the meetings of this latter body; assist the lord mayor in the execution of his duties; and when their year of office terminates, they become *ex-officio* members of the common council for life, under the name of sheriffs' peers, with the restriction that the number of persons enjoying this privilege shall not exceed 48: at present it is 32. The remainder of the common council consists of 96 representatives, chosen triennially out of the 25 minor corporations or guilds. The freedom of the city is obtained by birth, apprenticeship, or marriage; subject, however, to the approbation of the board of aldermen, which exercises a prescriptive right of refusal at pleasure, so that the nomination of freemen is thus virtually in that body. The board also grants the freedom of the city without any previous claim on the part of the candidate. Each guild exerts the right of admitting freemen into its own brotherhood, but such admission gives title to no civic privileges. The recorder, when elected by the aldermen and approved by the common council, retains his office during good behaviour. He is the legal adviser of the corporation, and presides in the city criminal court. His salary is 1,980*l.* per annum. The corporate meetings are held in the Assembly House, a plain building, originally erected for the exhibition of pictures.

The corporation holds a criminal court four times a year for minor offences; capital cases being referred to the superior judges. The court must be opened by the lord mayor and two aldermen; but, virtually, the recorder is the ruling judge. The lord mayor and sheriffs' court holds pleas of personal actions above 2*l.*; those under that amount are decided in the Court of Conscience, over which the lord mayor of the preceding year presides; its meetings take place in an apartment of the Assembly House. The recorder presides in the Civil Bill court, which is held four times a year, with power to decide by summary process in all cases of debt above 2*l.* arising within the city or liberties. The judicial business is transacted chiefly at the sessions-house; where also elections for the city representatives in parliament take place.

The prisons for criminal offences are,—1. Newgate, or the city gaol, a massive square building, for untried prisoners, felons condemned to death, who are executed from a balcony in its front, and convicts sentenced to transportation; there is also a ward for debtors under coroner's process: 2. Richmond Bridewell, to the S. of the city, for adult males sentenced to imprisonment and hard labour: 3. Smithfield Penitentiary, for juvenile male offenders; and, 4. Grangegorman Penitentiary, N. of the city, for females under sentence of imprisonment by the civic courts, and for female convicts for transportation, from all parts, previously to their embarkation. The debtors' prisons are,—1. The Sheriffs' Prison, near Newgate, for debtors not arrested under civic writs: 2. the Court-courts Marshalsea, for debtors under process of the superior courts; and, 3. the City Marshalsea, for those under process of the civic courts. The number of committals for criminal offences during the last 15 years were:—

Year.	Committ.	Year.	Committ.	Year.	Committ.
1844	2,125	1849	2,096	1854	2,371
1845	2,120	1850	2,129	1855	2,478
1846	2,091	1851	2,512	1856	2,627
1847	2,122	1852	2,584	1857	2,799
1848	1,982	1853	2,305	1858	2,507

The sentences of those committed in the last-named year were:—Death, 1, committed to transportation for 9*l*ths. Transportation for life, 16; for 14 years, 7; for 7 years, 113; for other periods, 11. Imprisonment for 2 years, 2; for 1 year, 378; for 6 months and under, 1255. Fine, 48.

Respite, 34. Inmate, 5. Acquitted on trial, 956. No bill found, 358. No prosecution, 183.

The income of the corporation arises from rents of lands and houses; the port duties of anchorage and slippage; assessments for pipe-water, and a casual revenue from renewal fines, freemen's admission fees, and fines for criminal offences. Tolls were levied on goods brought into the city for sale until 1818; since which time their collection has been suspended, in consequence of the general opposition made to them. The amount of the income arising from these sources is nearly as follows, according to the latest statement published:—

Rents of lands and houses	- - -	£ 14,934
Slippage and anchorage	- - -	300
Pipe-water tax	- - -	13,951
Casual revenue (not ascertained).		£ 30,185

The city returns 2 mem. to the H. of C. The elective franchise is vested in freemen resident within 7 m., forty shilling freeholders, 10l. householders, and 20l. and 10l. leaseholders for the respective terms of 14 and 20 years. Registered electors in 1832, 2,382; in 1838, 7,113.

The supply of water was originally drawn from the Dodder; but in consequence of its insufficiency, arising from the enlarged demands of an increasing population, additional supplies have been procured from the Grand and Royal Canal companies, at the rate of 12l. per cent. from the former, and of 15 per cent. from the latter, on the gross amount of the pipe-water revenue, which, at an average of 5 years, from 1828 to 1832, amounts to 2,800l. annually. The inhabitants have since received a copious supply of excellent water from three reservoirs, two S. and one N. of the river. In 1809 the corporation was empowered by act of parliament to levy an additional rate, in order to substitute cast-iron service-pipes in lieu of those of wood. The levy of the rate became the subject of legal dispute with the rate-payers, which was finally decided in favour of the latter, on an appeal to the House of Lords, the decree of which declared the corporation to be indebted to the inhabitants in the sum of 74,500l. on this account, and that the pipe-water rents are received and held by the corporation in trust for the benefit of the city.

The expenditure required for the erection and repairs of public buildings; the formation and repairs of roads; the salaries of civic officers, and public charities, are defrayed by assessments made by the city grand jury, consisting of 23 members, selected by the sheriffs every term, chiefly from the members of the corporation. The amount of taxation thus levied is as follows, for every fourth year of the period included in the subsequent table:—

	£.		£.
1810	- 13,285	1836	- 28,708
1814	- 18,607	1830	- 28,307
1818	- 21,648	1834	- 24,082
1822	- 25,128	1838	- 41,963

This tax, together with several others, is assessed on the houses, in such proportion that each house is liable to taxes to the amount of 1l. for each shilling of minister's money at which it was rated according to old valuations, since which the actual value of house property has altered considerably. To remedy the bad effects of this inequality, a new valuation was made in 1833, which gives the following results:—

Houses.	No.	Annual Value.
Upwards of 10l. ann. val.	- - -	12,252
Of 10l. and under	- - -	5,071
Total	- 17,324	658,594
		45,163
		704,757

Within or adjoining the civic bounds are five local jurisdictions, mostly independent of the authority of the corporation. They are, 1. the manor of St. Sepulchre; 2. the liberty or manor of Thomas Court and Donore; 3. the liberty of the deanery of St. Patrick; 4. the manor of Grangegorman, which includes the liberty of Christ Church; and, 5. the manor of Kilmainsham. The three first are popularly called the Liberties. The manor of St. Sepulchre lies to the S. E. of the city, and enjoys extensive powers, granted and confirmed to it by a succession of charters from the reign of John. It holds courts-leet and baron, and a court of record. Its criminal jurisdiction extends to capital cases, but the right, as far as respects these, has fallen into desuetude. A small court-house and debtors' prison is attached to it. The Archbishop of Dublin is lord of the manor. The pop. is estimated at 50,000. The liberty of Thomas Court and Donore lies S. W. of the city; Thomas Court being within the county of the city, and Donore in the county at large, of which it forms one of the baronies. Its separate rights are secured by a series of charters, and it holds a court-leet, a court of civil bill, and a court

of record for personal pleas to any amount. It has a court-house and small prison: the Earl of Meath is lord of the manor. The liberty of St. Patrick is a small district of about 54 acres surrounding the cathedral of the same name. It holds its privileges by prescription, and had courts-leet and a court for the recovery of small debts, both of which have fallen into desuetude; hence it has become a kind of sanctuary for debtors of small sums from the adjacent parishes. Attempts to abolish an exclusive jurisdiction, which interferes with the claims of the just creditor, have been successfully resisted by the corporation of the dean and chapter, which is lord of the manor. A seneschal appointed by it receives a trifling salary, but has no duties to perform. The pop. is small and very poor; there are not more than 24 good houses in the deanery. The manor of Grangegorman or Glasnevin comprises the greater and wealthier portion of the houses in the N. city parishes, and extends in some directions 7 m. N. and 10 m. S. It claims under an ancient charter, confirmed by another of 1 Jac. I. The corporation of the dean and chapter is lord of the manor. The right of holding courts-leet and criminal courts has fallen into disuse. The seneschal holds a civil bill court on Friday morning for the N. part of the manor, and on every alternate Friday evening for the S.; its sittings are held in each case in an apartment in a tavern. There is no prison, debtors being sent to the county prison at Kilmainsham. The liberty of Christ Church comprises the area in the centre of the city on which the cathedral is built. The manor of Kilmainsham, in which the royal hospital is built, lies W. of the city, and extends 9 m. W. Lord Cloncurry is lord of the manor. The seneschal holds a civil bill court six days in every quarter, with unlimited jurisdiction, but practically confined to actions under 5l.; the court sits in the county court-house at Kilmainsham.

The watching, paving, cleaning, and lighting of the city and liberties have been transferred from the municipal corporations of each to boards appointed by government.

The police is vested, by an act passed in 1835, in two local justices of peace, nominated by the lord lieutenant, with a salary of 800l. each, under whom are 4 superintendents, 16 inspectors, 90 sergeants, and 900 constables. The city, with the liberty, is divided into the Castle, College, Rotunda, and Barrack districts, in each of which there is an office, where an alderman and a barrister, both appointed by the lord lieutenant, sit daily.

The police jurisdiction extends over a district of 8 m. round Dublin, in every direction. The expenses of the establishment are defrayed by a parliamentary grant, by a tax on the inhabitants, by fines, and by carriage licences. The number of carriages licensed in 1834 was—

Coaches, job	- 104	Cars, jaunting	- 1,900
mourning	- 15	baggage, town	- 2,000
hackney	- 42	country	- 500
stage	- 9	Brewers' drays	- 104

The annual expenditure, both before and after the new act came into operation, and the portions paid by the corporate and general government are as follows:—

Local Assessment.	Parl. Grant.	Total.
1837	27,702l.	27,000l.
1838	29,093	31,238
1839	34,023	33,964
		64,702l.
		60,451
		67,987

The paving, cleaning, and lighting of the city was vested, in 1807, in a board of three commissioners, appointed and removable at pleasure by the lord-lieutenant. To this board was also given the charge of the public fountains, conduits, and sewers; and it was empowered to remove buildings that obstructed the main avenues through the city, and to widen the streets within the Circular Road. Under its superintendence, the city is well paved or macadamised, lighted with gas, and kept in a respectable state as to cleanliness. The average expenditure for the five years ending with 1833 was 43,306l.

The linen, woollen, silk, and cotton trades, which had been carried on to a considerable extent in the city and its vicinity, have all declined. The sales of linen were chiefly effected in a large site of buildings erected in 1778 by government, in the N. division, and rented to the factors: attached to it is a yarn-hall. The number of factors has decreased so much, in consequence of the decline of the trade, that most of the offices and stores are appropriated to other purposes. A pedestrian statue of Geo. IV. was erected in one of the halls, in commemoration of his visit to the establishment in 1831. The woollen trade was long carried on to a great extent in the S. W. liberties: a large building was erected there in 1814 by the late Thomas Piesantani, Esq., for tentering the cloth, a process previously carried on in the open air, and therefore subject to interruption from changes of weather; but since the repeal of the protecting duties, the manufacture has been nearly extinguished. The silk trade was introduced by emigrants from France, who settled in Dublin in the beginning of last century. The favourite manufacture was a fabric of silken warp and woollen weft, called tabinet or Irish poplin, which

is still in great demand. The other branches of the silk trade have been for several years in a very depressed state. The same may be said of most branches of the cotton trade; but print-works are still carried on at Ball's Bridge, and Island Bridge. Beer is extensively produced; and Messrs. Guinness and Darcy export large quantities of porter to Great Britain and foreign countries; there are also several distilleries. A few iron-foundries are employed chiefly in executing orders demanding immediate attention. Cabinet-making is carried on largely, as are the various trades required to meet the demands of a large and concentrated population.

The decay of manufactures in Dublin has been the subject of much irrelevant discussion. The truth is, that it has no single requisite for their successful prosecution, being without coal, and without the command of water-power. To suppose that its manufactures should ever rival, or be able to withstand the competition of those of Manchester, Glasgow, or Birmingham, would be absurd. They never had any better or more solid foundation than protecting duties; and the moment these were repealed, and the Irish people permitted fully to supply themselves with the cheaper and better products of Great Britain, the flimsy and exotic fabric fell to pieces.

The wholesale provision markets are held in Smithfield, Spitalfields, and Kevin Street. Smithfield market, which is within the civic jurisdiction, is held on Monday and Thursday for cattle, and on Tuesday and Saturday for hay and straw. A pig-market is held in the vicinity. Spitalfields and Kevin Street markets are in the manor of St. Sepulchre: the principal commodities sold in both are bacon, butter, and potatoes; and in the latter hay and straw. A wholesale fish-market is held in Boot Lane; one for potatoes, fowl, and eggs, and another for fruit in the neighbourhood. A corn-market, held by the corporation on Mondays and Thursdays, in Thomas-street, was discontinued when the building in which it was held was taken down to widen the street. Its business is now carried on by a joint stock company, in a building erected for the purpose on Burgh Quay, where the grain is sold by sample. The retail markets are all private property, but their management is under the control of the officers of the jurisdiction in which they are held; those in the city being under the lord mayor, who also regulates the assize of bread.

The inland trade of Dublin has been greatly promoted by the Grand and Royal canals, both of which terminate in the city, and communicate with the sea through the Liffey. (See last ann.) The quantity of goods conveyed to and from the metropolis by these canals in the years undernamed, was:—

Year.	Grand Canal.	Royal Canal.
	Tons.	Tons.
1821	142,692	108,833
1828	190,387	213,774
1831	277,810	199,844
1837	215,910	

The principal commodities conveyed by the Grand Canal in 1831 were,—stone, 22,000 tons; turf, 48,000 tons; manure, 25,000 tons; bricks, 27,000 tons; grain, flour, and meal, 52,600 tons; and miscellaneous articles, 35,600 tons.

Banking business is transacted by the Bank of Ireland, established in 1783; the Hibernian Joint Stock Company, 1824; and by the Provincial, the Agricultural and Commercial, the National, and the Royal Joint Stock banks, opened in 1828, 1834, 1834, and 1836; three private banking houses, and two savings' banks. The affairs of the Bank of Ireland are managed by a governor, who must hold 4,000*l.* stock; a deputy governor, with 3,000*l.*; and 15 directors, with 2,000*l.* each. It is the place of deposit for all government payments. The buildings, formerly the Irish parliament house, form a quadrangle, standing on an area of 14 acre, presenting three fronts; that to the E. of the Corinthian order, and those to the S. and W. of the Ionic. They are much admired, and the whole forms the finest pile of buildings in the city. It has a very ingenious system of steam machinery for printing the bank notes, so as to render frauds extremely difficult. A statue of Geo. III. occupies the spot on which the throne stood in the former House of Lords, now the directors' board-room.

An exchange was erected in 1767, in the centre of the city, partly by a parliamentary grant, and partly by subscription. The merchants held their meetings in it until 1786, when the greater facilities afforded by the Commercial Buildings in College Green induced them to transfer their dealings thither; and the exchange has been since nearly useless. The building presents a fine specimen of Grecian architecture, and contains pedestrian statues of Geo. III., Grattan, the celebrated orator, and Dr. Lucas.

The mercantile society of the Owl Galley, for deciding disputes relative to shipping and mercantile deal-

ings, by arbitration, was formed in 1705, and took its name from that of the vessel on which the first decision was pronounced. A chamber of commerce was established in 1820.

The river and port were vested in the corporation in 1590, by a charter of Hen. III. Admiralty jurisdiction belonged to Arlow, S., and the Nanny Waker, N., was granted by Elizabeth. In 1707, it was empowered to erect a ballast-office, the annual expenses of which were 4,400*l.*, at an average of 13 years, from 1753 to 1780. In 1783, the management of the office was committed to a new board, with control over the ballastage, tonnage, wherries, quays, and pilotage of the port, including the harbours of Dunleary, now Kingstown, and Dalkey. The total receipts of the board for 20 years, from 1814 to 1834, were 646,007*l.*, and the expenditure, 656,047*l.*; being an average of 32,300*l.* and 32,802*l.* per ann. each, and exhibiting a total deficit of 10,400*l.*

Vessels of large burden are prevented from entering the river by a bar at its mouth, with but 5 ft. water at spring ebbs. To remove this obstacle, walls have been built on both sides the river; that on the N. bank called the North Bull, extends only 1,200 feet; but that on the S. bank, or South Bull, projects 34 m. into the sea, being built about half way, in the form of a broad road, to the Pigeon-house Fort, and thence to its extremity by a broad wall of solid masonry. These structures not having produced the desired effect, a harbour was formed to the S. of the Peninsula of Howth in 1807, at an expense of upwards 420,000*l.*, enclosing a basin of 52 acres; but having been found inadequate to afford sufficient protection to the trade, another has been constructed at Kingstown, then Dunleary, enclosing a basin of 200 acres, with water sufficient to float vessels of 800 tons at ebb tide. The packets from Dublin to Liverpool and Holyhead sail hence, and it is connected with the city by a railway 6 m. long, constructed at an expense of about 240,000*l.*, or 40,000*l.* per mile. The railway was opened at the close of 1834, since which period it has been used chiefly for passengers, and promises to be an advantageous investment. There are four lights within Dublin Bay; one on the extreme point of Howth; the second and third at the extremities of the S. and N. walls; and the fourth, a revolving light, at the entrance to Kingstown harbour. The bay, which measures 6 m. at its entrance, between the Bailey or E. point of Howth, N. to Bray Head, S., and nearly the same distance E. to the city, is much admired for the beauty of its scenery, particularly along its S. coast; but the N. and S. sand-banks render its navigation very dangerous in stormy weather.

The extent of the trade of Dublin port may be inferred from the following table of the number and tonnage of foreign vessels, which entered in the years under-stated:—

Year.	British.		Foreign.		Total.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
1832	910	38,302	16	2,873	246	41,025
1833	840	45,039	35	5,540	275	52,449

The cross-channel trade, except that of coal, is now carried on chiefly by steamers, which sail principally to Holyhead and Liverpool; but partly also to London, Glasgow, Cork, Belfast, &c. Coals pay a duty of 4*d.* per ton, imposed to compensate the coalmeisters, whose services have been rendered nearly unnecessary by a late regulation allowing coal to be sold either by weight or measure.

The amount of the nett customs' duties, in 1836, was 832,356*l.*; in 1837, 793,645*l.*

ACCOUNT of the total estimated Value of the various Articles exported from Dublin in 1835, specifying the Quantities of the principal Articles.

Articles.	Quantity.		Value.

The fiscal business of the port is carried on at the custom-house, a very extensive and magnificent structure, capable, in fact, of serving as a custom-house for the empire, on the N. side of the river, near its mouth. The transfer of part of the business to London, in consequence of the union of the British and Irish boards of customs and excise, having rendered great part of the building useless, many of its apartments have been appropriated to the use of the stamp and stationery offices, the vice-treasurer's record department, the board of public works, the Poor Law commissioners, &c. Adjoining the main building are a floating dock and extensive stores, which were materially injured by a fire in 1834, but have since been in a great measure repaired. The business of the post-office is transacted in a large and stately building in Sackville Street: its revenue, in 1835, was 69,862; 1836, 70,563; 1837, 70,070.

Thirteen mail coaches and five mail cars leave Dublin daily. The penny post has 37 deliveries within the Circular Road, and the twopenny post 178 throughout the district within 8 m. of the city. Numerous steam-packets, carrying the mail, ply daily between Dublin and Holyhead, and between it and Liverpool.

Dublin is the seat of the archbishop's see, and of the second of the episcopiscopal provinces into which Ireland is now divided. The provincial jurisdiction is nearly co-extensive with the two civil provinces of Leinster and Munster. The see, including the bishoprick of Glandelagh, which was incorporated with it in 1214, includes the counties of Dublin and Wicklow, and part of Kildare. On the demise of the Bishop of Kildare, that see is also to be united to it. The landed property contains 34,040 acres, of which 23,926 are profitable. The income from rents and renewal fines was stated, in a return made in 1833, to amount to 7,450*l.* a year. There are two cathedrals: Christ Church, built near the summit of the hill on which the city stands, is the more ancient and superior. The building is plain, with no exterior architectural embellishments; it contains several remarkable monuments; among which is that of Strongbow, Earl of Pembroke. St. Patrick's Cathedral, in the valley, S. of Christ Church, also contains some remarkable monuments. The chapters of and installations of the Knights of St. Patrick, are held in it. The city contains 20 parishes or parts of parishes, the names of which, with the number and aggregate value of each, and the amount of ministers' money levied for the support of the established clergy, are given in the following table. The first 14 of the parishes, and St. Patrick's liberty, are to the S. of the river; the remaining 6 to the N.

Parish.	No. of Houses.	Annual Value.	Ministers' Money.
St. Peter's	2,860	19,366	£ 1,066 15 4
St. Mark's	1,076	38,599	530 3 3
St. Anne's	785	56,812	588 18 5
St. Andrew's	731	46,722	529 15 1

Total	17,224	704,757	7,285 6 9

According to the Rom. Cath. ecclesiastical arrangements, these 20 parishes are consolidated into 9 unions,

each having a place of worship; besides which, there are 11 chapels attached to friaries or nunneries. The number of clergymen and places of worship in Dublin are as follow:—Clergymen, Established Church:—1 archbishop, 11 dignitaries, 23 prebendaries, 12 rectors, 3 vicars, 32 curates, 25 chaplains; total 107. Rom. Cath.:—1 archbishop, 4 dignitaries, 2 archdeacons, 20 prebendaries, 9 parish priests, 47 curates, 6 chaplains, 6 Jesuits, 39 regulars; total 132. Presbyterians, 9; Dissenters, 6; Jews, 1. Total clergy of every religious persuasion, 266; which number, if equally distributed among the population, would furnish a religious instructor to every 900 souls, or to every 150 families. The places of worship are,—Established Church:—cathedrals, 2; parish churches, 20; episcopal chapels, 10; chapels attached to asylums, 2; to hospitals, 5; to schools, 3; total, 42. Rom. Cath.:—parish chapels, 9; friaries, 6; monasteries, 2; Jesuits, 1; convents, 8; total 26. Dissenters:—Presbyterians, 4; Independents, 4; Methodists, 6; Baptists, 2; Separatists, 1; Moravians, 1; German Lutherans, 1; Quakers, 2; total, 21. Jews, 1. Total places of worship, 90. St. George's Church, in the N.E. part of the city is a splendid structure, in the Grecian style. It is the only place of worship, except the cathedral, which has a place of bells. The Rom. Cath. church of the Conception, in Marlborough Street, considered the archbishop's cathedral, is of very large dimensions, and highly embellished internally, but not yet completed as to its exterior. The Rom. Cath. chapel of St. Francis Xavier is also an elegant building of the Ionic order.

Dublin was the seat of a university so early as 1820, but the institution gradually declined, in consequence of the unsettled state of the country, and the deficiency of funds. The existing university of Trinity College was founded in 1593, in the buildings of the dissolved monastery of Allhallows, applied to this purpose by the corporation, to which it had been granted at the dissolution of the monasteries. It consisted originally of a provost, 3 fellows, and 7 scholars; but at present of a provost, 7 senior, and 18 junior fellows, and 70 scholars, besides whom there are 16 professors, and 3 lecturers, with assistants, all endowed. The governing body consists of a chancellor and vice-chancellor, one of whom holds occasional visitations, and by a board, consisting of the provost and senior fellows, which sits weekly. The period of undergraduate instruction is about 4 years: the number of students is above 1,300 annually. The course of studies for candidates for a fellowship is logic, mathematics, natural philosophy, ethics, history, Latin, Greek, and Hebrew. The examinations, which are public, are carried on in Latin. The university derives a large income from lands, and the fees of students, and has also the patronage of a number of valuable benefices. It enjoys the right of returning 2 mem. to the H. of C., who are elected by the fellows, scholars, and all those who at any time have been fellows or scholars. The buildings, which present an extended front to College Green, are large and elegant: the principal are a library, containing upwards of 300,000 volumes, and entitled to a copy of every work published in the empire; a chapel, an examination hall, a museum, a dining-hall, a theatre of anatomy, and a printing office; it also maintains a small but well-kept botanical garden in the S.E. suburb. The College of Physicians is connected with the university; some of the courses of lectures are given in that institution, others in St. Patrick Dun's Hospital. The College of Surgeons, St. Stephen's Green, was founded in 1784. The incorporated company of apothecaries has established courses of lectures in pharmacy and other branches of medical science, at their hall in Henry Street. There are also several private medical and surgical schools, much frequented by students.

The chartered scientific and literary societies are—the Royal Dublin Society, for the promotion of the useful arts, having professorships in botany, chemistry, and experimental philosophy; drawing schools, a library, a museum, and a large botanic garden: the Royal Irish Academy, founded in 1786, for the encouragement of abstract science, polite literature, and antiquities, with a small but increasing library, containing a good collection of Irish MSS., and a museum: It has published nearly 20 vols. of Transactions. The Royal Hibernian Academy, founded in 1823, for the encouragement of the polite arts, meets in a building erected for its use, at an expense of 13,000*l.*, and presented to it by the late Francis Johnston, architect. An annual exhibition of the works of native artists takes place annually. All these institutions receive grants of public money: the amount of which for a series of years is stated in a subsequent table. The principal libraries, besides those already noticed, are Marsh's or St. Patrick's Library, near the cathedral of that name, and the Dublin Library, confined exclusively to subscribers. There are smaller collections of books, none of which are open to the public. At St. Patrick Dun's Hospital, Steven's Hospital, the Royal Hospital, Christ Church, and the Presbyterian meeting-house at Strand Street. The unchartered societies for science, literature, and the fine arts,

supported wholly by voluntary contributions, are—the Royal Irish Institution for Painting; the Zoological Society, which has a handsome garden in the Phoenix Park; the Horticultural, which maintains an annual show of flowers and fruit; the Agricultural, with an annual show of cattle; the Historical, for historical and political discussion; the Civil Engineers' societies; the Natural History Society; and the Mechanics' Institute, formed in 1837. There are 21 newspapers, 3 daily, 6 three times a week, and 12 weekly, and several monthly magazines.

The model schools of the Board of National Education and of the Kildare-place Society are held at their respective establishments. Schools, on the foundation of Erasmus Smith, are founded on the Coombe and in St. Mark's parish. Most of the parishes and congregations have free schools attached to them. The total number of schools maintained by grants of public money or voluntary contributions is about 200; the total number of pupils is about 16,000, who are educated, and partly clothed and maintained, at an expense of 38,000.

The principal charitable institutions which maintain as well as educate orphans and destitute children are the Foundling Hospital, founded in 1839, for the reception of destitute infants from all parts of Ireland, who are sent to the counties of Wicklow and Carlow to be nursed, and at a proper age are brought back to the central establishment, where they are educated and ultimately apprenticed to trades. The institution is supported wholly by grants of public money; but the injurious effect of these institutions on public morals, and the waste of life which they occasion, having been fully demonstrated, measures are now in progress for reducing, and finally closing the establishment, so that destitute children may be maintained by their respective parishes. King Charles's, or the Blue-Coat Hospital, a large and handsome range of buildings, maintains about 100 boys, the sons of reduced citizens. The Hibernian Society, in the Phoenix Park, was founded for soldiers' children; the Marine School, on the S. E. quay, for sailors' children; the Protestants' Orphan Society; and the Female Orphan House, N. Circular Road, for female orphans. The principal institutions for the relief of disease and accidents are, Steeven's Hospital, for Kilkenny; Sir Patrick Dun's; the Meath Hospital, which is also the county infirmary; the City Hospital; Jervis Street Infirmary; St. Mark's and Ann's; the Westmoreland Lock and Netterville Hospital; the hospital for incurables; two fever hospitals, one in Cork Street, the other on the N. Circular Road; and 10 lying-in hospitals, of which that in Rutland Square is the principal. Attached to this last-named is a fine suite of apartments and an enclosed garden or pleasure-ground for public amusements, the profits of which contribute to the maintenance of the institution. There are 10 dispensaries, supported partly by parliamentary grants and partly by private contributions. The institutions for cases of mental derangement are the District Richmond Lunatic Asylum, for the city and county, and for Louth, Meath, and Wicklow cos., supported by grand jury presentments;

Swift's Hospital, supported chiefly by the founder's bequest; an asylum near Donnybrook; and 6 private institutions. At the commencement of 1838, there were in the District Lunatic Asylum 284 patients (186 males and 149 females), who were supported at an annual expense of 4850*l.*; average, 17*l.* 5*s.* each. The number in St. Patrick's in the same year was 140 (60 male, 80 female); in the lunatic wards of the House of Industry, 474; and in the asylum at Donnybrook, and the other private institutions, 159: total in the asylums of Dublin, both public and private, 1,057. The chief asylum for the aged and impotent is the House of Industry, established in 1773, and supported wholly by grants of public money. Its buildings, yards, and gardens, extend over an area of 11 acres. The institution is arranged in six departments, which, in 1839, were occupied as follows:—

	No.
1 Aged and infirm	941
2 Idiots and incurable lunatics	473
3 Fever hospital	144
4 Chronic hospital	82
5 Surgical hospital	565
6 Confined mendicants	130
Servants and nurses, selected from the paupers	140
Total,	1,930

The expenditure for the year was 21,146*l.*, being, on an average, at the rate of 11*l.* per head nearly.

The Mendicity Association, on Usher's Quay, was opened for supplying paupers with employment and food, but not lodging; it is supported wholly by voluntary contributions. The number of inmates, and the annual expenditure, at periods at 5 years' distance from each other, were:—

Year.	Paupers.	Expenditure.	Average per head.
		<i>£.</i>	<i>£. s. d.</i>
1819	1,584	10,477	5 12 3
1825	753	5,545	5 12 8
1828	1,728	7,457	4 9 5
1834	1,957	7,011	3 12 0

The lowest average cost of each pauper in any year, from the commencement, was 3*l.* 6*s.* 1*d.*, the highest 5*l.* 14*s.* 2*d.*; general average, 4*l.* 5*s.* 8*d.*. The fluctuations in the expenditure arose chiefly from variations in the price of potatoes.

The minor asylums for age, debility, and want, are numerous. There are 2 for the blind, the Richmond, in Sackville Street, for males; the Molyneux, in Peter Street, for females: the inmates in each contribute to their maintenance by their labour. There are 2 houses of refuge for females of good character, and 10 for penitent prostitutes.

The following table shows the amount of public money granted to the literary and charitable institutions of the city during the last eight years for which returns have been published:—

Institutions.	1832.	1833.	1834.	1835.	1836.	1837.	1838.	1839.	Total for 8 Years.
Literary.	<i>£.</i>	<i>£.</i>	<i>£.</i>	<i>£.</i>	<i>£.</i>	<i>£.</i>	<i>£.</i>	<i>£.</i>	<i>£.</i>
National Education	20,000	25,000	20,000	35,000	45,653	50,000	50,000	50,000	295,553

Incurable Hospital	500	500	500	500	500	500	500	500	4,000

The places of public amusement are few, and not much encouraged. The Theatre Royal, Hawkins Street, is a large concern, and under excellent management. A minor theatre in Abbey Street has lately been burnt. An equestrian circus in the same street is opened occasionally. Clubs for social and convivial purposes are numerous. The principal are the Kildare Street, Sackville Street, United Service, the Beefsteak and the Friendly Brothers. A yacht club holds an annual regatta at Kingstown.

The environs of the city in every direction are very beautiful; the view of the valley of the Liffey from the rising grounds on the S. boundary of the county commanding the highly cultivated lands inclining to the sea-side, well planted, and studded with numerous seats and villages, the bay, with the hills of Killiney on the one

side, and the city spread out on the other; the Hill of Howth, Lambay, and Ireland's Eye, in the back ground; and, in clear weather, the Mourne mountains in the remote distance, present a landscape of superior tranquil beauty. The external appearance of the city itself is equally striking. The main avenues to it, particularly on the E. side, are spacious, airy, and bordered with large dwelling-houses; the public buildings, both civil and ecclesiastical, numerous, as compared with the size of the city, mostly of elegant architecture, and placed in imposing points of view. But this description is not applicable to every part. A line drawn N. and S. through Dublin Castle would divide the city into two parts, extremely different in appearance. The E., in which are the residences of the more wealthy class, contains most of the public buildings, all the squares

and streets of fashionable resort, both for amusement and trade: the W., once the seat of manufactures, and the emporium of the inland trade, is now in a state of dilapidation and extreme destitution.

A love of convivial enjoyments pervades all ranks. The habits of the higher and middle classes are special to a degree often bordering on profusion. Letters of introduction from strangers are the never-failing harbingers of rounds of dinner parties, evening entertainments, assemblies, balls, and suppers. The dinner hour varies from 5 to 7, and scarcely any business is transacted afterwards. Neither do the daily occupations commence at an early hour in the morning. The courts of justice seldom meet before eleven, and generally close before 4. Dancing is a favourite amusement; cards are every year getting less fashionable. Jaunting cars, both open and covered, carrying 4 persons, supply the place of the London cabriolets, and have wholly supplanted hackney-coaches. The appearance of the lower classes, particularly in the W. division of the city, exhibits, we regret to say, every indication of wretchedness. The habitations are mean and neglected; their clothes tattered; and they seem as if they maintained a constant struggle with poverty: but, despite all this, there is a light-heartedness about them that not only enables them to bear up under the pressure of want, but which, by rendering them comparatively insensible to its existence, paralyses their efforts to improve their condition, and makes them contented with the abject poverty in which they live. They are equally fond of amusement as their superiors; equally ready to indulge in dance and song. Intoxication is less frequent than formerly, and the spirit of riot and turbulence, which not many years since was the all but inevitable consequence of festive meetings, is rapidly subsiding,—a change partly owing to a stricter and better system of police, and partly to the moral influence of an improved state of society. Several meetings are held annually in the neighbourhood, ostensibly for the transacting of business, but in reality almost solely for festive purposes. The most celebrated is Donnybrook fair, in August, which formerly continued for a fortnight, but which is now properly restricted to a week. The fairs of Rathfarnham, Palmerstown, and Finglas, are of the same character, but in a minor degree. The family expenses of the middling classes are much the same as in London, with the exception of rents of houses, or lodgings, which are considerably higher, as compared with the accommodations. Butcher's meat is reasonable, and of excellent quality; fowl abundant; fish not so plentiful or cheap as might be expected from the vicinity of an extended line of coast well stocked with fish. Excellent coal is supplied, principally from Whitehaven, in Cumberland, at little more than half the London price; turf, brought down by both canals, supplies a cheap species of fuel for the lower classes. Considering the many advantages enjoyed by Dublin, in being the seat of the local government, and of the superior courts of justice, and the university; in the fertility of the adjoining districts; its excellent communications, both by road conveyance and inland navigation, with the still more fertile districts in the interior; in its cross-channel trade, and steam communication with the principal ports of Great Britain, and from the influx of strangers; neither the town, nor the condition of the inhabitants, has been nearly so much improved as might have been expected. Different theories have been, and may be, formed to explain this. We believe that it principally originates in the character of the population; but it would lead us too far to inquire into the circumstances by which it has been formed.

The principal events in the history of Dublin are identified with that of the Island in general, and are therefore to be found in the article IRELAND. But a few facts may be stated with respect to it. In 1169, it was taken by storm by the English, under Richard de Clare, better known by the name of Strongbow; and the Danes, who two years after laid siege to it with a numerous naval and land armament, were defeated with the loss of their leader, and forced to raise the siege. This was their last attempt to recover the dominions they once held in Ireland. In 1172, Henry II. landed, and held his court here in a temporary building erected outside the town, which was too small to afford suitable accommodations for the monarch and his retinue. In 1206, the castle was erected, and four years after, the citizens were unexpectedly attacked while amusing themselves in Cullen's Wood, now a suburb, by a party of Irish from the Wicklow mountains, and forced to seek the protection of the fortifications, after the loss of many lives. In 1210, King John held his court in Dublin, and about the same time the first bridge was built across the Liffey. In 1316, Edward Bruce was repulsed in an attempt to take Dublin. It was twice visited by Richard II., who took his final departure from it in 1399, the year of his dethronement and death. In 1486, the citizens declared for Lambert Simnel and crowned him in Christ Church. About the same time, the mayor was compelled to walk

barefooted through the city, as a penance for a violent outrage committed by the citizens in St. Patrick's Church. In 1534, Lord Thomas Fitzgerald, having rebelled against Henry VIII., laid siege to the city, on which occasion his batteries were mounted at Preston's Inns, now almost in its centre; but the obstinate resistance of the citizens, who burnt great part of the S.W. suburb to check his approach, compelled him to raise the siege. In 1583, a dispute between two of the Irish family of O'Connor was decided by wager of battle in the castle, before the lords justices and council. About the same time, the king's exchequer, which was kept between College Green and the castle, was plundered by a party of Irish from the mountains. During the civil wars of 1641, the battle of Rathmines, in which the Duke of Ormond was totally defeated by the garrison of Dublin, was fought in the neighbourhood. A mint for the coinage of brass money was established in 1689 by James II. The Grand Canal was commenced in 1765. A penny post-office was opened in 1778. In 1778, the first regiment of Dublin volunteers, arrayed for the defence of the kingdom against the threatened invasion by the French, appeared under arms. The Royal Canal, to the N. of Dublin, was commenced in 1789. The first steam-engine was set up in 1791; next year the buildings of the House of Commons took fire, while the members were assembled, and were completely burnt down; the cause of the fire was never clearly ascertained. The insurrections of 1798 and 1803 form part of the general history of the island. A jubilee was celebrated in 1809, in commemoration of George III. having entered on the 50th year of his reign. The commencement of 1814 was marked by a heavy fall of snow, which rendered the streets nearly impassable for three weeks. In 1816, the first steam-packet sailed from the harbour. In 1818, Dublin was visited by the Grand Duke Michael of Russia, and by the Archduke Maximilian of Austria, and in 1821 by George IV.; the latter landed on his birth-day at Howth. He was most rapturously welcomed; and it might have been supposed, were the declarations and speeches made on such occasions of the smallest value, that his visit was to be the commencement of a new era, and that faction and party strife were never more to disturb the public tranquillity. In 1824, the railway between Dublin and Kingstown, the only one hitherto (1839) completed in Ireland, was opened; and in 1836, the British Association for the Improvement of Science held its annual meeting in Dublin, when it was entertained with the characteristic hospitality of the country. (*Communication from Dublin.*)

DUBNO, a town of European Russia, govern. Volhynia, on the Irwa, 36 m. N.E. Brody. Pop. 7,000. It belongs to the princes Lubomirski, on whom its state reflects no credit, being ill built, with narrow, crooked, and unpaved streets.

DUDLEY, a town and parl. bor. of England, in a detached part or *enclave* of the par. of Worcester, surrounded on all sides by Staffordshire, 84 m. W. by Birmingham. The par. of Dudley, the limits of which are identical with those of the parl. bor., contains 3,930 acres; and had, in 1831, 23,043 inhab. and 4,326 inhabited houses. It consists principally of a long street, with a church at each end; the houses are generally good, and the streets paved, macadamised, and lighted with gas. St. Thomas's church, rebuilt in 1819 at an expense of 23,000*l.*, is a fine Gothic structure, with a lofty conspicuous spire; and two others are now (1839) in the course of being erected.

A chapel of ease has recently been erected, and there are places of worship for R. Cath., Methodists, Baptists, Independents, Unitarians, and Quakers. It has a grammar-school founded in the reign of Eliz., and endowed with land worth above 300*l.* a year. The number of scholars averages about 30 or 40. There is a charity school for clothing and educating 40 girls, and a charity for clothing 7 poor men, established in 1819. A school was also founded in 1732, for clothing and educating 80 boys, exclusive of about 200 not on the foundation. There is likewise a blue-coat school, where 230 boys are educated, and a school of industry. The Unitarians have a school for girls, and there are Sunday schools attached to the several places of worship. There are several book societies, and a well supported subscription library.

Dudley is a principal seat of the iron trade; its vicinity furnishing inexhaustible supplies of coal and iron ore; while the canals, with which it is connected, afford the means of readily conveying its products to all the great markets of the empire. The inhabitants are principally engaged in nail-making, which is the staple trade of the town, mining, the smelting of iron ore, and the manufacture of flint glass. Exclusive of nails, a great variety of iron implements are made here. In 1831, the coal mines employed 500 men, and 570 were employed as nailers, in which business great numbers of females are also employed.

The class of workmen comprises engineers, able mechanics of almost every description, such as pattern makers, carpenters, first-rate masons, founders, men of

great science for working the iron-stone, coal, and many others. Some of the persons employed will earn 12s. a week, and others 8s. An able-bodied labourer, with no particular skill, will receive, perhaps, 2s. 2d. a day. A man engaged in the iron-stone pits, will get 2s. 6d. a day; in the coal pit, 3s. 6d. and 2 quarts of beer; the men employed in the furnaces get about 30s. a week. A carpenter will get from 3s. to 4s. a day; a blacksmith 2s. 4d. to 2s. 6d.; a mason from 2s. 6d. to 3s. 6d.; a founder or moulder from 2s. 6d. to 4s. a day. Boys are employed in the pits and mines to attend to the fires, and various light jobs about the furnaces, to fill the boxes, barrows, &c. for the men; they obtain from 2s. to 7s. and 8s. a week wages. The price of coal in this district varies from 4s. to 8s. and 10s. a ton: the men engaged in the works, &c. are supplied with the coal at prime cost. The custom mostly is, to pay the men by the ton: some masters, however, pay them by the day. It takes a good deal of time to make a man a collier. He is first apprenticed to a person, himself a collier, either his father or fellow workman. The labour is severe, and the workmen generally live upon good food.

A mayor and other officers are annually appointed by the lord of the manor, the town is within the jurisdiction of the county magistrates, who hold petty sessions every Monday. A court baron is held every 3 weeks, for the recovery of debts under 40s. In the 33d Edward I. Dudley sent 2 members to the H. of C.; but the privilege was afterwards withdrawn, and the town remained unrepresented till the passing of the Reform Act, when the right to send 1 member to the H. of C. was conferred on it. Registered electors in 1837, 844; all 104 householders. The returning officer is appointed by the sheriff of the county.

To a stranger, for the first time approaching the town at night, the appearance presented by the numerous fires rising from the furnace forges, and collieries, is particularly imposing, their lurid glare illuminating the country for a considerable distance round. At Queen's Cross the coal in the mines is in a state of ignition; and the smoke or gas may be seen issuing from the interstices of the rock. These subterranean fires generally continue until the fuel which supplies them is nearly exhausted. This phenomenon has been observed, more or less, in the neighbourhood, for upwards of a century. At Russell Hall a stratum of from 25 to 80 ft. of argillaceous substances, lying between the upper stratum of coal and the surface of the earth, has been transmuted into a species of stone by the heat arising from these subterranean fires.

In the Saxon times a strong castle was built here, which has since undergone many vicissitudes. In 1644, it withstood a siege; and the occurrence of a fire in 1750, completed its destruction. Its ruins, which are very extensive, stand on an elevated situation, and command very fine and extensive views.

One of the most striking objects of curiosity at Dudley consists of the remarkable development of the mountain limestone in the hills under and immediately adjoining the castle. The peculiar stratification incident to a force acting powerfully from beneath, which has elevated a portion of the previously deposited beds of limestone, leaving them to dip on both sides from a central ridge, is developed with great distinctness. The stratification of this locality is still farther exhibited by the very extensive excavations in the limestone itself: some of these are open, and consequently very readily inspected, but the more extensive consist of long, horizontal galleries, whose extent and brilliancy can only be observed with the aid of torches, but which well repay the labour required in gaining a view of their dark and secret recesses. These workings extend 14 m. under the hill, and a canal, for the conveyance of the produce of the mine, extends the greater part of this distance. The organic remains of former races of animals are very numerous. Several species of *trilobites* (Dudley locust) and *crinoids* are met with not unfrequently, and corals, madrepores, &c. are in great profusion. Perhaps it may with justice be said, that few localities in the kingdom present so many curious and interesting subjects of observation to the geologist as this. Seldom have the operations of nature and of art united in bringing so much of the secret economy of the interior of the globe under the observation of the inhabitant of its surface. Many noble seats, and spacious residences, lie within a circuit of a few miles of the town. At Ladywood, within the par., and about 2 m. from the town, is a valuable spa, possessing similar qualities to the Cheltenham and Leamington waters, and equally efficacious for cutaneous diseases: here are also commodious hot and cold baths open to the public. There are also several chalybeate springs in the neighbourhood. The celebrated non-conformist divine, Richard Baxter, was for some time master of one of the schools in the par. Dudley conferred the title of Earl upon the late Lord Ward. Market-day, Saturday: fairs 8th May, 2d Oct., for cattle, sheep, and wool, 8th of Aug. for lambs.

DULCIGNO (Turk. *Olgun*), a maritime town of Turkey in Europe (the ancient *Oleisium*), prov. Albania, on the Adriatic; 19 m. S.W. Scutari; lat. 41° 53' 50" N., long. 19° 11' 49" E. Pop. 6,000? 40 m. S.S.E. Cattaro. The town possesses a citadel and a harbour, has some little trade, and is the residence of a R. Cath. bishop. Its inhabitants are the only natives of Albania who have a taste for a sea-faring life, or rather, perhaps, for piratical excursions by sea. When Sir J. Hobbhouse visited this town in 1809, they were accustomed to enter into the naval service of the Barbary powers, or to issue, as the Illyrians did of old, from the same port of Oleisium, to plunder the merchant ships of all nations." (*Journey through Albania*, p. 163.)

DULWICH, a village of England, co. Surrey, hund. Brixton, 5 m. S. London, being a hamlet of the par. of Camberwell, and included in its pop. returns. It is a quiet rural village, apart from any public line of road (except that to Sydenham), and mostly consisting of groups of respectable mansions scattered round a large open area planted with avenues of trees. Here is the celebrated Dulwich College, established in 1619, by Edward Allen or Alleyne, a contemporary of Jonson and Shakspere, and the most celebrated town actor of his day. He endowed it with the manor of Dulwich, and certain lands and tenements in the parishes of Dulwich, Lambeth, and St. Botolph, Bishopgate; the ann. rev. being at the time 800l.: but at present it is very much larger. The college was originally built by the founder in the Elizabethan style, from a design of Inigo Jones; it has of late years been renovated and augmented, and forms three sides of a quadrangle, with offices, a picture-gallery, and a large garden. It was founded for a master, warden, 4 fellows, 6 poor brethren, 6 sisters, 12 scholars, 6 assistants, and 30 out-members. According to the statutes, the master and warden must each be of the blood and surname of Alleyne, or—in default of relatives—of the same surname: they must be 21 years of age, and unmarried. The 2 senior fellows are required to be of the degree of M.A., and unmarried; and the 2 junior fellows graduate in holy orders. The brethren and sisters must be 60 years old, and single, when admitted. On the death of the master, the warden succeeds, and a new warden is chosen by lot from amongst candidates qualified as above. The fellows are also chosen by lot, when vacancies occur. The poor brethren and sisters are chosen in the same mode, from the 30 out-members, who must be parishioners of St. Saviour's Southwark, St. Botolph Bishopgate, or St. Giles Cripplegate (10 from each par.), and are lodged in almshouses appropriated to the purpose: the churchwardens of the above par. are *ex officio* assistants in the government of the college. The Archbishop of Canterbury is visitor. A library was bequeathed to it by Edward Cartwright, a comic actor, who died about the end of the 17th century, which contained a large, curious, and unique collection of old plays, subsequently (and with very valuable property) assigned to Garrick in exchange for some modern works. A respectable collection of pictures was also left to the institution by the founder, and by Cartwright; and to this a most valuable and splendid addition was made in 1810 by a bequest of Sir Francis Bourgeois, R.A., who also left 2,000l. to build a gallery for their reception, and to defray the expense of their preservation, &c. This fine collection of the old masters is open (except on Fridays and Sundays) to the public, admission tickets being obtainable by any respectable person, on application in London. It consists of about 300 pictures, mostly of the cabinet size, and was formed by M. Desenfans, an eminent collector, who bequeathed them, on his decease, to Sir Francis; and he, in turn, to the widow of his friend, for life, with reversion to the college: a mausoleum in the college chapel contains the remains of Sir Francis and Desenfans. Public service is regularly performed there, and it serves as a chapel of ease to the hamlet. There is a free school in Dulwich, founded in 1741, by James Alleyne, then master of the college, for 60 boys and 60 girls; the present revenue amounts to 2000l. a year. There are many elegant villas in the vicinity; and in summer the village is much resorted to by temporary visitors.

DUMBARTON, or **DUNBARTON**, a marit. co. of Scotland, consisting of two detached portions, of which the principal, or most westerly, lies between Loch Lomond on the N.E., Loch Long on the W. and N.W., the Clyde on the S., and the Milngavie burn on the E.: the other and much smaller portion lies on both sides the Forth and Clyde canal, from Cumbernauld to Kirkintilloch. Total area, 165,790 acres, of which nearly 80,000 are water, being principally part of Loch Lomond. It consists mostly of lofty rugged mountains, incapable of cultivation; the arable lands being principally in the S. part of the co., between Loch Lomond and the Clyde, and along the Forth and Clyde canal. The low ground is very fertile, and is pretty well cultivated. Estates mostly large; but arable farms are rather small, and even stock farms are not so large as in most highland

cos. Oats and potatoes principal crops, but very good wheat is also raised. Cattle in the upper parts chiefly of the highland breed; but in the low grounds, where dairying is extensively carried on, Ayrshire cows are almost exclusively met with. Sheep partly black-faced, and partly Cheviots. Average rent of land, in 1810, 7s. 10d. an acre. There are mines of coal and iron, and freestone and limestone quarries. There are large cotton mills at Dumtocher in this co.; and glass-making, paper-making, &c. are carried on to a considerable extent; there are extensive print-works on the Leven, the only river of any importance. The co. returns 1 mem. to the H. of C. Registered electors (1838-39), 1,218. The town of Dumbarton unites with Renfrew, Rutherglen, Kilmarnock, and Port Glasgow, in sending a mem. to the H. of C. Dumbarton is divided into 12 parishes; and had, in 1831, 3,785 inhab. houses, 6,343 families, and 33,911 persons, of whom 16,321 were males, and 18,170 females. Valued rent, 33,371. Scotch. Annual value of real property, in 1815, 71,567.

DUMBARTON, or DUMBARTON, a royal and parl. bor. and sea-port of Scotland, cap. of the above co., on the W. bank of the Leven, within 100 yards of its junction with the Clyde, 13 m. N.W. Glasgow. Pop. 2,305. The town consists of one well-built street in the shape of a crescent, and several smaller ones. The houses are crowded too closely together; so that many of them are ill-aired. There is a suburb E. of the Leven, connected with the burgh by a bridge of 5 arches. The chief public building is the par. church, a modern structure, with a spire and clock tower; there are also 2 chapels, belonging respectively to the United Associate Synod and the Rom. Cath. At high water, the Leven is navigable for large vessels to the quay at Dumbarton; but not so at very low tides. This is owing partly to a bar across the mouth of the river, and partly to several sand-banks between the entrance and the quay. The burgh has long been celebrated for its excellent educational seminaries. Sir John Smollet, of Bonhill, who was one of the commissioners for framing the articles of union between England and Scotland, and a member of the Scottish parliament before that event, and of the Imperial parliament after it, was educated here; as also his son, Dr. Smollet, the celebrated novelist. Dr. Patrick Colquhoun, author of a *Treatise on the Police of London*, and other works, was also a native of this place, and received his early education here. With regard to manufactures, shipbuilding and rope-making are carried on to a small extent; and it is celebrated for its manufacture of glass, introduced in 1770. When this manufacture was in its most flourishing state, in 1818, it employed 300 workmen; and in 1 year paid 119,000*l.* duty. At that time, there were about 2,000 tons of shipping belonging to the port. These works ceased for a few years; but having recently (1838) been sold and passed into other hands, the manufacture has been resumed, and promises to be as extensively carried on as ever. Various species of manufactures abound in the neighbourhood, along the line of the Leven from Loch Lomond, whence it flows, to the Clyde, a distance of 7 m. Dumbarton was erected into a royal burgh by Alex. II. in 1222; but at or near its site there had been a still more ancient town, called Alclud, the cap. of the Strathclyde Britons. The most important object connected with the place is the castle, on a rocky eminence, at the mouth of the river, once surrounded by water, and resembling the rocky islets, the Bass and Ailsa Craig. The rock on which it stands is about a mile in circumference at the base; it has two summits, the highest of which is 206 ft., and is a most conspicuous and interesting object from the Frith of Clyde and the opposite coast. The date of the erection of the castle is not known; but it is known to have been a royal fortress from very remote periods. Its name is intimately connected with the history of Scotland; and it was, at different times, in the possession of Edward I., John Balliol, Robert Bruce, Queen Mary, Charles I., and Cromwell. It is one of the forts that, at the time of the Union, it is agreed should be kept in repair. Dumbarton unites with Port Glasgow, Renfrew, Rutherglen, and Kilmarnock, in sending a mem. to the H. of C.; and had, in 1838-39, 160 registered voters. (*New Statist. Account of Scot.*, § *Dumbarton*; *Chambers's Cyclopedia*, III. 900.)

DUMBLANE, or DUNBLANE, a market town and formerly a bishop's see, Scotland, co. Perth, on the Allan, a tributary of the Forth, 4 m. N. Stirling, and 22 m. S.W. Perth. Pop. 1,570. Though once a city, having been the seat of a bishop, it is now only a large village, destitute of importance, and consisting of a single street, with a few lanes. But little business is carried on, except what results from a weekly market and four annual cattle fairs. A number of strangers are attracted to it in summer, owing to an excellent mineral well in its vicinity. It is chiefly celebrated for the remains of its cathedral and other episcopal edifices. The cathedral is pretty entire, but no portion of it is converted to use except the choir, which serves for the parish church. The dean's house is new used as the minister's manse or

parsonage-house. Robert Leighton, afterwards archbishop of Glasgow, held the see of Dumblane from 1663 to 1670. This celebrated person bequeathed his library, consisting of 1,400 volumes, to the cathedral and diocese of Dumblane. It is still extant, and has received great accessions by subsequent bequests. It is open not only to the clergymen of the prebatory, but, on easy terms, to the public. The battle of Sheriffmuir, on the 13th of November, 1715, between the constitutional forces under the Duke of Argyle, and those of the Pretender, under the Earl of Mar, was fought near this town. Though indecisive, the result of the conflict was eminently favourable to the revolutionary establishment. (*Chambers's Gaz.*; *Keith's Scottish Bishops*, p. 170; *Murray's Life of Leighton*, Edin. 1828.)

DUMDUM, a military village and extensive cantonment in Hindostan, prov. Bengal, 6 m. E.N.E. Calcutta. It is the head-quarters of the Bengal artillery, and consists chiefly of several long low ranges of buildings of one story, ornamented with verandahs, the lodgings of the troops, and some small but convenient officers' quarters; the whole adjoining a large plain, used as a practice ground. A battalion of European artillery is usually stationed here: it has a church and a free school.

DUMFRIES, a marit. co. in the S. of Scotland, having S. the Solway Frith, E. Cumberland, N. Roxburgh, Selkirk, Peebles, and Lanark, and W. Ayrshire and Kirkcudbright. Area, 808,320 acres, of which only about 1-4th or 1-5th part is supposed to be arable. With the exception of Annadale and Nithsdale, that is of the low ground traversed by the rivers Annan and Nith, the principal in the co., it is for the most part mountainous; the mountains, however, are not generally rugged or heathy, but are mostly of an easy ascent, and afford good sheep pasture. This, like most other Scotch cos., has been wonderfully improved since the American war; and very material improvements have been effected within the last dozen years, principally through the facilities afforded by steam navigation for the conveyance of fat sheep, cattle, and other farm produce to Darnley, and the consequent extension of the turnip culture, the introduction of bone manure, furrow draining, &c. Roads, fences, and farm buildings, have been astonishingly improved; and are now, speaking generally, as good as any in the kingdom. Cattle are mostly of the Galloway breed; and Cheviots are rapidly displacing the black-faced breed of sheep. Hogs extensively raised (see next article). Property, mostly in very large estates: that of the Duke of Buccleugh, in this co., is one of the finest in Scotland, and the improvements made upon it within the last few years, reflect equal credit on his Grace's intelligence and liberality. Farms in the lower districts vary from 100 to 500 acres; in the hill district they vary from 500 to 10,000 acres. Average rent of land, in 1810, 6*s.* 1*d.* an acre. There are valuable coal and lead mines in the par. of Sunquhar; and freestone is abundant, particularly in the vicinity of Dumfries. Manufactures unimportant. The co. is divided into 43 parishes, and sends 1 mem. to the H. of C. Registered electors in 1838-39, 1,927. The burghs of Dumfries, Annan, Sanquhar, and Lornburn (which are the principal towns) unite with Kirkcudbright in sending a mem. to the H. of C. In 1831 Dumfries had 12,365 inhab. houses, 14,096 families, and 73,770 inhab., of whom 34,829 were males, and 38,941 females. Valued rent, 158,538*l.* Scotch. Annual value of real property in 1815, 256,621*l.*

DUMFRIES, a sea-port and parl. bor. of Scotland, co. Dumfries, of which it is the cap., on the E. bank of the Nith, about 9 m. from its influx into the Solway Frith, 64 m. S. by W. Edinburgh, and 32 m. W. by N. Carlisle. Pop. in 1831, 8,432; inhab. houses, 1,154; families, 1,888; but, including a suburb called Maxwellton, on the opposite side of the Nith, in Kirkcudbright, and comprised in the parl. bor., the pop. in 1831 was 11,500. The town is well and handsomely, though irregularly, built; the High Street, which stretches nearly 1 m. in length, does not run in a straight line, and is greatly obstructed at one point by a steeple, or building, in which the town council holds its meetings, placed in the very centre of the street. Almost all the other streets lie either at right angles with the High Street, or parallel to it. The houses are generally built of red freestone, which the neighbouring country produces in unlimited abundance; and such of the buildings as are of old date are generally whitewashed; while many in the modern part of the town are painted in imitation of Portland stone. Altogether, the town is clean, neat, and substantially built, with comparatively few marks of poverty or destitution; and is regarded as the provincial capital of the S. of Scotland. There has been no material increase in the streets or buildings of the town for many years past, but there has been a considerable increase in the number of villas in the vicinity. Maxwellton is connected with it by two bridges, the one built in the 13th century, and consisting originally of 13 arches, of which only 7 are now visible; the other, a very elegant

gant structure, erected in 1795. The public buildings are numerous. There are two parish churches; St. Michael's, rebuilt in 1745, and the New Church, erected in 1757. The former is chiefly remarkable for its extensive and crowded burial-ground, with the vast number and variety of monuments by which it is surrounded. Of the first class of monuments there were, in 1830, 107; of tombstones on pillars, 712; besides about 1,000 others, of a more common description. It has been calculated that, exclusive of ruinous and dilapidated monuments, the cost of erecting those in preservation could not have been less than 100,000*l*. In this cemetery was erected, by public subscription, in 1815, at an expense of 1,500*l*., a mausoleum to the memory of Burns, who spent the last years of his life in Dumfries, and whose remains are deposited in a vault below. An emblematic piece of marble sculpture, executed by Turnell, in the interior of the structure, represents the genius of Scotland finding the poet at the plough, and throwing her inspiring mantle over him. Near the churchyard gate are deposited the remains of Andrew Crosbie, Esq., advocate, once the ornament of the Scotch bar, who exemplified in real life the character of Counsellor Pleydell, as portrayed by the fancy of Sir Walter Scott. A third church has recently (1840) been erected; and there are 8 dissenting chapels, some of them favourable specimens of architecture. The steeple in the High Street, already mentioned, is a handsome structure, the work of Inigo Jones. In Queensberry Square, off this street, is a handsome Doric column, erected in 1780, in honour of Charles, Duke of Queensberry. The other public buildings are the trades' hall, court-house, county gaol, containing a bridewell, infirmary, dispensary, academy, assembly-rooms, theatre, and lunatic asylum, called "The Crichton Royal Institution," founded in 1838, by Mrs. Crichton, widow of the late Dr. Crichton, of Friar's Carse, only half of which is yet built; when finished, it will have cost 70,000*l*, and will accommodate 200 patients. The infirmary, which was opened in 1776, is the only institution of the kind in the S. of Scotland. There is a poor-house, founded and endowed by two brothers of the name of Muirhead, in 1753, which accommodates, at an average, 30 old and 20 young paupers, besides dispensing charity to about 40 widows, who live out of the building. The poor are supported at an expense of about 1,500*l*. a year, derived principally from an assessment on heritable property, according to its real value, and which, in 1840, was fixed at the rate of 1*s*. per pound; but partly also from the interest of money in mortmain for this purpose. The number of paupers, exclusive of the inmates and pensioners of the poor-house, is about 456. There is also a bequest (yielding about 200*l*. yearly) for the support of the lame and blind. As to education, the means are very ample. There are 3 parochial schools in the parish, and 4 endowed seminaries under the patronage of the town-council, united under the name of the Dumfries Academy; an institution that has long held a high character. The fees in it are, per quarter, for English, writing, and arithmetic, 5*s*.; for Greek and Latin, 7*s*. 6*d*.; for mathematics, &c., 10*s*. 6*d*.; and for French, 1*l*. 1*s*. The aggregate number of schools, male and female, in the town, is not less than 20. There are 4 libraries belonging to societies, a mechanics' institute, an observatory, a savings' bank, and various religious associations. There are 4 public reading-rooms, and the town produces 3 weekly newspapers; two of which have a very extensive circulation.

With regard to manufactures, the chief branches carried on, to any extent, are those of hats and hosiery. The number of stocking-frames is now (1840) about 500 in the town and vicinity, and the value of their manufacture is estimated at 70,000*l*. a year. There are three hat manufactories, but the numbers employed in them are small. Formerly checked cottons were produced here; but this branch has disappeared, and the cotton weavers who remain (about 300, including the neighbouring villages,) are employed through the medium of agents by Carlisle or Glasgow manufacturers. The trade of tanning is carried on to a considerable extent, there being nine considerable tanneries. There are several breweries, and the largest basket-making establishment in Scotland. The manufacture of clogs or strong shoes, with thick wooden soles, the use of which is almost entirely confined to the inhab. of the S. of Scotland, is with one or two slight exceptions peculiar to Dumfries; but it does not employ many hands, the use of the article being on the decline. Shoemaking is here a flourishing branch of industry, and employs upwards of 350 individuals: great quantities of shoes are exported.

Dumfries has long been celebrated for its weekly cattle-markets, and its four great annual fairs for the sale of cattle and horses, which, with the markets, are held on the Sands, an open space between the town and the river. Most part of the cattle raised in the co. of Dumfries, and a considerable part of the peculiarly fine breed of cattle raised in Galloway (eos. Kirkcudbright and Wigton),

are disposed of in the Dumfries markets. Perhaps, at an average, 25,000 head of cattle, of the average value of 10*s*. each, may be annually sent up from Dumfries and Galloway to England, principally to Norfolk, where they are fattened for the London markets; and it is probable that the fat cattle sent by steam to Liverpool, and those sent to the markets of Edinburgh and Glasgow, may be worth 100,000*l*. a year additional, making an aggregate sum of 250,000*l*. a year received into the district for cattle. From 400 to 600 horses are annually exposed at each of the two great horse-fairs. Dumfries is also the principal pork-market in Scotland. From the end of November to the end of March, above 1,300 carcasses, of the average weight of 14,000 stones, are sold weekly: in the height of the season, the sales are frequently much more considerable, and instances have occurred of from 5,000*l*. to 7,000*l*. having been received for pork in a single market day. (*M^d Diarmid*, p. 27.) The pigs come principally from Galloway, but they are produced to a greater or less extent in all parts of the district. At Candlemas fair as many as 30,000 hare skins have sometimes been offered for sale, though of late the quantity has been much less. The principal foreign trade is with America and the Baltic for timber, of which the annual value imported varies from 8,000*l*. to 10,000*l*.: the remainder is coasting trade. The imports are coal, slate, iron, tallow, hemp, bones, timber, wine, and colonial produce; the exports, wool, freestone, hosiery, shoes, pork, fat cattle and sheep, grain, wood, nursery plants, and grass seeds. The number of vessels, of all burdens, belonging to the port is 90, the total tonnage of which is 5,934. (O. R.) The number of foreign vessels trading to the port varies from 12 to 18. Customs' duty, in 1839, 9,286*l*. Vessels of above 60 tons burden can approach the town, the river having recently been much deepened: there is also a quay about 700 yds. distant; one for vessels of greater burden about a mile and a half farther down; and a fourth near the mouth of the river for foreign vessels, and such as draw too much water to approach nearer to the town. There are no fewer than 6 different banking establishments in Dumfries, the deposits in which are supposed, on good grounds, to amount to upwards of two millions sterling. The town is governed by a provost, 3 bailies, and 22 councillors. Corporation revenue, in 1838-39, 1,596*l*. Municipal constituency, 485.

Dumfries is a place of great antiquity, though it was not made a royal burgh till the 12th century. It was less than a century afterwar, s. Devorgilla, daughter of Alan, last lord of Galloway, and mother of John Balliol, King of Scotland, erected a monastery here for Franciscan friars; and for the sake of this religious house, she built the old bridge, the toll on which formed part of the endowment of the institution. It was in the chapel of this monastery that John Cumyn, the heir and representative of Lady Devorgilla, and one of the competitors for the throne, was slain, in 1305, by his rival, Robert Bruce. The castle belonging to the Cumyns was situated on a spot in the immediate vicinity of the town, which still bears the name of Castletykes. A strong castle once stood on the site now occupied by the New Church. Being in some respects a border town, Dumfries frequently fell into the hands of the English. It was for some time in the possession of Edward I. It was burnt by the English previously to 1440, and again in 1536. In 1570, the castle was taken and sacked, together with the town, by the Earl of Essex and Lord Scrope. Queen Mary and her privy council, in 1623, ratified, at Dumfries, a peace with England. James VI., in passing through the town, in 1617, on his return to England, presented the trades with a small silver gun, to be fired, from time to time, to the great mortification, a pastime which still obtains. The inhab. in 1706, displayed their opposition to the union of the two kingdoms by burning the articles and the names of the commissioners at the market-cross. They evinced great loyalty towards the reigning family in 1715, and so fortified their town, that a large body of insurgents, who had determined to attack it, found it expedient to change their resolution. But in 1745, the town suffered severely from the rebel army, which was stationed here a few days on its return from England.

Though reckoned an extremely healthy town, Dumfries suffered excessively from Indian or spasmodic cholera in 1832. The disease made its appearance on the 15th Sept., and disappeared in the last week of Nov. The total number of cases officially reported was 837; of deaths 422; and of recoveries 415. The spinsters of Dumfries would seem to have less chance of changing their condition than those of most other towns. According to the census of 1831, there were in the town and par. 6,400 females, and only 5,306 males.

Dumfries, including Maxwellton, unites with Kirkcudbright, Sanquhar, Lochmaben, and Annan, in sending a mem. to the H. of C., and, in 1839, had 692 registered voters. (*New Stat. Acc. of Scotland*, § *Dumfries*; *M^d Diarmid's Picture of Dumfries*; *Chalmers's Caledonia*; *Chalmers's Gazetteer*; *Private Information*.)

DUNBAR, a royal and parl. bor. and sea-port of Scotland, co. Haddington, on a slight eminence on the German Ocean, 27 m. E. by N. Edinburgh, and 28 m. N.W. Berwick. Pop. (1854) 3,217; families 787. It consists of a long and well-built street running E. and W. with inferior streets towards the sea, and one on the S. introducing the road from Edinburgh. Its public buildings are a new parish church of Gothic architecture, with a tower 107½ ft. high; Dunbar House, the ordinary residence of the noble family of Lauderdale; the town-hall; and burgh schools. It has a subscription and mechanics' library; an English and Latin school under one master, and a mathematical school; and several private seminaries; a sailors' society for the benefit of superannuated seamen and their widows; three dissenting chapels, two belonging to the United Associate Synod, and one to the Wesleyan Methodists. The harbour has 9 ft. water at neap, and 14 at spring tides, but owing to rugged rocks the entrance is dangerous. Vessels belonging to the port 18, tonnage 1233. Coal is imported to the extent of about 20,000 tons a year; foreign grain to a considerable extent. Corn of various kinds, including beans and peas, exported to the amount of about 15,000 qrs. Whisky exported, in 1855, 91,900 gallons. The export of whisky is now less than in former times, and the distilleries have almost stopped. There are two branch banks in the town. There are two foundries, one of them is celebrated for its manufacture of steam-engines. Dunbar was formerly a sample-market for grain, which was, in 1832, converted into a stock market. It is inferior, as a grain-market, only to Dalkeith and Haddington. The burgh has long stood high as a fishing station. White fish of all kinds are caught off the coast. The cod is pickled, and sent to London; the haddocks are smoked, and sent chiefly to Edinburgh and Glasgow; the lobsters are preserved in pits, cut in the rock within sea-mark, and sent to London. The herring fishery is very productive; 300 boats being, at an average, employed in this line: the quantity caught in a good year being about 30,000 barrels. Dunbar was created a royal bor. by David II., but existed as a burgh long before that date. It is mentioned in history so early as the 9th century. It evidently grew up under the protection of the celebrated castle of Dunbar; a fortress which was destroyed by Henry VIII. in 1547, but the date of its building is unknown. The castle and lands of Dunbar were conferred, in 1072, by Malcolm Canmore, on the Earl of Northumberland, whose descendants, created Earl of Dunbar and March, retained possession of them till their forfeiture in 1434. This fortress rendered Dunbar the theatre of many warlike exploits. It was taken by Edward I. in 1296. Edward II. took refuge here after his defeat at Bannockburn. It was often beleaguered, and seems alternately to have belonged, for longer or shorter periods, to the English and Scotch. Four times it received within its walls Queen Mary. In 1567, parliament ordered it to be demolished, as it then belonged to the crown. Scarcely a vestige of it now remains. The town was entirely burned by Henry VIII., to punish the Scotch for refusing to allow the marriage of the young queen with his son. Cromwell here defeated the Scots under General Leslie in 1650. The 6th earl of Dunbar, in 1218, founded in the neighbourhood a monastery of Red Friars, of which some traces yet remain; and the 7th earl founded a monastery of White Friars, but of it no vestige can now be seen. The title of Earl of Dunbar was revived, in 1603, by James VI., in the person of George Home, of Manderston, lord high treasurer of Scotland, at whose death, as he left no heirs male, it again became extinct. A splendid marble monument, 12 ft. broad, and 26 high, was erected to his memory in the old, and is now preserved in the new, church of Dunbar. Dunbar unites with N. Berwick, Haddington, Lander, and Jedburgh, in sending a member to the H. of C.; and in 1838, had 128 registered voters. (*Keith's Relig. Houses*, pp. 369, 455.; *Caledonia*, v. *Dunbar*; *Miller's Hist. of Dunbar*, 1830; *New Stat. Account of Scot. art. Dunbar*.)

DUNDALK, a sea-port town and parl. bor. of Ireland, co. Louth, prov. Leinster, 45 m. N. Dublin, at the extreme E. point of Dundalk Bay, near the mouth of Castletown river. Pop. (1821) 9,256; (1831) 10,078. In 1834, the parish, which extends beyond the town, had a pop. of 14,317, of whom 1,447 were of the estab. church, 256 P. M. dis., and 12,614 R. Cath. "It is a flourishing and increasing place" (*Encyclopædia Repert*), consisting of 3 main streets, each 1 m. in length, intersecting each other near the centre, with several transverse thoroughfares. They are paved, lighted, and kept in order by commissioners under the watching and lighting act. A bridge crosses the Castletown river on the N. There is an assembly-room, a literary society, and two news-rooms. A hunting club holds its meetings here, and races take place occasionally in the neighbourhood. Near the sea-side is a large cavalry barracks. The parish church is a spacious building: there is also a large R. Cath. chapel, and meetings-

houses for Presbyterians, Independents, and Methodists.

It has an endowed classical school, to which the sons of freemen are admissible at a low quarterly fee; a school, called the Dundalk Institution, under the Incorporated Society; one on the foundation of Erasmus Smith; and some others supported by the contributions of individuals: these educate in all about 600 pupils; and about 500 are instructed in private seminaries. It has also a co. infirmary, a mendicity association, a savings' bank, and several minor charitable institutions. The building in which the fever hospital was held is now a pin factory. Lunatics are sent to the Richmond District Asylum in Dublin.

Though incorporated by charter of Richard II., the bor. is governed under a charter of Charles II. The ruling body consists of a bailiff, 16 burgesses, and an unlimited number of freemen chosen by the burgesses. Dundalk returned 2 mem. to the Irish H. of C., and now returns 1 to the Imperial H. of C. The parl. bor. comprises 445 acres, and had, in 1831, a pop. of 10,750; registered electors (1837-38), 423. The assizes and general sessions of the peace for the co. are held here twice a year, and petty sessions every Thursday. A guildhall contains apartments for municipal purposes, an assembly-room, and offices for several branches of public business. The co. court-house, an elegant modern structure, is built on the model of the temple of Theseus at Athens. The co. prison is large and well constructed; a tread-mill in it is used for raising water.

There are here a steam flour-mill, 2 distilleries, 4 tanneries, 2 salthouses, a malthouse, and a foundry. The trade consists principally in the export of a large portion of the agricultural produce of Louth, Cavan, and Monaghan; comprising wheat and wheat-flour, oats and oatmeal, barley and malt, with cattle, sheep, pigs, &c. The introduction of steam navigation has occasioned a great increase in the export of eggs and poultry. The harbour is safe but shallow; the anchorage ground has from 4 to 8 fathoms water. Markets on Mondays; fairs on the Monday next but one before Ash-Wednesday, May 17., first Monday in July, last Monday in August, second Monday in October, and second Monday in November.

Account of the Quantity and Value of the Articles exported from Dundalk in 1855.

Articles.	Quantity.	Estimated Value.
Corn, meal, and flour - cwts.	605,226	279,713
Provisions - - - -	—	46,160
Flax and tow - - - -	10,580	12,000
Wool - - - - lbs.	5,000	980
Linen - - - - yards	15,600	4,500
Eggs - - - - number	2,410,800	5,430
Cows and oxen - - - head	3,932	30,000
Horses - - - -	102	100
Sheep - - - -	7,266	10,000
Pigs - - - -	48,183	70,000
Other articles - - - value	—	5,000
Total - - - -	—	452,813

Dundalk is inhabited mostly by families connected with commerce and manufactures. The working classes are comparatively well clad and lodged; the vicinity of the sea enables them to make use of fish occasionally as food. Fuel, both of peat and coal, from Great Britain, is plentiful.

It was one of the fortresses erected by the English shortly after their settlement, for the defence of the northern pale; but its defences have since been suffered to fall into decay, and few remains of them are now in existence. (*Report on Irish Railways*, App. B. p. 24.)

DUNDEE, a flourishing royal and parl. bor. and sea-port of Scotland, co. Forfar or Angus, on an acclivity on the N. bank of the Frith of Tay, 34½ m. N. by E. Edinburgh, and 59 m. S. by W. Aberdeen. Pop. in 1740, including the par. 5,302; in 1801, 26,804; in 1831, 45,356; but in the town only, 44,200. No. of inhabited houses in Dundee 3,892, averaging nearly 1½ persons to a house. The pop. cannot now be under 50,000. The town stretches upwards of a mile along the Tay, and inland about half a mile up the acclivity which terminates in Dundee Law, an insulated conical hill, 525 ft. above the level of the river. In the centre of the town there is a spacious parallelogram, 360 ft. long by 100 broad, called the Cross, or market-place, and six of the principal streets diverge from it. There is generally great irregularity in the streets, except in the modern portions of the town; and there are many narrow and mean lanes, which contrast strikingly with the new streets. The suburbs along the Tay are marked by many elegant villas. Of public buildings, by far the most imposing is St. Mary's Church, with its tower 156 ft. high, a splendid edifice, built in the 12th century, though it has since been often repaired and enlarged, and which under one roof contains four separate places of worship. There is another parish church, and five chapels, connected with the

new ground across parishes. There are no fewer than 17 dissenting chapels, some of them fine specimens of architecture. Of these chapels, 6 belong to Presbyterian dissenters, 3 to Episcopalians, who have lately united, and now form one congregation, consisting of about 500 families of 1,100 persons, 3 to Baptists, 2 to Independents, 1 respectively to the Methodists, Glasites, and Catholics. The other public buildings are, the town-house, trade's hall, academy, Watt institution (devoted to popular lectures on arts and sciences), gaol and bridewell, infirmary, lunatic asylum, dispensary, the exchange reading-rooms. The means of education are very ample, there being no fewer than 80 schools, of which none are endowed except the grammar-school and academy, which two seminaries are now united under one roof. There are schools connected with some of the numerous spinning mills in the town. The system of infant schools was introduced in 1830. The town is well supplied with subscription libraries and reading-rooms. There are three newspapers published weekly. With regard to charitable institutions, there are many instances of sums of money being left in mortmain for such purposes, sometimes including education; but none of these bequests is very large. The assessment for the poor is about 4,000*l.* annually; but the whole money spent in this way, including every species of income, is about 11,000*l.* There are 30 friendly societies, and no example of persons receiving aid from them ever becoming paupers. The religious societies are numerous, the sum raised by them annually being about 550*l.*, exclusive of the extraordinary collections in the various churches and chapels, which average about 600*l.* Since 1824 a well organised police has been established, which costs about 4,000*l.* a year. A company was established in 1823, which supplies the town with gas. The capital vested in it is about 51,000*l.* The consumption is very large, occasioned by gas being used not only for lighting the streets, spinning-mills, and manufactories, but from its being introduced generally into private houses.

Dundee is eminent for manufactures, being the chief seat not only of the Scotch but of the British linen manufacture. The business is principally confined to the coarser fabrics, such as Osnaburghs, imitation Russia sheeting, sail-cloth, sacking, and bagging; but the spinning of finer yarns has been introduced within these few years, a part of which is manufactured in the place, and the remainder exported to France and Belgium. The value of yarns exported in the year ended the 31st of May, 1839, was about 385,000*l.* The finer sorts of linen fabrics, such as damask, diaper, shirting, are exclusively confined to Dunfermline. Dundee imports the raw material, or hemp, flax, and codilla, almost solely from Russia, Prussia, Holland, and Brabant, rather more than two-thirds of the whole supply coming from Russia. The manufacture has not been long established in Dundee. The total import of flax, in 1745, was only 74 tons; and in 1791 not more than 2,743 tons. The business, indeed, made very little progress till the use of spinning machinery was introduced. Previously to the beginning of the present century, all the yarn used in the manufacture was spun on the hand-wheel, the expense of *spinning* alone being about equal to that of the yarn, including the raw material, while the quality of the article was very inferior. The introduction of spinning machinery, indeed, has been the commencement of a new era in the progress of the linen manufacture of this place.

The following table will show the progress of spinning mills in Dundee:—

Year.	No. of Mills.	No. of Tons of Flax, &c. used.	No. of Spindles of Yarn produced.
1811	4	480	224,640
1832	31	15,600	7,488,000
1839	47	27,000	12,960,000

At the close of 1839 the number of spinning mills was 41, of 1,695 horse-power, of which 951, using about 19,000 tons of flax, were employed, and 744 were unemployed. If the whole were fully employed, their consumption of flax, &c. would be 33,000 tons. But the imports of the raw material at Dundee are considerably greater than the quantity here specified as used in the town, generally about a fifth or a sixth more, this extra quantity being disposed of in the various burghs and villages in the neighbourhood, or throughout the district. The aggregate number of flax-mills in Forfarshire was 96, in 1838; of which 47, or about a half, are situated in the town of Dundee; but the greater part of the raw material, imported for the more distant mills, is landed at Arbroath and Montrose. The exports, like the imports, have been rapidly increasing. They amounted to 89,480 pieces, in 1791; to 464,732 pieces, in 1830; to 618,707, in 1835; and to 717,470 in 1839, worth between 1,425,618*l.* and 1,500,000*l.*

The imports of flax, flax codilla, hemp, and hemp codilla, from which the staple articles of their trade are manufactured for the last four years have been:—

Year ending 31st of May	1836	1837	1838	1839	Tons.	Value.
	-	-	-	-	89,565	1,057,534 <i>l.</i>
	-	-	-	-	32,141	1,660,032 <i>l.</i>
	-	-	-	-	19,709	605,372 <i>l.</i>
	-	-	-	-	34,462	1,017,942 <i>l.</i>

The value of the manufactured goods and yarns exported for the same period has been:—

1836	-	Value, 1,651,439 <i>l.</i>	1838	-	Value, 1,172,670 <i>l.</i>
1837	-	— 1,284,862 <i>l.</i>	1839	-	— 1,810,466 <i>l.</i>

To the cost of the raw material employed in these manufactures the value added by labour, &c. amounts to from 30 to 50 per cent. An inspection of these returns shows therefore how much the trade was affected by the commercial crisis, which commenced in Oct., 1836, as the value of the manufactured goods, &c. exported in the year ending 31st May, 1837, but little exceeds the value of the raw material imported during the same period.

The spinning mills are driven wholly by steam-engines. There is a great deficiency of water; an inconvenience which many attempts have been made to obviate, but hitherto without success. The total extent of machinery is estimated, as already seen, at 1,695 horse-power, the cost of which at 400*l.* per horse-power is 678,000*l.*; but, at present, it is considerably depressed. It is supposed that about four persons are employed in the mills for every horse-power, or an aggregate of about 6,700 individuals, of whom rather more than a half are under 18 years of age. None are now employed under 12. Notwithstanding, however, the all but universal use of the spinning mill, the yarn for some of the very coarsest fabrics is still hand-spun. This arises from the material being so very coarse and short, that it cannot be converted into yarn by spinning mills. It is found also that hemp used in the manufacture of tarpauling, pimento bagging, and some other fabrics, can be more cheaply spun by the hand than by machinery, as from not requiring to be so highly dressed there is a great saving of waste. The yarn is generally bleached before it is woven. The same individuals, in some instances, import the flax, spin it into yarn, manufacture the yarn into cloth, and export the finished article to the various foreign markets; but generally the principle of the division of labour is attended to, and the spinner sells his yarn to the manufacturer. The weaving is often carried on by the various persons engaged in it, on their own looms, in their own houses; but in some instances the manufacturer has a factory for this part of the business, and furnishes both the looms and other materials to the weaver. The loom generally used is the common one, with the fly-shuttle. The power-loom which was tried several years ago, and abandoned as not being applicable for the weaving of linen—probably from its then defective construction, is now introduced, and from the better quality of the yarn, and its improved structure, is found to answer well for weaving dowlas, sheeting, and the lincens sent to the French market. One extensive manufacturing house employs 220 looms, another 110; and a factory is being erected which, when completed, will contain 300 looms, of which at present 90 are at work.

Previously to the crisis of 1836, the wages of men and women employed in the spinning mills, working 69 hours in the week, were 18*s.* for the former, and 8*s.* 6*d.* for the latter. At present, the rate of wages is about 25 per cent. under these prices, and it is probable they would have been lower, had not a considerable number of the Irish who settled here when the trade was good, left the place in search of employment. The wages of weavers, which, in 1836, were from 10*s.* to 14*s.* per week, are now from 7*s.* 6*d.* to 10*s.* 6*d.* The highest wages are given to machine-makers, mill overerss, and flax-dressers. In 1836 they were 18*s.* to 20*s.* per week, and are now also 25 per cent. under these prices. The advance which has taken place in the price of provisions since 1836, and the reduction of wages, has rendered the situation of the working classes very uncomfortable, and unless a speedy improvement takes place, the population will have difficulty in finding employment, even at a farther reduction of wages, although the manufacturers are averse to have recourse to the expedient.

Since 1836 the price of weaving has fallen in the following ratio:—

For one fabric, as	1836	1840
	10 <i>s.</i> 6 <i>d.</i> —	12 <i>s.</i> 6 <i>d.</i>
	26 <i>s.</i> —	7 <i>s.</i> 6 <i>d.</i> or 8 <i>s.</i>
		17 <i>s.</i>

In weaving sail-cloth, and other heavy goods, men only are employed, but in the lighter fabrics women are pretty extensively engaged.

The harbour of Dundee was till 1815 on a humble scale, and adapted only to a very limited commerce. Only one small pier existed. But in the year referred to an act was obtained for separating the harbour from the other branches of the burgh revenue, for constructing an

entirely new work, on a scale commensurate with the growing importance of the place, and for investing the management in a board of commissioners. Additional acts were obtained in 1830 and 1836. The consequence has been, that Dundee can now boast of the completion of two wet docks, King William's, of 64; Earl Grey's, of 54; and of a tide-harbour, of 44 acres, connected with them. The breadth of the lock of the former, to which is attached a splendid graving dock, is 40 feet, of the latter 55 feet, made of this width to admit steamers. A crane, reaching 28 feet, from the face of the quay wall on which it is placed, and capable of lifting 30 tons, is erected at this dock, so that every facility is afforded for taking out and putting in the boilers, &c. of the largest steam vessels. There is also a Morton slip attached to the tide-harbour, on which three vessels may be placed at once, as the length of the ways for repairing is 330 feet. The vessels are hauled up by a steam-engine of 15 horse power, and a ship of 800 tons may be placed on the slip; one of the Dundee steamers, the Perth, weighing, without her boilers, 695 tons, was lately repaired on it.

A wet dock of 141 acres is now being constructed, the lock of which will be 60 feet. The harbour plan also embraces another wet dock of 94 acres, and the tide-harbour between these docks will be of the extent of 11 acres. The quays are wide and spacious, affording berths for above 55 vessels at the same time, and there are extensive and convenient carpenters' and other yards for ship-building. The accommodation for the building and repairing of vessels is not surpassed in any port of the kingdom.

These splendid works had cost in May, 1839, no less than 447,248*l.* 1*s.* 6*d.*, of which 356,150*l.* 18*s.* 0*d.* had been expended on the works, and 82,097*l.* 3*s.* 6*d.* paid as interest of the money borrowed. The amount of shore dues and rents collected up to May, 1839, was 233,678*l.* 13*s.* 6*d.*, and the sum borrowed 213,672*l.* 8*s.* The sum allowed to be borrowed on the credit of the harbour is 230,000*l.* The revenue of the harbour from Martinmas, 1760, to 15th of July, 1815, when it was put under a parliamentary commission, was only 38,666*l.* 3*s.* 4*d.*, and during this period the sum expended in maintaining it was 9,464*l.* 10*s.* 9*d.* The shore dues in 1765 yielded 125*l.*; 1775, 140*l.* 5*s.*; 1785, 490*l.*; 1795, 955*l.*; 1805, 1,272*l.* 10*s.*; 1814, 1,701*l.* 10*s.* 3*d.* Their amount in the following years has been:—

Year 1816	-	L. 4,096	0	0	Year 1838	-	L. 15,249	8	9
1824	-	7,851	0	0	1839	-	15,996	15	11
1833	-	9,996	0	0					

It is essential also to bear in mind, that though the income has thus rapidly increased, the rates of charge have been very considerably reduced. The customs' revenue in the undermentioned years has been:—

Year.	Revenue.	Year.	Revenue.
1825	L. 6,241	1838	L. 78,026
1832	49,547	1839	92,537
1837	76,450		15 4

The number and tonnage of vessels belonging to the port at different periods has been:—

Year	No. of Vessels.	Tonnage.
1832	-	274
1837	-	318
1838	-	316
1839	-	325

Note.—This is the tonnage belonging to the Port of Dundee. The Parliamentary Return includes that of Perth, and would show:—

Year.	No. of Vessels.	Tonnage.
1832	-	349
1837	-	398
1838	-	408
1839	-	417

In 1839 the average wages paid per day to workmen employed at the harbour were:—Smiths, 2*s.* 10*d.*; Wrights, 3*s.* 9*d.*; Masons, 2*s.* 6*d.*; and Labourers, 1*s.* 10*d.*

In 1838 the number of British vessels which cleared out for foreign ports was 292, tonnage 46,670; and 49 foreign vessels, tonnage 7,005. In 1839 the number of the former was 297, tonnage 43,933; of the latter 47, tonnage 7282.

There are several shipping companies belonging to this port, such as the whale fishing companies which, in 1825, employed 10 vessels, of about 300 tons each, but from the great depression which has taken place in this trade they are now reduced to 5; the Dundee, Perth, and London Shipping Company, &c. This latter company began its operations in 1798, with 4 vessels: it has now 34, including steamers, plying at least, by sailing-vessels and steamers, twice a week to London, Glasgow, Leith, &c. A vast amount of black cattle, sheep, and agricultural produce, is now shipped from Dundee for London by the three steamers, two of which were put on that passage in 1834, the other in 1837. They are first class vessels, having cost 64,000*l.*; have excellent accommodation for passengers; perform the voyage of

480 miles at all seasons of the year with remarkable regularity, and in the short space of from 36 to 42 hours. The capital employed in the concern is 80,000*l.*

Previously to 1819 the ferry over the Tay from Dundee to Newport, on the opposite coast of Fife, a distance of two miles, was plying by sail boats. The inadequate accommodation afforded to the public, and the inconvenience experienced from the want of low water piers, were such as induced some spirited individuals to form a company to improve the ferry, and for that purpose to obtain an Act of Parliament. Under it, at an expenditure of 35,000*l.*, the ferry has been improved, and low water piers erected, so that a passage may be effected at all times of the tide. There is now a regular passage boat, impelled by steam, that plies once an hour. The thoroughfare is great, there being about 100,000 passengers a year, besides black cattle, sheep, horses, carriages, &c., the proceeds being about 5,000*l.* per annum. Were the ferry across the Forth improved in the same manner, the intercourse would be greatly increased, as it would then become the great road to the north of Scotland. There were, on the 6th of April, 1840, 10 steam vessels registered in Dundee, tonnage 1806. There are other two steamers belonging to the port, the George IV. ferry-boat, and the Caledonia iron steamer, which are not registered. Dundee has seven banks, of which three are parent establishments. Also a savings' bank, established in 1818. In Nov. 1838, it was placed under the national security system. The amount of deposits on the 30th Nov. 1839, belonging to 1,933 depositors, was 10,248*l.* 11*s.* 3*d.*

The other more important branches of industry carried on in Dundee are, tanning, sail-making, rope-making, and ship-building. There are also various foundries, machine-factories, sugar-refineries, candle-works, &c. We may state, that Dundee is remarkable for the adoption at different times of different kinds of industry and speculation. The manufacture of coarse woollens, cottons, and glass, was successively tried and abandoned. Leather was at one time a principal article, and 7,000*l.* worth of shoes were annually exported: this trade is also extinct. The linen manufacture now forms the great staple, to the exclusion of almost every branch of business not connected with it.

There are two railways connected with this town, those of Dundee and Newtyle, and Dundee and Arbroath. The former, which was opened in 1832, is 10½ m. in length, and cost upwards of 90,000*l.* It passes through a hilly country, has three inclined planes, wrought by steam-engines, and a tunnel, 340 yards in length. Branches are now open to Cupar-Angus and Glamis. The number of passengers in 1839 was 68,169, and the traffic in goods, 47,530 tons. The latter, on the Dundee and Arbroath line, which is 16½ m. long, will, when completed, cost about 120,000*l.* The formation of the road averages an expense of about 6,050*l.* per mile. It was partially opened in 1838, and was completed to and opened from the harbour of Dundee on the 2d of April, 1840. The revenue drawn from the line 53 passengers who travelled on it in 1839, was 8,104*l.* 15*s.* 6*d.*, and from parcels 271*l.* 15*s.* 6*d.* They will now commence carrying goods. The line is almost a dead level.

Dundee is of great antiquity. It was made a royal burgh in 1210; and afterwards became so important as to be occasionally a royal residence. It was twice occupied by the English under Edward I., but was as often retaken by Wallace and Bruce. At the Reformation, it espoused the new faith so warmly that it acquired the name of "the Second Geneva," and many of the persecuted Presbyterians were at different times in the habit of seeking refuge in it.

Dundee was formerly a walled town; but of its walls and gates no traces remain, except the Cowgate Port, preserved from respect to the memory of the famous George Wishart, who, during the dreadful plague of 1544, preched from the top of this gate, the diseased being removed to the outside, while the healthy were in the inside. The town was besieged and taken by the Duke of Montrose in 1645, and by General Monck in 1651; and on both occasions it was sacked and plundered. Alexander Scrymgeour, one of the companions of Wallace, was created constable of Dundee by that brave patriot, a dignity which the family enjoyed till the direct line failed in the time of Charles II. Sir John Scrymgeour was created Viscount Dudhope in 1641; and his grandson, the last of the family, Earl of Dundee in 1661. The lands and constabulary of Dundee were then conferred on Maitland of Hatton; but he being deprived of all his privileges in 1696, they were bestowed on John Graham of Claverhouse, who, in 1698, was created Viscount Dundee, only a few months before his death in the battle of Killiecrankie. The estates were next conferred on the noble family of Douglas, who still hold them. The castle of Dudhope, now used as a barrack for soldiers, stands between the town and the Law. There were three monasteries and a nunnery at Dundee, but no traces of them are now to be seen.

The town was visited by spasmodic or Asiatic cholera in 1833, and of 808 persons seized, 513 died. It revisited the town next year, but was not generally diffused, and its ravages were comparatively limited.

Previously to the passing of the Reform Bill in 1832, Dundee was united with Forfar, Perth, Cupar, and St. Andrews, in sending a member to the H. of C.; but since that period it has enjoyed the privilege of having a representative for itself. The registered voters in 1839-40 were 2,740. (*Parl. Reports; New Stat. Account of Scotland*). But the recent and most valuable information has been obtained from the best private sources in Dundee.)

DUNFERMLINE, a royal and parl. bor. and eminent manufacturing town of Scotland, co. Fife, 3 m. N. Frith of Forth, 16 m. N.W. Edinburgh, and 6 m. N.W. North Queensferry. It is about 300 ft. above the level of the sea, and occupies an agreeable, but rather inconvenient situation, being placed on the face of an extensive eminence, difficult of ascent on the S. for heavy carriages. Pop. of town and suburbs, 1801, 5,484; 1831, 10,026; but, including the parish, 17,068: inhab. houses, 2,347, giving about 74 persons to a house.* The pop. has not increased much since 1831, and is not at present supposed to exceed 16,000. The town stretches fully a mile in length from E. to W. in its length, and is about 3 of a mile. The main street, which is handsome and substantially built, is pretty regular. Almost all the other streets are more or less irregular; and while some are handsome, not a few are of an opposite description. A large suburb having risen up on the W., and being separated from the town by a deep ravine, formed by the Balbridge Burn, a bridge was thrown over the rivulet in 1770; and the ravine having been so far filled up, buildings have been erected on both sides. The only very distinguished public building is the parish or Abbey church, being part of a monastery founded here by Malcolm III., surnamed Caenmore, and which served as the parish church till 1821, when a new church was erected to the E. of the old building, and in immediate connection with it: the old, in truth, serves as the vestibule of the new place of worship. When digging in what is called the Psalter churchyard (on which spot the choir formerly stood), for a proper site for the new edifice, the tomb of the most illustrious of the Scotch sovereigns, ROBERT BRUCE, was discovered in 1818. His skeleton, which was pretty entire, and 6 ft. in length, was disinterred, and a cast of his skull taken. It was re-interred, amidst much state, by the barons of exchequer, the bones being placed in a new coffin, filled up with bituminous matter, calculated to preserve them. The spot is below the pulpit of the new church. This building, which is of Gothic architecture, harmonises well with the old structure, of which it is a continuation; and is surmounted by a high square tower, round the sides of which, in open hewn work, are the words "King Robert the Bruce," in capital letters 4 ft. in height. The Abbey church of Dunfermline is, in short, one of the most imposing and magnificent structures of the kind in Scotland. It has 2,051 seats; but is only available, from the obstruction of pillars and otherwise, for about 1,500 hearers. There are numerous other churches and chapels in the town, but none of them seems to deserve any special notice. The other public buildings are the town-hall, gaol, guildhall, and grammar-school. The town-hall consists of three stories, and is surmounted by a steeple 100 ft. high. The 3d story is occupied as a gaol for all sorts of prisoners, and is one of the most inconvenient and most unsuitable in Scotland. The greater part of the building which forms the guildhall serves as an inn, and is called, owing to the lofty spire (132 ft.) that distinguishes it, the Spire Inn. Many elegant villas, surrounded by garden ground, adorn the declivity S. of the High Street.

The means of instruction are ample: there is a grammar-school, established prior to the Reformation, and of which Robert Henryson, an ingenious poet of the time of James I., was once master; also an institution of a similar kind under the patronage of the guildry; both partially endowed. A teacher of music, termed "master of the song," has also a small endowment. There is no parish school; but the total number of schools in the town, male and female, is about 20. There is a mechanics' institute, and a scientific association for popular lectures on science and literature. This last institution is perhaps the most flourishing of its kind in the empire. The audiences at the different courses of lectures are never under 600, and have been as high as 800, of whom nine-tenths are of the industrious classes. There are several subscription libraries.

A legal assessment for the poor was introduced so recently as 1839: previously to this, the poor were supported by means of a "Voluntary Association," which raised contributions for the purpose, in addition to the

* The weavers, as will be afterwards seen, work in their own houses, so small portion of which is necessarily occupied by the looms; otherwise the number of persons to a family would be considerably greater.

funds which were otherwise provided. The aggregate sum disbursed by the association was about 800*l.* annually. A savings' bank has existed here since 1814, and has been very successful.

In addition to the Abbey church, which is collegiate, are two *quoad sacra* churches belonging to the establishment: there are 4 chapels belonging to the United Associate Synod, 1 to the Relief, 1 to the Baptists, and 1 to the Independents. The Secession, which took place in the established church in 1732, may be said to have originated here. Of the Messrs. Erskine, justly regarded as the fathers of the Secession, one of them, Mr. Ralph Erskine, was minister of the Abbey church of Dunfermline. More than half the inhab. of the par. are Presbyterian dissenters.

Dunfermline is eminent in the linen manufacture, particularly for the finer sorts of diapers, damasks, &c. The linen manufacture here is of considerable antiquity, having been introduced towards the end of the 17th century; but the original fabrics were of a coarse description, namely, ticks and checks. Damask and diaper were afterwards introduced, mainly through the ingenuity of James Blake, an artisan, who learned the mechanism of the damask loom at Drumsheugh, near Edinburgh, where the business had long been established. Blake died in the century ago; but the trade continued steadily to increase. In 1778 a new epoch commenced in the manufacture, by the introduction of the fly-shuttle, by John Wilson. Various improvements were also effected in the damask-loom mounting, and in other respects, chiefly by Mr. David Bonar and Mr. John Philip. "Thus," says Mr. Fernie, "owing to successful inventions and improvements, all the different kinds of table-linen, diaper, back-harness (a species of diaper), and damask, are now woven by one person, and with as much expedition and ease as originally by three." (*Fernie's History of Dunfermline*, p. 53.) The weavers carry on their branch of the business generally in their own houses. Almost every man is master of his own loom; sometimes an individual owns two or more looms, in which case he lets them out to others at so much per week. In some few instances the loom belongs to the manufacturer. Previously to the beginning of the present century, all the yarn was spun by the hand-wheel; but at that time machinery was introduced, and has now entirely superseded the former clumsy and expensive system. The manufacturers are supplied with the finer sorts of yarn chiefly from Yorkshire and Ireland, and the other sorts from the neighbourhood, Dundee, and elsewhere; but in 1835 there were seven spinning-mills in the burgh and parish, which employed 160 men, and 533 girls, the wages of the former being 1*s.* weekly, of the latter *6s.* The quantity of flax purchased by these mills is about 1,000 tons annually. The quantity in 1835 was 1,059 tons; its value, before being spun, 68,350*l.* These mills do not spin exclusively for the local market, but prepare such articles as linen thread, shoe thread, twist, &c., for the general market. The power-loom is not thought applicable to the Dunfermline manufacture, but the Jacquard loom, introduced in 1824, and now universally used, has occasioned a great saving of time as well as comfort in working. The fineness, too, and general fabric of the goods, have been vastly improved, as well as the manufacture itself proportionally extended. The following table shows the progress of the manufacture within the burgh and parish, and in the neighbouring villages of Torryburn, Leath, Culross, &c., in which places the work is carried on for the Dunfermline manufacturers.

Date.	No of Looms within the Burgh & Par.	No. of Looms out of the Burgh & Par.	Total.	Value.
1749	400	-	400	<i>£</i>
1758	-	1,500	1,500	
1818	2,794	150	2,944	190,000
1835	2,794	725	3,519	351,700
1837	2,983	717	3,700	370,000

The following table shows the number of persons and amount of capital occupied in all the branches of the manufacture (damask and diaper, both single and double, table-covers, ditto with worked warp, linen full harness, bed-quilt, floor-covers or crumb-cloth, cloutings, &c.), prepared by a committee of manufacturers in 1836, for J. Hume, Esq., M.P.

5517 looms, producing annually finished goods to the amount of (calculating it at 100 <i>l.</i> each loom)	<i>£</i> 351,700
Value of looms, shops, and workhouses	156,000
Floating capital (calculated at 60 <i>l.</i> for each loom)	331,020
Total amount of capital invested in 1836	<i>£</i> 718,720

The following table shows the aggregate of all the persons employed in the different departments of the manufacture, exclusive of the spinners; together with their wages.

DUNFERMLINE.

Trades.	No. of Persons employed.	Average W. per week.
Weavers (men and boys)	3,517	10 0
Winders and spin-filers (women and girls)	1,100	4 0
Warpers, warblers, and lappers (men)	150	15 0
Yarn-bollers (chiefly women)	99	7 0
Blaschens of yarn (chiefly women)	135	7 0
Blaschens of cloth (men and women)	125	6 6
Lappers (chiefly men)	99	9 6
Pattern-cutters (men and women)	12	10 0
Dyers (men)	10	18 0
Total number of persons	5,032	

The patterns were till lately conceived in a wretched taste, were ill-drawn, and in every respect far inferior to foreign specimens. They consisted chiefly of the British flag, the national Scottish arms, gentlemen's coat of arms; sometimes flowers, birds, &c.; all very unnatural and extravagant. But now the patterns display equal ingenuity and taste in design and execution, and are exceedingly rich and varied, and considered equal if not superior to the German; besides, the damask loom is capable of producing any figure, however complicated. There are now four persons, exclusive of assistants, wholly devoted to design painting: to encourage the art, a number of the table-linen manufacturers, in 1826, instituted an academy for drawing, but this has since been discontinued.

The other manufactories in Dunfermline are, 3 breweries; 1 soap-work, which produced, in 1837, 345,560 lbs. of hard soap; 2 candle-works; 2 rope-works; 1 tan-work; 1 flour-mill, with steam-engine; 4 manufactories of tobacco. In 1837 there were sold of roll tobacco 49,564 lbs., and of British rappee snuff, 33,856 lbs. There are three branch banks in the borough, viz. Bank of Scotland, British Linen Company, and Commercial Bank of Scotland.

There are three harbours in the parish of Dunfermline, each about 3 m. from the town, namely, Charleston, Brucehaven, and Limekilns. The last, which takes its name from lime having been burnt here previously to its being a village and harbour, cannot admit vessels of more than 200 tons burden. Its pop. is 1,100. Charleston, which was founded in 1761, and contains about 900 inhab., admits vessels of 400 tons. Its basin is capacious, and perfectly sheltered from every wind. It forms the chief port of Dunfermline; but as the United States take about a third part of the whole goods manufactured in the burgh, this large portion is shipped, not at Charleston, but at Greenock. A railroad, the private property of the Earl of Elgin, connects Dunfermline and Charleston.

The parish of Dunfermline abounds in mineral wealth, viz., coals, lime, and ironstone. The coal has been wrought for upwards of 500 years. There are pits in the vicinity of the burgh on the N. E. and W. sides; but there is no workable coal under its foundations. The quantity worked in the parish is nearly 300,000 tons yearly. The two harbours referred to were originally constructed by Lord Elgin, whose collieries and lime-works are on a very extensive scale. There is a railroad running from some of the coal and lime works in the E. of the parish, to Inverkeithing, on the Frith of Forth, about 5 m. E. of Charleston.

From what has already been said, Dunfermline, it is evident, can boast of great antiquity. A tower or fort, built here by Malcolm Canmore in the 11th century, gave origin to the burgh. The same king also founded a spacious Benedictine monastery, which ultimately became one of the most wealthy and important institutions of the kind in Scotland; and ordained that its precincts should form the burying-place of the Scottish kings. His own remains and those of his consort, Queen Margaret, were interred there, as also those of eight others of the royal line, including Robert Bruce. Dunfermline continued to be a favourite royal residence as long as the Scottish dynasty existed. Charles I. was born here; as also his sister Elizabeth, afterwards queen of Bohemia, from whom her present majesty is descended; and Charles II. paid a visit to this ancient seat of royalty in 1650. The Scottish parliament was often held in it. The date of the erection of the palace is unknown; but it was much extended by James IV. in 1500. Nothing now remains of it but the S. wall, and a vaulted apartment which was the king's cellar, having the kitchen above. Of the tower, erected by King Malcolm, only a mouldering fragment is now seen. Of the monastery, which was once of great extent, nothing remains entire, except the S. and W. walls of the frater, or refectory, in the latter of which is a fine Gothic window; and the nave of the old abbey church, which, as above stated, forms the vestibule to the new church. But enough remains both of the abbey and palace to indicate the extent and magnificence of the original buildings. We may conclude by mentioning, that, ancient as the place is, it was not

DUNGARVAN.

723

made a royal burgh till 1568. The constabulary force of the town is of very old standing; the force is 20 in number, chosen by the council; one of them, elected by themselves as chief, is dignified with the title of "My Lord."

Dunfermline unites with Stirling, Inverkeithing, Culross, and Queensferry, in sending a mem. to the H. of C., and in 1839-40 had 571 registered voters, being about the half of the whole constituency. (*Ferne's Hist. of Dunfermline; Mercer's ditto; Keith's Cat. of Sc. Bishops; New Stat. Acc. of Scot. & Dunfermline; Private Information.*)

DUNGANNON, an inland town and parl. bor. of Ireland, co. Tyrone, prov. Ulster, 12 m. N. by W. Armagh, and 7 m. W. Lough Neagh. Pop. in 1831, 3,515; pop. of par., in 1834, 6,226, of whom 1,784 were of the estab. church, 500 Prot. diss., and 3,952 Rom. Cath. The town consists of a square, with several good streets branching from it along the sides of a hill. "It is not increasing, but, on the contrary, on the decline, if we may judge from the average proportion of uninhabited houses. The linen trade has declined very considerably, and that in grain is not so good as formerly." (*Boundary Report.*) The par. church is a large ancient building, and it has also a Roman Cath. chapel, meeting-houses for Presbyterians, Seceders, and Methodists; a classical school, founded in the reign of Charles I., well endowed, and capable of accommodating 100 resident pupils; a dispensary, and a mendicity institution. The corporation, under a charter of Jas. I., in 1612, consists of a portreeve, burgesses, and commons. The town returned 2 mems. to the Irish H. of C. till the Union, since which it has returned 1 mem. to the imperial H. of C. Previously to the Reform Act the franchise was vested in the portreeve and burgesses. The ancient liberties of the bor. comprised 886 acres, but the parl. bor. has been restricted to 224 acres. Registered electors (1838-39), 167. A manor court, with jurisdiction to the amount of 20*l.*s held every three weeks; as also general sessions twice in the year, and petty sessions every fortnight. The court-house, with a bridewell attached, is a handsome modern building; a party of the constabulary is stationed here. The linen manufacture, though much fallen off, is still carried on pretty extensively, and there are several bleach-grounds in the neighbourhood; earthenware and pottery are also manufactured, and there are iron-works, a brewery, and a large distillery. It is supplied with coal from the neighbouring mines of Drunglass and Coal Island, and also by the Newry Canal from England. Markets held Tuesdays and Thursdays, in a spacious and convenient market-house: fairs on the first Thursday of every month. Post office revenue increased from 857*l.*, in 1830, to 1,300*l.* in 1836. Branches of the Provincial and Belfast banks were opened here in 1834, and of the Agricultural in 1836. This place was the chief seat of the O'Neals, chieftains of Ulster, and suffered much in the struggles made by that family to maintain their independence against the English. In the war of 1641, Dungannon was taken by Sir Phelim O'Neal, and afterwards by the parliamentary forces, by whom the castle was dismantled. In 1742 delegates from all the corps of Ulster volunteers met here, and published a manifesto declaratory of the independence of the Irish parliament. (*Stat. Surv.; Railway Rep.*)

DUNGARVAN, a marit. town and parl. bor. of Ireland, co. Waterford, prov. Munster, principally on a peninsula in the estuary of the river Conigar, 25 m. W. by S. Waterford. Pop. in 1821, 5,105; in 1831, 6,519; pop. of par. in 1834, 13,372, of whom 335 were of the estab. church, and 13,037 Rom. Cath. As vessels of above 150 tons cannot come up to the town, it is not a place of much trade, though some corn and other produce is shipped for England. Recently it has been much improved principally through the exertions of the Duke of Devonshire, who has built, at his own expense, a handsome bridge, connecting the main body of the town with the suburb of Abbeyside, on the opposite bank of the river. It has a neat appearance, and is a good deal resorted to for sea-bathing; but is not rich in proportion to its population, because of the vast numbers of small houses that have recently been erected for the purpose of qualifying voters, the occupiers of which are almost dependent on fishing, or some such precarious employment. The public buildings are the par. church, a new and splendid Rom. Cath. chapel, with three others belonging to convents, a school-house for 800 pupils, a court-house and bridewell, a barrack, and a fever hospital and dispensary. It returned 2 mems. to the Irish H. of C. till the Union, since which it has returned 1 mem. to the imperial H. of C. Previously to the Reform Act, the franchise was vested in the occupiers of 5*l.* houses in the town, and the resident 40*l.* freeholders of the manor. The latter comprised about 10,000 acres, and had in 1831 a pop. of 11,856. But the extent of the existing parl. boundary, as fixed by the Boundary Act, does not exceed 430 stat. acres. Pop. of parl. bor. in 1831, 8,387; registered electors (1838-39), 460. A manor court is held every three weeks; as also general sessions in Jan., April, and Oct., and petty sessions on Thursdays. Mar-

kets on Wednesdays and Saturdays; fairs Feb. 7., June 22., Aug. 27., and Nov. 8. The deep sea fishery was formerly carried on here pretty extensively, but has latterly much declined. Post-office revenue in 1830, 5844; in 1836, 7600. Branches of the Provincial and National banks were opened in 1835. (*Boundary Report; Smith's Waterford.*)

DUNKELD, a bor. of barony and market-town of Scotland, co. Perth, on the N. bank of the Tay, 15 m. N. by W. Perth, and 49 m. N. by W. Edinburgh. Pop. (1834) 1,867. Little Dunkeld is a suburb, though in a different parish, being divided from the bor. by the Tay, which is here crossed by an elegant bridge of 7 arches, built in 1809. Except a handsome new street leading from the bridge into the town, the houses are generally old and of mean appearance. But the situation of Dunkeld and the surrounding scenery are the most beautiful imaginable, and have long been objects of admiration to every stranger. The town is situated in the centre of a valley surrounded by mountains of considerable elevation, presenting a great variety of picturesque forms, and covered to their summits with trees of every species. It is, besides, regarded as the great pass to the Highlands on the E.: the bulk of its inhab. are of Highland origin, and speak the Gaelic language. The banks of the mountain stream Braan, which joins the Tay nearly opposite to Dunkeld, present the most striking scenery connected with the place. Dunkeld House, the residence of the ducal family of Atholl, is on the verge of the town, and the style, extent, and natural and artificial beauties of the pleasure-grounds are not equalled by any in Scotland. The late duke began a new mansion on a scale of great magnificence, but his death in 1830 put an end to the undertaking. But perhaps the most imposing object in or about Dunkeld is its cathedral, delightfully situated on the banks of the Tay; an edifice partly of Saxon and Gothic, and the remains of which, owing to the care of the family of Atholl, are both extensive and in good preservation. The choir of the building is used as the parish church. Different portions of the cathedral were erected at different times, but the oldest portion, the choir, was built in 1250. Gavin Douglas, who translated Virgil's "Æneid," and Henry Guthrie, author of "Memoirs of Scottish Affairs from 1637 to the Death of Charles I.," were both bishops of this see. The Culdees had a monastery here so early as 725. When Iona, the original and chief seat of that order, was ravaged by the Danes in the 9th century, the primacy resided for some time in Dunkeld, but was afterwards transferred to St. Andrews. "But the rank of the abbots of Dunkeld," says Pinkerton, "one of whom was the father of a royal race in Scotland, and another, Ethelred, the son of Malcolm III., sufficiently marks the estimation in which that dignity was long held." (*Early Hist. of Scotland*, li. 271, 272.) The monastery, however, was changed by David I. into a cathedral in 1127, at or about which period the system of the Culdees was superseded throughout Scotland by that of the Roman Catholics. *Chamber's Geog. of Scotland; Keith's Scottish Bishops; & Dunkeld.*

DUNKIRK (Fr. *Dunkercque*, the Church of the Dunes, or Sand Banks), a sea-port town of France, and the most northerly in that kingdom, dép. du Nord, cap. arrond., on the Straits of Dover, 40 m. N.W. Lille, and 47 m. E. Dover, lat. 51° 2' 9" N., long. 2° 22' 37" E. Pop. (1836) 23,808. It is well built, and has broad and well-paved streets. The Champ-de-Mars, and the Place Jean Bart, are large and fine squares; the latter, which is planted with trees, has a bust of the brave sailor whose name it bears, and who was a native of Dunkirk; but this is said by Hugo to be *petit et mesquin*. The greatest drawback upon the town is its want of good water; it being indebted for this necessary wholly to the rain-water collected in cisterns. Its defences consist of a rampart and ditch, a citadel, and Fort Louis, about 3-4ths of a mile distant; the fortifications were formerly more formidable, but having been demolished, according to the stipulations in the treaty of Utrecht, they have not been completely re-established. Principal public buildings are the church of St. Eloi, with its fine portico, the naval storehouses, barracks, town-hall, college, &c. The *Tour des Pholices* serves for a landmark, and was one of the positions whence Cassini, and more recently Biot and Arrago, conducted their observations relating to the map of France, and the measurement of the earth: it has a very fine chime of bells. Dunkirk has also a communal college, a public library containing 18,000 vols., a school of hydrography, a theatre and concert-hall.

The harbour of Dunkirk, though in a great degree artificial, is large and commodious; but a sand bank, which dries at low water, being interposed between the town and the roadstead, it is rather difficult of access, and is apt to fill up; but these inconveniences have been to a considerable extent obviated by works constructed in 1826. Dunkirk has both an inner and an outer roadstead, defended from the violence of the sea by

sand-banks parallel to the shore, and having deep water and good holding ground. Being connected, by means of numerous canals, with a very fertile district, Dunkirk is a considerable emporium. The inhabitants have always been distinguished for enterprise. During the late and former wars between England and France, great numbers of privateers were fitted out here, that inflicted very serious injury on our trade. At present several vessels belonging to the port are engaged in the herring-fishery, and in the cod-fishery on the Dogger bank, and the banks of Newfoundland. Dunkirk was made a free port in 1826, since which its commerce has materially increased, particularly its trade in French wines destined for the supply of Belgium, of which it is a dépôt. It has extensive soap-works, with starch-works, rope-works, tanneries, and iron-foundries. It has also considerable Geneva distilleries, breweries, sugar-refineries, &c. It has a general and a founding hospital, a military and civil prison; and is the seat of a sub-prefect and of tribunals of primary jurisdiction and commerce. It is said to have been founded by Baldwin, count of Flanders, in 960; in 1388 it was burnt by the English; and in the 16th and 17th centuries alternately belonged to them and to the Spaniards and French. Charles II. sold it to Louis XIV. for 200,000*l.*, who, aware of its importance, had it strongly fortified at a vast expense. But, as the province of Louis was compelled, by the treaty of Utrecht, to consent to the demolition of its fortifications, and even to the shutting up of its port! It was unsuccessfully besieged by the Duke of York in 1793. (*Hugo, art. Nord; Dict. Géog. Univ.*)

DUNLOP, a par. of Scotland, celebrated for its manufacture of cheese, partly in the co. of Ayr, and partly in that of Renfrew, 8 m. N. Kilmarnock. The village of Dunlop in the par. has 284 inhab.; the aggregate pop. of the par. in 1835 was 1,157. Dunlop cheese has for nearly a century and a half held a high character. Previously to this date, or between 1688 and 1700, cheese here, as well as throughout Scotland, was made of skimmed milk, as is still the case in various districts. A female of the name of Barbara Gilmour, who had fled to Ireland during the persecuting times of Charles II., returned at the Revolution, and, having married a farmer, was the first to introduce the practice of using the unskimmed milk in the making of cheese. This practice, which succeeded admirably, was for a time confined to the par., but it gradually extended to almost every part of the W. and S. of Scotland, all the cheese made in these districts with unskimmed milk being called *Dunlop*. The fact, however, is, that cheese made in the par. of Dunlop is not superior, but inferior, to that made in other districts. The number of milch cows in the par. of Dunlop, in 1837, was 910; the average quantity of cheese made during the season from each cow is about 27 stones of 14 lbs., or 24,570 stones from the whole par. annually. In some small dairies, each cow has been known to average 42 stones annually. Besides the cheese made in the par., a great proportion of what is manufactured in other parts of Ayrshire passes through it on its way to the consumer. Being a convenient *entrepôt* between the producing country to the S. and W., and Glasgow, Paisley, &c., a considerable number of persons resident in Dunlop follow the business of cheese dealers, purchasing it from the farmers, and supplying the victuallers in the manufacturing towns and districts. Dunlop cheeses generally weigh between 20 and 60 lbs. each. (*New Stat. Account of Scotland; & Dunlop.*)

DUNMANWAY, an inland town of Ireland, co. Cork, prov. Munster, near the junction of three streams, which form the Bandon, 28 m. W. by S. Cork. Pop. in 1831, 2,738; pop. of par. in 1834, 11,649, of whom 1,613 were of the estab. church, 46 Prot. diss., and 9,990 Rom. Cath. It has a par. church, a Rom. Cath. chapel, a market-house, and a bridewell. The linen trade, after being for some years rather flourishing, has declined; but tanning and brewing, and the corn trade, are largely carried on. A manor court is held every third Saturday, and petty sessions on alternate Mondays.

DUNSE, a bor. of barony and market town of Scotland, co. Berwick, in a plain at the S. foot of Dunse Law, an eminence 630 ft. above the level of the sea, 13 m. W. Berwick-upon-Tweed, and 36 m. S.E. Edinburgh. Pop. 2,656, families 630. Dunse is neat and regularly built, but devoid of public buildings, except the town-hall and Dunse Castle, in its vicinity, the residence of the feudal superior of the bor., of Gothic architecture, the greater part modern, but added to an ancient tower said to have been built by Randolph Earl of Murray, in the time of Robert Bruce. The par. church is a plain building; as are the three dissenting chapels belonging to the Associate Synod, and the Relief. The means of education are ample; a par. school, an eminent unendowed academy, six other unendowed schools, besides private seminaries for females, and several Sabbath schools. A subscription library was commenced so far back as 1768. There are two circulating libraries, and a reading-room.

The assessment for the poor of the *bor.* and *par.* is 710*l*. There are two friendly societies, a savings' bank, and two branch banks. There is a weekly market, three fairs for black cattle and horses annually, and a quarterly fair for sheep.

Dunse was erected into a burgh of barony by James IV. in 1489; it was then situated on the N.W. side of Dunse Law; but having been afterwards burnt by the English, it was rebuilt in 1589, and its present site adopted, in order that it might be more immediately under the protection of Dunse Castle. After Berwick-upon-Tweed was ceded to the English (1482), and ceased to be the co. town, Dunse enjoyed that distinction in common with Lauder. It was afterwards (1600) transferred by act of parliament to Greenlaw; but Dunse was not altogether deprived of the privilege till 1696. It is, however, by far the largest and most important town in the co., and more country business is done in it than in both the towns referred to. In 1639, when Charles I. lay on the S. side of the Tweed with the intention of reducing the Scotch Presbyterians to submission, General Leslie took up his station on Dunse Law, with a body of 20,000 Covenanters, to defend the country from invasion. After the two armies had continued in this position for three weeks, a treaty of peace was concluded, and both were dissolved. Dunse has given birth to many distinguished men, among whom may be specified, John Duns Scotus, the Subtle Doctor, descended of an ancient family (not long extinct) of Duns of Duns, or of that ilk; Boston, author of the *Fourfold State* and other works; Dr. M'Crie, the historian of Knox; Mr. John Black, the learned and able editor of the *Morning Chronicle*, &c. (*N. W. St. Acc. of Scotland*, § Dunse; *Chambers's Gaz. of Scotland*.)

DUNSTABLE, a town and par. of England, co. Bedford, hund. Manshead: area of par. 520 acres. Pop. of duto, 2,117. The town, situated on the S. acclivity of the Chiltern Hills, near the source of the Lea, on the road from London to Penny Stratford, 32 m. N.W. the former, has four streets, and is pretty well built. A celebrated priory was founded here by Henry I., in 1131, of which the par. church contains the nave. The Baptists and Methodists have also places of worship. Here is a charity school, founded in 1727, for 40 boys and 15 girls; with 12 almshouses for poor widows, and 6 do. for decayed maiden ladies. Dunstable is the principal seat of the British straw plait manufacture, which employs many females in the town and vicinity. Ladies' straw hats were, and still are, not infrequently called Dunstable. (For a full account of this manufacture, see *Commercial Dictionary*, art. HATS (STRAW). Market-day, Wednesday.

DUNWICH, a sea-port bor. and par. of England, co. Suffolk, hund. Blything, on the E. coast of the co., 90 m. N.E. London, and 26 m. N.E. Ipswich. Pop. in 1831, 232. Though now a poor fishing station, this was once an important sea-port, having an extensive trade, a large population, 2 abbys, and several churches. It has been reduced to its present state of insignificance by repeated inroads of the sea; and would probably have been totally abandoned, but for its having had the privilege of returning 2 mem. to the H. of C. The encroachment of the sea began previously to the Conquest. In the reign of Edward III., an inundation swallowed up more than 460 substantial houses. The last great encroachment was in 1740; but the sea has continued progressively to encroach on the land; and at present there remains only the ruins of one of its many churches. It was disfranchised by the Reform Act; and no longer attracts any attention, except from those who visit the coast to study the great natural revolutions of which it has been the theatre. (*Campbell's Survey*, i. 277; *Lyell's Geology*, i. 403. 3d ed.)

DURANGO, a town of Mexico, cap. of the state of the same name, in the Sierra Madre, 6,848 ft. above the level of the sea, 480 m. N. Mexico, on the N.W. by W. Zacatecas; lat. 24° 25' N., long. 108° 15' W. Pop. 22,000. (*Ward*.) It is regularly built, and contains a cathedral and other churches, several convents, a mint, and a theatre. It is the seat of a bishopric. Its inhabs. are industrious: they manufacture many wooden articles, woollen goods and leather, and have a considerable trade in cattle. Iron mines are worked in the vicinity. (*Ward's Mexico*.)

DURAZZO (an. *Epidamnus* and *Dyrrachium*), a sea-port town of Turkey in Europe, Alban., on the E. shore of the Adriatic, and on the S. side of a projecting tongue of land, 7 m. S. Cape Palli; lat. 41° 17' 32" N., long. 19° 26' 44" E. Pop. 5,000. ? This town, which has greatly declined from its ancient importance, is surrounded by walls, and is indifferently fortified. It has some trade in the export of corn. The bay, on the N. side of which it stands, is 5 m. broad from N. to S., with from 7 to 3 fathoms water, the best anchorage being about 1½ m. S. by E. from the town.

According to Plautus, the inhab. of Dyrrachium were immersed in every sort of debauchery and vice; wherefore, says he, —

" huc ubi nomen Epidamnus inditum est,
Quia nemo ferme hic sine damno deditur; i.
Messicini, Act. II. Sc. 1.

And certainly, if we may depend on the statements of M. Pouqueville, their descendants at the present day, if they be less luxurious, exhibit few other symptoms of improvement. He calls their town *une anarchie, un repaire de pirates, un séjour d'assassins, et le receptacle impur des scélérats qui peussent s'échapper des cîtes de l'Italie!* (*Voyage dans la Grèce*, i. 326.)

Dyrrachium was founded by a colony from Corcyra, anno 625 s. c. After it fell into the hands of the Romans, it became a place of great importance, from its being the port which vessels from Brundisium, bound for the opposite coast, endeavoured to make; and from its being the usual place of departure for ships crossing the Adriatic with despatches or passengers from Greece for Italy. It became the seat of some important strategical operations during the struggle between Cæsar and Pompey, which terminated advantageously for the latter. (*Cæsar, de Bello Civili*, iii. § 41.) It was made a Roman colony by Augustus; and, after various vicissitudes, was subjected to the Turks, under whose destructive sway it still continues, by Bajazet II.

DURHAM, a marit. co. in the N. of England, having E. the German Ocean, N. Northumberland, W. Cumberland and Westmorland, and S. Yorkshire. Area, 702,080 acres. In its W. parts it is occupied by offshoots from the Pennine range of mountains, and by black heathy moors. Soil in parts good; but generally it rests on a sub-soil of stiff clay, and is cold and infertile. It is a curious fact, however, that the W. parts of the co., though naturally the least productive, are the best cultivated. Principal crops, wheat, oats, barley, beans, and pease. A mixture of rye and wheat, provincially called *maslin*, is also rather extensively cultivated. Turnips are generally introduced, particularly in the W. districts. Lime, of which there is an abundant supply, is principally used as manure, the quantity applied being from 70 to 80 bushels an acre. Draught is much neglected in the E. parts of the co. which, in consequence, are in a comparatively backward state. The Teeswater breed of short-horned cattle, so called from the river Tees, which bounds the co. on the S., is admitted to be one of the very best, both for feeding and milking, and is now very widely diffused. Sheep mostly Cheviots; stock estimated at between 200,000 and 250,000 head. A great deal of property belongs to the church, and there are besides some large estates; but property is, notwithstanding, a good deal subdivided. Farms of all sizes, but the greater number rather small; and the condition of the occupiers of the small farms is said to be very unfavourable. Average rent of land, in 1810, 14*s*. 6*d*. an acre. Durham has some of the most extensive and valuable coal-fields in the kingdom; and also has also valuable lead and iron mines. Vast quantities of gristones are produced from the quarries at Gatehead Fell. Manufactures various, but not very extensive or important. Principal rivers, Tees, Wear, and Derwent. Durham has 4 wards and 75 parishes, and returns 10 mems. to the H. of C., viz. 4 for the co., 2 each for the city of Durham and Sunderland, and 1 each for Gateshead and S. Shields. Registered electors for the co., in 1838-39, 10,346, being 5,325 for the N., and 4,980 for the S. div. Principal towns, Durham city, Sunderland, Gateshead, S. Shields, Darlington. In 1831, Durham had 40,740 inhab. males, and 132,162 females. Sum paid for relief of poor in 1834, 61,365*l*. Annual value of real property in 1815, 885,580*l*. Profits of trades and professions in do. 253,631*l*.

DURHAM (originally *Dunholme*, from *dun* a hill, and *holme* a river), an ancient and celebrated city of England, cap. co. same name, and nearly in its centre, on a bend of the river Wear, 230 m. N. by W. London, and 65 m. N. N. York; lat. 54° 38' N., long. 1° 10' W. Pop. in 1821, 10,282; in 1831, 10,620; but from the latter epoch down to the present year (1840), there has been a great increase in the pop. of the town and its immediate vicinity, occasioned chiefly by the opening of several new and extensive collieries. Probably, at next census, the pop. of the city and neighbourhood, within 3 or 4 m. on each side of the former, will be ascertained to be little short of 40,000.

The grand objects of interest in the city are the cathedral and castle; their appearance from the surrounding country is most striking, being situated in a rocky peninsula, elevated about 80 ft. above the Wear, by which it is nearly encircled. The first of these structures, begun in the reign of William Rufus, but much enlarged and improved in subsequent ages, is a large and majestic pile of Norman architecture: it is 461 ft. in length, by about 200 in extreme breadth, from the N. to the S. transept; it has a central tower 214 ft. in height; and at the W. end are two low towers, once topped with spires. The inside is much of the clumsy though venerable magnificence of the early Norman style. The pillars are vast cylinders, 23 ft. in circumference, and variously adorned. In the

Galilee, or lady's chapel, at the W. end of the cathedral, is the tomb of the venerable Bede, his remains having been transferred thither from Jarrow in 1370; and in the Nine Altars, at the E. end of the cathedral, is the shrine of St. Cuthbert, the patron saint of the sacred edifice. Dr. Johnson says, characteristically, of this noble structure, that "it strikes with a kind of gigantic dignity, and aspires to no other praise than that of rocky solidity, and indeterminate duration!"

The see of Durham is well known to have been about the most valuable in the kingdom. At an average of the three years ending with 1831, it yielded a nett revenue of 19,066*l.* a year! The total revenue of the dean and chapter, during the seven years ending with 1834, amounted to 36,937*l.* a year; the dean having a revenue of 4,800*l.*, and each of the canons residentiary, of whom there are twelve, having a revenue of 2,280*l.* a year! But on the death of the last bishop of Durham, in 1836, the bishop's revenue was fixed, pursuant to the recommendation of the ecclesiastical commissioners, at 8,000*l.* a year, the surplus revenue of the see being reserved to form a fund for the augmentation of the incomes of the poorer bishops. The bishop of Durham was also, till deprived of it by the act 6 and 7 William IV. cap. 19, *custos rotulorum* and chief civil governor of the co., which has distinct courts and law officers; he presided at the assizes, and all writs were returnable to him, and not to the king. The practice in the Palatinate courts is now, however, assimilated in a great measure to that of the superior courts at Westminster; and as actions may be commenced in the court for any sum, however large, the change has been productive of great public benefit.

It is a curious fact, that Cromwell founded a university in Durham in 1657, assigning to it the houses and part of the lands belonging to the dean and chapter. This institution, which, had it survived, must have been of great service to the N. counties, fell to pieces on the Restoration, when the church recovered her old possessions. No new attempt, or at least no successful one, was made to establish another university at Durham till 1831. In that year, however, a university, endowed by the dean and chapter, the bishop, and other wealthy individuals, was founded, to afford instruction, and grant degrees in the different faculties. It was incorporated by royal charter in 1837, and consists of a warden, professors, tutors, &c.; but, however creditable to the liberality of the founders, it is far from adequately meeting the existing wants of society, its grand object being to furnish instruction for candidates for holy orders in connection with the church of England.

The castle, founded by William the Conqueror, and intended partly to bridle that part of his own dominions, and partly as a defence against the irruptions of the Scotch, stands a little to the N. of the cathedral, and on the same elevated peninsula. It was long used as the bishop's palace, and has some magnificent apartments. It is now (with the exception of a suite of rooms reserved for the accommodation of the bishop, on his visits to the city) appropriated to the purposes of the university, being occupied by students. Adjoining the castle, on an artificial mound of considerable elevation, is the ancient tower, or keep, which had fallen into decay, but has recently been restored, and presents a most imposing appearance. On the palace green is the exchequer, a large square building, in which the bishop's courts of exchequer and chancery were held, and near it is a magnificent library, erected by Bishop Cosins; and a little further distant is the office for the custody of wills. The cloisters adjacent to the cathedral are 147 ft. square, and very neat. The chapter-house, a plain building, opens into them.

The shelving sides of the peninsula, from the cathedral, castle, and other buildings, down to the river, are laid out in hanging gardens, intersected with walks, and planted with trees, that have a most imposing effect.

Besides the cathedral, there are six par. churches. Those of St. Nicholas and St. Oswald, the latter remarkable for its vaulted roof of wood, are of considerable antiquity. The Primitive and Wesleyan Methodists, Rom. Catholics, Independents, and Quakers, have also places of worship.

The grammar school connected with the cathedral has four exhibitions, of 50*l.* each, for the sons of clergymen at the school, and of 20*l.* each at either university; in addition to this, it has five scholarships, of 10*l.* each, at Peterhouse, Cambridge. There is a blue-coat school, an infant school, and an endowed charity school, which, together, furnish gratuitous instruction to about 1,000 children. It has an infirmary, founded in 1791, dependent on voluntary contributions, a lying-in hospital, and several almshouses. There are here also a public reading-room, a library, and assembly-rooms, and two weekly newspapers. Races take place annually in May.

The city is divided into several distinct portions: that which contains the cathedral and castle has some excellent and finely situated houses, principally occupied by the dignitaries of the church. What is called the old

town adjoins the castle on the N.: in it are the market-place, the theatre, and principal shops, but it has a great many inferior houses; in the market-place is a fountain for the supply of the city with water, conveyed thither from springs about 1½ m. distant, consisting of an octagon building, surmounted by a statue of Neptune. The township of Elvet lies on the E. side of the cathedral peninsula, being separated from it by the Wear. It is comparatively well built. In this quarter of the town is the magnificent new co. gaol and co. court-house, erected in 1809, at an expense of nearly 140,000*l.* On the W. side of the Wear and of the cathedral are the townships of Crossgate and Framwellgate; they are occupied by a very inferior class of houses, and have the appearance of great poverty. The communication between the different parts of the town is kept up by two old and one comparatively modern bridge. The latter, called Prebend's Bridge, was erected by, and is maintained at the expense of, the dean and chapter: it is placed in a very romantic situation, and connects the public walks called "the Banks" already alluded to. The city is well paved and lighted.

Durham, for a lengthened period, made little or no progress. It used to be one of the dulllest and most stagnant of cathedral cities. But from the flow thitherward of the tide of pop., through the opening of the collieries, previously mentioned, and the construction of several railways in the district, connecting it with Shields, Sunderland, Hartlepool, and Stockton, none of which are more than 20 m. distant, a powerful impetus has lately been given to its trade. This is visible in the crowded state of the weekly markets, the improvement of the shops, and other signs of the increasing importance and trade of the town. An extensive carpet manufactory and a worsted spinning mill are situated on the banks of the Wear. The Great N. of England Railway will connect the city directly with Newcastle-on-Tyne, 14 m. distant; and the Newcastle and Carlisle Railway opens an easy communication with the W. coast. The neighbourhood of Durham abounds with situations well adapted for the establishment of various manufactures, having numerous rivulets and inexhaustible stores of stone, lime, coal, and iron. The want of means of outlet have hitherto rendered these resources unavailable; but as the railways now in progress will supply facilities of transit, this part of the kingdom may, in the course of a few years, be expected to afford an excellent field for the advantageous employment of capital and industry.

Durham has sent 2 mems. to the H. of C. since 1675. Previously to the Reform Act, the right of voting was in free freemen who had acquired their freedom by patrimony or servitude within the city of Durham, the bor. of Framwellgate, "or the streets and suburbs adjoining thereto." Hence the limits of the par. bor. were not definitely fixed, but varied with the varying size of the suburbs: a definite limit was, however, given to it by the Boundary Act, which included, in 1831, a pop. of 9,269, and 1,204 houses, of which 668 were worth 10*l.* a year. Registered electors in 1838-39, 949. Under the Municipal Reform Act, the city is divided into three wards, and is governed by 6 aldermen and 18 councillors. Market-day, Saturday. (*Hutchinson's and Saurer's History of Durham; Pennant's Tour in Scotland*, iii. 330, &c.; and *Boundary Rep.*; and *Private Information*.)

DURLACH, a town of the grand duchy of Baden, circ. Central-Rhine, 2 m. E.S.E. Carlsruhe, with which it communicates by a road lined throughout with poplars. Pop. 4,900. Before Carlsruhe was built, this town was the residence of the margraves of Baden-Durlach, an old castle belonging to whom, now in ruins, stands upon a conical height; and has attached to it a fine garden, in which several Roman antiquities have been discovered. A palace of a later date has been in part converted into a cavalry barrack. The inhab. manufacture porcelain, tobacco, and sealing-wax; and have some trade in corn, wine, fruit, and other agricultural produce. (*Berghaeus & Müller*.)

DUSSELDORF, a town of the Prussian states, prov. Rhine, cap. reg. and circ. same name, at the confluence of the Dussel with the Rhine; lat. 51° 18' 46" N., long. 6° 48' 28" E. Pop. 33,137, of whom 27,000 are Cath. It has nearly trebled its pop. in the course of the present century. It is a well-built, handsome, thriving town. "We were delighted with its singular neatness, and the beauty of its environs. It stands so close upon the Rhine, that vessels sail up to its quays, and then take on board the merchandise of which the town is the depot. Near the river the streets are narrow, and full of symptoms of industry; but beyond these the town consists of handsome white stone houses, disposed in rows as streets, or as open squares and places with trees in the centre, all which are remarkably clean and quiet." (*Chambers's Holland*, p. 49.) The castle and other fortifications were destroyed by the French in 1794. It is the seat of the provincial states or parl. of the Rhine prov., has a court of appeal for the

regency, a gymnasium or college, an academy of sciences, an observatory, a fine public library, a theatre, and some remains of the noble collection of paintings transferred to Munich. Recently the school of painting at Düsseldorf, under Schadow, has attained to very considerable celebrity. There are considerable manufactures at Düsseldorf; but it derives its principal importance from its position on the Rhine, nearly opposite to where it is joined by the canal leading to Venlo on the Maese, and from its being the *entrepôt* and principal port of the contiguous flourishing manufacturing district, of which Elberfeld is the capital. Cottons, cloths, &c. are imported from the latter; hardware, iron, and steel, from Solingen, Humscheid, &c.; linen from Ratingen, &c. Large quantities of coal, brought from the mines on the Roer, are shipped here for the Netherlands; and there is also an extensive trade in corn, oil, and wine.

DWARACA or JUGGUTH, a marit. town of Hindostan, prov. Gujrat, the most W. point of which it occupies, dom. of the Guicowar, on a sandy shore 95 m. N.W. Jounaghur; lat. $22^{\circ}15'N.$, long. $69^{\circ}7'E.$ It is the most sacred place in this part of India, and is annually frequented by about 15,000 pilgrims from all parts of that extensive country. Its principal pagoda is a magnificent carved building of high antiquity, dedicated to Runchon, an incarnation of Krishna, with an entrance towards the sea by a very long and noble flight of stone steps, succeeded by a massive gate, where the whole front breaks upon the view with a striking effect; its great pyramid is 140 ft. high, and much ornamented. There are numerous subordinate temples, having flags with representations of the sun and moon. In front of the large temple is the sacred place of ablution, formed by a creek of the sea, which is lined for some distance by small temples with stone steps down to the margin of the water, on which prayers are made, and idols, rings, and amulets sold by the Brahmins: the town itself is small, but surrounded with walls and towers washed by the tide. The devotees here are usually stamped by means of a hot iron, with the insignia of the god, and this rite is often practised upon young infants. The chalk with which the Brahmins mark their foreheads comes from Dwaraça, whence it is carried by merchants all over India. The revenue of the temple, derived from pilgrims, is estimated at about one lac of rupees, and was formerly swelled by the plunder of many piratical vessels, fitted out in the name of the idol. Dwaraça submitted to the British forces in 1816; but in the following year was transferred to the Guicowar, to whom its sanctity rendered it a highly acceptable acquisition. (*Hamilton's E. I. Gaz.* i. 531, 532.; *Mod. Trav.* x. 203-205.)

DWINA, the name of two Russian rivers, one of which falls into the White Sea by several mouths, 35 m. below Archangel, and the other into the Gulph of Riga, in the Baltic, 9 m. below Riga. The first, or *Northern Dwina*, is a large and important river. It is formed by the junction of the Soukhona, which rises in the farthest W. part of the government of Vologda, with the Joug rising in the central S. part of the same government. From the point of confluence, near Oustouev-Velik, the united river flows in a deep and broad stream, N.W. to its embouchure below Archangel, a distance of about 350 m. Its principal affluent is the Vithegha, flowing W. from the confines of Perm. The extent of natural navigation for boats and barges on this river and its affluents is very great, extending W. to the city of Vologda, S. to Nikolessk, and E. to the frontier of Perm. At Vologda an artificial navigation begins, which, by means of the Lubinski canal and the lake Bielo, connects the Soukhona with the Neva; while, on the E., the Severnal canal connects the Vithegha with the Kama, one of the principal affluents of the Volga. Hence, goods imported at Archangel may be sent by water to either Petersburg or Astrakhan, and conversely. The ebb and flow of the sea is perceptible in the Dwina many m. above Archangel. Opposite to the latter it is above 4 m. in width; it is also very deep, though owing to the sand-banks at its mouth it does not admit vessels drawing more than from 12 to 14 ft. water. It is frozen over for about half the year. (*See* ARCHANGEL.)

The second, or *Southern Dwina* or *Duna*, though of inferior dimensions to the preceding, is also a large and important river. It rises in the Valdai hills, not far from the source of the Volga; and following a S.W. course to Vitsebsk, it thence pursues a W.N.W. course to its embouchure below Riga. It is navigable from near its source, or for about 625 m. Near Dunaburg, however, it is a good deal interrupted by cataracts, and in other places it is encumbered with shoals, so that it can only be navigated with safety after the breaking up of the ice in the spring, and after the setting in of the autumnal rains. It has few affluents of any considerable magnitude. At Riga it is about 2,400 ft. broad. Its mouth is encumbered with banks, which render it inaccessible for vessels drawing more than from 12 to 15 ft. water. It begins to freeze over about the end of Nov., and the breaking up of the ice, or *débâcle*, usually takes

place in the beginning of April, when there are inundations that frequently occasion great injury to Riga and the adjacent country.

This river has always been the principal channel by which the masts and other timber exported from Riga were conveyed to it. But owing to the gradual exhaustion of the forests, it is necessary to go much farther S. than formerly, to the provs. of Tchernigoff and Kieff, the timber from which is conveyed by water, against the stream, up a part of the Dnieper, and then carried across the country separating that river from the Dwina, to be embarked on the latter. This, however, is a very expensive and tedious process, requiring about 2 years for its completion; and hence the mast trade, that formerly centered wholly at Riga, is now beginning to be transferred, in part at least, to Kherson, to which place the trees are, at the proper season, easily and rapidly floated down the Dnieper. (*Hagemeister on the Black Sea*, p. 122. English trans.)

DYSART, a royal bor. and sea-port of Scotland, co. Fife, on the N. coast of the Frith of Forth, 114 m. N. by E. Edinburgh, and 1 m. E. Kirkcaldy. Pop. 1801, 4,884; 1831, 6,802, exclusive of above 100 sailors. This includes the immediately contiguous villages of Pathhead, Sincclairtown, Gallaton, and Borland, the last of all of which, so far as industry is concerned, may be regarded as forming one community. Their pop. in 1831 was as follows:—Town of Dysart, 1,801; Pathhead, including Sincclairtown, 3,330; Hawkey Muir, or upper par. of Sincclairtown, 434; Gallaton, 1,053; Borland, 184: total pop. in 1831, 6,802.

Dysart consists chiefly of 3 narrow streets, with a species of square in the centre. The central or High Street is full of antique substantial buildings, the fronts of which are generally decorated with inscriptions and dates, and, in one part, with piazzas, the latter being the places in which, in former times, merchants exposed their goods to sale; but the greater part have been built up. In the middle of the town stands the town-house, erected in 1617, but rebuilt, after having been accidentally burnt by Cromwell's soldiers. Under its roof are, the council-chamber, the prison, the public weigh-house, the guard-room, the black hole. Dysart House, the elegant residence of the Earl of Roselyn, stands on the W. of the town, being separated from it only by a wall. The par. church is a plain building; also the two dissenting chapels, which belong respectively to the Relief and Associate Synod. Dysart is a collegiate charge, or has the services of two parochial clergymen.

With regard to the means of education, there are no fewer than 14 schools in the par.; namely, 4 at Dysart, 4 at Pathhead, 2 at Sincclairtown, 3 at Gallaton, and 1 at Borland. All these schools are unendowed excepted three: one at Dysart; a free-school in Pathhead, endowed by the late Ralph Philip—salary to the teacher 120*l.* yearly; and one in Borland. There are 4 subscription libraries in the par., and 2 reading-rooms. Philip's school is the only charitable endowment. There is no legal assessment for the poor. There are several friendly societies, and a savings' bank.

Before the union between England and Scotland, Dysart was a place of such commercial eminence as to have been called "Little Holland." But its importance in this respect is now greatly reduced. Nail-making flourished in the bor. and neighbourhood, particularly at Gallaton, for a hundred years previously to the end of last century. But that trade has now entirely disappeared. It was in reference to Gallaton that Adam Smith remarked, in his "Wealth of Nations," published in 1776, "There is at this day a village in Scotland where it is not uncommon, I am told, for a workman to carry calls, instead of money, to the baker's shop or the alehouse." The number of men employed in this business within the last 50 years was not less than 100. The manufacture of linen cloth, once extensively carried on here, has also disappeared. Salt was made here from seawater at so early a period as 1450; and the trade continued to flourish till 1823, when the duty being repealed, it was relinquished. The salt-pans were very extensive. The principal trade at present is the manufacture of checks and ticks, a branch of the Dundee staple trade. This business was introduced into Dysart between 1710 and 1720; but so slowly did it advance, that in 1776 the annual value of the manufacture was not estimated at more than 9,000*l.* It is very different at present. The number of looms employed in the manufacture of this fabric is not less than 2,098; and the value of the cloth annually produced is estimated at about 150,000*l.* The number of hands employed, including weavers, winders, and warpers, has been estimated at from 5,000 to 6,000; but this, we believe, is beyond the mark. The number of looms employed by the manufacturers out of the par. is above 1,000. A mill for spinning fax has recently been built, and is in active operation. It employs about 100 hands.

Dysart coal was among the first wrought in Scotland, operations having been begun upwards of 350 years ago.

Upwards of 100,000 tons are dug yearly. Sandstone, limestone, and ironstone also abound, and are in considerable demand, particularly the two latter. The harbour is one of the safest on the Frith of Forth, except with easterly winds. It has a wet dock. There are only, however, a few brigs and sloops belonging to the port, and no foreign vessel approaches it, except occasionally from Holland or the Baltic laden with flax, or when coals are wanted.

Dysart is a place of great antiquity. It is mentioned in history so early as 874, when the Danes invaded Fife. But it was not made a royal burgh till the time of James V. The town was taken by Cromwell. There is a place at the harbour called the Fort, said to have been fortified by the Protector, but no remains of any work on it can now be seen. To the W. of the burgh is the castle of Ravenscraig, standing on a steep crag fronting the sea, but now a ruin. It has been the property of the Sinclairs, now Earls of Rosslyn, for 500 years. On the S. or lower part of the town, there are the remains of a chapel said to have been dedicated to St. Dennis. The ruins of the old church of Dysart are nearly on the same spot. One of the windows bears the date of 1570.

Dysart unites with Kirkcaldy, Burtlandale, and Kinghorn in returning 1 mem. to the H. of C., and in 1839-40 had 130 registered voters. (*New Stat. Acc.*; *Dysart*; *Muir's Account of Dysart's Boundary Rep.*; *Private Inform.*)

E.

EAGLESHAM, a market-town, and burgh of barony, Scotland, co. Renfrew, on a tributary of the White Cart, 9 m. S. Glasgow. Pop. (in 1840) 1750. The town, which is modern, though on the site of an ancient village, consists of two rows of well-built houses, all of freestone, with a space between varying from 100 to 250 yards, laid out in fine green fields interspersed with trees, with a beautiful streamlet running down the middle. Length of the town nearly 3 furlongs. The cotton manufacture was introduced here about 40 years ago. The cotton-mill at Eaglesham, which is driven by water power, employs 87 males and 112 females; that of Millmill in the vicinity, also driven by water, employs 40 females and 24 males. Besides cotton spinning, there are no fewer than 400 persons in the town engaged in weaving. The noble family of Eglington are the feudal superiors of the place, and appoint the baron bailie. (*New Stat. Acc. of Scotland*, art. *Renfrew*, p. 383.)

EARLSTON (formerly *Ercildown*), a village in the par. of the same name, Scotland, co. Berwick, 304 m. S.E. Edinburgh, and situated in the middle of a pastoral district, within 4 m. of the Leader, a tributary of the Tweed. Pop. 847. It is straggling and irregularly built; but it is recently become well known in manufactures, and "Earlston Gingham" are now familiar to most persons in the S. of Scotland. Messrs. Whale and Co. established, about 20 years ago, a manufactory of gingham, merinos, shawls, muslins, shirtings, and furniture stripes, which affords employment to about 80 individuals. Another manufactory has also recently been established by Mr. Wilson, for plaidings, blankets, and flannels, and gives work to about 50 persons. Such instances of manufactures starting up, and eminently prospering, in a small remote village, are but rare. "Thomas the Rhymer," whose proper name was Thomas Learmonth, who flourished in the 13th century, and is famous both as a poet and an alleged prophet, belonged to this place. An account of this celebrated person will be found in Sir W. Scott's edition of "Sir Tristram," a poem ascribed to the Rhymer. The walls of the castle, called "Rhymer's Tower," in which he lived, are still standing within 4 m. of Easton. (See *Sir Tristram*; *Barbour's Bruce*; *Jervyn's Scottish Poets*; and *New Stat. Acc. of Scot.*, art. *Berwickshire*, p. 18.)

EBORA, or EVORA, a city of Portugal, cap. prov. Alentejo, 85 m. E. Lisbon, 42 m. S.W. Elvas. Pop. 14,680. It is built on an eminence, in the centre of a fertile plain, and is venerable from the appearance of its ancient towers, as well as striking from its elevation. It is surrounded by ramparts, and has two forts in ruins. Streets narrow, crooked, and filthy; but it has some good houses. It is the see of an archbishop, and has a magnificent Gothic cathedral, with an altar in the Italian style, extremely rich, and decorated with various marbles. (*Lord Caernarvon*.) Exclusive of the cathedral, there are four churches, several convents and hospitals, a house of charity, and fine barracks. There is a good collection of books in the bishop's library, and the museum is said, by Lord Caernarvon, to be the finest in Portugal. It was formerly the seat of a university, suppressed on the expulsion of the Jesuits.

This city was for a lengthened period the headquarters of the famous Roman general Quintus Sertorius, by whom it was fortified, and adorned with several fine public buildings. An ancient temple, supposed to have been dedicated to Diana, though much dilapidated, has still to

ECLOO.

beaut of some noble columns, evidently raised during the best period of Roman architecture (*idem*); but this fine ruin has been greatly neglected, and even degraded to a slaughterhouse! (*Murphy*.) There is here also a magnificent aqueduct, said to have been built by Sertorius, in fine preservation, and still applied to its original purpose.

It has manufactures of hardware, tanneries, and a fair for cattle on St. John's day, which is much frequented. Julius Cesar made it a municipal town, and gave it the name of *Libertas Julia*. The Moors took it in 715. It has been the residence of many of the Portuguese sovereigns. In 1828 the populace and the militia rose en masse in favour of Don Miguel, and having overpowered the regular troops and constitutionalists, expelled them from the city. (*Caernarvon, Portugal and Galicia*, il. 47. 75. 95., et seq.; *Murphy's Travels in Portugal*; *Milano*, lii. 315.)

EBRO (an. *Iberus*), one of the principal rivers of Spain, through the N.E. part of which it flows, uniformly almost in a S.E. direction, being the only great Peninsular river that has its embouchure in the Mediterranean. It rises at Fontibre, prov. Santander, on the S. declivity of the Sierra Secia, about lat. 43° N., and long. 4° W., near the sources of the Pisuerga, an affluent of the Douro. It afterwards separates the provs. Santander, Biscay, and Navarre from Old Castile, intersects Aragon in its centre, and disemboques near the S. extremity of Catalonia, about lat. 40° 40' N., and long. 0° 55' E. Its entire length is estimated at somewhat above 400 m.: its principal tributaries are, the Nela, Aragon, Gallego, and Segre, with the Cinca on the river, and the Oca, Tiron, Nagerillo, Xilon, Guadaloupe, &c., on the S. side. Reynosa, Miranda, Logrono, Tudela, Saragossa, Mequinez, and Tortosa, are the chief cities, and towns upon its banks. It runs mostly through a succession of narrow valleys till it reaches Mequinez; after which it enters Catalonia, and flows through a more level country. At Amposta, 13 m. W. from its mouth, it is about 300 yards wide. It immediately afterwards forms a kind of delta; a navigable canal having been cut from the port of Alaiquer, or San Carlos, at its S. mouth, to Amposta. The Ebro is navigable for boats as high as Tudela, but its current is very rapid, and its bed in many parts encumbered with rocks and shoals. To avoid these obstacles, and the numerous windings of the river, the Aragon canal has been cut along its right bank from near Tudela to Sagtogo. An ancient Moorish canal, now dry, formerly connected the town of Alcaez, on the Gundaloupe, with the Ebro. The principal commercial utility of the Ebro is the transport of grain from Saragossa to Tortosa, together with the floating down of timber from the Pyrenees. This river, before the second Punic war, formed the boundary of the Roman and Carthaginian territories, and, in the time of Charlemagne, between the Moorish and Christian dominions. (*Milano*, *Dict. Geog.*; *Inglish's Spain*.)

ECBATANA. See HAMADAN.

ECIJA (an. *Asligi*), a city of Spain, prov. Seville, finely situated on the banks of the Xenil, which is here crossed by a fine ancient bridge, 47 m. E.N.E. Seville, 31 m. S.W. Cordova, lat. 37° 51' 51" N., long. 5° 43' 44" W. Pop. 34,730. It is surrounded by walls, and has narrow crooked streets. Its churches, of which there are six, are "built entirely of brick, fitted up in the old taste, and crowded with pillars, loaded with proportionate ornaments, and covered with gold." The most extravagant of all is the church of *Nuestra Señora del Rosario*, in the convent of the Dominicans; this may serve as a model for the perfection of vitiated taste." (*Townsend*, ii. 305.) Exclusive of churches, there are here 20 convents, a hospital, a foundling hospital, and a public granary. The Plaza Mayor, fine ancient square, has a double row of balconies the whole way round. Along the river's side is a handsome *alameda*, or public promenade, planted with elms and other ornamental trees, provided with seats, and decorated with statues. It has manufactures of coarse cloth, serges, camlets, friezes, linens, &c.; and the vicinity produces wheat, wine, and oil. This is a very ancient city, having been called by the Romans *Asligi* and *Augusta Frona* (*Plin. Hist. Nat.* iii. 1-1.). It was for a lengthened period a border town between the Moors and Christians, and is famed in many a romance; but it is no longer of any importance as a fortress, and its walls are covered with brambles. When Mr. Townsend visited this city, the king's troops had been defeated the previous day in an engagement with smugglers; and as the oppressive duties and prohibitions, out of which this contest arose, have sustained no material diminution in the interval, such encounters still occasionally take place; and to this cause, and vicious government in other respects, are to be ascribed the robberies for which the vicinity of Ecija was long infamous. ECKMUHL, an inconsiderable village of Bessarabia, circ. Regon, on the great Labar, 13 m. S. by E. Radobice. Here, on the 22d April, 1809, the grand French army, under Napoleon, gained a decisive victory over the Aus-

trians, under the Archduke Charles. Marshal Davoust having particularly distinguished himself on this occasion, was raised by Napoleon to the dignity of Prince of Eckmühl. The battle of the 22d was preceded by partial actions on the 19th, 20th, and 21st, all of which terminated favourably for the French.

ECLOO, a town of Belgium, prov. E. Flanders, cap. arrond., on the road between Ghent and Bruges, 15 m. E. the former city. Pop. (1836) 8,730. It is generally well built, and has several squares and well paved streets. It has 2 churches, a town-hall, an ancient convent, 8 schools, and a prison. Its manufactures are chiefly of coatings and other woollen stuffs, cottons, starch, soap, chocolate, hats, &c. It has also breweries, distilleries, salt refineries, and various mills. Its trade, which is very active, especially at its weekly markets, which are the largest in the prov., is mostly in corn, linens, timber, and cattle. (*Vandermaelen, Fland. Orient.*)

EDDYSTONE LIGHTHOUSE. This, which is one of the most remarkable structures of its kind, is built on one of the points of a reef or ridge of rocks, from 600 to 700 ft. in length, in the English Channel, about 9 m. S. by W. from the Ramhead, and 1 m. from Plymouth; lat. 50° 10' 45" N., long. 4° 18' 3" W. The Eddystone rocks are covered at high water; and being much exposed to heavy swells from the Bay of Biscay and the Atlantic, the waves frequently break over them with tremendous fury. In consequence of the many fatal accidents occasioned by ships running against these rocks, a lighthouse was erected on one of them in 1696; after standing many storms, it was overthrown in the dreadful tempest of the 27th Nov., 1703. A second lighthouse, erected in 1708, was burnt down in 1755. The present edifice, built by the celebrated engineer Smeaton, and finished in 1759, is universally admired for its solidity and the skill displayed in its construction, and bids fair to last for ages. The total height of the lighthouse is 100 ft.; the lantern being elevated 72 ft. above the sea at high water. The light is fixed, and is of the first magnitude. This lighthouse has served as a model for that on the Bell Rock, and others of the same kind.

EDEN, a river in the N.W. of England, which has its sources on the borders of Westmoreland and Yorksire, near Pindragon castle, close to the sources of the Sgale, is one of the highest parts of the Pennine or central range of mountains. It pursues a N.W. course through the valley between the Pennine and Cumbrian mountains past Carlisle, 7 m. below which it falls into the Solway Frith. It is navigable to Carlisle; but the navigation being tedious and difficult, a canal has been cut from Carlisle to Bowness, lower down the Frith, a distance of 1½ m., which admits vessels of from 60 to 80 tons burden.

EDDER, a town of Hindostan, prov. Gujrat, cap. of a principality of the same name, 17 m. N. by W. Ahmednurgur, and 117 m. S.W. Odeypoor; lat. 23° 53' N., long. 72° 3' E. Pop. 12,000? It is but a poor town, though built within the walls of a magnificent fortress constructed by the Mohammedan kings of Gujrat. (*Hamilton's E. I. Gaz.*)

EDFOU (the *Ἀπολλωνίαν πόλιν* of Strabo, and *Apollonopolis Magna* of the Romans), a town, or more correctly a large assemblage, of mud huts congregated around and amidst the superb ruins of an ancient temple on the W. bank of the Nile, in Upper Egypt, about 2 m. from the river, and 52 m. S. by E. Thebes. Lat. 24° 58' 43" N., long. 32° 54' E. Pop. from 1,500 to 2,000, consisting principally of Ababitic Arabs, with a few Coptic families, who manufacture blue cotton, cloth and pottery, and boast of inheriting from their ancestors the art of making earthen vessels; and it must be admitted that their klna and the forms of their vases exactly resemble those of ancient Egypt, as represented on the monuments. Dr. Richardson says that the inhab. are "civil and dity" and the place would be unworthy notice were it not for its antiquities; but two noble temples, placed opposite to each other, though half buried in the sand, and an ancient quay, still remain to evince the former grandeur of *Apollonopolis Magna*. The great temple on a small eminence, commands a view of all the surrounding country, and is therefore called, in Arabic, *Gala*, or the citadel." Its *propylon*, or entrance, consists of a doorway, 11 ft. 4 in. wide, between two vast truncated rectangular pyramids or moles. The base of each of these pyramids is 104 ft. by 37 ft.; their height is 114 ft.; and the horizontal section of each at the top 84 ft. by 20. The door is surmounted by the often-repeated sculpture of the globe with the serpent and wings; and three rows of immense figures are sculptured on the sides of the pyramids. These gigantic structures are not solid, but have chambers, to which and to the top access is provided by means of staircases. Within the doorway is an open rectangular court, now filled with huts and rubbish, 161 ft. by 140 ft., enclosed by high walls, which also confine the temple itself, and are 414 ft. on each of the longer sides, and 184 ft. on the shorter. Notwithstanding these vast dimensions, the walls are elaborately co-

vered with hieroglyphics. On each side of the longer walls in the court there is a row of pillars so disposed that a space intervenes between them and the walls, which being roofed form two covered ways, leading from the *propylon* to the portico or *pronaos* of the temple. The columns, of which there are 32, present a most magnificent perspective. There is a gradual ascent in the court to the portico, the outside of which is adorned with six columns, having various capitals; and within are several apartments and corridors, supported by columns, and ornamented with sculptures. The *sekos*, or sanctuary, is an oblong apartment, about 38 ft. by 17 ft. The terraced roofs of the temple, from the *pronaos* to the extremity, are covered with mud huts, and the sanctuary and adjoining chambers are now either used as repositories for grain or other products, or are half filled with mud, and with filth and rubbish, shot down by the Arabs through the apertures that formerly lighted the chambers. (*Egyptian Antiquities, Library of Entertaining Knowledge; Modern Traveller*, vi. 176. &c.)

The plan and arrangement of this temple is simple and symmetrical. Its largest columns are 6 feet 4 inches diameter, 21 ft. in circ. and 42 ditto in height; the capitals are 37 ft. in circ. The *palmiform* capitals peculiar to Egyptian architecture, is here seen to great advantage. It represents the trunk of a palm, of which the spreading foliage forms a graceful frieze. Art has here copied Nature with great fidelity; it has preserved the same number of leaves, the exact form of the fruit, and the scales of the trunk, and the capitals gradually augment in size till they balance the leaves. The 32 capitals of the peristyle, and the 6 of the *pronaos*, exhibit in alternate columns the dactyliform and lotiform figure, which last is as faithfully borrowed from Nature as the palmiform. This is the account given by Jomard in the *Description d'Edfou* (p. 20.), and copied by Ritter, who praises the simplicity and pure antique style of the temple. But a higher authority, M. Champollion, is of a wholly different opinion:—"Ce monument," says he, "imposant par sa masse, porte cependant l'empreinte de la décadence de l'art Égyptien, sous les Ptolémées, au règne desquelles il appartient tout entier; et n'est plus si simple et antique; on y remarque une recherche et une profusion d'ornemens bien maladroites, et qui marquent la transition entre la noble gravité des monuments pharaoniques, et le papillotage fatigant, et de si mauvais goût, du Temple d'Esneh, construit au temps des empereurs." (*Lettres*, p. 191.) This, however, is probably too unfavourable an opinion.

Notwithstanding its truly colossal character this temple is not, as was long supposed, of the pharaonic era, but is comparatively modern, being, as now stated, the work of the Ptolemies. This is proved by the date of its decorations, the most ancient of which, according to Champollion, belong to the age of Ptolemy Philopater. It would appear from the same authority that the meaning of the sculptures, and the object of the temple, had been completely misunderstood by Mr. Hamilton, M. Jomard, &c., who supposed that it was sacred to Osiris, the beneficent deity. M. Champollion affirms that this magnificent edifice was consecrated to a triad consisting of,—1st, the god Harhat, the personification of heavenly science and light; 2dly, the goddess Hathor, the Egyptian Venus; and, 3dly, their son Harsonth-Tho, the Eros of the Greeks and Romans. (*Lettres d'Égypte*, p. 192.)

The other and much smaller temple at Edfou, is pe-ripteral, and was supposed to be devoted to the worship of the malignant deity, Typhon, whose image was believed to be represented above the capitals of the columns, and elsewhere on the walls. But Champollion has shown that this temple is really one of those *manus* that were always erected near the great temples devoted to the worship of a triad, and that it represents the birth-place of the third person of the triad, or of Harsonth-Tho, son of Harhat and Hathor. The *bas-reliefs* on this temple are of the age of Ptolemy Euergetes II. and Soter II. (*Lettres*, p. 193.)

Between Edfou and El Cab, one of those transverse valleys which frequently divide the mountain ranges of the E. desert, opens to the E., and is called the valley of Edfou. It extends from the Nile to the Red Sea, near Berenice; and upon it have been traced the tracks of a great commercial road, over which the traffic of the ancient sea-port of Berenice, and the produce of the celebrated emerald mountains were conveyed. It was also, formerly, a much-frequented caravan route.

EDINBURGH, or MID-LOTHIAN. See **LOTHIAN**.

EDINBURGH, a celebrated city, the metropolis of Scotland, co. Mid-Lothian, 2 m. S. from the Frith of Forth, built principally on three parallel ridges, running E. and W., and separated by deep depressions, lat. 55° 57' 2" N., long. 3° 10' 30" W., 387 m. N. N.W. London, and 39½ m. E.

by N. Glasgow. The central ridge, occupied by the Old Town, is terminated on the W. by a precipitous rock, 434 ft. above the level of the sea, surmounted by the castle, and is bounded on the E. by the palace of Holyrood, 108 ft. above the same level, the distance between them being rather more than 1 m. The circumference of the city, exclusive of Leith, its sea-port, lying between it and the Forth, is rather less than 6 m.

Edinburgh is said by Maitland (*Hist. of Edin.* p. 7.), in reference to the year 1600, to have been "so full of inhabitants that probably there is no town elsewhere of its dimensions so populous," it being at that time confined solely to the Old Town. At the Union, in 1707, the pop. was estimated at 35,000; in 1755, before the New Town existed, and when the southern districts were not above a fifth part of their present extent, the population was estimated at 57,195; in 1775, soon after the commencement of the New Town, the pop. was 70,430; in 1791, about 80,000: but these enumerations include Leith, the pop. of which in 1753 (*ib.* p. 500.) was 7,280. The pop. of Edinburgh, city and suburbs, exclusive of Leith, according to the censuses since 1801 inclusive, has been as follows: 1801, 66,544; 1811, 81,784; 1821, 112,235; 1831, 136,301. But including Leith, which forms a continuation of Edinburgh, the pop. in 1831 was 162,403, lodged and distributed as follows:—

			Persons to a house.
Houses inhab.	-	10,179	15.95
— building	-	95	
— uninhab.	-	582	
			Persons to a family.
Families	-	35,116	4.6
Males	-	72,489	
Females	-	89,804	
Males 20 yrs. of age and upwards	-	36,667	
Female servants	-	12,429	

The number of persons to a house, according to the foregoing table, is unusually great, but is easily accounted for. A house often contains several different families, each story (provincially *flat*) being, in such cases, appropriated for a separate dwelling, the access to it being obtained by means of a common stair. Nay, a story is sometimes subdivided into two or more separate residences, each being accessible by its own door opening to the same common stair. In the Old Town, common stairs are still all but universal. They are general also in the southern districts; but more rare in the New Town, inasmuch as separate or "self-contained houses," as they are termed, generally prevail in this fashionable and wealthy quarter of the city. The loftiest houses are in Mound Place, in the Old Town: they extend to 11 stories, including the attics; and as each story is generally divided into two lodgings, each house is supposed to contain, at an average, about 20 families, or 92 individuals. With the exception of the older buildings, which range from three to six stories in different districts, the usual height is three stories, exclusive of the attics and the basement floor, which latter is generally half sunk under the level of the street. This is the case, with very unimportant exceptions, throughout the New Town. The word *land* is used in Edinburgh to signify a house or tenement, from top to bottom, whether it be occupied by one family or several. Previously to the houses being numbered, they were distinguished by such names as Todrig's *land*, Moodie's *land*, Gavenloch's *land*, &c. Similar remarks apply to Leith.

But though the population of Edinburgh have fully doubled itself during the thirty years ending with 1831, its progress has of late been checked, inasmuch that we incline to think it has latterly been stationary, if not retrograding. Our opinion, indeed, is, that it has fallen off since the year last mentioned, and that the number of inhabitants will be found, by the census of next year (1841), less than in 1831. In consequence of this, house-rents have fallen greatly within the last fourteen years. They had reached their maximum in 1825-6; since which they have greatly declined. In 1831, according to the preceding table, there were 582 houses uninhabited, and 95 building; total, 677: or, in other words, about a fifteenth part of the town was unoccupied. The proportion has rather increased since; and accordingly the fall of rents during the ten years ending with 1835, is stated, on the best authority, at a third. (*M'Laren's Annuity Tax*, p. 110.) From personal inquiries, we have reason to believe that this estimate is not over-rated. The fact is, that Edinburgh had been completely over-built during the ten years ending with 1830; both by the erection of too many houses, and of houses greatly exceeding the means of the occupiers. Hence the revulsion that has since taken place; which has been extremely injurious not only to the speculators in house property, but to the labourers and others who had been attracted to the city by the previous great demand for labour, and who have since, for the most part, continued to be involved in a state of great distress. At this moment house rents, though latterly they have risen a little, are, perhaps, lower in Edinburgh than in any other great town in the empire.

The situation of Edinburgh is eminently striking and romantic. Not only is it built on three separate ridges, but its neighbourhood is marked by lofty hills, except towards the N., where the ground gently declines to the Frith of Forth. The Calton Hill, 347 ft. above the sea, on the E. side of the city, now surrounded with fine terraces of houses, affords the remarkable spectacle of a verdant hill, except where covered with monuments, within the precincts of a large town. Arthur's Seat (822 ft. above the level of the sea), and Salisbury Crag (547 ft.), the latter divided from the former by a deep and gloomy ravine, lie on the S.E. of the city. Each of these hills rises abruptly, and in some places perpendicularly, from its base, and commands splendid and extensive views. Blackford Hill, the Braid Hills, the Pentland Hills, and Corstorphine Hill, rise at different distances on the S. and W. These eminences form a magnificent amphitheatre, in which, on elevated ground, but of less altitude, the Scottish capital is situated.

The central one of the three eminences, on which the city is built, is the most distinctly formed. "It bears," says Arnot, "a striking resemblance to a turtle, of which the castle is the head, the High Street the ridge of the back, the *wynds* or closes the shelving sides, and the palace of Holyrood-house the tail." (*Hist. of Edin.* 4th ed. p. 179.) It is separated from the New Town on the N. by a deep valley, which for centuries formed a lake, called (as it is still) the North Loch, but which was drained in 1763, and is now beautifully laid out in gardens; while, on the S., it is divided from the southern districts by a similar valley, the site of the Cowgate, now a narrow and mean, though once a fashionable street. From the High Street, on the summit of the ridge, descend, on both sides, in regular rows, numerous narrow

lanes, which are mostly steep and difficult of passage, being rarely more than 6 ft. in width, and in general very dirty. Those of the greatest width, or which admit of a cart or carriage, are termed *wynds*, as Blackfriars' Wynd, St. Mary's Wynd, &c., while those which admit foot passengers only, are called *closes*. A few have no thoroughfare, being in the form of *culs de sac*.

The High Street, which (including the Castle Hill, Lawn Market, and Canongate) stretches in nearly a straight line from the Castle to the Palace, a distance, as already stated, of more than 1 m., is a truly magnificent street; it is about 90 ft. in breadth, the houses, which vary from five to six or seven stories in height, have been mostly rebuilt; but a few, especially those on the Castle Hill, are of great antiquity. This street, with its shelving lanes and appendages, constitutes the whole of what is properly the "old town." It is connected with the southern districts by the Cowgate, and by two bridges which stretch over the valley in which that street is built, viz. the South Bridge, opened in 1788, and George the Fourth's Bridge, opened in 1836. On the other hand, the Old and New Towns are connected by the North Bridge, which spans the North Loch, and forms a continuation of the line of the South Bridge, and by the "Earthen Mound." The North Bridge, which consists of 3 central arches, with several smaller ones at each extremity, was opened in 1768; while the Mound, which was begun in 1784 from the accumulation of the rubbish from the excavations of the New Town, was formed into a thoroughfare about the beginning of the present century, but it has since received great additions. It is supposed to contain 500,500 cubic yards, or about 1,500,000 cart-loads of earth. W. of the Cowgate lies the Grass Market, a wide, open street, used as a market-place for the sale of horses, sheep, corn, &c.

The New Town, which, as well as the more modern parts of the southern districts, is built of light-coloured freestone, procured in abundance in the immediate vicinity of the city, stands on an eminence, which slopes to the Water of Leith, the small river at the mouth of which Leith is built. The leading streets run in straight lines from E. to W., and are crossed at the distance of about every 250 yards, by streets running in an opposite direction; so that great regularity, elegance, and beauty, characterise this quarter of the city. George's Street, which stretches along the top of the ridge, is terminated on the E. by St. Andrew's Square, and on the W. by Charlotte Square. Great King Street, which lies considerably down the declivity, and nearer the Water of Leith, has, in like manner, the Royal Circus on the W., and Drummond Place on the E. There are, also, James's Square (the oldest in the New Town), and Rutland Square, recently built. Nor is variety, in other respects, entirely wanting. Another New Town may be said to have lately (1822-3) risen up, covering about 30 acres of ground, having Moray Place in its centre, and Randolph Crescent on the W. This is by far the most elegant and fashionable part of the city. The *fews*, or building leases, in this quarter fetch from 20s. to 40s. annually per foot of frontage. This portion of the city is terminated by the steep banks of the Water of Leith, and is connected with the grounds N. of that stream by the Dean Bridge, an elegant structure, consisting of 4 arches, each 96 ft. span, the height of the road-way above the bed of the river being 106 ft. One of the most celebrated streets in the New Town is Prince's Street, forming a species of terrace, and facing the Old Town, of

which it commands a fine view, which, especially by moonlight, is probably unequalled. Waterloo Bridge connects this street with the Calton Hill, being thrown over a deep ravine occupied with ancient, but shabby buildings, called the Low Calton. The line of road, to which this bridge leads along the E. side of the Calton Hill, forms a grand approach to the city in this direction. The Queen Street Gardens, a piece of ground which extends from E. to W., about $\frac{1}{2}$ of a m., and are about 200 yards in width, may be regarded as bisecting the New Town. Elegant streets have, at different periods, been built W. of Prince's Street and Charlotte Square, of which the most important are Athol and Coates's Crescents: the greatest length of the New Town, from Athol Place to the termination of Waterloo Bridge, is $\frac{1}{2}$ m.

The situation of the southern districts is considerably more elevated than that of the New Town; but the buildings are of an inferior order, nor has much regularity been observed in the laying out of the streets. The houses are high, mostly four stories, and common stairs prevail, with partial exceptions, particularly in George's Square: this, which is the most elegant and fashionable place in this quarter of the town, was built above 70 years ago, and is of large dimensions. It has on the W. the public walk leading to the Meadows; and on the S. it is separated from them by Buccleugh Place. The principal line of buildings is Nicolson Street, which stretches from the South Bridge, already mentioned, to the country on the S., and now forms the main approach to the city in this direction. The former approaches on this side were parallel to Nicolson Street, being an old street, called the Pleasance, on the E., and the Causeway Side on the W. While the Meadows bound the southern districts on the W., a valley or ravine, fronting Salisbury Crags, forms their termination on the E. Not a few of the public buildings, including the University, are in this district.

The original *royalty*, or "*borough roads*," embraced only the Old Town, excluding even the Canongate, which intervenes between it and the Palace. But the "extended royalty," as it is called, obtained from Parliament in 1767, while it excludes the Canongate, embraces the whole of the New Town, with the exception of a few streets which have stretched beyond its limits. The suburbs of Edinburgh may be briefly enumerated:—the Canongate, including the Calton, a contiguous hamlet at the base of the hill of that name, the superiority of which is vested in the city of Edinburgh. The town council of the city possesses a veto on the election of two resident bailies for the Canongate: that body, besides, appoints one of its own members as baron-bailie. Wester and Easter Portsburgh, the former lying W. of the Grass Market, and the latter, now called the Potter Row, S. E. These two places, which are of considerable antiquity, and which took their names from *ports* or gateways in the Old Town Wall, are also subject to the city of Edinburgh, being governed in a similar way as the Canongate. Leith was formerly in the same predicament; but it has of late years been rendered entirely free and independent. Broughton, a burgh of regality under the same jurisdiction, and lying on the site of the streets in the New Town, which now bears its name, has been nearly obliterated, and will soon entirely disappear. Its separate jurisdiction was destroyed when the Act for extending the royalty was obtained.

angular court in the centre, covered by a dome of 50 ft. diameter. It has great architectural beauty. Its front is ornamented with Corinthian pilasters, supporting a pediment, within which are the royal arms of Great Britain, with a fine entablature of the same order. It is disposed in nearly 100 small arched apartments entering from long corridors on both sides; and, though heated by flues, is, from the total absence of timber, proof against fire.

Churches, &c.—Edinburgh originally consisted of one parish, and John Knox was, for a time, the only minister of the city, that is, of the ancient royalty, independent of the suburbs. The single place of worship at that time was St. Giles', or the High church. In 1625, the royalty was divided into 4 pars.; in 1641, into 6; and now (1840) into 9; but including the extended royalty, the number of pars. is 14, of which 4 are collegiate, or have each 2 clergymen; consequently, the number of parochial ministers in the city is 18. This is exclusive of the Canongate, whose church is collegiate, and of the par. of St. Cuthbert; which latter, after having had 4 of the city pars. formed out of it, still contains no fewer than 68,887 inhab. Its par. church is collegiate. But in addition to the parishes recognised by the civil law, there are no fewer than 13 *quoad sacra*, or ecclesiastical pars., each having a distinct church and clergyman; most of these have been formed since 1834.

The most important ecclesiastical edifice is St. Giles, so called after the tutelary saint of Edinburgh. It stands in the High Street, and forms the N. side of the Parliament Square. It is an ancient Gothic building, the date of its erection being unknown; and is built in the form of a cross. Its length is 206 ft., its greatest breadth 129. It is adorned with a lofty square tower, the top of which is encircled with open figured stone-work, whilst from each corner of the tower springs an arch, which meeting together in the centre form a magnificent imperial crown. A pointed spire, elevated 103 ft. from the ground, terminates this stately tower. Shortly after the Reformation, St. Giles was divided into separate places of worship. In 1822-23 it was thoroughly repaired, with the exception of the tower, renovated, and greatly improved in appearance by an entire casing of new free-stone walls, its ancient character being at the same time carefully preserved. It now contains only two churches; but an aisle intended as a place of meeting for the General Assembly of the church, and not answering that purpose, is used temporarily for a place of worship. The High church, or Easter St. Giles, has a highly ornamented seat for the sovereign, with a canopy supported by four handsome columns. This seat was occupied by George IV., who attended divine service here when in Scotland in 1822. In the church are also the official seats of the magistrates of the city, and of the judges of the court of session.

The next church, in respect of antiquity, is Trinity College church, founded in 1462, by Mary of Gueldres, widow of James I. The building, which is Gothic, and in the cathedral form, appears never to have consisted of more than the choir or E. part, and the transept or cross, the W. part having been begun but not finished.

The Tron church, which stands at the point of intersection of the South Bridge Street and High Street, is also of Gothic architecture, blended with Roman ornaments and details. The present spire of this church is 160 ft. high; the former spire, which was of wood, was burnt down in 1824. Among the other and more modern churches, are St. Andrew's, erected in the extended royalty, in 1781, with a spire 168 ft. high; St. George's, opened in 1814; St. Mary's, in 1821; St. Stephen's, in 1829; and Greenisle, in 1839. St. George's, on the W. side of Charlotte Square, is a large, heavy, tasteless square fabric. From the centre rises a tower surmounted with a dome 150 ft. in height, in imitation of St. Paul's: the building cost 33,000*l*. The town council of Edinburgh are the patrons of the 14 city pars.

The chapels, seven in number, belonging to the Scotch Episcopal church are generally handsome structures. Of these, the principal are, St. John's, at the W. end of Princes Street, in the florid Gothic style, with a beautiful square tower 120 ft. high; St. Paul's, in York Place, of tasteful Gothic architecture; and Trinity chapel, at the N. extremity of Dean Bridge, also in the Gothic style.

The Rom. Catholics have two handsome places of worship, both Gothic; one in the new town, and the other in the old. They have also recently instituted a convent of nuns, called St. Margaret's, at the head of Bruntsfield Links, attached to which is an establishment at Milton House, in the Canongate.

The chapels of the various dissenting denominations are all respectable, and many of them spacious, elegant, and costly. The following is the number of places of worship in the city and suburbs (exclusive of Leith), with the denominations to which they severally belong:—

Established Church, including the quoad sacra parishes		
United Associate Synod	-	29
Relief Synod	-	5
Cameroonians	-	1
Associate Synod of original leaders	-	2
Total number of Presbyterian congregations		46
Independents	-	3
Episcopallians	-	7
Rom. Catholics	-	2
Baptists	-	5
Methodists	-	4
Glasgow, Quakers, Unitarians, Jews, New Jerusalemites, Brethren, 1 each	-	6
Total number of churches and chapels		75

About a half of the seats let or apportioned (about 20,000), belong to the estab. church; the other half let or apportioned belong to one or other of the various dissenting denominations specified in the foregoing table. Notwithstanding the cry that has recently been raised about church extension, there are about 20,000 seats unlet, including all the churches and chapels in Edinburgh. (*First Report of the Church Commissioners, 1837*.) The city parochial clergy, 18 in number, are supported chiefly by an assessment (called annuity tax) of 6 per cent. levied on all houses and shops within the ancient and extended royalty, with the exception of the dwelling houses of the members of the College of Justice, that is, of the legal practitioners before the court of session. A bill is at present (1840) before parliament, the object of which is to extend the annuity over the classes hitherto exempted from its payment, and proportionally to reduce its amount. As the rental of the city has declined (as was previously shown) about a third within the last 14 years, the income of the city clergy has fallen off in a similar ratio. The annuity being also a very unpopular impost, its payment is often evaded, even at the risk of imprisonment or disfranchising of goods, so that great defalcations are experienced in its collection. The clergy drew, till 1838, certain shore dues at Leith, and other trifling imposts; but, by an act of parliament passed in that year (*Edinburgh and Leith Agreement Bill, cap. 55.*), the sum of 2,000*l*. was secured to them, in lieu of all such claims. Their average income of late years has hardly reached 600*l*.

Education.—Edinburgh is not more celebrated for any thing than for her literary and educational institutions: of these, the university deserves the first notice. The building of this seminary, the only foundation of the kind established in Scotland since the Reformation, began in 1580, after many unsuccessful efforts had been made by the citizens of Edinburgh to obtain for their city the advantages of such an institution. It received a charter from James VI. in 1582; and in 1583 the college was opened for the reception of students, the number of whom was 48. (*Crawford's History of the University of Edinburgh*, p. 31.) On the first institution the college there was but one professor or regent; a second was soon afterwards added, then a third, and so on, till there were six—a principal, who was also professor of divinity, four regents of philosophy; and a regent of humanity. Each of the regents of philosophy conducted his class for four successive years, including, in his course of study, almost every department of science and literature—the classics, logic, metaphysics, ethics, mathematics, and physics. A division of labour in teaching was gradually introduced, as new professorships were founded; but it was not till 1708 that the old system was entirely superseded. In the year just mentioned, the number of professors, including the principal (from whose duties the office of regent of theology had been withdrawn in 1620), was 15; but such has since been the increase, that it is now 32. The medical school of Edinburgh, of late years so famous, had its origin so recently as the end of the 17th century, there being no professor of medicine previously to the year 1685. The magistrates, whose predecessors may be regarded as the founders of the university, and who have been at all times its munificent guardians, are its general patrons, and have power to institute new professorships, and to alter or modify the academical discipline. Out of the 32 appointments, they possess the exclusive right of presentation to the offices of principal and of 14 professors; they unite with other parties in the right of election to 7 other chairs; the crown enjoys the patronage of 8; while the principal and professors are invested with the patronage of 1, namely, music, instituted in 1839. The chair of clinical medicine is taught in rotation by certain of the medical professors, according to an arrangement among themselves. The crown is the patron of those chairs only instituted by itself. No party except the crown (and even that was at one time disputed), has a right to found a professorship without the sanction of the magistrates. The incomes of the professors depend chiefly (some of them entirely) on the fees paid by the students. The crown endowed most of the chairs which it has founded; while such of the others

as have salaries attached derive them either from the patrons of the university, their respective founders, or the bequest of private individuals. The chair of music, founded and endowed by General Reid, has attached to it the comparatively large salary of 300*l*. The following table (*Report of Scottish University Commissioners*) contains a view of some not unimportant particulars:—

Offices.	When founded.	Salaries.
First Regent	1583	ditto
Second Regent	1586	£. 151 2 2
Principal	ditto	ditto
Third Regent	1589	ditto
Fourth Regent	1589	ditto
Chair of Humanity	1597	87 4 4
Divinity	1620	196 2 2
Hebrew	1648	115 0 0
Mathematics	1674	148 6 8
Botany	1676	127 15 6
Theory of Physic	1685	None.
Practice of Physic	1685	None.
Church History	1695	200 0 0
Anatomy and Surgery	1705	50 0 0
Public Law	1707	Unknown.
Greek	1708	87 4 4
Natural Philosophy	1708	92 4 4
Moral Philosophy	1708	102 4 4
Logic	1710	52 4 4
Civil Law	1710	100 0 0
Chemistry	1715	None.
Universal History	1719	100 0 0
Scottish Law	1728	100 0 0
Midwifery	1735	None.
Clinical Medicine	1741	None.
Rhetoric	1762	100 0 0
Natural History	1767	100 0 0
Materna Medica	1769	None.
Practical Astronomy	1786	120 0 0
Agriculture	1790	50 0 0
Clinical Surgery	1805	100 0 0
Military Surgery	1806	100 0 0
Medical Jurisprudence	1807	100 0 0
Conveyancing	1825	120 0 0
General Pathology	1831	None.
Music	1839	300 0 0
Total amount of salaries, exclusive of the class of Public Law		£. 759 4 2

The above sums include, in the case of the older chairs, allowances for house rent, as the professors and also the students originally lived within the walls of the college; but such is no longer the case. Both parties now live wherever they choose; and no discipline is exercised over a student, except when within the walls of the college. The professorships are divided into the four faculties of philosophy, law, medicine, and divinity. The students wear no particular academical dress. The principals of the University, of whom the most illustrious by far was Dr. Robertson, have, till the recent appointment of Dr. Lee (1840), been ministers of Edinburgh; so that the smallness of the endowment was less felt. It is supposed that government and the magistrates will now combine to raise the income of the principal to at least 800*l*. For most part of last century the duties of principal were confined to his officially presiding as chairman at meetings of the *senatus academicus*, or body of professors. But it is supposed that the system of general superintendence of the seminary, and the delivery of a weekly or occasional lecture, will again be revived. There is no such officer as a chancellor or rector, except that the functions of the latter are said to be officially vested in the lord provost of Edinburgh. A standing body, called the college committee, appointed by the town council out of their own number, has charge of the seminary. There is but one session annually, from the 1st of November till the end of April. There are, however, a few summer classes for three months, such as botany, natural history, &c.

The exhibitions, or *bursaries*, attached to the university are 34, their benefits being extended to 80 students; their aggregate amount is 1,172*l*. a year. Three are of the annual value of 100*l*., six of 50*l*., ten of 20*l*., four between 20*l*. and 15*l*., one of 15*l*., five between 15*l*. and 10*l*., forty-two between 10*l*. and 5*l*., and three under 5*l*. The fees paid by the students are—for each class in the faculty of divinity, 2*l*. 2*s*.; in that of arts, 3*l*. 3*s*.; in those of law and medicine, 4*l*. 4*s*. There is, also, 1*l*. paid annually on matriculation.

The number of students increased pretty regularly from the institution of the university till 1823, when it was at its maximum. The number attending the class of each regent, previously to 1646, ranged from 13 to 70; the average being 35. (*Craufurd, passim*.) The aggregate attendance during that period, including divinity, the only other department then taught, did not probably exceed 180. The number did not exceed 500 in 1788 (*Maitland, p. 370*); it was 1,279 in 1791-92. The rapid diminution of attendance since 1828, will be seen from the following table:—

Years.	No. of Students.
1828-9	2,544
1830-1	2,023
1832-3	1,504
1834-5	1,282
Decrease since 1828-9	1,062

It may not be uninteresting to trace the diminution in the different faculties.

Years.	Arts.	Medicine.	Law.	Divinity.
1828-3	930	867	274	275
1839-40	469	468	165	162
Decrease	441	399	111	111

The list for the year 1839-40 does not include those students who may attend any of the summer classes beginning in May; but their numbers, it is likely, will not exceed 20; so that the discrepancy between our tables and the aggregate numbers will be inconsiderable. The following table, which refers to the students of 1838-39, and which will apply tolerably well to any other year within the present century, shows the districts and countries whence the supply of students is derived:—

Counties, &c. from which the Students come.	Medical.	Arts.	Law.	Total.
Edinburgh, county and city	104	208	55	367
Dumfriesshire, county	21	28	4	53
Perthshire, county	5	24	5	35
All other parts of Scotland	133	200	85	418
Uncertain	1	1	1	3
England	167	34	3	204
Ireland	58	7	0	65
Colonies and other countries	82	15	1	98
Students in divinity	574	617	152	1,343
Total attendance	-	-	-	1,400

The proportion of medical students is great, though the decline in this faculty is nearly as considerable as in the other departments. But it is a curious fact, that, despite this decline, the number of graduates in medicine has been more than maintained. Reckoning from 1726 to 1826, the total number of graduates amounted to 3,070, or to an average of 30 per annum. But the average for the last 25 years is considerably above 160.

Years.	Number of Graduates.	Years.	Number of Graduates.
1816	76	1836	123
1827	160	1837	106
1835	110	1838	98
		1839	119

While the number of medical graduates is so great, those in arts are very few indeed. For 50 years preceding 1826, the total number was only 164, or little more than 3 a year. The number is still only about 6 annually; the fact is, that but little value is attached to the possession of the degree of A.M. The degrees of D.D. and LL.D. are entirely honorary, and are proposed to be bestowed only on persons of literary eminence. The right of conferring this honour is vested in the *senatus academicus*; and it would seem as if it had not been abused. The number of degrees of D.D. averages about 2 yearly; and of LL.D. only 1.

The great diminution of students to which we have referred is owing, it is proper to remark, not to any inefficiency that attaches to the university of Edinburgh, for that seminary could rarely boast of more able and assiduous teachers, and has seldom been in a state of greater proficiency than at present, but to a combination of other circumstances, particularly to the recent institution of several colleges in England, to an increased emigration to our colonies, and to the country having become more commercial, and supplying more advantageous channels of employment than those afforded by the learned professions.

The university library consists of nearly 100,000 vols. It is open on payment of the matriculation fee, referred to above, to all students, who may borrow from it and carry to their lodgings as many books as they please, or depositing a sum equal to their value, which is returned to them when the books are replaced. The library is supported by the matriculation fee, by *bf*, paid by each professor on his election, and by a portion of the fees of graduates both in medicine and in arts. It was one of the institutions that were entitled to a copy of every book entered in Stationers' Hall; a right commuted for a certain fixed sum paid by government. The library hall is 198 feet in length by 50 in width, and is certainly one of the largest and finest halls in the kingdom. There are various other subsidiary apartments. The theological faculty has a library, consisting of about 6,000 vols. appropriated to the use of its own students. The college museum, which occupies two large and elegant rooms, besides minor apartments, is particularly rich in objects of natural history.

The present university buildings, which are on a very magnificent scale, were begun in 1789, the expense being defrayed partly by public subscriptions, but chiefly by repeated grants from government. The structure is quadrangular, 268 ft. by 265, including a court. A hand-

some portico, supported by massive Doric columns, forms the chief entrance. This is to be surmounted by a dome, the only thing that is now wanted to complete the building.

The celebrity of Edinburgh as a medical school has of late depended materially on the schools of a number of private lecturers of eminence in their separate departments, particularly in medicine. They are generally members of the Royal College of Surgeons, and attendance on their courses of lectures is allowed by that body to qualify for examination. This college grants diplomas in surgery, but not in medicine; so that a person may obtain the rank of surgeon in Edinburgh without attending a single class in the university; a circumstance which, of late years, has tended to diminish the attendance in the latter. A number of the lecturers, in 1839, united and formed themselves into a body called Queen's College. The lectures of this institution, as well as those delivered under the auspices of the Royal College of Surgeons, are recognised by the University of London, and qualify for examination before that body. The Royal College of Surgeons, incorporated by charter, in 1778, has recently built a Hall in Nicolson Street, which ranks amongst the finest specimens of architecture in the city.

The Royal College of Physicians was established so early as 1581 by a charter from Charles II. The number of its fellow residents and non-residents, is about 100. Their Hall is in George-street, a handsome edifice, of the Grecian style, built in 1778.

The High School is at once the oldest and most celebrated of all the Edinburgh schools; and is surpassed but by few classical seminaries in the empire. It was instituted in 1519, but having fallen into decay, was re-erected in 1577. It now consists of a rector, and four other Greek and Latin masters, each of whom begins an elementary class yearly, and at the end of four years hands it over to the rector, under whom, generally during two additional years, the *curriculum* of study is completed. The school also embraces teachers of writing, arithmetic, mathematics, and French. The present building, one of the greatest ornaments of the city, is situated on the S. slope of the Calton Hill; it was opened in 1829, is composed of a central body and two wings, and cost 34,000*l*. The number of scholars has been (1820) as high as 968; but for some years past, the number has been rather under 400. This decline is not, however, ascribable to any falling off in the reputation of the school, but to the institution, in 1824, of a more aristocratical establishment of the same kind, called the Edinburgh Academy, conducted by a committee of subscribers. Considering the excellence of the instruction, the fees charged at the High School are very moderate, not exceeding in all 5*l*. a year; the fees at the Academy are about twice as much. A Naval and Military Academy, instituted in 1825, embraces all the classes necessary for the two professions from which its title is derived, as well as all the branches implied in a liberal education. The other more eminent schools, to which we can do no more than allude, are the Southern Academy, situated in George-square, embracing not merely classical literature, but all the branches requisite in a commercial or general education; the Hill-street Institution in the New Town, of which a similar character may be given; the Circus Place School, a seminary for English literature; the Ladies' Institution for the Southern Districts; the Scottish Institution for the education of young ladies (attendance upwards of 100, whose average age may be 16); Dr. Bell's School (attendance 400); Lancasterian School (attendance 600); the Seasonal School, supported by the Kirk Sessions of Edinburgh (attendance 300); School of Arts, or Mechanics' Institute (attendance 450).

The following table (*Education Inquiry, Scotland, Session 1837, vol. xiv.*) shows the general state of education in Edinburgh, including the number of parishes and of non-parochial schools, and the number of teachers and of scholars:—(See next col.)

This table embraces all the par. included under Edinburgh, both civil and *quoad sacra*, as they stood in 1834. The number of par. schools was then 6; and of non-parochial, 302. Some of the returns are defective as to the number of scholars; but they give, notwithstanding, an aggregate amount of 14,666, showing that 9*l* per cent. of the pop. of the capital of Scotland, exclusive of Leith, were being educated at the same time. But if we make allowance for the defective returns, and take also into account the number of pupils, chiefly females, attending private boarding schools, and those whose education is strictly domestic, the probability is that the proportion will be 8*l* per cent. instead of 9*l*; a larger proportion than perhaps any other town of any considerable size can exhibit. These returns do not extend to pupils attending the School of Arts, or the Edinburgh Philosophical Association; the object of which latter is to afford instruction by lectures to the middle classes after business hours, in winter. The attendance

on the one may be, as stated above, about 400; on the other, 450. Literary and scientific associations, to make here mention, are common in Edinburgh, such as the Royal Society, the Astronomical Institution, the observatory attached to which on the Calton Hill is in the purest classical taste, the Society of Antiquaries, the Wernerian Society, the Royal Physical, the Royal Medical, the Cuvierian, the Plinian, the Speculative Societies. There are also various subscription libraries, some of them of great extent and value.

Charitable institutions are so numerous in Edinburgh, that we can do little more than barely enumerate them. The most important is George Heriot's Hospital, whose founder was goldsmith and jeweller to James VI. This noble structure, which is of quadrangular form, with a court in the centre, and of Gothic architecture, from a plan of the celebrated Inigo Jones, is devoted to "the maintenance and education of poor fatherless boys, freemen's sons of the town of Edinburgh." It was opened for the reception of boys in 1659, when 30 were admitted. It now contains 180; but by a recent act of parliament, the governors of the hospital are empowered to erect schools from the surpluses of income throughout the town, for the gratuitous education primarily of freemen's sons; but if circumstances admit, to be open to the children of poor parents generally. One such school, containing 250 pupils, has been in operation for two years; and several others are about to be opened, while still more are contemplated. The management of the charity is vested in the 18 city clergymen, and in the members of the town council; total 51. The revenue of the hospital is upwards of 14,000*l*. a year. The other charitable institutions are George Watson's Hospital, founded in 1741, containing 80 boys; John Watson's Hospital, founded in 1825, and containing 120 children, male and female; the Merchant Maiden and the Trades' Maiden Hospitals; the Orphan Hospital; Gillespie's Hospital, for the reception of old decayed men and women, and attached to it is a free-school, attended by about 160 poor children; Trinity Hospital, founded by the widow of James II. in 1651, for the benefit of "burgesses, their wives, or children not married, nor under the age of 50 years;" Cauvin's Hospital for the maintenance and education of the sons of poor teachers, and of poor but honest farmers; the Institution for the Deaf and Dumb; Asylum for the Blind; Magdalene Asylum; Lunatic Asylum; House of Refuge; Royal Infirmary, founded in 1736; Society for the relief of the destitute Sick; Lying-in Hospitals; Dispensaries. In addition to these, and other less important charities, three bequests have recently been made for benevolent purposes, James Donaldson, printer, Edinburgh, who died in 1830, bequeathed 210,000*l*. for the endowment and erection of an hospital for the maintenance of 200 poor boys and girls. Sir William Fettes, who died in 1836, left the greater part of his large fortune to form an endowment for the maintenance, education, and outfit of young people whose parents have fallen into adverse circumstances. George Chalmers, plumber, who died in 1826, bequeathed 20,000*l*. for the erection and support of an hospital "for the sick and hurt."

Courts of law.—Edinburgh is distinguished by being the seat of the supreme courts of Scotland, or College of Justice, founded by James V. in 1532. Of these, the principal is the Court of Session, or supreme civil court, which possesses in itself all those peculiar powers exercised in England by the Courts of Chancery, Queen's Bench, Common Pleas, Admiralty, and others, being a court both of law and equity. The constitution of the court has undergone various modifications in its different departments, during the last 300 years. At present it consists of 13 judges, called lords, and sepa-

* This par. embraces Heriot's Hospital, the school of the charity Workhouse, and the Model Infant School; but the number of scholars is not given in the return. Some of the other par. include various similar institutions, but whether the returns comprise the children that attend there does not appear. We believe they do.

rated into the first and second divisions: in the former there are 6 lords, in the latter 7. The two divisions form distinct courts, but they may, and on important questions do, sit in judgment together. From the first division are detached 3 judges, called Lords Ordinary, and from the second there are taken 3. Before one or other of these Ordinaries, all cases must be brought in the first instance; but an appeal lies from their judgment to that division before whose ordinary the case was primarily tried. Cases may be appealed from the Court of Session to the House of Lords, the decision of the latter being final. The court has a winter term of 4 months, and a summer term of 2 months. Trial by jury in civil cases was introduced into Scotland, under a separate court, in 1816; but in 1830 this tribunal merged in the court of session. In the same supreme court has been invested the jurisdiction of the Feind or Tithes Court, (the peculiar duty of which was to regulate the stipends of the clergy of the established church of Scotland), of the Commissary or Consistorial Court, and the Court of Exchequer. The High Court of Justiciary or supreme Criminal Court was instituted in 1672. It is composed of a president called the Lord Justice Clerk, and of other five judges, who must, at the same time, be lords of session, but the crown may appoint any of the other lords to act should such a step be thought expedient. (*See Scotland.*)

The edifice which, since the Union, has been the place of meeting of the College of Justice, was the parliament house of Scotland, from 1640, the date of its erection, down to 1707, when the Union extinguished the separate legislature of Scotland. The building is situated in the centre of the Old Town, being separated from the High Street by the cathedral of St. Giles. A small space called the Parliament Square intervenes between it and that church. Nearly half the buildings which formed this square were burnt down in 1824; but both St. Giles and the Parliament House escaped. A new front, though but little in harmony with the surrounding buildings, has been given to the latter, and great changes have been effected in its interior in the course of the present century. There is in the court occupied by the second division an admirable statue by Roubilliac, of Duncan Forbes, of Culodden, president of the Court of Session; and in the court occupied by the first division is a statue of President Blair; and in the outer house, where the lords ordinary sit, is a statue of Henry Dundas, Lord Melville: the last two are by Chantrey, but they are poor and spiritless compared with the masterly production of Roubilliac.

The faculty of advocates is an association of barristers (but not incorporators), entitled to plead before the supreme or any other courts of record. The society of writers to the signet is an incorporated body, qualified to conduct cases, as agents, before the same courts, and enjoying the exclusive right of preparing such papers or warrants as are to receive the royal seal or signet, whence their designation. The solicitors before the supreme courts form a body of attorneys incorporated in 1797, but of inferior grade and dignity to the writers to the signet. Advocates' first clerks may practise before the supreme courts by undergoing the usual examination, and paying certain fees.

The legal practitioners, all ranks included, may be regarded as the most important class in Edinburgh. Public opinion is, to a considerable extent, affected by their influence: they form a very numerous body; but while they have greatly increased in numbers during the last 40 years, the business of the Court of Session, before which almost all of them exclusively practise, has undergone a remarkable diminution. The following table shows the number of new cases tried at the first time in the Court of Session at several different periods, with the numbers of advocates and agents, the latter embracing writers to the signet, and all professional men entitled to practise before the supreme courts:—

Years.	No. of Cases.	No. of Advocates.	No. of Writers to the Signet.	Other Agents.
1798	2,631	237	245	199
1810	2,374	270	252	171
1835	2,811	457	707	308
1839	1,486	451	702	296

It thus appears that while the number of cases annually enrolled for the first time in the Court of Session is nearly a half less than it was in 1798, the number of advocates has almost doubled, and that of agents of all kinds has nearly trebled. As, however, the capital and pop. of the country have nearly doubled within the time specified, it is probable that conveying and such departments of business have greatly increased, but not nearly to the same extent as the number of lawyers. It is owing to the unprosperous state of the profession of the law in Edinburgh, and to the falling off in the amount of students at the university, that the

stationary or declining state of the city, and the consequent fall of house rents, must be imputed.

In immediate connection with the parliament house are numerous apartments, some of them spacious and highly ornamented, fitted up for the libraries belonging to the faculty of advocates, and the writers to the signet. The library of the former body was established in 1692. This collection, which exceeds 150,000 volumes, is by far the most extensive and valuable in Scotland, and is, in fact, a very noble national library. The library of the writers to the signet is also large and very valuable.

Places of amusement.—Among these may be specified the theatre, which is tolerably well attended; the assembly rooms, &c. The former, situated at the N. end of North Bridge-street, is a plain building externally, but is handsomely and conveniently fitted up. The assembly rooms in George-street are large and elegant. Golf is a favourite game; and curling and skating are very favourite amusements in winter, when the *lochs* of Duddingstone and Larchmont happen to be frozen over.

Manufactures.—Edinburgh can scarcely be regarded as a manufacturing town. The brewing of ale has for upwards of two centuries been established in Edinburgh; and without referring to the breweries in the vicinity, the number at present in operation in the city is 28; the number of persons employed, exclusive of masters, about 600; and the produce 193,100 barrels a year. There are only two distilleries of whiskey immediately connected with Edinburgh; Lochrin, which employs 236 men, and annually produces 740,000 gallons of spirits; and Sunbury, which employs 106 men, and produces 555,000 gallons yearly. There are 16 coach-making establishments in Edinburgh, which employ about 600 hands. Figured shawls, in imitation of those of Cashmere, were first successfully made at Edinburgh, where they are still produced in great perfection. This took place about 1805, and the honour of it belongs to a Miss Bowie, who, with her father, had been for a number of years engaged in the gold lace manufacture, and who then "attempted to make square shawls of the most simple patterns, in imitation of the Cashmere," by means of the sewing needle, from a fabric made of silk, spun from the waste made in reeling the finest Italian silk. This plan was tedious and expensive, and in effect fell short of the originals." (*Jb.*) But how clumsy soever, this was the origin of a manufacture now of great importance. The invention of the Jacquard loom gave for a time the superiority in shawl-making to our French neighbours. But a knowledge of the invention having reached this country, produced a reaction in favour of the Scotch manufacture; and while this business was being cultivated with greater or less success in France, it established itself at Norwich, and at Paisley and Glasgow. Edinburgh, from the commencement of this manufacture, has taken the lead in most of the improvements connected with it, always producing the best goods of the kind; but from the circumstance of labour of various kinds being lower in Paisley and Glasgow, the manufacture has mostly been transferred to these places. At one time there were about 1,000 hands employed in Edinburgh in this manufacture; now (1840) it scarcely gives work to 100." (*Encyc. Britannica*, art. *Shawls*.)

Literature has long been not only the principal glory of Edinburgh, but has also afforded a principal source of employment to the population. The great works of Hume, Robertson, and Smith, were not indeed printed or published in Edinburgh; but from their era the city began to attain to great distinction in the literary world, and several valuable works soon after began to issue from her press. The publication of the Edinburgh Review, which commenced in 1802, added greatly to the celebrity of Edinburgh as a literary mart, which was not long after still further extended by the appearance of the earlier productions of Sir Walter Scott. Since then a vast number of works of the highest eminence, in almost every department of literature, philosophy, and science, have appeared at Edinburgh; and it is not going too far to say, that her press has contributed ten times more to the instruction, the amusement, and the glory of the country, than all the other presses of the kingdom put together, that of the metropolis only excepted. In this respect, indeed, Edinburgh need not fear a competition with any city, either of ancient or modern times. Her press presents at this moment no symptoms of decay; and besides the Edinburgh Review, and other standard works, it furnishes two widely circulated monthly magazines, a journal (Chambers'), the best by far, and the most extensively read, of the class of cheap publications; and 18 newspapers, 2 of which appear three times a week, 3 twice a week, and the others weekly. There are now (1840) in Edinburgh 85 printing offices, employing from 950 to 1,000 workmen, exclusive of masters. The number of persons, men and women, young and old, to whom the business of bookbinding gives direct employment, is 518, exclusive of masters. Then, with regard to the book-selling department, the following contains a minute synopsis:—

Copartners.	Single Masters.	Clerks.	Apprentices.	Warehousemen.	Porters.
39	-	34	56	4	12
20	-	none.	14	1	5
17	17	27	29	1	5
20	20	none.	41	none.	1
14	14	none.	none.	none.	none.
Totals - 49	61	61	120	6	21

From this table it appears that there are 110 different bookselling establishments in Edinburgh, of which 49 are copartnership houses; that of these copartnership houses, 20 employ no clerks; that there are 47 separate booksellers, of whom 17 employ clerks, and 30 not; and that there are 14 booksellers on a small scale, who have neither clerk, apprentice, warehouseman, nor porter: the total number of persons to whom the bookselling business gives employment being 318, and allowing for the copartnership houses about 350. Most, or all of these booksellers, deal in stationery; but there are, besides, 18 stationers, properly so called, who employ about 90 individuals.

The linen manufacture, both as respects the coarser and finer fabrics, long flourished in Edinburgh. "The number of looms," says Arnot, "employed in Edinburgh in the linen trade is extremely fluctuating; the largest number that has been known is about 1,500; at present (1779) it is supposed there are upwards of 800. This city has long been famous for making the finest damask table linen, and linen in the Dutch manner, equal to any that comes from Holland." (*Hist.* p. 461.) But so thoroughly has the linen trade disappeared, that there are not at this moment 50 looms employed in the city. Dumfries and Dundee have become the chief seats of the manufacture, the former devoting itself chiefly to damask and diaper, the latter to Ormaburghs and the coarser fabrics.

The first of the Scotch banks, the Bank of Scotland, was established in Edinburgh in 1695. The office now occupied by this bank, was erected in the course of the present century: it is situated in the street leading from the High Street to the S. end of the Mound, and is a large handsome edifice, occupying a conspicuous place among the public buildings of the city. The next bank instituted in the city was the Royal Bank of Scotland, in 1727; the third, the British Linen Company, was set on foot, in 1746. There are now eleven banks in the town, of which four are branch banks, which, with a single exception, are all joint-stock establishments, with wide constituencies; they have in general large capitals, and vast sums in deposit. They are, with the exception in question, all banks of issue. Ten years ago there were seven private banks in Edinburgh, but now only the one just referred to. (For an account of the Scotch system of banking, see SCOTLAND.) A savings' bank was established in April, 1836. Its deposits amounted, on 7th Feb. 1840, to £83,010*l.* 3*s.* 4*d.*; the number of its depositors being, at the same time, 18,410.

The Union Canal, which commences at Port Hope-town, on the W. of Edinburgh, and joins the Forth and Clyde Canal, near Falkirk, forms a continuous line of water communication between the Scottish capital and Glasgow and the W. of Scotland. The course of the Union Canal is 31½ m., its depth 5 ft., its width at the surface 40 ft., and at the bottom 30 ft. An act was obtained in 1839 for the construction of a railway between Edinburgh and Glasgow; and it is supposed the work will be completed in 1842. The length of the line is 46 m. A railway is now being made between Edinburgh and Newhaven, a distance of 2 m. Edinburgh is connected with the coal district, S. of the town, by the Edinburgh and Dalkeith railroad, which has branches to Leith, Porto-bello, and Fisher-row, in all 15 m. It was opened in 1832.

For a lengthened period, Edinburgh was very indifferently supplied with water. There are no springs of any importance within the city; the water required for its consumption being conveyed in pipes from a considerable distance. The first of these pipes was laid in 1681; and additions were made to it in 1723, 1787, and 1790. Still, however, the supply, owing to the increase of population, was very defective, and it became necessary to take more efficient measures for increasing its quantity. In this view a joint-stock company was established by act of parliament in 1819, which has conveyed into the town the water of the Crawley and Glencorse springs, about 7 m. S.W. from the city. The works that have been constructed to effect this object are on a scale of great magnificence, and do honour alike to the skill of the engineer, Mr. Jardine, and the public spirit of the company. The whole cost of this great work amounted to nearly 300,000*l.*; but the city has now the inestimable advantage of an abundant supply of the most excellent water. The cost is defrayed by a water rate charged on all property.

Edinburgh is extremely well lighted with gas; and

the pavement of the streets and lanes has long been celebrated for its excellence. The best material for paving is found in the neighbourhood. Some of the leading streets are now macadamised.

Advantages and Disadvantages of Edinburgh as a Place of Residence.—As a place of residence for persons in the upper ranks, to whom the expenses and excessive distractions of a London life may not be quite suitable, Edinburgh seems to hold out greater advantages than any other city perhaps in the empire. Not being to any great extent a seat of trade or manufacture, there is neither that eager and restless pursuit of gain, nor that occasional ostentation and misuse of new riches, which have a tendency to lower the tone of society in such places, and to make them, for the most part, uncomfortable for the habitation of those who take no share in the prevailing occupations; while there is still such an assemblage of educated persons in easy circumstances, as to constitute a society, at once unusually intelligent, and reasonably polite. The upper classes of this society consist chiefly of the most distinguished members of the legal and other learned professions; a very unusual proportion of accomplished artists, engineers, and men of science, with a certain admixture of landed proprietors, or other persons of independent fortune, who have come with their families for the purposes of education or amusement, which may both be here found of better quality, and at easier rates, than in most other places. At the High School, and the New Academy in particular, every thing that is taught at the great public schools of England may be as perfectly acquired at an infinitely less expense, and with less hazard, in many respects, to the moral habits of the pupils; being all day-schools only, and the lads continuing therefore to reside in the bosom of their own families, or in others into which they have been individually adopted, and never collected promiscuously in large boarding-houses. There are also excellent teachers for all the modern languages, music, drawing (for which last there are also two public academies), dancing, fencing, and other accomplishments, on far more moderate terms than in the metropolises.

There is a regular theatre royal, and other inferior dramatic establishments; an annual exhibition of painting and sculpture, by native artists; out of which there have been purchases made (chiefly by means of a very extensive association) to the amount of more than 3,000*l.* for each of the last five years; frequent professional concerts, very numerously attended; and, besides public assemblies, a great deal of dancing and music in private houses for about half the year.

There are no regular residents of great fortune; and the style of living is pitched, therefore, on a comparatively moderate scale of expense. There probably are not four or five families that spend so much as 4,000*l.* a year; and for half that sum an establishment may be maintained (with good management) on the highest level of the place. There probably are not more than 150 private carriages kept, exclusive of cabs or flies. But, from the shortness of the distances, and old frugal habits, this is by no means considered as so indispensable to a complete establishment, as in many societies of no higher pretensions. These remarks are applicable, of course, only to those who may wish to live and receive company on the best and handsomest footing. Much comfort and respectability may no doubt be obtained on far inferior incomes; nor is there any place perhaps in the kingdom, where individuals enjoying any

reputation, or possessing any accomplishment or social recommendation, may find access to the best company with less necessity of expense. Persons engaged in literary undertakings, have facilities for obtaining loans of books from the great public libraries already mentioned, that are wholly unknown in London.

Ordinary provisions, or at least fish, poultry, and vegetables, and in a more particular manner fuel, the keep of horses, and house rents, are very greatly lower than in London: but bread, wine, groceries, servants' wages, ordinary clothing, and household furniture, are nearly the same. There are very good coach-building establishments, and on an extensive scale; from which very substantial articles are furnished very much under the London prices.

There is nothing to be called gaming now in Edinburgh society; a good deal of literary and political conversation; much dining out, with excellent wines, still perhaps too liberally partaken of; and rather more than the London opportunities for love-making, with quite as few rash or unsuitable marriages. Party politics run higher, perhaps, and are more bitterly asserted, than in the larger society of the metropolis, and to an extent which still interferes too much with the natural operation of social affinities; though less, certainly, than during the first heats and panics of the French revolution. The Episcopal chapels are very well attended, and chiefly by the higher classes. The clergy of the (Presbyterian) establishment go less than in former times into general society; and are mostly occupied in the zealous and meritorious exercise of their sacred duties: though, undoubtedly, some religious acrimony and uncharity may be occasionally found to disturb the harmony of societies which would be otherwise delightful. There is a greater turn for reading, and even for scientific study, among the middling and lower orders, than in any other place of the same extent in the empire; and more lectures and subscription libraries for their use, and mostly maintained entirely by their contributions. It cannot be denied, however, that, in consequence of causes that will be afterwards noticed, the condition and habits of the poorer part of the population have been lowered, and that local misery and destitution prevail to an extent which seems to call on the justice as well as the feelings of the community for some effectual relief.

Edinburgh is also to be considered as a garrison town; having generally a foot regiment quartered in the castle, and a regiment, or part of a regiment of horse, in the cavalry barracks at Piershill; besides a station of ordnance or engineers at Leith fort; establishments which, together with the habitual residence of the commander of the forces in Scotland, and his suite, tend, in some degree, to diversify and enliven its general society.

The only other places within the realm which can be named in competition as places of residence, are Bath and Dublin; but Edinburgh seems entitled to the preference over either: Bath is still but a great watering-place, with little of a settled population, and far less original intellectual activity. Nobody will imagine that the Edinburgh Review, or Blackwood's Magazine, could have originated or been supported in that great resort of gouty canons and card-playing dowagers. As to Dublin, again, few British families, it is thought, have ever taken up a voluntary residence in any part of the sister island; and Dublin would scarcely appear the

most attractive part. The extremes of fortune and of party are too much blended there. The pomp of the vice-regal court contrasts painfully with the squalid misery of the poorer quarters; and the bitter Orangism of its corporation and university, with the fiery and turbulent zeal of the Catholic body: while the ghost of recent independence stalks frowningly across the path of the *avatar* of impossible repeal.

The Scotch metropolis had long the unenviable reputation of being one of the dirtiest towns in Europe; and though vast improvements have been effected in this respect, this reproach is not yet completely obliterated. The dirtiness of the Old Town seems to have been mainly attributable to the crowded state and height of the buildings, and to the want of water. These circumstances hindered the formation of water-closets, and of common sewers; and down to the commencement of the American war there was probably not a dozen of the former, and certainly not one of the latter, in the city. Both are now universal in the New Town, but they are still wanting in very many parts of the Old Town; and notwithstanding the regulations laid down and enforced as to the casting of filth on the streets, they can never, under the circumstances, be perfectly clean. In very many, too, of the stories (*flats*) or houses, especially those in the narrow closes or wynds on each side the High Street, there is no supply of water, save what is obtained from the public pumps in the vicinity; and this circumstance, combined with the want of ventilation, and with the poverty and usually crowded state of the inmates, render them the abode of filth, misery, and disease, to an extent that would not easily be believed.

None but burghesses were till lately entitled to carry on any trade or manufacture within the royalty. But we are not aware that there now exists any such prohibition or exclusion. None, however, but burghesses or their children have a claim on the charity of the Trinity Hospital, and none but the sons of burghesses are entitled to admission to Heriot's Hospital. There are eight incorporated crafters within the burgh—hammer-men, tailors, wrights, bakers, shoemakers, weavers, fleshers, and barbers—all nominally enjoying exclusive privileges, and all possessed of funds appropriated to the support of decayed members and the widows of members.

Lying situated near the sea in a rich well-cultivated country, the markets of Edinburgh are extremely well supplied with all sorts of provisions at a reasonable rate. Fish, in particular, is both abundant and cheap. Coal, which is the only fuel, is brought from near Dalkeith, by railway, on the one hand, and from near Linlithgow, by canal, on the other: it is not so good as that used in London, but costs less than half the price.

Notwithstanding its picturesque beauty, the situation of Edinburgh has several very considerable disadvantages. Owing to the unevenness of the ground on which it is built, a large expense has had to be incurred in the formation of bridges and roads between the different parts of the city, and in the lower parts of many of the houses. The town is also very much exposed; and is probably more subject to violent gusts of wind than any other great city in the empire. The E. winds in April, May, and June are unusually piercing, and not unfrequently bring with them thick fogs: owing to the difficulty of watering the streets they are often infested with dust so as to be extremely unpleasant. But, on the other hand, the views from the Calton Hill and the Castle, ascending, as they do, the E. side of the opposite shore of Fife, and a vast extent of fine country bounded by distant mountains, are of almost unrivalled beauty and variety. No where else, perhaps, can such varied and extensive prospects be commanded within the precincts of a large city.

Condition of the Poor, Rate of Mortality, &c.—The condition of the lower classes in Edinburgh has been progressively declining for several years past, and is, at this moment, exceedingly depressed. We have already glanced at the sudden stoppage of the building speculations, and other circumstances that have conspired to produce this state of things. We may here add, that during the period that the Union Canal was being excavated, a great number of Irish labourers were employed upon it, many of whom settled in Edinburgh; and having since received large accessions from Ireland, now form a colony of several thousands, injuring the Scotch labourers by their competition, and far more by the pernicious example of their low estimate of what is necessary for comfortable subsistence. In consequence of these and other concurring causes, the pauper pop. of Edinburgh has become very considerable, and is, we are sorry to say, subjected to extreme suffering.

The poor here, as in most other Scotch towns, are

partly supported by assessments, partly by collections at the church doors, and other voluntary contributions, and partly by the interest of money in mortmain. At an average of the three years ending with 1837, the permanent paupers on the roll amounted to 2,911, the lunatics to 140, and the occasional poor to 542, making an aggregate of 3,593 individuals. The total sum collected, at an average of the same three years, for the relief of the poor, including the expense of management, amounted to 17,674*l.* a year, of which 14,000*l.* were raised by assessment. (*Report of Committee on the Poor, 1839*, p. 2.) But there is, and has long been on the part of the magistrates and parochial authorities of this and most Scotch towns, a great disinclination to admit the claims of paupers for relief, and a strong determination to confine the allowances, when granted, within the narrowest possible limits. We shall elsewhere state the reasons (erroneous, as we believe) that have led to this practice (see SCOTLAND); but, in consequence of their operation, many persons in Edinburgh to whom relief should be extended, have been excluded from the poor's roll, and the provision made for the others has been most inadequate. These conclusions have been fully established by Dr. Aitson, in his important tract on the "Management of the Poor in Scotland," Edinburgh, 1840. The authentic information given in this tract as to the state of the pauper pop. of Edinburgh, is quite appalling. Owing to the inadequate supply and bad quality of their food, and the crowded and intolerably filthy state of their lodgings, the lanes and closes of the Old Town are hardly ever free from malignant fever; and the mortality is, in consequence, unusually great. It is most probable, as already stated, that the pop. of Edinburgh has been about stationary since 1831; and in that year the pop. of the city and St. Cuthbert's par., excluding the Canongate, amounted to 136,100: now it appears that the burials in these districts in the year ending May 1838, amounted to 4,856; showing, supposing the pop. to be stationary, the mortality to be as high as 1 in 28; but in the city itself, with a pop. of 55,218, the mortality during the same year seems to have been as high as 1 in 21, or 1 in 22—a tremendous mortality for a town in a healthy situation, without manufactures, and consequently but little exposed to fluctuations of employment, and not subject at the time to the ravages of cholera, or of any other peculiarly destructive disease. Such a state of things calls for the prompt and vigorous interference of the city authorities and of the government; and no time should be lost in making a more adequate provision for the necessities of the poor, and in enforcing regulations as to cleanliness.

It is usual to ascribe a great deal of this misery to the prevalence of habits of intemperance; but we believe that dram-drinking is a consequence more than a cause of poverty—that it is resorted to as an antidote to despair, and as a means of effecting a temporary escape from misery and wretchedness. Besides, it is not true that drinking has increased; on the contrary, it has materially diminished. It is no doubt greatly to be wished that it were decidedly less prevalent; but it is not the source of a tenth part of the misery and destitution met with in this and other great towns.

Before the passing of the Reform Bill in 1832, the town-council of Edinburgh, which consisted of 33 members, may be said to have been self-elected. With the exception of 6, who were returned by certain incorporated trades, the council for the time being had the exclusive right of nominating their successors, the public having no voice or right to interfere in the matter. The town-council thus elected possessed the exclusive right of choosing a representative in parliament for the city. Owing to the unpopularity that necessarily attached to this self-elected and irresponsible body, the passing of the Reform Bill was no where more strenuously insisted upon, or received, when framed into a law, with more sincere rejoicing, than in Edinburgh. By this bill 2 representatives were given to the city. The first election of members of parliament under that act took place on the 21st Dec. 1832; and never, perhaps, was so great a concourse of people collected in the streets of Edinburgh. The members chosen on this occasion were Francis Jeffrey, Esq. (now a lord of session), one of the most distinguished citizens of whom Edinburgh has had to boast in recent times, and the Hon. James Abercromby, now Lord Dunfermline. In 1840 the registered voters were 5,195. Under the Municipal Reform Act, Edinburgh is divided into 5 wards, and is governed by a lord provost, 4 bailies, or aldermen, and 28 councillors. Municipal constituency in 1840, 3,089.

Owing partly to the large amount of the debts incurred on account of the excavation of docks at Leith and other improvements, and to the waste of the public money that prevailed under the old irresponsible system of municipal government, the affairs of the city of Edinburgh were recently involved in the greatest embarrassment; and it seemed as if ruinous bankruptcy would inevitably take place. Luckily, however, an arrangement has been ef-

fected under the auspices of government, which has obviated this threatened calamity. The creditors have surrendered a portion (25 per cent.) of their claims, and provision has been made for payment of the remainder. The corporation revenue amounted in 1834, to 27,321*l.*

The origin of Edinburgh is involved in obscurity. So early as the beginning of the 7th century it had obtained the name of *Edwinesburgh*, derived, it is supposed, from Edwin, a prince of Northumberland, who overran a great part of the S. of Scotland. In the year 1128, it was called by David I. his *burgh of Edinburgh*; whence we infer that it was then a royal burgh. It was not a walled town, as previously stated, till the middle of the 15th century. James IV. encouraged the erection of its first printing press, in the beginning of the 16th century; but it was not till the succeeding reign that it was recognised as the undoubted capital of Scotland. From this time its history merges in that of the kingdom. It was converted to the Protestant faith at an early period of the Reformation; and the great bulk of its inhab., in successive ages, and under various forms of persecution, adopted the Calvinistic creed, and adhered rigidly to the Presbyterian form of worship. John Knox was, for some time, minister of Edinburgh; and the house which he inhabited (at the Netherbow, near the E. extremity of the High Street) is still standing, and is regarded with no ordinary degree of reverence. During the ascendancy of Episcopacy (1633), in the reign of Charles I., Edinburgh was made a bishop's see; but on Presbytery obtaining the supremacy, in 1638, the Episcopalian form of worship was superseded, and the Restoration, in 1660, to which latter date it continued to be the established church, till the Revolution in 1688, when Presbytery finally got the ascendancy. The union of the kingdoms excited great tumults in Edinburgh, with the view of intimidating those members of the Scotch parliament who were favourable to the obnoxious measure. The act, however, was eventually passed (1st May, 1707) without bloodshed. In the rebellion of 1715, an unsuccessful attempt was made by the Jacobites to surprise the castle. In the subsequent rising of 1745, the rebels got possession of the city, a party of the Highlanders having secured the Netherbow Port; and they remained masters of the town from the 15th Sept. to the 31st Oct. But finding it impossible to reduce the castle, they abandoned the city, and proceeded on their march to England.

In 1736, a remarkable occurrence took place in Edinburgh, known by the name of the *Porteous mob*. The circumstances were these:—On the 14th of April, at the execution of a smuggler of the name of Wilson, a disturbance arose, and the executioner and city guard were assailed by the populace. John Porteous, the captain of the guard, having ordered his men to fire on the crowd, 6 people were killed and 11 wounded. Porteous, having been tried for the offence before the high court of justice, was condemned to death, but was reprieved by the crown. Resolved, however, that he should not thus escape the fate which they thought he merited, the mob, on the evening of the day previously to that on which he was to have been executed, broke into the gaol in which he was confined, and, having dragged him out, led him to the usual place of execution, and there hung him by torch-light on a dyer's pole. It being supposed that the municipal authorities had neglected their duty on this occasion, the city was ordered to pay a fine of 2,000*l.* sterling to the widow of Porteous; and what is remarkable, though a reward was offered for the discovery of the perpetrators, they never were discovered; and their names continue to be unknown.

Few events worthy of notice have since occurred in the annals of Edinburgh. On the 2d of February, 1779, during the parliamentary discussions on the subject of the Catholic claims an infuriated mob burnt one Catholic chapel, and plundered another. Soon after the breaking out of the French revolution, a number of the inhabitants of Edinburgh, sympathising with the principles which then prevailed in France, formed themselves into societies for obtaining parliamentary reform, and similar political objects. The proceedings of these associations, the members of which styled themselves "the friends of the people," were sometimes perhaps, neither very wise nor constitutional. At length they attracted the notice of government; and the servility of the judges, and the wretched state of jury trial in Scotland at the time (see ante, p. 463.), afforded a ready means of inflicting on them the utmost penalty of the law. One of the prosecuted parties, named Watt, was beheaded for sedition; and Muir, Skirving, and others, were transported. The only other important event connected with the annals of Edinburgh was the visit of George IV. in 1822, being the first sovereign who had entered Edinburgh since the year 1650. His Majesty landed at Leith on the 18th August, and embarked for England at Port Edgar, 9 m. W. of Edinburgh, after a visit at Hopetoun House. (See *Milland's Hist. of Edinburgh*, fol. 1753; *Arnott's Hist. of Edinburgh*, edition 1018; *Stark's Picture of Edinburgh*; *Stevenson's Annals of*

Edinburgh; Crawford's Hist. of the University of Edinburgh; Creoch's Fugitive Pieces; Chambers' Gaz. of Scotland, and Traditions of Edinburgh; Chalmers' Caledonia; Pennant's Tour, &c.

EGER (Boh. *Cheb.*), a town of Bohemia, ranking third in that kingdom, near its W. frontier, ch. Elbogen, on a rock on the Eger, 84 m. W. Prague; lat. 50° 54' N. long. 12° 39' 15" E. Pop. (1834) 9,890. It was formerly an important fortress; but its walls are now almost destroyed, and its ditches gradually filling up. It contains some handsome buildings, inclusive of a fine par. church and town-hall. In the centre of the town is a large market-place, at the E. end of which is the *Burgomaster's house*; in a bed-room of which, Wallenstein was assassinated in 1634. In an angle of the fortifications overhanging the river, stand the ruins of the imperial castle, containing an ancient square tower built of black lava, supposed by some to have been constructed in the time of the Romans, a singular double chapel, and the hall in which the principal friends of Wallenstein were treacherously put to death at the same time with their master. Eger has a gymnasium, 2 convents, a high school, a school for the children of soldiers, 2 hospitals, an orphan asylum, 3 workhouses, a foundation for 12 old men, and manufactures of chintz and cotton fabrics, wool, hats, soap, &c. (*Berghaus; Oesterreichische Encyclo.*)

EGHAM, a par. and village of England, in the N. part of the co. of Surrey, bund. Godley, contiguous to the Thames. Area of par. 7,444 a. 4303 of which the village may have nearly a half. The latter, situated near the Thames, 18 m. W. London, is connected with Staines on the other side of the river by an iron bridge, erected in 1807. The church, though of mean appearance, is ancient, and contains some curious monuments. There are 2 almshouses, one for 5 poor women, and one for 6 poor men and as many women. N. from Egham, between the village and the Thames, is Runnymede, famous in English history from its being the scene of the conference between King John and the barons, that led to the signing of *Magna Charta* by the king, in 1215. In this parish is Cooper's Hill, which commands a fine prospect, and is the subject of the well-known descriptive poem of the same name, by Sir John Denham.

EGINA or ENGIA (an. *Ægina*), an island of Greece, in the centre of the gulph to which it gives name (*Saronicus Sinus*), 16 m. S. by W. Athens, 34 m. E. by S. Corinth, and 6 m. from the nearest point of the promontory of Methana. It is about 8 m. from E. to W. and 8 from N. to S.; surface diversified with hills and valleys; in the N. part of the island there are rocks of lava. Soil rocky and of a light colour. The low and cultivated grounds are however fertile, and produce good crops of corn, with wine, cotton, olives, figs, almonds, and other fruits. The hilly and uncultivated portions are deficient in water, and are covered with pines, small cypresses, junipers, &c. The red-legged partridge is very abundant. The pop. may, perhaps, amount to from 5,000 to 6,000; during the revolution, it was much greater, the island having been then resorted to by crowds of emigrants from the adjoining continent and islands, but since the peace, there have mostly returned home. The inhab., who are industrious, carry on a considerable trade. The port, and principal town, called Egina, or Engia, is on the W. side of the island, near the extensive ruins of the ancient city of the same name. There are from 15 to 18 fathoms of water in the roadstead, on a tough clay ground. There is another and smaller town in the N. part of the island.

Though so unimportant in modern times, in antiquity Egina was early celebrated for its wealth and population. Its position is very favourable for commercial pursuits; and it was indebted for its greatness to the zeal and success with which it carried them on. At one period its naval power was superior even to that of Athens; and it sent 30 ships to the battle of Salamis, to whom the prize of valour was accorded by the suffrages of the Greeks. But the proximity of Egina to the Piræus awakened the jealousy, and provoked the vindictive hostility of the Athenians, who, having defeated the Eginetans and taken their city, treated them with the utmost severity—*Duris etiam Athenienses, qui sciverunt ut Æginetis, qui clausæ volebant, polares prædicarentur: hoc visum est eis; nuntio cum trepiditate præter præcipientem, Eginæ Piræus. (Cic. De Offic. lib. iii. § 11.)* After various vicissitudes, Egina was restored to a nominal independence by Augustus; since which period it has usually followed the fortunes of the adjacent country of Greece.

The temple of Jupiter Panhellenius in the N.E. part of the island, is among the most interesting of the Grecian ruins. The hill on which it stands, though of no great height, commands the greater part of the island, the whole coast of Attica, with the city of Athens, part of Peloponnese, and several of the islands in the gulph. It is built on a platform supported on all sides by terraced walls. The temple, said to have been erected by Æacus, grandson of Jupiter, is certainly one of the most ancient in Greece. It is of the Doric order, being 90 ft. in length, measured at the base of the columns, by 45 in breadth.

Originally it had 36 columns, exclusive of those in the cella, of which 26 were standing when it was examined by Mr. Dodwell. The greater number of the statues that occupied the tympanum of the pediment, were dug up in 1811; and having been carried off, were purchased by the present king of Bavaria for 10,000 sequins, and are now in the museum at Munich. They are in the peculiar style of sculpture called Eginetan, and are amongst the most interesting relics that have ever been conveyed from Greece. (*Chandler's Greece*, caps. 3 and 4; *Dodwell's Greece*, i. 558–574.)

EGYPT (the Mizraim of the Hebrews, and *Ai-yuppos* of the Greeks), a country on both banks of the Nile, occupying the N.E. angle of the African continent; one of the earliest seats of art, science, and literature, and famous alike for the historical events of which it has been the theatre, its magnificent monuments, and physical character.

Boundaries, Extent, &c.—There have been very discordant statements as to the boundaries of this famous country. There cannot of course be any doubt as to its N. limit, which is formed by the Mediterranean; and it seems to have been generally agreed from a very remote period that its S. limit should be fixed at Syene, or rather at Philæ, in lat. 24° 3' 45" N. But the difficult point is to determine its breadth. From Philæ to the Nile, the Nile in most parts flows through a narrow valley, bounded on either side by a ridge of hills, or inferior mountains; at Cairo these ridges diverge, that on the E. to Suez, and that on the W. in a N.W. direction to the Mediterranean. Some authors identify Egypt with the tract lying between the mountain chains now referred to; while others, regarding the Nile as the source of life and vegetation in Egypt, restrict its territory within the limits covered by the inundation of the river. (*Strabo*, lib. xvii. p. 544.) But from the age of the Ptolemies down to the present day, the desert country lying between the valley of the Nile and the Red Sea has been uniformly included in Egypt. On the W. side the mountain ridge already noticed seems to be its only natural boundary. Still, however, it has been usual to reckon the oases that lie within 100, or even 200 m. of this limit, as belonging to Egypt.

From Cape Bourlos, on the coast, lat. 31° 36' N., to Philæ, the distance N. and S. is 7° 32' 15", about 482 geographical, or 520 English m. But the distance by water, and the extent of the alluvial territory are considerably greater than would appear from this, because of the many and considerable bends of the river. The breadth of the Egyptian coast is 160 m.; but in ascending to Cairo (104 m. from Cape Bourlos), the cultivated tract tapers off to a point, and the rest of the country is chiefly comprised in the narrow valley of the Nile; which, however, at Beni-souf, 83 (by water) m. higher, spreads to the W. to form the vale of Faioum, a circular valley of great fertility and beauty, measuring about 40 m. from E. to W., and 30 m. from N. to S. The Nile, in the valley of the Nile is mostly confined within very narrow limits. The whole cultivated territory of Egypt, including its lateral valleys, has been estimated at about 16,000 sq. m., or about half the area of Ireland. (*Malte-Brun*, iv. 21. 23.; *Modern Trav.*, art. *Egypt*, i. 6.; *Heceren's Researches*, Engl. ii. 210.)

The Nile, so important among the great rivers of the world, is also the most striking object in the general aspect of a country which not only is wholly comprised within the sphere of its influence, but is entirely indebted to it for its existence. As already stated, the Nile enters Egypt at the island of Philæ, from it to *Memphis* (*Syene*), a distance of about 6 m., it has cut a passage for itself, through a ridge of granite rocks, with which its stream is much encumbered. At Assouan is the last of the cataracts of the Nile, so celebrated by ancient authors. (*Senec. Nat. Quest.* lib. iv. § 2.; *Plin. Hist. Nat.* lib. v. § 9.; *Lucon*, lib. x. line 330, &c.) Their statements with respect to it seem to be not a little exaggerated, though there can be no doubt that the cataract must have been much more magnificent 2,000 years ago than at present; as the attrition of the water for so long a period could not fail materially to deepen and smooth its bed; at all events, however, it is now rather a rapid than a cataract. According to Sir F. Henniker, it is not really more formidable than the fall in the Thames at low water at Old London Bridge, previously to its demolition (p. 147.). But it is clear that its height and rapidity must depend materially on the state of the river. When the inundation is at its height the fall is hardly perceptible, but at low water it varies from 8 to 10 feet. After leaving Assouan, the river runs on in a placid quiet stream, till a little below Cairo, at Bahr-el-Bakra, it divides into two great arms, the most E. of which falls into the sea at Damietta, and the most W. at Rosetta; but it has other, though very subordinate outlets. For the immense distance of 1200 m.,—that is, from lat. 17°

47°, and about 34° 5' of E. long., where it is joined by the Atbara or Tacaze, the Nile rolls on to its mouth in the Mediterranean in solitary grandeur, without receiving a single affluent: an unexampled instance in the hydrographic history of the globe. The periodical inundations, which water the country and cover it with mud, have, given occasion, in all ages, for much discussion, and modern discovery has confirmed the conjectures of the ancients (*Herodotus, Euterpe*, li. 20. 28.; *Strabo*, xvii. 543.). for these overflows result from rains falling near the mountains amongst which the Nile has its source, or early course. Bruce has explained this phenomenon as follows:—"The air is so much rarified by the sun during the time he remains almost stationary over the tropic of Capricorn, that the winds, loaded with vapours, rush in upon the land (to restore the equilibrium) from the Atlantic Ocean on the W., the Indian Ocean on the E., and the cold S. Ocean beyond the Cape. Thus a great quantity of vapour is gathered, as it were, into a focus; and as the same causes continue to operate during the progress of the sun N., a vast train of clouds proceed from S. to N. In April all the rivers in the S. of Abyssinia begin to swell; in the beginning of June they are all full, and continue so while the sun remains stationary in the tropic of Cancer." It may be further observed, that when the sun approaches the tropic of Cancer, the Etesian winds along the coast of Egypt begin to blow from the N., and convey vast quantities of aqueous vapours to the mountains, which are there precipitated in torrents along with the vapours derived from the oceans already specified. The Etesian winds also contribute to increase the inundation, by determining the waters of the Mediterranean to the coast of Egypt, and obstructing the exit of those of the river. On the sun again turning to the S. the rains begin to abate, and on his passing the Equator they cease in the N. and commence in the S. hemisphere. The torrents, detaching in their rapid course the soil from the upper country, bring down supplies of alluvium, so that the valley of the Nile is constantly gaining in elevation. Nor is the delta of Egypt exempted from this peculiarity; though, from there being a wider space for the deposits to spread over, the increase of soil is not nearly so great: indeed, the accumulation decreases, even in Upper Egypt, in proportion as the river approaches the sea. "According to an approximate calculation," says Wilkinson (*Journal Geog. Soc.* ix. 432.), the land about Elephantine, or the first cataract, in lat. 24° 5', has been raised 9 ft. in 1700 years; at Thebes, in lat. 25° 43', about 7 ft.; and at Heliopolis and Cairo, in lat. 30°, about 5 ft. 10 in. At Rosetta and the mouths of the Nile, in lat. 31° 30', the diminution in the perpendicular thickness of the deposit has lessened in a much greater decreasing ratio than in the straightened valley of Central and Upper Egypt, owing to the great extent E. and W. over which the inundation spreads."

Were it not that the bed of the river rises in the same proportion as its banks, the country would cease to be inundated, an apprehension which till lately was strongly entertained. It is impossible to find any where amongst terrestrial objects a more striking instance of the stability of the laws of Nature than the periodical rise and fall of this mighty river. We know by the testimony of antiquity that the inundations of the Nile have been the same, with respect to their season and duration, for 3,000 years. They are so regular that the value and annual certainty of this gift regulates the public revenue; for when, by means of Nilometers, it is ascertained that the waters promise an unusually prosperous season, the taxes are proportionally increased. (*Russell's Egypt*, p. 46.) Sometimes, however, when the river exceeds its ordinary height, it becomes a calamity; occasioning the loss of life and property. In September, 1818, Beloni witnessed a scene of this sort; the river having risen 34 ft. above the highest mark left by the former inundations, it ascended with uncommon rapidity, and carried off several villages, and some hundreds of inhabitants. The swellings of the Nile in Upper Egypt are from 30 to 35 ft.: at Cairo, 23 ft.; in the N. part of the Delta, owing to the breadth of the inundation and artificial channels, only 4 ft. Pliny says of the inundation,—"Justum incrementum est cubitorum 16. Minores aqua non omnia rigant: ampliores detinent tardius recedendo. Hæ serentia tempora absumunt solo madente; illæ non dant sitientie. Ursumque reputat provincia. In duodecim cubitis famem sentiant, in tredecim etiamnum esurit: quatuordecim cubitis hilaritatem afferant, quindecim securitatem, æscadem delicias. (*Hist. Nat.* lib. v. § 9.) The depth and rapidity of the river vary at different times in different places. It is seldom that any vessel exceeding 60 tons burden can ascend as high as the Cataracts. The mouth of Damietta is between 7 and 8 ft. deep when the waters are low, that of Rosetta does not exceed 4 or 5 ft.; but when the waters are high, caravels of 24 guns may sail up to Cairo. (*Mod. Trav.* i. 52.) As a beverage the water of the Nile is considered delicious: Mallet declares that it is among waters what champagne is among wines.

The mud of the river gives on analysis one half of argillaceous earth, one fourth carbonate of lime, the remainder being water, oxide of iron, and carbonate of magnesia. (*See Nilæ*.)

The *Moussata system* of Egypt is on many accounts deserving of attention. Two ranges, already noticed, pressing closely on each bank of the river, extend from Syene to Cairo, and form the valley of the Nile, protecting it from the ravages of the deserts on either side. That to the E. gives out an arm at Kenneh (lat. 26° 12'), and bisects the desert to the Red Sea at Cosseir in nearly the same latitude; while the Libyan or W. range branches off from Assouan to the Great Oasis. (*Ritter*, li. 397.) Near Cairo the mountains diverge on both sides; one ridge running in a N.W. direction to the Mediterranean, the other due E. to Suez. (*Malte Brun*, iv. 22.) The geological components of the hills, from Philæ through the cataract region to Syene, are chiefly granite, and a peculiar highly crystallised red formation called syenite marble. This primitive rock is remarkable for durability and the fine polish it is capable of receiving. From quarries of this stone the Pharaohs, Ptolemies, and Antonines drew materials not only for the stupendous monuments which still make Egypt a land of wonders, but also for many of the public buildings of Italy, the remains of which attest the genius of the Roman artists. Some days' journey S. of Thebes extends the limestone region, the most remarkable object presented by this wonderful country is the Scete, or Valley of Natron Lakes, bounded on one side by a lofty ridge of secondary rocks, which, perhaps, proves the means of concentrating the saline deposit which gives it name to the place. The banks and waters of these lakes, six in number, are covered with crystallisations, consisting of sea-salt and natron, or carbonate of soda, sometimes united; at others, found separately in different parts of the same lake. (*Russell's Egypt*, p. 48.)

The most considerable of the Egyptian lakes are those of Menzaleh, Bourlos, Biko, and Marcota, lying along the shore of the Delta. But though called lakes, they are more properly lagoons, and bear a striking resemblance to the *haffs* that skirt the shores of Prussia. Some of the lagoons, especially that of Menzaleh, E. of Damietta, are of large dimensions. They are all shallow; are separated from the sea, with which they communicate, by a narrow bank or ridge of sand; and are in the course of being gradually, though slowly, filled up. In antiquity, the Nile is said to have disengaged itself by seven channels—*Septemvtrmini ostia Nilæ*; but of these some were certainly artificial; and then, as now, there were two principal mouths—the Pelusiac, or Eastern, and the Canopic, or Western. The Syennitic mouth, in the centre of the Delta, was also of considerable importance. But considering the nature of the soil, and the efforts that have been made from the remotest times to divert a portion of the river by canals and otherwise into new courses, we need not be surprised that very great changes should have taken place in the channels by which it pours its waters into the Mediterranean.

Exclusive of the lagoons in the Delta, there is considerable lake occupying the N.W. parts of the valley of Faioum. The principal canal of Egypt, the *Bahr Jousef*, communicates with this lake. It branches out from the Nile at Deirout-el-Sherif, S. of Minzeh, traversing the valley of the Nile at the foot of the Libyan chain, till it reaches the waters of Faioum at Habun, and thence continues till parallel to the Nile, the Rosetta branch of which it finally joins at Alkhar. Under the name of Souhadi the same canal is continued to Farhout in Upper Egypt. The whole of the Delta is intersected with canals in every direction, in which the overflows of the Nile are preserved after the inundations, to afford communication between the various towns, and to keep a constant supply for the irrigation of the cultivated lands. (*Brown's Travels*, pp. 177—187., &c.)

Egypt is naturally divided into—1. The Delta, or Lower Egypt. 2. The Valley of the Nile, comprising Central and Upper Egypt. 3. The E. Desert. 4. The W. Desert, and Oases.

1. The *Egyptian Delta*, which derived its name from the similarity of its figure to the Greek Δ, is a triangular tract, formed by the bifurcation of the Nile. The soil consists of the mud of the river, resting upon desert sand. Near the banks of the two branches this alluvium has collected to a thickness in some places of more than 30 ft., while at the extremity of the inundation it does not exceed 6 in. This constant accu-

mulation and spreading of the deposit E. and W., has gradually extended the limits of the Delta further into the adjoining deserts than they reached in antiquity (*Wilkinson on the Levels of Egypt*, in *Geographical Journal*, ix. 437.), so that the arable land of the country is constantly increasing; and though the sand in its turn frequently encroaches in various places, yet the injury it inflicts is only partial and temporary, while the alluvial deposit goes on steadily increasing in extent. The greatest length of the Delta is at present about 85 m. from E. to W., and from the fork of the Nile to the sea about 90 m. intervene; but the inundations extend very considerably beyond these limits. The Delta is covered with meadows, plantations, and orchards, and presents a more fertile aspect than any other part of the country; but various causes have combined to prevent the spread of husbandry and cultivation, proportionally to the increase of territory rescued from the deserts by the annual overflows. (*Ibid.* p. 437.) This district, from its comparatively low situation, and from the absence of those mountains which enclose the Valley of the Nile and confine its waters, aptly designated by Browne "the walls of Egypt," is more influenced by the inundations than the upper lands; and when the river is at its greatest height, it presents the aspect of an extensive marsh. The river begins to swell in June, and gradually increases till Sept., at which period the fields of the Delta are completely submerged, its villages, towns (which are built on natural or artificial mounds), and trees, only appearing above the water. After remaining stationary for a few days, the waters begin to subside, and by the end of Nov. leave the land altogether, having deposited a rich alluvium. An Egyptian spring, corresponding to our winter, gives to the Delta its most smiling and verdant appearance. The rice fields, having been sown before the water has entirely receded, are covered with a vivid green, trees put forth their blossoms, and the whole country bears at this season the aspect of a fruitful garden.

The question as to the origin of the Egyptian Delta, has engaged the attention of the ablest inquirers from the remotest period. The most probable as well as most ancient theory, is that which represents it as wholly formed of the deposits brought down by the Nile, and as constantly, though slowly, gaining on the sea. (*Herodotus*, ii. § 5.) Originally the sea is said to have flowed as far S. as the Pyramids; but in the course of ages, through the gradual accumulation of the mud of the river assisted in some degree by the construction of canals and dykes, the land rose above the level of the sea, and ceased to be submerged, except during the period of the inundation. (*Savary's Letters on Egypt*, Letter i.) This opinion has, however, been stoutly denied; and though it be admitted on all hands that the land of Egypt and the bed of the river are both slowly rising, it is contended that the limits of the Delta to the N. are the same now as in the remotest antiquity. This opinion is supported by the high authority of Sir J. G. Wilkinson; and it is also supported by the learned author of the very able and elaborate article on Egypt, in the new edition of the *Encyclopædia Britannica*. But though it were admitted that the limits of the Delta on the N. had continued nearly stationary from the age of Herodotus, that would not invalidate his statement that the cultivated portion of Egypt is the gift of the river. (*Ubi supra.*) The chain of sand-banks skirting the Delta on the N. probably existed long before the Delta attained its present form; and the lakes, or lagoons, already noticed, lying to the S. of this chain, are apparently the last remains of the sea by which it was anciently covered. That the Delta should owe its existence to the Nile, is perfectly agreeable to what is observed in all similar situations; and no positive evidence has been brought forward to controvert, or even materially weaken the strong and all but conclusive presumptions in its favour. (*Shaw's Travels*, 385, &c., 4to. ed.; *Renou's Geog. of Herodotus*.) But without insisting further on these points, it is sufficient to observe that but few traces are now to be found of the many famous cities with which this part of Egypt was formerly studded; and that, except Alexandria, the only places of consequence in the Delta, at the present day, are Rosetta and Damietta, situated at the two mouths of the Nile. At the former the river is 1800 ft. wide, but at Damietta only 800. The villages are numerous, and generally large; but the houses seldom exceed from 10 to 12 ft. square. They are built of sun-dried bricks, and are covered with flat roofs of straw and Nile mud. (*Dr. Richardson's Travels*, i. 40.; *Clarke's Travels*, iii. 13.; *Modern Traveller*, i. 180—232, &c.)

3. *The Valley of the Nile, in which Central and Upper Egypt are comprised.*—Ascending the river from its fork, the cultivable land at the apex of the Delta and for some distance is found to decrease; for here the banks are much more elevated, and are seldom quite covered with water, even during the highest inundations. (*Geog. Journal*, ix. 434.) Hence the alluviums do not reach the interior at this point. The E. or Arabian mountain

chain terminates abruptly at Mount Mokattam, near Cairo, and diverges towards Suez; while the opposite or Libyan range ends at Faioum, having turned off to the W. to inclose that valley. Throughout the entire district the E. chain has generally more transverse breaks and ravines, is more lofty and rugged, and comes closer to the river, than the hills on the opposite side. Between Faioum and the Nile the Libyan ridge has nearly a level summit, overlooking the country below; and this table-land was chosen for the site of the Pyramids. The space left between both ridges seldom exceeds 10 m. In Central Egypt, while in the upper country they press even more closely upon the sides of the river; thus that part of the Valley of the Nile which belongs to Egypt has but a contracted breadth, and even that is not all available for the labours of the husbandman, a great portion of it being, from the height of the banks, out of the reach of the overflows; and their beneficent deposits; hence a stripe of desert mostly runs along at the foot of the hills. Where, however, the land is laid under water at high Nile, communication is kept up between one village and another by means of elevated roads or dykes, which commence on a level with the banks of the river; and, as they extend to the interior, rise to so great a height above the fields as to leave room for the construction of bridges for the passage of the water. As the river enters the Egyptian territory from the N., the great hills bear the appearance of having been rent by the stream. Hence, between the Isle of Philæ and Assouan the current is interrupted by innumerable islands. Others, of a less rocky character—some of them extensive, considering the breadth of the Nile—spring up out of its bed at various intervals during its progress to the Mediterranean. The Isle of Elephantine, opposite to Assouan, wears so beautiful an aspect that it is called by the natives the "Isle of Flowers" (*Djeyret-el-Sahir*); and most European travellers describe it as a sort of terrestrial paradise. The Egyptian valley is strewn with those stupendous monuments of human labour, those beautiful remains of ancient art, which have excited the wonder and admiration of ages; and which, the more closely they are examined, the more astonishing they create.

3. *The desert E. of the Nile* is broken by rugged mountains, and intersected by numerous wadis or ravines, sometimes thickly, but more frequently scantily, clothed with verdure. It has, however, the advantage of numerous springs; beside which, and traced ancient caravan tracks, that are still traversed in exactly the same manner as when the "company of merchants" found Joseph in the pit. The leading characteristic of this desert, particularly in the N. part, is its gradual ascent from the Nile to a certain distance E., where commences a plain nearly level, and of some extent, from which all the valleys or torrents running in a W. direction empty themselves into the Nile, and those to the E. into the Red Sea. Of such a character are the Atuka hills, mentioned above as branching E. from the Mokattam mountains, near Cairo. These are joined at a right angle by a series of eminences which skirt the shores of the Red Sea into the Nubian country; under the names of the Zarafana, Doffa, and Jaffatine ranges; and form the E. edges of the plateaux raised by the transverse hills, a chain of which appears again in lat. 29° between Benisouf and that part of the Suez gulph called Birket Farân. These are entirely of limestone, and present a gradual ascent from the Nile to a distance E. of 30 m.; the high plain which succeeds is about 16 m. broad, and the descent down to the Red Sea occupies a space of about 80 m. At the S. declension of the N. Kelâlla mountains is a copper-mine, which appears from the ruined huts, furnaces, scoria, &c., found by Wilkinson to have been extensively worked. (*Geog. Journ.* ii. 32.) The Wady Arabah intervenes its desert of sand to the S. Kelâlla or Kolsim mountains, at the foot of which are situated the two celebrated convents of St. Anthony (17 m. from the sea) and St. Paul, placed about 14 m. apart; between these convents and the gulph at Wady Gizeh, are the remains of houses and enclosures which appear to belong to the Greek period. In lat. 29° 26' the limestone formation, which continues with little interruption throughout the N. hills of this desert, is joined by primitive rocks, which present more irregular surfaces, but rise from the banks of the Nile, with a gentler declivity than the series already described; and about with proportionate abruptness upon the shores of the Red Sea. Mount Grârb (28° 15'), one of these rugged eminences, is the highest of the hills in this desert; being 6,000 ft. above the sea. Four hours S. of Grârb are two copper mines, with the same appearances of having been worked as those before mentioned. In lat. 28° the character of the levels again changes, being higher and more uniform from the Nile to where they make a descent to the sea, which is gradual till they reach Mount Asseiz, which gives them an abrupt termination. Near Mount Dokhan (lat. 27° 28') are the ruins of a town, and vast quarries of red por-

phry, strowed with the materials of a small temple, which was evidently never completed. At Cosseir, whose bay indents the Red Sea, at about lat. 26° 6', and the primitive hills that intersect the desert in a direction parallel to the Nile and the Red Sea, and join a transverse range, upon which extends the caravan route from Kenneh on the Nile to Cosseir, where pilgrims embark to pay their devotions at the shrine of Mecca. (*See* COSSER.) The valley of Cosseir extends down to about 25°, where another transverse range occurs, which contains, near the sea, some low mines. Mount Zabarab, celebrated by ancient writers for its emeralds, rises a little further inland. Attempts have been made to re-open the sources of wealth which these mines are said to have afforded, but without success. (*Callioud's Travels*, fol., Paris, 1822, p. 60.) Nearly on a line with Assouan (lat. 25° 56') are the ruins of Berenice. The whole of the desert of Egypt is the resort of distinct tribes of Arabs, who confine themselves to particular localities; they consist of the Masay, occupying the country to the E. of Benisuef, Atouni, and Beni-Aysel, S. of the Masay and the Ababde Arabs, who are scattered over the N. part of the desert, and breed camels for the market of Eneh.

4. *The desert IV. of Egypt* presents a scene so formidable to travellers, that few have visited the oases by which it is here and there interspersed. The most N. of these is Siyah, or Ammon; S.E. from which, and nearer to the Nile, is the Little Oasis, or Wah-el-Bahryeh; the chief village of which lies in lat. 28° 16' N., and long. 29° 55' E. S. and W. are the small oases of El Hayz, Farafra, and Zersora; and still further S. is the Dakkileh oasis, whose first European visitant was Sir A. Edmonstone, in 1819. Its chief village stands in about lat. 25° 35' N., and long. 28° 55' E. 'Three days' journey to the E. brings the traveller to the Great Oasis, or Wah el Khargeh, extending in length from 24° 30' to near 26° N. lat. Instead of islands of the blest (*Mæsagis nîras*) springing up amidst the surrounding and desolate ocean of sand, as the ancients describe them, the oases are valleys or depressions of the lofty plain which forms the extensive table-land of E. Africa. On descending to them, they are found to bear in many respects, a similarity to a portion of the Valley of Egypt, being surrounded by steep cliffs of limestone, at some distance from the cultivated land, which vary in height in the different oases; those rising from the S. oases being the highest. Neither do they present a continuation of cultivable soil, all of them being intersected by patches of desert. They, no doubt, owe their origin to the springs with which they abound, the decay of the vegetation thence arising having produced the soil by which they are now covered. Their fertility has been deservedly celebrated; but, as already observed (*AFRICA*, p. 22.), the glowing eulogiums of travellers on their surpassing beauty, are probably, in a great measure, to be ascribed to the striking contrast they present to the surrounding deserts of arid, burning sand. It may appear contradictory, considering the high opinion the ancients entertained of the fertility and beauty of the oases, that they should have selected them for places of banishment; but that such was the case, at least under the Romans, is certain. A law of the *Digest*, lib. 48. tit. 22., refers to this practice; and it has been supposed that the poet Juvenal was one of those who suffered a temporary banishment (*relegatio*) to the Oases, though the evidence of this is by no means clear. (*Biographie Universelle*, art. *Juvenal*.) But the fact of their being selected as places of banishment is in anywise inconsistent with the received opinions as to their salubrity and fertility. They were selected, not because of their being naturally noxious or disagreeable, but because of their being easily cut off from the world, and from the extreme difficulty of escaping from them. The larger oases have some fine remnants of antiquity; the most celebrated of which is the temple of Jupiter Ammon, at Siwan. (*Edmonstone's Visit to the Oases*, *passim*; *Geog. Journal*, ix. 440, 441, &c.)

The climate of Egypt is extremely hot; this is a consequence, no doubt, of the lowness of its elevation, of its being surrounded on all sides except the N. by vast tracts of burning sand, and of the scantiness of the rain. According to Volney, two seasons only are distinguishable—spring and summer; or, rather, the cool and the hot season. The latter continues from February or March to October; and Volney says, that during the whole of this period the air is inflamed, the sky sparkling, and the heat oppressive to those unaccustomed to it: during this season the average height of the thermometer is about 90° Fahr. But this heat of the atmosphere is so much tempered by the inundations of the Nile, by the vapours brought by the Etesian winds from the N., and by the dews in the nights, that the natives and even Europeans occasionally complain of cold. During the remainder of the year, the average height of the thermometer is about 60° Fahr. It is necessary at all times to avoid exposure to the night air.

It might be imagined that Egypt, being for about three

months of the year either wholly or partially inundated, and being subjected, at the same time, to the action of a powerful sun, producing an excessive evaporation, would be extremely unhealthy. But such is by no means the case. The exhalations from stagnant waters, so fatal in Cyprus, and at Iskenderoon and most other parts of the Levant, are here comparatively innoxious. They are not, however, entirely divested of their bad qualities. On the retreating of the waters, in November, which is the Egyptian seed-time, W. winds and fogs are prevalent, which produce ophthalmia, fever, diarrhoea, &c. catarrah. From December to March the winds blow mostly from the E.; the nights are cold, but the temperature during the day is that of June in France: the various productions of the earth are then vigorously on the increase; its surface is covered with the finest verdure; and all nature, reanimated by the fertilising influence of the river, and the moderate temperature, seems to grow young again. In Upper Egypt, the exhalations being comparatively few, the climate is proportionally healthy.

This general salubrity of the climate, notwithstanding the powerful pestiferous influence to which it is exposed, is ascribable, according to Volney, to the natural dryness of the air; the proximity of the African and Arabian deserts, which incessantly absorb the humidity; and the currents of wind that sweep over the country without meeting with any interruption. This aridity, he says, is such that butchers' meat exposed, even in summer, to the N. wind does not putrefy, but dries up, and becomes hard as wood. In the desert dead carcases are found dried in this manner, so light that a man may easily lift with one hand the entire body of a camel. But it is necessary to bear in mind that near the sea the air is much less dry than farther up the country, and that at Alexandria and Rosetta from exposed to the air speedily rusts.

We have already seen that on the approach of the sun to the tropic of Cancer the winds invariably blow from the N. or N.W.; but as the sun recedes to the tropic of Capricorn the winds become variable, blowing from the E. and W.; passing to the S. about the vernal equinox, and blowing from this quarter till about the end of May or the beginning of June. During this season Egypt is at intervals visited by the pestilential hot winds of the desert, here called *khamisin*, but identical with the *simoom* of the Arabs, and the *amsiel* of the Turks. They have the same effects as in Arabia and other contiguous countries. (*See* ARABIA, p. 130.) Their heat is sometimes excessive; the soil is parched, and broken by chasms; the trees are stripped of their foliage, and the fields of their verdure. The fine impalpable sand with which they are loaded obscures the sun, insinuates itself into every thing, and gives to every thing a dusty appearance. During the *simoom* the streets are deserted, and are as silent during day as during night—"Les habitants des villes et des villages s'enferment dans leurs maisons, et ceux du desert dans leurs tentes; ou dans puits creusés en terre, où ils attendent la fin de ce genre de tempeste. Communément elle dure trois jours. Si elle passe, elle devient insupportable. Malheur aux voyageurs qu'un tel vent surprend en route loin de tout asyle; ils en ressentent tout l'effet, qui est quelquefois porté jusqu'à la mort." (*Volney*, i. 56.) The rising of the Nile terminates these accessions of heat and drought, and again diffuses life and gladness over the land. The beneficent river

From his broad bosom life and verdure flings,
And broods o'er Egypt with his wat'ry wings.

The saline properties of the earth, or, as Volney supposes, of the air, in conjunction with the heat of the climate, and the vegetation on active Egypt, is known in cold climates. Wherever plants have water the rapidity of their growth is prodigious. But it is a curious fact, that the soil is exceedingly unfavourable to exotics, and that the seeds of those raised in the country require to be annually renewed. (*Volney*, *Voyage en Syrie et en Egypte*, i. 61—66., ed. 1787.)

In consequence of the extreme dryness of the air, comparatively little rain falls in Egypt; and some seasons have passed away without the occurrence of a single shower. But this is not usually the case, and occasionally the rains are pretty heavy. In this respect there is a great variety in the seasons; and according to Marshal Marnott, falls of rain would appear latterly to have become comparatively frequent. He says that in Lower Egypt they have now pretty generally from 30 to 40 rainy days in the year; and that the pacha has constructed immense warehouses for the securing of products in harvest, which were formerly exposed without inconvenience to the open air. (*Voyage*, &c. lib. 177.) No doubt, however, the rains have been quite frequent and heavy in Egypt in past times, as at present. In proof of this we may mention, that the learned and accurate Mr. Greaves, who visited Egypt in 1638 and 1639, states that the rains were heavier at Alexandria in December and January, than he had known in London; and that

there were, also, at the same time, very heavy falls in *Cairo*. (*Pyramidographia, Works*, i. 103.) Hail showers occasionally occur in winter at Alexandria, and sometimes, though rarely, in *Cairo*. Snow is totally, and thunder and lightning nearly, unknown in Egypt. Earthquakes occur but seldom, but they are not unknown.

Diseases of Egypt.—The inhab. of Egypt are subject to a variety of diseases, some of which seem to be, at least in their extent, to a considerable degree peculiar. Of these ophthalmia is one of the most prevalent; and Voisey says that nothing appears more extraordinary to a stranger in *Cairo*, than the number of persons whose sight is either lost or impaired. It is more common in Lower than in Upper Egypt. "It generally arises from checked perspiration; but is aggravated by the dust and many other causes. Where remedies are promptly employed, this disease is seldom alarming in its progress; but vast numbers of the natives of Egypt, not knowing how to treat it, or obstinately resigning themselves to lose one or both their eyes." (*Lane*, i. 4.) Small-pox and leprosy are also very frequent. Elephantiasis is met with among Labourers in the rice fields; and in the marshy districts of the interior the legs often swell to an enormous size. Syphilis is exceedingly prevalent; and malignant fevers prevail in April and May. The plague occasionally breaks out with great violence in Egypt; and Mr. Lane says that, in 1825, it destroyed 90,000 persons in *Cairo* only! It generally, though not always, breaks out during the prevalence of the Khamsin, or hot wind from the desert. But notwithstanding this formidable list of diseases, it is still true, as already stated, that no part of Egypt can be justly characterised as insalubrious. The diseases to which the people are subject are mostly to be ascribed to their depressed circumstances—their filth, miserable accommodations, and the bad quality and deficiency of their food. Much also is owing to their apathy, their belief in the doctrine of predestination, and, consequently, in the inutilty of remedies and precautions; and the inefficiency of the police. The present pacha has, however, effected, in these respects, some material reforms; and the improvements in surgery and police have powerfully contributed to diminish disease. "During the last ten years," says Mr. Lane, "the country having been better drained, and quarantine regulations adopted to prevent or guard against the introduction of this disease from other countries, very few plague-cases have occurred, except in the marshy parts of the country near the Mediterranean, and in those the pestilence has not been severe." (i. 4.) These remarks were written before the occurrence of the dreadful plague of 1835, introduced from Turkey; but that does not affect their general accuracy.

The vegetable productions of a country possessed of such a climate are of a nature peculiarly fitted to its exigencies. The absence of rain forbids the existence of forests; and there being no high mountains, alpine productions are no where found. The native plants of Egypt are of a loose plethoric texture; so that their proper aliment is prepared in continually distended veins, whose widely-opened mouths receive and retain the copious dews, and cause the leaves to perform the functions of so many roots. Hence, great transpiration is excited, and the continually moist roots enable the plants to pass from the extreme drought of summer to the humidity of a three months' flood. These characteristics will be found in the celebrated papyrus, the lotus, and its three varieties, Egyptian arum and safflower. Bulbs find a congenial soil in Egypt, and the gourd and cucumber tribe are every where planted. The acacia of the Nile, and date palm (which is heavily taxed), and agave, are scattered rather thickly throughout the country. The constant use to which the soil is put in rearing valuable plants prevents the accumulation of such as are noxious and weeds; so that the country is remarkably free from them. The number of fruit trees in Egypt by no means answers to the culture and fertility of the soil.

The peculiar hydrography and vegetation of Egypt exercises a great influence over its zoology. The larger species of wild animals find no forests in which to prowl—no recesses for their dens; and except those monsters of the Nile—hippopotami and crocodiles—are banished from the land. Birds also, that inhabit mountains and groves, avoid the exposed deserts and scorching fields around the Nile. The country is also unfriendly to some insects; their eggs and chrysalides being either washed away by the overflows of the river, or smothered in the stagnant pools formed by its overflow.

The only primeval animals now left in Egypt are the hippopotamus and crocodile. The former, so poetically yet accurately described in the book of Job (x. 15-24), has been known to measure 16 ft. long, 15 ft. in circumference, and to stand 7 ft. high. The skin is sufficiently thick and tough to withstand the effect of a musket-ball. Though amphibious, the animal is not nearly so powerful on land as in the water. Its appetite is enormous. The Nile crocodile is a lizard of enormous size, covered

with a complete armour of ball-proof scales; its feet are provided with strong sharp claws; an immense mouth, opening as far as the ears, exhibits two rows of teeth like saws, fitting into each other when closed. This is also an amphibious animal; but more than one-fourth part of its existence is passed in water, and, like the hippopotamus, it is a most voracious eater. The ichneumon is a persevering destroyer of the eggs of crocodiles and serpents. The jerboa, or jumping mouse, Nitote fort, Egyptian and Alexandrian rat and arvicola, complete the list of wild animals. The domestic and tame animals are chiefly oxen, and buffaloes, which are employed in agriculture; the Egyptian goat; dogs, of which there is a peculiar breed at Alexandria; and the true cat, a native, it is supposed, of Egypt. Horses are much esteemed, and the Egyptian grooms are reckoned among the best in the world. Ases are in requisition all over the country. Lastly, the camel and dromedary yield their important services to the inhabitants of this desert-bounded land. (*See ARABIA*.)

Of the feathered tribe peculiar to Egypt, the first to claim attention is the ibis, so often mentioned by ancient writers, and identified by Bruce with the *abou-hannes*,—a species of curlew, placed by Cuvier amongst the *grallæ*, or wading birds. Its size is equal to that of a hen, with white plumage, except the tips of the quill feathers, which are black, the largest of them having violet reflections. Part of the head and neck are naked; black in the adult, but clothed with short black feathers in the young. (*Cuvier's Animal Kingdom*, by Blyth and others, 243.)

The Egyptian vulture and stork perform the office of scavengers in towns, by feeding upon the animal substances that would be otherwise left to corrupt the air. Pelicans are numerous along the banks of the Nile, and have a beautiful plumage. Pigeons are kept by almost every farmer in the country for the sake of their dung, and are provided with curious conical huts. Fowls abound in Egypt; and the artificial mode of hatching eggs forms an extensive branch of Egyptian industry. Plovers, bustards, and partridges are often met with; quails visit the land in immense flocks, from the interior of Africa; and sea swallows abound along the base of the Delta, and on the shores of the Red Sea. History, sacred and profane, attests the predilection of the Egyptians for fish as an article of food; and the Nile abounds with it. Nile salmon is highly esteemed. The fishermen of the coast form an important and turbulent community. Besides the crocodile, the reptiles of Egypt are numerous. Serpents charming is a regular profession; and some of the Arabs really perform extraordinary feats with the most venomous snakes. The horned and hooded viper (*Crotalus cerastes* and *C. Hajj*) are the most dangerous. Insects abound in Egypt during a great part of the year, particularly flies and mosquitoes. (*Lane*, i. 3.) Locusts also occasionally scourge the land, visiting it in such immense flights as to obscure the sun's rays, and destroying when they alight every vestige of herbage. The breeding and keeping of bees forms an extensive branch in the rural economy of the country. The beetle peculiar to Egypt (*Scarabeus sacer*), so often represented on the sacred monuments, is rather larger than the common beetle, and is entirely black. The Egyptian bat is also much larger than that of other countries. Zoophytes abound in the Red Sea, and it is the red coral which supplies its name. Sponges, various corallines, polypes, and madrepores, are also found on its shores. (*Hasselquist's Appendix to Voyages and Travels in the Levant*, &c.; *Richardson's Travels, passim*; *Russell's Egypt*, 404, &c.; *Consult Egypt, passim*.)

Population, Manners, Customs, &c.—The political revolutions to which Egypt has been subject from the earliest historical era have—as the Persians, Greeks, Romans, Arabs, Turks, and other nations, gained in their turn the ascendancy—introduced into the country people of all those races. These, added to the Copts, descendants from the ancient Egyptians, slaves from the Upper Nile countries, a small number of Jews, and a few Europeans, make up the motley congregation at present assembled in the land of the Pharaohs. But of all its conquerors Mohammed has left the most permanent traces in Egypt. The descendants of the Saracens who fought under his banner form by far the greatest portion of the present population. In the absence of more precise data, the estimate made in 1822 by M. Mengin (*Histoire de l'Egypte sous le Gouvernement de Mahomet*, &c. Paris, 1823), founded on a computation of the number of houses, and an average of the inmates of each, has been much relied upon. But assuming this estimate, which made the pop. amount to 2,500,000, to have been correct at the time it was made, various causes have since then been at work to diminish its amount. Political oppression, which leaves the cultivators of the soil scarcely enough to support existence, and withdraws the best portion of the male pop. from their homes to convert them into soldiers, and other, though minor evils

must have materially reduced the number of inhabitants during the 18 years which have elapsed since M. Mengin's estimate was made. Marshal Marmont, in comparing the Egypt of 1800 with that of 1837, says, "Je fus également frappé du grand nombre de villages en ruine, résultat du misère actuelle des paysans, et d'une diminution sensible dans la population." (iii. 176.) The following is Mr. Lane's more recent statement:

1. Arab Egyptians	-	1,750,000
2. Christian Egyptians (Copts)	-	150,000
3. Turks	-	10,000
4. Syrians	-	5,000
5. Greeks	-	5,000
6. Armenians	-	2,000
7. Jews	-	5,000

Of the remainder (namely, Arabians, W. Arabs, Nubians, negro slaves, mamelukes or white male slaves, female white slaves, Franks, &c.) the amount may be about 70,000, the respective numbers being very uncertain and variable. (*Lane's Modern Egyptians*, 12mo. ed. i. 32.) Concerning the number of Arabs of the desert, it is next to impossible to approach accuracy; Volney (*Travels*, i. 78.) affirms, that they could supply a body of 20,000 horsemen.

1. The Arab-Egyptians are divided, by Volney, into three classes. The first are the fellahs or husbandmen, the posterity, he says, of the Arabs who emigrated from the peninsula after the conquest of Egypt by Amrou in 640. They still retain the features of their ancestors, but are taller and stronger. In general they reach 5 ft. 4 in., and many 5 ft. 6 or 7 in. (Fr. meas.). Their skin, tinged by the sun, is almost black. They have oval heads, prominent foreheads, large but not aquiline noses, and well-shaped mouths. They constitute the bulk of the Egyptian peasantry. The second class of Arabs are Moghrebbins, or settlers from Mauritania. They are very numerous in the Sudd, where they live in villages by themselves; they likewise are fellahs. The third class are Bedouins of the desert, or wandering tribes.

The Arabs, particularly the Bedouins, wherever they are found, have a remarkable identity of appearance and character; and we beg therefore to refer the reader to the article ARABIA for a full description of this singular race. But the fellahs or husbandmen of Egypt, having been subjected for centuries to a despotical government, and deprived of that wild freedom that is now, as of old, enjoyed by their brethren of the desert, have lost several of the distinguishing traits of the Arab character. They are rigid Mussulmen, and strictly observant of the religious rites and ceremonies laid down by their sheiks, or priests. "Very few large or handsome houses are to be seen in Egypt, excepting in the metropolis and some other towns. The dwellings of the lower orders, particularly those of the peasants, are of a very mean description: they are mostly built of unbaked bricks, cemented together with mud. Some of them are mere hovels. The greater number, however, comprise two or more apartments, though very few are two stories high. In one of these apartments, in the houses of the peasants in Lower Egypt, there is generally an oven (*joorn*), at the end farthest from the entrance, and occupying the whole width of the chamber. It resembles a wide bench or seat, and is about breast high: it is constructed of brick and mud; the roof arched within, and flat on the top. The inhabitants of the house, who seldom have any night-covering during the winter, sleep upon the top of the oven, having previously lighted a fire within it; or the husband and wife only enjoy this luxury, and the children sleep upon the floor. The chambers have small apertures high up in the walls, for the admission of light and air—sometimes furnished with a grating of wood. The roofs are formed of palm branches and palm leaves, or of millet stalks, &c., laid upon rafters of the trunk of the palm, and covered with a plaster of mud and chopped straw. The furniture consists of a mat or two to sleep upon, a few earthen vessels, and a hand-mill to grind the corn. In many villages large pigeon-houses, of a square form, but with the walls slightly inclining inwards (like many of the ancient Egyptian buildings), or of the form of a sugar loaf, are constructed upon the roofs of the huts, with crude brick, pottery, and mud. Most of the villages of Egypt are situated upon eminences of rubbish, which rise a few feet above the reach of the inundation, and are surrounded by palm trees, or have a few of these trees in their vicinity. The rubbish which they occupy chiefly consists of the materials of former huts, and seems to increase in about the same degree as the level of the alluvial plains and the bed of the river." (*Lane, Mod. Egyptians*, 30. 31.) The dress of the peasantry consists of coarse woollen cloths; and, like all orientals, they are fond of striding coffee-houses, and listening to the tales of pretended magicians, or the rude music of strolling musicians. But, what is most singular, they submit, without murmuring, to every species of ill-treatment; principally, we believe, from a deep-rooted conviction of its inutility, which has degenerated into an apathy that now forms the main feature of their character. They

are—in spite of diet both poor in quality and scanty in quantity—robust, healthy, and capable of undergoing great severity of labour and fatigue, being muscular without fleshiness or corpulency. Like Bedouins, they have a habit of half shutting their eyes, from constant exposure to the sun. The women are in a most degraded condition, and perform all the laborious and menial offices. The Bedouins, or wandering Arabs, have a great contempt for the established peasantry of Egypt, and apply to them the name of fellahs, as one of contempt, signifying bores; distinguishing themselves as true Arabs (*bedawees*). The latter, whenever they please, take the daughters of the former in marriage, but will not give their own daughters in return. Should a Bedouin be slain by a fellah, blood revenge is often perpetrated upon the offending tribe three or four fold.

2. The Egyptian Christians, or Copts, are usually regarded as the descendants of the ancient Egyptians; and it is believed that their written language is identical with that spoken by their ancestors. Some learned men have supposed, from certain resemblances between the Hebrew and Coptic, that the latter was a dialect of the former, or that it belonged to the Semitic languages. But this opinion is now all but abandoned. Michaelis says, that "every person competent to form an opinion knows that the Coptic and the Hebrew have not the slightest original affinity; and that although some words occur in the former that resemble Semitic vocabularies, they are to be attributed to the influence which the proximity and intercourse of Semitic nations have exercised over the idiom of the native Egyptians." (Quoted by *Frichard*, ii. 211.) The characteristics of the Coptic language are shortness of the words, and the simplicity of its grammatical construction; its genders and cases are expressed by prefixes and infixes, and not, as is usual with Asiatic and European languages, by terminations. (See *Quatremere, Recherches sur la Littérature Egyptienne*.) The modern Copts, however, speak Arabic, their original tongue being understood but by few persons; and though their liturgy be written in Coptic, it is expounded in Arabic. (*Lane*, ii. 312; *Quarterly Review*, lix. 170.) They are sober and steady; are much employed as secretaries in public offices, &c.; and are the best accountants in the country, few respectable traders being without a "Coptic clerk." They are held in such esteem by the present government as to possess certain immunities, being unmolested in their religion, and exempted from military conscription; for which privilege, however, they compound by payment of a tribute. Their patriarch, though called the patriarch of Alexandria, resides in Fostat, or Old Cairo. Many conflicting opinions have been entertained as to the physical characteristics of the ancient Egyptians. Their early and high civilisation, and their great works, show conclusively that they were of a very different race from most other African nations. Cuvier, who states that he had examined the heads of more than 50 mummies, declares that not one of them had any of the distinguishing characters of the Negro or the Negroid race, and concludes that they belonged to the same race of men as the Europeans. Even at this day the appearance of the Copts contrasts most advantageously with that of the Arabs. M. Pagnet, an intelligent and discriminating physician, observes, "A *Festierieur chéif et misérable des Arabes*, les Copts opposent un air de majesté et de puissance; à la rudesse de leurs traits une affabilité soutenue; à leur air inquiet et soucieux, une figure très-épanouie." 3. The Turks settled in Egypt, though few in number, occupy important social positions, being masters of the country. They fill all the high offices of state, which are, in most instances, made the objects of bargain and sale, and are hence administered with little impartiality; and few favourable specimens of the Turkish character, as it exists in its native country, are to be found in Egypt. Of the Syrians, Greeks, and Armenians, no account need be given; and the Bedouins are despised, and therefore a distinctive class in Egypt, and have a particular quarter of every large town set apart for their residences—generally the most confined and dirty portion of the place. They are usually bankers, money changers, gold and silver-smiths, merchants, &c., and enjoy a fair share of religious toleration. Slaves, chiefly from Nubia, Abyssinia, Darfur, &c. are introduced in large numbers, and are sold in public markets belonging to every moderately sized town. (*Lane*, ii. 311–353; *Burkhardt's Arabic Proverbs*, passim; *Niebuhr's Travels*, &c.)

The following statements, as to the condition of the labouring classes in Egypt, apply principally to the fellahs; they were supplied by an English gentleman long resident in the country.

"With the labouring classes of Egypt bread is the great article of life, and may be said to be their sole support. The staff of life than in any other country. Beans and lentils are next in importance. With bread, as a sort of seasoning, they use the yam, radish, cucumber, date, onion, and at certain seasons the melon, of which there

is great abundance, and occasionally also cheese, and a sort of butter or ghee, in common use for cooking. Fish, too, and particularly the dried fish of Lake Menzaleh, is a favourite article of food. Rice is less used here than in most eastern countries, being dearer than bread; but still their favourite dish of pilau, or rice and butter mixed, with the addition of a fowl or meat, if the party happen to be of the better sort, is sometimes to be seen. Butcher's meat is beyond the reach of the labouring classes; and unless at their great festival of the Bairam, when the duties are taken off, they rarely taste it. But though thus living in a great measure on vegetable food, they are a robust and healthy people, capable of undergoing great fatigue; and in despite of the general unimpressing appearance of both sexes, there are often to be seen specimens of the human form of matchless symmetry and beauty, particularly among the boatmen on the Nile. Their only luxuries are coffee and tobacco; the latter a coarse description produced in the country, yet still such a solace to the poor man, that while he has it he seldom complains, though all else were wanting. The dress of both sexes consists of a coarse blue cotton shirt manufactured in the country, without any thing else, except the red and orange sash, which covers the head, the shawl and broad cloth ambitiously worn by the upper classes being far beyond the reach of the humble labourer. The richer classes of natives, including those in offices of trust under the government (which is the major part), or engaged as retailers or handicraftsmen in such pursuits as yield a decent livelihood, live as well and as fully, and are as well clothed, as the same classes in any other country.

"In Egypt, where there is no personal liberty,—where the government claims and enforces its right to the labour of every man, willing or not willing, on its own terms,—where among the native traders there is no property, or if it exist is not sequestrated,—where no enterprise can be undertaken but with consent of the government, or at the risk of clashing with some of its private interests, there can be no proper rate of wages as applicable to any particular trade, nor any chance of the remuneration for labour being bottomed otherwise than upon favour or caprice. The native artisans, as cutlers, silk weavers, shoemakers, saddlers, coppermiths, &c., confine their operations to their own little booths and shops, and usually find in themselves and their families sufficient hands for all their work; and the same applies to all retailers of silk and cotton goods, coffee, tobacco, sugar, and every other article of consumption. Were a capitalist, supposing him possessed of the authority of the government, to embark in any enterprise, he would be almost sure to come in competition with the pacha, and to be driven out of the field, commanding, as the latter does, all the labour of the country at his own price, besides having monopolies of nearly every thing consumed in the country. Hence it will be seen that it is upon the pacha the whole labouring classes must mainly depend for support; and it has been generally stated, that whatever be the nature of the work, the average rate of wages paid by him does not exceed a piastre per day for a full-grown man; one half usually in bread, upon which he has his profit, for he is a large baker also, and the other half in money. To women and children he pays from 10 to 20 paras per day. A Frank cannot command the labour of the same people for less than double the money. In the manufactories men who have made themselves remarkable for their skill are occasionally to be found drawing from 3 to 6 piastres per day, but these are rare exceptions. The common rate of one piastre per day may be said just to preserve the parties in existence, and that is all."

Government and Laws.—Egypt, whose history commences with the history of civilised man and organised government, which gave laws to the old world and art to the Greeks, after being, for many centuries, subjected to foreign masters, became, at length, prey of the Ottoman empire. Under the Turkish sway it has been her fate to suffer that worst kind of despotism resulting from the delegation of arbitrary power by a careless tyrannical master to a scarcely responsible seryant. The bold, innovating spirit of its present ruler, the celebrated Mehemet Ali, has, however, introduced several reforms into the administrative constitution of the government, which have been upon the whole beneficial; though he has always endeavoured to make the interests of the country in some degree subservient to his own personal aggrandisement. The government of Egypt, as at present existing, comprises, 1st, the pacha, whose power is unlimited and despotic. 2d, His deputy, called *Kikhy'a*. 3d, Seven councils of state, who have each a distinct department of the government to preside over. 4th, Governors (*Nazirs*) appointed to each prov., of which there are thirteen, viz.—

Besides these provincial governors, the fellahs retain their hereditary *shiks*, who regulate the local affairs of villages and small communities; but every shikh on his accession is obliged to propitiate the pacha by a sum of money, that he may be confirmed in his office. The civil and criminal laws are administered by a *cadit*, or chief judge, and his deputy, or *scab*. But most of these offices being filled by Turks, who speak their own language, an official interpreter is necessary. The court of the cadit has also its *bash rosool* (chief sergeant of arrests, which are executed by his inferior officers); its *bash kdtib*, or chief secretary; and *shakhids*, or recorders, who prepare the business of the court, and relieve it of such details as would unnecessarily take up the time of the cadit. Petty cases are at once decided by a *sabit* or magistrate. The police is numerous and effective, and consists of the military, the magistrates, or *sabit* police. Though still very defective, the administration of justice in Egypt has been vastly improved under the government of Mehemet Ali. Except in rare cases convicts are usually punished by being compelled to labour at the public works. (*Lane's Modern Egyptians.*)

State of Property and Taxation.—The pacha of Egypt may truly exclaim, in the words of Louis XIV., "*L'Etat c'est moi!*" He has rendered himself, with some few exceptions, proprietor of all the land of Egypt; and he is, in fact, the only considerable agriculturist, manufacturer, and trader in the country. Private property and freedom of industry, the principles that lie at the bottom of all real prosperity and lasting improvement, are all but unknown in Egypt. The pacha is the sole manufacturer, printer, and bleacher of cotton goods; the sole maker of sail-cloth and Fex caps; the sole glass-blower, paper-manufacturer, iron-founder, gun-maker, gunpowder-manufacturer, &c.; he has the monopoly of opium, indigo, salt-petre, and linseed oils; he is the only tanner in his dominions; he is the owner of all the mills and manufactories, and of more than half the camels, horses, buffaloes, and cattle in the country; and of half its boats, &c. But this is not all. Not satisfied with engrossing so many businesses, he dictates the terms and conditions under which every one else shall be carried on. He specifies the employments in which the bulk of the pop. shall engage; the crops or produce they are to raise or furnish, and the prices at which, when produced, they are to deliver them to his agents. Interference with individual property has never been carried to half the extent in any other country to which it is now carried in Egypt; and if we add to this, that every man is subject to the conscription, and may, at any moment, be torn from his home and compelled to join the army or the fleet, we may well be astonished that such a system should be submitted to: the apathy with which its inflictions are borne can only be accounted for by the spirit of the people having been totally broken, and their energies extinguished, by the long-continued oppression and misgovernment to which they have been subjected.

Marshall Marmont has supplied the latest and best information as to the nature and working of the pacha's economical system, and the following details with respect to it are principally borrowed from his excellent work.

The head cultivator (*chef de culture*), in conjunction with the head civil authority (*chryk-el-beled*) of each village, makes every year a division of the lands to be cultivated by the inhabitants: this division having been made, the kind of culture to which each portion is to be applied is determined,—so much being devoted to dhourrah, so much to wheat, barley, pulse, and trefoil; so much to sugar, rice, cotton, indigo, &c.

The quantity of dhourrah to be cultivated is regulated according to the quantity presumed to be necessary for the support of the cultivator's family; and the produce is given up wholly to him for their support. The other products are divided into two classes. The different kinds of wheat, barley, pulse, and trefoil belong to the cultivator, after the quantity of each demanded by the pacha has been deducted: this quantity varies every year, but is most commonly the half or two-thirds of the whole. The remainder, including rice, cotton, sugar, indigo, opium, and wood, are reserved exclusively for the pacha. The cultivator is prohibited, under the heaviest penalties, from retaining the smallest portion of any one of these articles: they are deposited in the public magazines established throughout the country, and placed to the account of the fellahs at a price fixed by the pacha, which never exceeds two-thirds of the market price.

The fellah has to pay to the pacha the *wag*, which may be regarded either as a land-tax, or the rent of the land. This impost is regulated according to the quality of the land; the maximum is 28 pataks (1*½*), the mini-

mun 17 pataks (8s. 1d.) the feddan. The average may be about 3s. or 10s. an acre.

The fellah pays, moreover, a personal tax, which varies according to the presumed circumstances of the individual, from 15 piastres to 8 cents. His cattle is also taxed: oxen and cows at 30 piastres, and at 70 piastres when they are sold to the butcher; on the animal being killed, the skin belongs to government. Camels and sheep pay 4 piastres: Nile boats 200 piastres, &c.

Male children only, above the age of 12 years, are subject to the personal tax; but as there is no certain method, — no registers existing, — of ascertaining the precise age of an individual, the appearance of the person is held to determine the matter, which, as may be supposed, is always decided in favour of the government.

Marshal Marmont states that the fellah is obliged to obtain from the public magazines everything he requires, even to his clothes; as blue linen shirts, winter cloaks, &c.; but we are assured that this is an error. It is true that the articles required for the clothing of the fellah can in general be only procured from the government offices; but the fellahs are under no obligation to resort to them, and many of them buy articles direct from the European stores. The fellah buys of the pacha his seed corn, for which he pays a price, but he is not obliged to convey the water destined for irrigation, it is the pacha who furnishes them. Does he require for his boat a sail and other rigging, the pacha is his purveyor. The mat he sleeps on comes from the government magazines!

An account is opened by the village tax-gatherers with each inhabitant: the fellah is credited with the value of the produce which he has deposited; and debited with the *miry*, and the other imposts, as well as the prices of the articles with which he has been furnished, which always exceed their value. The account is balanced every four years.

If the fellah be found a debtor, he is sued; if a creditor, the sum which is due to him is kept back as a security for the payments of the other fellahs of his village who may be in arrear, or perhaps it is at once carried to the account of another fellah indebted to government. This method of equalising accounts exists not only between individuals of the same village, but also between neighbouring villages, and even provinces; so that a rich and industrious canton may be charged with the taxes of another canton or province, the inhabitants of which are sunk in sloth and idleness! And to add to this injustice, the debts of the government to the fellahs, being never available to the latter, are in reality imaginary.

Much, however, of this injustice, and of the exactions to which the fellahs are exposed, originates in the peculation and underhand proceedings of the governors of provinces and their subordinate officers. It is, in fact, alleged, that for every dollar that finds its way into the coffers of the pacha, two or three are appropriated by the parties in question! The pacha is aware of this abuse; but he has hitherto been prevented from taking effectual steps for its suppression. There are some places in which there is a large consumption of articles, — as Cairo, Alexandria, Damietta, Rosetta, Syene in Upper Egypt, and Cosseir, which are subject to taxes on consumption (*octrois*), laid on nearly every article. Corn is taxed at 18 piastres the ardep, an impost which considerably augments its price; in addition to which, the cultivator, who has corn to sell, is not suffered to bring it to market until all that had belonged to the government has been sold, and the magazines are empty.

A cultivator, included in that portion of a district on which the corn required by the pacha is ordered to be grown, if he wish to commute for the delivery of that article by a money payment, is charged at the rate of 36 piastres the ardep; and he will generally rather pay this sum than double the sum at his credit with government; such credit being of no service to him, since it is never paid; while, by selling his corn, notwithstanding the duties and the 36 piastres which he pays, he receives at least, in money, a fourth or fifth part of its value.

Mehemet Ali has not neglected to tax manufactures of whatever kind. All traders pay an income tax (*firdek*), amounting to a twelfth part of their annual gains. Long-established manufacturers cannot dispose of their products excepting to the pacha, and at the price which he himself fixes. The meanest articles are burdened with duties. For instance, Egypt is naturally destitute of fuel, which is supplied by mixing straw and dung; but before being used it must pay a tax, called an *apake*. No one can fish in the Nile, or sell eggs or chickens in a town, without paying an *apake*. The fellah pays duties on his palm-trees, exclusive of the *miry* or tax on the land on which they grow; and Marshal Marmont states, that these duties have occasioned the destruction of many palm-trees; and that they would have been wholly destroyed, notwithstanding their great utility, had not the pacha declared, that lands where palm-trees grew should be charged, in addition to the other imposts on them, with the tax on palms, whether they were cut down or not. (iii. 176.)

It must, however, be admitted, notwithstanding the grinding oppressiveness of this system, that it has materially improved the agriculture of the country; and that some new and important branches of culture have been introduced, as that of cotton, now a staple product. We agree with Marshal Marmont in thinking that these improvements never could, under any system, have been effected by the fellahs, who are ignorant, attached to old habits, and easily satisfied. But the vice of the present system is, that the fellahs reap no advantage whatever from this increased production. On the contrary, it has stripped them of not a few of their limited enjoyments, and rendered them more impoverished and depressed than they ever were at any former period of their history: their increased labour, instead of bringing with it an increase of comfort, brings only an increase of privations. Hence, were any thing to occur that should overthrow the government of Mehemet Ali, or should it pass at his death into less vigorous hands, the whole fabric would fall to pieces, and leave not a wreck behind. It is forced, factitious, and unnatural; it is not bottomed on or associated with the interests or affections of the people, but merely on the supposed, though not real, interests of the government; and will necessarily go to ruin the moment it ceases to be upheld by power.

It is due to Mehemet Ali to state, that in constituting himself proprietor of all the land of Egypt, and loading the cultivators with oppressive taxes, he may plead the example of most Asiatic monarchies, and even of British India, where, we regret to say, the taxes on the land are quite as oppressive as in Egypt; and their assessment and collection equally arbitrary and unjust. The pacha has been driven into his monopoly system partly by the necessity under which he is placed of levying a very large revenue, and partly by the false belief, natural to persons in his situation, that he can do every thing better than any one else. But it is needless to say that there is no foundation for any such opinion. A system like that of the pacha may, no doubt, force the premature development of a few branches of industry; but by annihilating individual enterprise and competition, it is sure, in the end, to paralyse industry, and to extinguish every germ of real improvement.

It is not, therefore, in the cotton mills and workshops of the pacha, but in his customs and police works, in his schools, and in his improved police and military organisation he has introduced, that we must seek for the advantages which his government has conferred on Egypt. And it is greatly to be regretted that these substantial and real improvements, being associated with the degradation and impoverishment of the great bulk of the people, can be looked upon by them with but little favour; and will, consequently, stand a great chance of being destroyed on any change of the government.

Besides the taxes previously noticed, customs duties are levied on all ships entering at the various ports, and also on all goods transported to Upper Egypt (which are collected at Boulae; the river port of Cairo), to an annual amount of about 120,000*l.* sterling. The gross yearly revenue of Egypt and its dependencies is unknown, and various estimates have been framed of its amount. It has been recently stated at 1,000,000 piastres of 125 French francs each (about 5,000,000*l.* sterling); viz. Egypt, 780,000 piastres; Syria, 150,000; Nigritia, 25,000; Hedjaz, 25,000; Candia, 20,000. (*Augsburg. Gazette*, Feb. 21, 1840.)

Army and Navy.—The regeneration of the army was one of Mehemet Ali's first projects on attaining to the pacha of Egypt. To accomplish this, to consolidate his government, and to pave the way for his other reforms, the reconstruction, or, if that was impossible, the destruction of the Mameluke force that had so long ruled in Egypt, was indispensable; and this Mehemet accomplished, partly by force and partly by the wily treachery. This superb cavalry being destroyed, with the exception of a small party who enrolled themselves, under the banners of the pacha, the latter commenced his work of military reform with equal vigour and success. He had long been sensible of the vast superiority of European tactics and discipline over the brave but tumultuary onsets of Asiatic troops, and he was determined at all hazards to introduce the European system into his dominions. With this view he had the troops commanded by his son, Ismael Pacha, drilled and disciplined in the European fashion, chiefly through the instrumentality of some Italian officers. But the troops were naturally disinclined to the change; and the injudicious severity with which it was attempted to be introduced and carried into effect, gave rise to a dangerous mutiny, that threatened to put an end to the projects and power of the pacha. Mehemet having succeeded in suppressing this formidable insurrection, saw his error, and resolved to proceed with greater caution. With this view he formed a depot of fellahs in Upper Egypt, and had them trained in the European manner. Perhaps, however, he might have failed even in this, and at all

events there is but little probability that he should have succeeded so well, but for the invaluable services of Colonel Sarras, the Selimian Pacha. This officer, who had served with distinction under Napoleon, undertook the arduous task of new-modelling the army of the pacha, and of organising and disciplining it according to the most approved models; and by a rare combination of firmness, bravery, and good sense, he has overcome the all but insuperable difficulties with which he had to contend. He succeeded in gaining the confidence both of the pacha and the troops. Marshal Marmont has spoken in the highest terms of the excellence of the new system; and there can be no question that the troops of the pacha are equal and probably superior to any ever embodied in the East. The army is raised by conscription, which, in consequence of the limited pop. of the country, is very severe: it is alleged that the peasantry frequently maim themselves in order to escape being subject to it. The number of troops, in 1838, including veterans and invalids, amounted to 127,236, besides from 10,000 to 12,000 irregular Turkish troops, and the Bedouin Arabs, who furnish about 30,000 more. In his tract on Egypt, published in 1838, Mr. Waghorn states the pay of a general of division at 150,000 piastres, and that of a soldier of the line at 180 ditto; but since then the pay of the higher class of officers and functionaries has been reduced. The medical-staff is well organised; and the title of M.D., from one of the faculties of Europe, is required to obtain the rank of major.

The Egyptian navy is also a creation of the pacha: it numbers 11 ships, carrying 853 32-pounders; 7 frigates with 353 32-pounders; 4 corvettes, 102 32-pounders, short; 7 brigs, 124 32-pounders, cannonades; and 3 steamers. The ships, which are constructed by native builders, are beautifully modelled; and though the crews have not attained to the proficiency of English or American sailors, they have, regard being had to the circumstances under which they have been placed, made the most extraordinary advances.

Literature and Education.—The literature of the Arabs is very comprehensive. The works on religion and jurisprudence comprehend about one fourth of the entire number of Arabic books. Others on grammar, rhetoric, philology, history, and geography, are also numerous; as are also their poetical compositions. There are many large libraries in Cairo, most of which are attached to the mosques. (*Lanc.* i. 287.) A system of public instruction has been organised by the pacha, which deserves high praise. It is nearly as follows:—The pupils are first sent to the "primary" schools, of which there are 50 throughout the country, instructing, in 1838, 5,500 scholars. The youth having acquired the rudiments of education at these, they are advanced to the two "preparatory" schools, at which there were 2,000 pupils in the same year. The next step is the "special" schools, which are 10 in number, each devoted to particular studies; namely, medicine, midwifery, veterinary surgery, languages, music, and agriculture; the other 3 being military schools, to fit the scholars for the cavalry, artillery, or infantry service. At Absoosabel in Cairo, the pacha has established a military hospital and a medical college, both under the direction of a distinguished French physician, Dr. Clot, now Clot Bey. The success that has attended this establishment has been quite extraordinary and notwithstanding their old prejudices, many of the Arab pupils have become expert anatomists and clever surgeons.

It is impossible to appreciate too highly the beneficial influence of these establishments; they have already effected, and will, no doubt, continue to effect, a very great revolution in the public mind in the East; and will pave the way for reforms and changes of which, at present, no one can form any distinct idea. Almost every mosque or public fountain has a school attached to it, mostly endowed by benevolent persons. At these schools, getting the Koran by heart forms the chief employment; but reading and writing are also taught: those who aspire to the higher branches of learning become students of the University of El-Aghas at Cairo, the principal seat of learning in the East. In this building are certain *rituals*, or colleges, set apart for the natives of particular provinces. The regular subjects of study are grammar, rhetoric, Mohammedan theology, and the traditions of the Prophet; law, religious, civil, and criminal; algebra, and arithmetic. The sciences are but imperfectly understood in Egypt, though great improvements have been made in medical science, in consequence of the introduction of European practitioners, and natives being sent to Europe to study. Egyptian geography describes the earth as a flat surface; and astronomy, beyond merely computing the calendar, is studied for the purposes of astrology. Music affords a favourite study for pastime, but the theoretical system is complicated, as each tone has three intervals or gradations of sound instead of two. Their melodies are mostly of a plaintive kind; but a kind of recitative, in which they chant their romances, has some bold measures. (*Lanc.* i.

288, *et seq.*; *Waghorn's Egypt in 1838, Appendix; Egypt, a Popular Description*, &c. 182—190.)

Productive Industry and Commerce.—No soil can be better adapted for agriculture than that brought down by the Nile, and deposited on its banks. The earliest authentic records of the human race represent Egypt as the granary of the old world, to which less fortunate nations resorted in times of scarcity; while she received from them, in exchange for the necessities of life, all those luxuries and riches which enabled her people to make such early progress in the arts, and to leave behind them monuments surpassing even the remains of the classic world in costliness, extent, and grandeur. The supplies of silt annually brought down by the river considerably abridge the labours of the husbandman, and have enabled the country, with but little of his assistance, to bear for the last 3,000 years three, and sometimes four annual crops, without the least impoverishment. The husbandry of Egypt is divided into two great classes:—the upper, or *sharakee* lands, where the banks are too high for the country beyond them to benefit by the inundation; and the *rez*, or low lands, which are watered by the natural overflowings of the river.

About four millions of *faddans* are now under cultivation in Egypt, of which from 200,000 to 300,000 are occupied with cotton; 1,000,000 with flax, indigo, sugar, dates, hemp, &c.; and the other 2,800,000 or 3,700,000 *faddans* with grain, principally millet (*dhourra*), maize, wheat, and rice. In Lower Egypt sowing commences immediately after the waters subside; the seed only requiring to be strewn over the land, and it either sinks into the soft earth by its own weight, or is trodden down by cattle driven over it. This is generally done in November; in February the fields are verdant, and in May the harvest takes place. In July rice and maize are again planted, and yield a second harvest in September. In Upper Egypt the constant artificial supply of irrigation required by the land gives to the farmer unceasing employment. Deprived of rain, and exposed almost always to a burning sun, the land would be arid and barren if not constantly refreshed with moisture. After the water has been preserved in canals and wells, it is raised by *terrian* or *saqi* wheels, worked by oxen, or by means of a hand-machine of a more simple construction. Sowing begins here about November, as in Lower Egypt; and the corn begins to spring up before the end of the month, and by December gives to the country the appearance of a verdant spring. In January lupines, dolichos, and cumins are sown; and towards the end of the month the first barley harvest commences. In February sugar-canes are cut for the press. By April flax has ripened, and the plants are pulled up; tobacco leaves are gathered, and the wheat harvest is got in. In July there is a third crop of trefoil, and a second of rice. October is the month for all sorts of leguminous seeds to be sown. (*Malic-Brun*, iv. 43—45; *Burckhardt's Arabic Proverbs*, 134; *Wilkinson's Topography of Thebes*, &c.)

The efforts of the pacha having been principally directed to the culture of cotton, the crops of wheat have greatly fallen off, and Alexandria has ceased to be a port for the shipment of this species of grain. The cotton of Egypt is long-stapled, of good quality, and the soil is well suited to its growth; but it is notwithstanding more than doubtful whether the forcing its culture has been judicious. It may have been more immediately profitable to the pacha, but it is very questionable whether it has been profitable to the country; and the opinion of the best informed parties seems to be that the cotton plantations of Egypt will have great difficulty in maintaining themselves, on any thing like a free system, which could never be the case with its wheat culture. Marshal Marmont estimates the amount of the indigo crop at 3,000 cwts. Immense plantations of mulberry trees have been executed by order of the pacha, which already produce 100,000 kilog. of silk.

As the productiveness of Egypt depends wholly on the extent of the inundation and the command of water, it would be of vast importance to the country if means could be found of regulating the inundation, and preserving the waste of water, which is here the one thing needful. These important considerations, which engrossed a large share of the care and attention of the ancient rulers of Egypt, who excavated the lake Moeris in this view, have not been overlooked by Mehemet Ali; and it is greatly to be regretted that instead of expending his energies in attempts to introduce manufactures wholly unsuited to the country, and which cannot be carried on except at a constant sacrifice, he had not applied them to this great work. Marshal Marmont has given an account of the works (*barrage*) which were projected by the pacha for the regulation of the inundation; and it is believed that it is by no means impracticable so to regulate the flow of the river that it might always be equally diffused over a much larger extent of country than at present, and that an inexhaustible supply might be secured for irrigation in the

dry season. But the engineers employed by the pacha appear to have been unequal to the task; and, after costing large sums, the work is now abandoned. But it is to be hoped that it may be resumed under more favourable auspices. It could not fail to double or treble the productive capacities of the country; and were it carried into effect, and full scope given to private enterprise and industry, the wealth and population of Egypt in modern times might be as great as under the Pharaohs.

Manufactures are not carried on, at least to any considerable extent, by private individuals in Egypt. Such indeed is no where the case; unless in countries where the government abstains from engaging in similar undertakings, and where property is secure, and every individual left to dispose at pleasure of the fruits of his industry, enterprise, and economy. But, as has been already seen, all this is unfortunately wanting in Egypt. The pacha seems to have concluded that the same system that has given him an army and a navy would be equally successful in establishing manufactures. But it is needless to say that the means by which these different ends are to be attained are radically and completely different as the ends themselves. It is to be hoped that the pacha may speedily become aware of this; and that by ceasing to interfere with the industrious pursuits of individuals, and allowing them to prosecute their own industry in their own way, he may insure the stability of his plans for regenerating the country. The fact is, that Egypt is totally unsuited for manufactories, inasmuch as the humidity of the climate along the shore, and the sand in other parts of the country, prevent the prompt working of fine machinery, and, in the end, destroy it. The pacha, it is believed, is now sensible of his mistake, in forcing manufactures, and several of his establishments have been allowed quietly to expire. The most extensive was that erected at Boulac, near Cairo, for spinning, weaving, dyeing, and printing cotton goods; it was superbly fitted up, and was worked by a steam engine, and lighted with gas. About 800 men and boys were employed in this building three or four years ago; but we have no very recent details respecting it. The linen at present fabricated in Egypt has originated from the fine flax of ancient historians so often mention with praise: it now consists chiefly of the coarser kinds, for towels, sackcloth, &c., large quantities of which are exported. Carpets for sofas are made at Densouef, and embroidered silk handkerchiefs at Cairo. The potteries of Egypt are extensive, and celebrated for a species of porous jars admirably adapted for clarifying and cooling water. But the most curious branch of Egyptian industry is the hatching eggs by artificial means—that of ovens of various degrees of heat, skillfully graduated according as the egg advances towards incubation. (For a full description of the process, see Lane, ii. 5; Wilkinson's *Topog.*; *Thbes*, &c.)

Possessing so absolute a control over his subjects, Mehemet Ali has means at his command for the carrying on of public works which less absolute rulers do not possess. Canals have chiefly occupied his attention: old ones have been opened, and new ones cut, so that the whole produce of Upper Egypt is now easy of transit down to the coast. The manner in which the canal that connects the harbour of Alexandria with Fouah was opened, affords a good example of the pacha's arbitrary system. All the labouring classes of Lower Egypt were compelled to assist; but were paid one month in advance to provide themselves with subsistence. The Arabs were marched down in immense numbers, under their respective chiefs; and having set to work, completed the canal (which is 48 m. long) in the short space of six weeks.

Commerce.—No country can be better situated for commerce than Egypt. She forms the link that connects the Eastern and Western worlds; and it is to her admirable situation in this respect, and to the commerce of which she in consequence early became the centre, that her ancient wealth and civilisation are mainly to be ascribed. It has been customary to trace the ruin of commerce in Egypt, in modern times, to the discovery of the route to India by the Cape of Good Hope; but more stress has been laid on this event than it really seems to deserve. No doubt it most probably would, under any circumstances, have diverted a portion of the trade with the extreme western states of Europe, and in the bulkier articles, into a new channel; but had the same facilities for conducting the commerce with the East existed in Egypt in the 15th and 16th centuries that existed in antiquity, the trade between India and the countries on the Mediterranean, and in the lighter and more valuable products, would, there is every reason to think, have continued to a great extent in the old channel. The truth seems to be, that the extinction of the trade through Egypt, at the epoch referred to, was mainly owing to its having become subjected to the lawless and arbitrary dominion of the Mamlukes, who loaded all articles passing through the country with oppressive exactions, and treated all foreigners, especially

Christians, with insolence and contempt. But a new era has begun; and the intercourse with the East has already in part reverted to its old channels. The establishment of a steam communication between Europe and India by way of Alexandria and Suez, is one of the most striking and important events in recent times. It has shortened the journey to India by nearly a half. Steamers ascend the Nile as far as Cairo; and the passengers and mails are thence conveyed across the desert from Cairo to Suez, and conversely, by carriages; and it is a fact that no fewer than 5 inns or khans are now established along this road, which is travelled with comparative comfort and expedition. And no doubt can be entertained, provided the present order of things in Egypt be not violently subverted, that the facilities for the intercourse with the East through it will be greatly increased. With respect to the steam communication with India carried on through Egypt, it may be mentioned that the mail for India, which leaves London on the night of the 4th of each month, reaches Alexandria on the 15th, and leaves Suez for Bombay on the 16th; and the mail from Bombay, which leaves that city on the last day of each month, reaches Suez on the 18th, and Alexandria on the 21st of the ensuing month. The mail boxes, which sometimes weigh a ton, are sent across the desert between Suez and Cairo without a guard; and it is honourable to the Egyptians that, down to the present time (January, 1840) there has not been a single instance of a box or even a letter being missing since the regular communication was established. Europeans may now establish steamers and other vessels on the Nile; and Messrs. Hill and Co., of Alexandria, have availed themselves of this privilege, by establishing a steam packet between that city and Cairo.

We are assured, that were it not for the hostilities in which the pacha has been almost always engaged, he would have attempted to re-open the famous canal that formerly connected the Red Sea and the Nile. According to Herodotus, this canal was commenced by Necho, King of Egypt, and finished by Darius. (Lib. ii. § 188. iv. 39.) Under the Ptolemies, by whom, according to some authorities it was completed, this canal became an important channel of communication between the Nile or Pelusiac branch of the Nile at Bubastis, the ruins of which still remain; it thence proceeded E. to the bitter or natron lakes of Temrah and Chelk-Aneded, whence it followed a nearly S. direction to its junction with the Red Sea at Arsinoe, either at or near where Suez now stands. It is said by Strabo (lib. xvii. p. 805.) to have been 1,000 stadia (122 m.) in length; but if we measure it on the best modern maps it could hardly have exceeded from 85 to 95 m. Herodotus says that it was wide enough to admit two triremes sailing abreast. This great work having fallen into decay after the downfall of the Ptolemaic dynasty, was renovated either by Trajan or Adrian; and it was finally renewed by Amron, the general of the caliph Omar, the conqueror of Egypt, anno 639. (*Herodot.*, par Larcher, iii. 450.) The French engineers traced the remains of this great work for a considerable distance; and it would be of singular advantage to Egypt and the commerce of the world were it re-opened.

Marshal Marmont states that the ground has been carefully examined by M. Lepère, an able engineer, and that it presents no sort of difficulty that may not easily be overcome. This, indeed, might have been inferred from the fact of its former construction; for the ancients, being unacquainted with the use of locks, had to encounter difficulties in the construction and working of canals which are now obviated with the utmost facility. According to M. Lepère, the cost of constructing a navigable canal from the Nile to the Red Sea would not exceed 15,000,000 fr., or less than 700,000*l.* (*Marmont*, iv. 161.) The completion of this work, therefore, would be desirable. The opening of the Mahmoudieh canal, from Alexandria to Fouah, shows what the present government is able to achieve; and an enterprise like that now under consideration, though more difficult, would be of still greater importance to Egypt as well as to Europe and Asia. Marshal Marmont appears to think that the ground between Suez and Cairo is quite unsuitable for a railway, to which project the pacha is, however, understood to be most favourable. In fact, a portion of the iron rails for this undertaking have been ordered from England, and are now in Egypt; but the attention of the pacha having been diverted to other matters, the project has been, for the present, abandoned.

The whole foreign trade of Egypt centres in Alexandria; and we beg to refer the reader to the article on that city for an account of the imports and exports of the country, and of the mode in which the trade is at present carried on.

Money.—Accounts are kept in Egypt in current piastres, each equal to something under 4*d.*, there being 100 of them to the pound sterling. There are, besides, coins to represent the $\frac{1}{2}$ piastre (*noos khirak*) and 1-40th (*juda*).

ddh or pardh), and 5 and 10 fuddah pieces. The *saader-gah* is a small gold coin, of the value of four piastres; and the *shayreegh* is equal to nine piastres, or 45d and 1-16th. These are the only Egyptian coins. There is, however, the nominal *kees* or purse, which stands for 500 piastres, and the *kameeh*, or treasury of 1,000 purses, or 5,000 sterling. The coins of Constantinople are current in Egypt, but scarce. European and American dollars are pretty generally exchanged for 30 piastres. The English sovereign is called *gin gah*, for guinea, and is freely taken. (*Lane*, ii. 378-39.)

Antiquities of Egypt.—A contemplation of the remains of antiquity scattered throughout Egypt, carries us back to a period of which history furnishes no other records than those derived from the monuments themselves. The temples, the palaces, and pyramids of the country, mark the spot where idolatry began—where civilisation commenced its career; while the annals of other nations prove that this land of gigantic fabrics had attained to a high degree of civil and social order, and architectural proficiency, when the rest of the world was involved in barbarism. The range of objects presented to the archaeologist may be classified thus:—1. Pyramids; 2. Temples; 3. Colossi and sphinxes; 4. Sculptures and hieroglyphics; 5. Tombs and paintings.

1. The *Pyramids*, which, for vastness and duration, stand at the head, not only of all the monuments of Egypt, but of the ancient world, are placed, at irregular intervals, along the E. foot of the Libyan hills, at some distance from the W. bank of the Nile. They commence at Ghizeh, nearly opposite to Cairo, in about 30° lat., and extend S. to about 29°. The pyramids of Ghizeh, three in number, are the best known, the largest, and most celebrated. They stand on a plateau of rock, elevated about 180 ft. above the desert, about 7 m. W. by S. from Cairo. The pyramidal form seems to have been adopted in order to ensure stability. Their plan is that of a perfect square, and their sides contract by regular gradations till they terminate in a point, but so that the width of the base always exceeds the perpendicular height. They are not solid; at least chambers and galleries have been explored in some of the principal pyramids.* The greatest of the pyramids of Ghizeh, and indeed of Egypt, that of Cheops, the pyramid of which is dedicated to Isis, is a gigantic structure. The sides of its base, which are in the line of the four cardinal points, measure, at the foundation, 753 1/4 ft., so that it occupies a space of more than 13 acres. Its perpendicular height is about 450 ft., being about 100 ft. higher than the summit of St. Paul's. Supposing this pyramid to be entirely solid, its contents would exceed three millions of cubic yards, and the mass of stone contained in it would be six times as great as that contained in the Plymouth breakwater! (*Egyptian Antiquities, Library of Entertaining Knowledge*, ii. 213.) This huge fabric consists of successive tiers of vast blocks of calcareous stone, rising above each other in the form of steps. The thickness of the stones, which is identical with the height of the steps, decreases as the altitude of the pyramid increases, the greatest height being 4'6 3/4 ft. and the least 1'6 3/4 ft. The mean breadth of the steps is about 1 ft. 9 in. The best authorities agree in estimating the number of steps or tiers of stone at 903. According to the information communicated to Herodotus by the priests, 100,000 men were employed for 20 years in the construction of the prodigious edifice, and ten years were employed in constructing a causeway by which to convey the stones to the place, and in their conveyance. (*Ibid.* ii. 124.)

The other pyramids are of inferior dimensions; but they are mostly all, notwithstanding, of vast magnitude—*basilic montium eductæ*; they are not all of stone, some of them being of brick.

Many learned dissertations have been written, and many fanciful and a few ingenious conjectures have been framed, to account for the original use and object of these imperishable structures. But the difficulty of the subject is such, that hitherto no satisfactory conclusion has been arrived at. Even in the remotest antiquity their origin was matter of doubt, and nothing certain was known with respect to them or their founders. (*Phil. Hist. Nat.* lib. 36. § 12.) On the whole, however, it would seem to be most probable that they were intimately connected with the religion of the ancient Egyptians; and that they were at once a species of tombs and temples, but participating more of the latter than of the former character. (For some remarks on this part of the subject, see *Sherrin's Travels*, p. 170, &c. 4to. edit.; and *Greece's Pyramidographia*, in his Works, vol. i.)

It has long been customary to regard the pyramids as monuments merely of the power and folly of the monarchs by whom they were raised, and of the bondage of their subjects. This, however, seems to be a very super-

ficial prejudiced view of the matter. The varying magnitude of the pyramids, the fact of their being scattered over a space extending lengthwise about 70 miles, and their extraordinary number, appear to show, pretty conclusively, that they must have been constructed from a sense of utility or duty; and not out of caprice, or from a vain desire to perpetuate the names or the celebrity of the founders. If we had a sufficient knowledge of antiquity, it would probably be found that the motives which led to the construction of the pyramids were, at bottom, nearly identical with those which led to the construction of St. Peter's and St. Paul's; and that they are monuments of the religion and piety, as well as of the power, of the Pharaohs.

It is impossible for any one to look at these stupendous piles without a deep sense of their sublimity. Their prodigious magnitude, the impenetrable mystery that hangs over their origin and the purposes to which they were applied, and the conviction that they will endure long after the proudest existing monuments of human greatness have been levelled with the dust, awaken feelings that cannot be excited by any other display of the power and industry of man. The pyramids, too, are associated with some of the most interesting events in the history of the human race. They were probably gazed upon by Moses; and certainly were regarded with wonder and admiration by Homer and Herodotus, Pythagoras and Plato; Alexander the Great and Napoleon marshalled their hosts under their shadow; and they are no doubt destined to receive the homage of poets, historians, and philosophers, and to witness the exploits of warriors, through the ill but endless series of future ages. (For further details as to the Pyramids, besides the authorities already referred to, see the *Description de l'Égypte*, tom. ix.; *Modern Traveller*, Egypt, vol. i.; *Clark's Travels*, vol. v. 8vo. edit.; *Greece's Works*, i. 1-164, &c. 1737; *Ancient Universal History*, i. 425-445; *Herodote*, par Larcher, lib. ii., with the Notes; and a host of other works.)

2. *Temples.*—The remains of buildings devoted to religious worship form, next to the pyramids, the most considerable reliques of antiquity in Egypt. Reared after one uniform design, gigantic in size, massive in the architecture of Egypt, above that of all other nations, the most characteristic and unique. The plan and proportions of an Egyptian temple consist, first, of the approach to it, or *dromos*; a sacred avenue lined on each side with sphinxes, and in some instances a mile long. This conduits to the entrance, or *propylon*; a principal feature in the building, consisting of pyramidal moles, with a rectangular base and sides, inclining less to one another than in the perfect pyramid, upon which the most elaborate sculptures were cut. Between them is the door; but before the door sometimes two obelisks rise beside two colossi, as in the temple of Luxor (*Thébes*). The number of these propylæ and dromi is indefinite; occasionally three must be passed before arriving at the pronaos, or portico of the temple itself, which has a massive façade, supported by pillars. A doorway leads to the sekos, or cell, which is always divided into several apartments. A second door generally leads to an hypostolite hall, having a flat roof, supported by huge pillars. (*Denderah*.) Some of these halls are of immense size. Other chambers succeeded, until the holy recess presents itself; an oblong room, with an altar and several idols sculptured in stone. To almost every apartment there are staircases leading to the terraced roofs, many of which are of such dimensions that at present Arab villages are built upon them. Although many of the temples are more than a mile in length, their interiors are uniformly covered in every part with the most elaborate sculptures. The structures will be found more minutely described under DENDERAH, ESBOU, THEBES, &c. (*Strabo*, *Édt. de Casaubon*, 808; *Egyptian Antiquities*, i. 69-77.)

3. *Colossi, Sphinxes, &c.*—Although these have been invariably found as appendages to the temples, the important place they occupy in the antiquities of Egypt, demands a separate notice. Immensity of size, so main an element in producing grandeur of effect, was the chief end of the Egyptian artist; and that this might take a stronger hold upon the imagination of the spectator, the largest colossi have mostly placed near them a small figure for contrast and measure of magnitude. Those representing men are always the figures of some deity, and were placed in pairs opposite the propylæa. They are naked, except a head-dress and cloth bound

* Colonel Howard Vyse has opened and explored four new chambers in the Great pyramid; he also opened the third pyramid of Ghizeh, of the previous opening of which no tradition exists; but there can be no doubt that it had been previously opened, as a sarcophagus was found with the broken lid on the floor.

round the waist. Some are sculptured of one entire stone (hence called monolithes), and were cut out of the quarries and transported to the temples at an enormous expense of time and labour. On the plain of Thebes, about half way between the W. desert and the Nile, are two colossal figures, about 50 ft. in height, seated each on a pedestal 18 ft. long, 14 ft. broad, and 6 ft. high. One of these, supposed to be the "Memnon," the most celebrated by far of the Egyptian statues, is said to have emitted sounds at sunrise or soon after, and when the sun's rays fell on its lips. Strabo saw the statue, and heard the mysterious sound; and Tacitus tells us that Germanicus visited the *Memnonis Saxæ effigies, ubi raditis solis ictu est, vocem sonum reddens.* (*Annal.* lib. II. c. 61.) A portion of a similar statue, but of smaller dimensions, may be seen in the British Museum (No. 4, Egyptian saloon), which was brought by Belzoni from the Memnonium. Besides these gigantic representations of deified human beings, those of other gods are met with throughout the country. The strangest are those ideal figures called sphinxes, some having a man's head, and lion's limbs and body (*andro sphinxes*); others, the most numerous, with a female head; others again displaying a ram's head. Sphinxes were usually placed in those double rows which formed the avenues, or dromi, of the temples, and vary very much in size. The largest is that placed E. of the second pyramid of Ghizeh. It is an andro-sphinx, much of it buried in sand, but the head and a portion of the body are visible; the first measuring, from the chin to the top of the forehead, 28 ft., the body being about 100 ft. long; the face has been much mutilated. The excavations of M. Caviglia disclosed some curious appendages to this gigantic monster. On a stone platform, between the fore-paws, is a block of granite 14 ft. by 7 ft., and 2 ft. thick, highly embellished with sculptures in bas-relief; and on the second digit of the southern paw, a Greek inscription is deeply cut (given with others in the *Quarterly Review*, xix. 411., with a translation by Dr. Young). Between the legs of the sphinx, and on the ground in front of it, is a small temple, a plan of which may be seen in the *Quarterly Review*. (xix. 416.) Appendages around the sphinx indicate that it was originally inclosed within a wall. Besides the human colossal and sphinxes, other figures belonging to the Egyptian mythology are of frequent occurrence. All the colossal, or what are termed colossal, statues are supposed, coloured and over in every part; many of them still exhibiting traces of paint. (*Heeren's Researches, Engl. trans.* ii. 314.; *Quarterly Review*, &c.)

4. *Sculptures and Hieroglyphics.*—Hitherto we have regarded only those specimens of Egyptian architecture and sculpture whose immensity, and, when compared with the classic elegance of Grecian models, whose uncouth forms, might be deemed the first rude, though gigantic efforts of the Egyptian artists; but a close examination of the ornaments with which the ancient buildings are profusely enriched, shows the great proficiency to which they had attained in the more refined branches of art. The obelisks, the walls, and all the apartments of the edifices described above, are covered in almost every part with sculptures executed with the most minute finish and exquisite skill. The ruined temples and obelisks of Egypt are, in fact, so many historical records. The wars and triumphs of the Egyptian sovereigns were, for the most part, the theme of the sculptor. The immense propylæa and walls of Luxor and Karnak, for example, give a vivid picture of the forms of pursuit, the attitudes of the victors, the wounded, and the dying,—the sea fights, the religious sacrifices and processions. And it has been surmised, with what probability we shall not undertake to determine, that Homer's admirable descriptions of similar scenes is principally to be ascribed to his study of these monuments!

The hieroglyphics are intimately connected with this part of our subject; but we have to regret that our limited space will not allow of our giving more than a very short and imperfect sketch of their nature, and of the recent researches with respect to them. By hieroglyphics are popularly understood the various figures, symbolical devices, and characters with which the Egyptian obelisks and other monuments are covered. They are highly interesting, from the insight which they afford into the steps by which men were led to the use of a written language. The most obvious expedient for communicating substantive ideas would be by drawing figures of the objects; thus, a battle might be represented by the figures of armed men contending with each other, &c. But this is a very clumsy and inconvenient mode of conveying information, and cannot be applied to represent mental feelings or abstract ideas. Hence pictorial are very soon superseded by or mixed up with symbolical or allegorical representations, which depict facts, qualities, or circumstances, by conventional or arbitrary marks; and these sort of characters being, in the course of time, still further simplified, lose a great portion of their original pictorial character, and degenerate into what may be called a common, *demotic*, or *enchorial*

writing.* The Chinese is the most perfect example of this sort of conventional writing; and Duhalde has given an interesting account of the steps by which it was derived from pictorial writing. (*Duhalde, Description Géographique*, &c. II. 272. ed. 1736.) The present Chinese characters are, in truth, nothing but a refined and improved species of hieroglyphics, each character representing to the eye a distinct object or quality. At this point the Chinese have stopped; and it seems never to have occurred to them to attempt to mark the different sounds of the voice by characters or letters, and by combining these to form a written language. Now, it was long supposed that, like the Chinese, the characters on the Egyptian monuments were wholly hieroglyphical, and much learning and ingenuity have been expended in efforts to decipher them. It was latterly, however, conjectured by Zoega (*De Origine et Usu Obeliscorum*, p. 454.) that some of the characters on the monuments might be neither pictorial nor symbolical, but *phonetic* (from *φωνε*, *vox*); that is, that they might represent sounds, and not things, and be either alphabetic or syllabic, or both. Warburton had already shown how the refined symbolic writing might pass into the phonetic, but he erroneously concluded that the monuments afforded no specimens of the latter. (*Divine Leg.* lib. III. 161.) The surmise, for it was little better, of Zoega has since, however, been sustained by Dr. Young, Champollion, and others. But in doing this they had facilities unknown to Warburton, Zoega, and previous inquirers. The French, when in Egypt, discovered at Rosetta a stone, now in the British Museum, on which three inscriptions are sculptured; and it appears from the last and most perfect of these, which is in Greek, that the inscriptions are either entirely or substantially identical with each other, being the same royal decree which, it says, was ordered to be cut in sacred characters or hieroglyphics, in *enchorial* characters (that is, in modified or conventional hieroglyphics), and in Greek. The inscriptions are a good deal mutilated, particularly the hieroglyphical; but they are still sufficiently distinct to allow the hieroglyphical and *enchorial* to be compared with each other and with the Greek. The study of this trilingual stone enabled Dr. Young to determine, or rather perhaps conjecture with considerable probability, which of the *enchorial* and hieroglyphical signs were phonetic, and to fix their value. M. Champollion has since, however, been sedulously followed up the path thus opened, but with no great or marked success. If, indeed, the Egyptian writing were either wholly figurative or wholly phonetic, a key to its mysteries might be discovered, and its long-hidden treasures be again brought to light. But the most probable conclusion seems to be, that it is partly the one and partly the other; or that the characters are in a state of transition from the former to the latter. This, also, is the matured opinion of Champollion, who lays it down distinctly, in the second edition of his *Précis du Système Hieroglyphique*, published in 1828, that "the hieroglyphic mode of writing is a complex system—a system *figurative, symbolical, and phonetic*, in the same text, in the same phrase, I would almost say in the same word." An examination of the hieroglyphic writings must go far to satisfy every one that this is a tolerably correct statement. Many of the characters are purely pictorial; while others are mere arbitrary symbols, and may be, and most probably in some instances are, phonetic, or, which is the same thing, alphabetic or syllabic. In fact, no certain conclusions can be, or at all events, have been, drawn with respect to. No doubt it was sufficiently intelligible to those who were instructed in its mysteries, but to those destitute of such instruction its interpretation must be a work of all but insuperable difficulty; so that there seems but little probability that the veil which covered Isis in antiquity should ever be wholly removed.† (Besides the authorities already referred to, the reader may consult the *Essay on Hieroglyphics* in the new edition of the *Encyc. Britannica*, the most able and elaborate treatise on the subject that has ever appeared.)

5. *Tombs and Paintings.*—Every relic of the ancient Egyptians appears to have been originally designed for an almost perpetual endurance. Their architecture,—the forms of which are mostly pyramidal, with bases that have withstood the most studious and continued destruction; their colossal sculptures,—many of them monolithes cut out of the solid rock; and even the bodies of their dead,—all seem to have been intended for eternity. Thousands of years have passed since many of the mummies recently unrolled were embalmed, yet every feature, every fibre, still remains. Even the colours of the paintings with which their se-

* See the clear and convincing statements of Warburton, *Divine Legation of Moses*, lib. 69.—163. ed. 1765.

† The learned and able author of the work on *Egyptian Antiquities*, in the *Library of Entertaining Knowledge*, says, "it is Champollion's statement, as to the diversified characters of hieroglyphics be true, 'no man in his senses will ever trouble himself about deciphering an hieroglyphic text.'" (ii. 361.)

sepulchres were adorned are still as vivid as if they had been laid on yesterday. So deep were their religious sentiments concerning dissolution, that they bestowed more labour and ornament upon the dwellings of the dead than upon the habitations of the living. They call," says Diodorus Siculus, "the houses of the living tann, because for a short space they inhabit them; but the sepulchres of the dead they call *eternal mansions*, because they continue with the gods for an infinite space. Wherefore, in the structure of their houses they are little solicitous; but in exquisitely adorning their sepulchres, they think no cost sufficient." *Diod. Sic. lib. 1.* It was not enough that the bodies of individuals should be preserved by the laborious and expensive process of embalming, but their actions and employments during life were elaborately recorded, and, as it were, perpetuated, by the hand of the painter on the walls of the tombs in which they were laid. In every instance the entrances of the tombs were artfully concealed, presenting an exact resemblance to the rest of the rock in which they were cut; for all the tombs of Egypt are excavations,—those of the people being dug in the side of the mountains, and those of the kings within the enclosures of the temples; the most remarkable of which is *Biban-el-Motak* at Thebes. The expedients employed to secure the dead from desecration are elaborate in the extreme; not only were their entrances a secret, but the entrance chambers where the bodies were laid only to be made by deep shafts and endless winding recesses. The mummy was enclosed in a sarcophagus profusely ornamented, and standing in the midst of a chamber. Besides human bodies, those of animals held to be sacred were also often embalmed. (*Belzoni's Operations and Discoveries; Wilkinson's Topography of Thebes.*)

As the monuments unravel, in some degree, the dark mystery of Egypt's ancient history, so an examination of the paintings that cover the tombs gives us some insight into the domestic condition and usages of its people. Every employment and amusement is vividly portrayed around these sepulchral walls, each according to the station of life of the person to which it refers. The forms of every article of furniture, of ships, of carriages, of every thing, in short, pertaining to civilised life, are there accurately figured. As pictures, however, these efforts of the primeval artists are far from pleasing. The colours, though still bright and vivid, are all positive, seldom being blended or softened; and perspective, or any approach to it, is no where to be detected. But the details of private life that they present are wonderfully minute and copious; and by a long and careful study of these, assisted in parts by an active imagination, and by a large infusion of what Du-gald Stewart has called conjectural history, Sir J. G. Wilkinson has produced a singularly interesting and instructive work. In fact, if we might trust to his ingenious suggestions and deductions, we should have a clearer insight into the habits, manners, and every-day life of the ancient Egyptians, than we have into those of most European nations (*Manners and Customs of the Ancient Egyptians*, 3 vols. Lond. 1837; a 4th vol. is to be added to this work. Rosellini has produced a similar work; *Monumenti dell'Egitto*, &c. Pisa, 1834.)

Present State of Egypt.—It is difficult to lay before the reader any statements that would convey a proper idea of the existing state of Egypt. The fact is, that it is now in a state of transition, and that the feelings, opinions, and habits of the people are undergoing a great and rapid change. Mehemet Ali has nothing about him of the religious intolerance that has for centuries been a distinguishing characteristic of the rulers of Egypt; he regards all religions, provided their professors do not interfere with political matters, with the same favour; and in consequence fanaticism is every day becoming less powerful in Egypt; and an infidel, or unbeliever in the doctrines of Mohammed, is no longer looked upon with contempt or aversion. The arts, sciences, and customs of Asia are also fast losing their influence in Egypt, and are making room for those of France and England. The taxation of the pacha is, no doubt, essentially Asiatic; but his armies, his schools, and his manufactures, are all European. In Cairo, ten or a dozen years ago, a man who should have walked the streets in a European dress would have been pointed at, and even at the risk of being pelted; whereas at present (1839) the European dress is more respected than the Eastern. At no very distant period, the pacha sat squatted on carpets or ottomans, fed himself with his fingers, and drank brandy by stealth; but now he uses a high chair, dines from a mahogany table covered with a handsome Dunelmire table-cloth, and well furnished with the finest crystal cutlery, and plate, with a bottle of claret to each guest. The same style is observed by all his principal officers; by all those, in short, who constitute the good society of Cairo and Alexandria.

It is not easy to exaggerate the vast influence of this extraordinary change. Unhappily, however, too much of its success depends on the life of an individual now

in old age. But all who are anxious for the improvement of the human race, and especially of this most interesting country, must surely be desirous that the good which the pacha has effected should be rendered permanent. Now, this will be most likely to be secured by the great European powers guaranteeing the independence of Egypt, and securing the succession in the family of the pacha. As the price of such guarantees, they might fairly stipulate for the diminution of some of the grievous burdens now laid on the fellahs; and they would be censurable if they did not enforce the adoption of such measures as may seem best fitted to facilitate the transit of passengers and goods across the country.

At present the pacha is compelled to keep a military force on foot quite disproportionate to the population and resources of the country; and this compels him, even were he otherwise inclined, to impose the most oppressive taxes and exactions on his subjects. The settlement of the "Eastern question" is, therefore, a matter of vital importance to the people of Egypt and Syria as well as to the pacha; and it would seem reasonable to conclude, that as the pacha is really independent, he should be acknowledged to be such, and be relieved from the tribute he has still to pay to the Porte. *The government of the latter has been the most dreadful of all the plagues that ever fell upon Egypt; and now that she has all but emancipated herself from this ruinous bondage it certainly cannot be too much, and it is difficult to imagine that it can be for the interest, of any Christian power to prevent her becoming completely independent.*

The Mamelukes having been for a lengthened period the masters of Egypt, and acquired a high degree of celebrity, the reader may not be disinclined to have some account laid before him of that singular and formidable force. They were a body of cavalry, consisting originally of about 12,000 Circassian, Mingrellian, and Arabian slaves, captured by the Tartars under Jengiz Khan, in their conquest of W. Asia in the 13th century. About the year 1230 they were sold by their first masters to one of the successors of Saladin. This prince had them trained up to military exercises, and soon obtained a body of the handiempt and best troops in Asia, though at the same time the most mutinous. The Mamelukes, like the Prætorian bands, speedily gave laws to their master. They became still more insolent under his successor, whom they deposed in 1250; and shortly after the disaster of St. Louis, they put to death the last Turkman prince, and enthroned in his stead one of their own chiefs, with the title of Sultan, retaining themselves that of Mamelukes, or Memlukes, which signifies military slaves.

The Mamelukes had no other rule of conduct and government than the violence natural to a licentious and insolent soldiery. The first leader whom they elected, having found employment for their turbulent spirit in the conquest of Syria, reigned 17 years; but after him none governed so long. The sword, the bow-string, or poison, pulsed by the Tartars under Jengiz Khan, in the fate of a series of tyrants, 47 of whom are enumerated in the space of 267 years. At length, in 1517, Selim, sultan of the Ottomans, having taken and hanged Toman Bey, their last chief, put a period to their dynasty.

The body of Mamelukes, however, continued to exist in Egypt down to the present century; but, singular as it may seem, notwithstanding a residence of nearly 6 centuries, they never became naturalized in the country. Dedicating to ally themselves with natives of Egypt, their wives were all brought from Georgia, Mingrelia, and the adjacent countries, and Volney remarks that their offspring invariably became extinct in the second generation: they were therefore perpetuated by the same means by which they were first established; that is, their ranks were recruited by slaves brought from their original country. The Circassian territories have been, in fact, in all periods, a nursery of slaves. The ancient Greeks, Romans, and Asiatics resorted to them for supplies; and from the era of the Tartar conquest slaves of both sexes, carried first to Constantinople, have thence been dispersed throughout the provs. of the Turkish empire.

Towards the end of last century, when they constituted the whole military force, and had acquired the entire government of Egypt, the Mamelukes, according to Volney, did not exceed 8,500 fighting men, or, together with the *Serradjas*, a kind of mounted domestics, 10,000 in all, including a number of youths under 20 or 22 years of age. They lived under a system similar to that of the feudal clanships of Northern Europe—their boys keeping each in their pay generally from about 50 to 800, though one or two might have perhaps from 100 to 600 retainers. Some hundreds of them were dispersed throughout the country and in the villages, to maintain the authority of their corps, and collect tribute; but the main body constantly remained at Cairo. Strangers to each other, bound by no ties as parents or children, placed amongst a people with whom they had nothing in com-

men, despised as renegades by the Turks, ignorant and superstitious from education, ferocious, perfidious, seditious, and corrupted by every species of debauchery, the disorders and cruelties which accompanied their licentious rule may be more easily imagined than described. Sovereignty with them was to have the means of possessing more women, toys, horses, and slaves, than others; of managing the court of Constantinople, so as to elude the tribute or the menaces of the sultan; and of multiplying partisans, counterming plots, and destroying secret enemies by the dagger or poison. The great agent in effecting all this being they, their only employment was to procure it, which they did by wresting it by violence from its possessor wherever it was to be found, and imposing arbitrary contributions on the villages, and on the custom-house, which, in its turn, levied them again upon commerce. But, with all this, they were brave in the extreme. Their boys, and even the common soldiers, distinguished themselves by the magnificence and costliness of their accoutrements, though these were in general clumsy and heavy. Being trained from infancy to the use of arms and horsemanship, they were admirable horsemen; and used the scimitar, carbine, pistol, and *djerid* or lance, with almost unequalled skill and vigour. Hence, notwithstanding the defects of their armour, and the want of union in their movements, the Mamelukes were very formidable in the field; and had they been properly disciplined, would have been the finest body of cavalry that ever existed: nothing could exceed their boldness and intrepidity; and though they were folled in their onset on the squares of Napoleon, they did all that the most undimmed courage and contempt of danger could effect. (*Voyage*, i. 181-186; *Gibbon*, cap. 59.) The Mamelukes are now extinct as a body, and almost as individuals. Even had they escaped the proscription of the pacha, they could not long have survived; for the conquests of the Russians, by putting a stop to the export of slaves from the Caucasian territories, has shut up the sources whence they drew their supplies of recruits.

History.—The origin of the Egyptian nation, and the history of their native princes, are involved in the greatest obscurity and uncertainty. This much, however, is established beyond the possibility of doubt, that the Egyptians had attained to great wealth and civilisation, and had established a regular, well-organised, and (if we may estimate it by its results) wisely contrived system of government, while the greater number of the surrounding nations were involved in the grossest barbarism. At length, however, Cambyse, emperor of Persia, added Egypt to his other provinces. It continued attached to Persia for 193 years, though often in open rebellion against its conquerors. Alexander the Great had little difficulty in effecting its conquest; and it has been inferred from his foundation of Alexandria, which soon became the centre of an extensive commerce, that he intended to establish in it the seat of the government of his vast empire. On the death of Alexander, Ptolemy, the son of Lagus, became master of the country. Under this able prince and his immediate successors, Egypt recovered the greater portion of its ancient prosperity, and was for three centuries the favoured seat of commerce, art, and science. The feebleness and indolence of the last sovereigns of the Macedonian dynasty facilitated the conquest of Egypt by the Romans: Augustus possessed himself of it after a struggle of some duration, and for the next 668 years it belonged to the Roman and Greek empires, constituted their most valuable prov., and was for a lengthened period the granary, as it were, of Rome. In 640 Egypt submitted to the victorious Amrou, general of the caliph Omar; under whose successors it continued till about 1171, when the Turkmen expelled the caliphs: these again were in their turn expelled, in 1250, by the Mamelukes. The latter raised to the throne one of their own chiefs with the title of sultan; and this new dynasty reigned over Egypt till 1517, when the Mamelukes were totally defeated, and the last of their sultans put to death by the Turkish sultan Selim. The conqueror did not, however, entirely suppress the Mameluke government, but merely reconstructed it on a new basis, placing at its head a pacha appointed by himself, who presided over a council of 24 Mameluke boys or chiefs. So long as the Ottoman sultans preserved their original power and authority, this form of government, though about the worst that could have been devised had the interests of the country been ever so little attended to, answered their purpose of preserving Egypt in dependence, and of drawing from it supplies of men and money; but the power of the pachas declined with that of their masters; and latterly the whole executive authority centred in the boys, who, except upon rare occasions, paid little more than a nominal deference to the orders of the sultan.

This state of things continued till 1798, when a French army, commanded by Napoleon, landed in Egypt. The Mameluke force having been annihilated or dispersed in a series of engagements with the French, the latter suc-

ceeded in subjugating the country. Napoleon having returned to France, the French in Egypt were attacked in 1801 by a British army, by which they were defeated, and obliged to enter into a convention for the evacuation of the country. The British having not long after also evacuated Egypt, it relapsed into its former state of anarchy and barbarism, from which it was at last rescued by the good fortune and ability of Mehemet Ali, the present pacha. This extraordinary man, a native of an obscure village of Albania, having entered the military service, attained partly by his bravery, and partly by his talent for intrigue, to the dignity of pacha in 1804. His subsequent history is well known. The massacre of the Mamelukes, in 1811, raised him to almost absolute power; and his victorious arms have since wrested Syria from the Grand Seignor.

EHRENBREITSTEIN, a strong fortress of Rhenish Prussia, on a steep and picturesque rock, 773 ft. in height, on the E. bank of the Rhine, opposite to Coblenz, with which it is connected by a bridge of boats. A tower or fortress is said to have been constructed on the summit of this rock by the Romans; and in modern times it was regularly fortified, a well was cut in the rock to the depth of 864 ft., and it was justly regarded as one of the principal bulwarks of Germany. It was unsuccessfully besieged by the French in 1795, 1796, and 1797; but it fell into their hands on the 27th of January, 1799, the garrison having been previously reduced to such a state of famine that a pound of horse flesh sold for 30 kr. 1. The French blew up the fortifications subsequently to the treaty of Lunenburg. They have, however, been reconstructed by the Prussian government since 1818, and rendered more extensive and formidable than ever. Ehrenbreitstein, with the new fortresses on the hill of the Chartruse and the Petersberg, forms a portion of the grand military position of which Coblenz (which see) is the centre. The town of Ehrenbreitstein, situated at the foot of the castle rock, has about 2,500 inhab. (*Schreiber, Guide du Rhin*, &c.)

EICHSTADT, a town of Bavaria, circ. Regensburg (Ratisbon), cap. of the mediatised district of the Duke of Leuchtenburg, on the Altmühl, 41 m. W.S.W. Ratibon. Pop. 7,500. (*Müller*, 1840.) It is well built, and contains the summer residence of the ducal family, with a Brazilian cabinet, and other collections of art and science; a cathedral, in the Gothic style, commenced in 1289; with several other churches, a Capuchin convent, bishop's palace, Latin school, ecclesiastical seminary, public library, and museums of painting, antiquities, and natural history. It has four suburbs. About 1 sp. distant is the Willibaldsburg, a castle on a height, believed to have replaced a Roman fortress. It has well of great depth, and its trenches have been cut in the solid rock; but it is now in a state of decay. Eichstadt has manufactures of hardware, earthenware, and woollens; besides breweries and stone quarries. The principality of which it is the cap. extends of about 217 sq. m., with a pop. of 24,400. It originally belonged to the prince-bishops, successors of St. Willibald, by whom Eichstadt was built in the 8th century; but, in 1817, it was given to Prince Eugene Beauharnois, to whose memory the citizens have erected a handsome monument in the vicinity. (*Cannabich & Berghaus*.)

EIMBECK, or **EINBECK**, a town of Hanover, cap. principality Grubenhagen, distr. Hildesheim, on the Ilme, by which it is surrounded, 37 m. S. by E. Hanover. Pop. 5,400. It is enclosed by walls and broad ditches, and is ill built and dirty. It has two hospitals, and a superior school. Eimbeck was formerly celebrated for its beer, which, "like London porter, was sent all over the empire. A barrel was, in the 15th century, what a few bottles of Tokay are now—a present for a prince. The affairs of Germany were then settled at Spire or Worms, by the princes of the empire, over foaming draughts of true Eimbeck." (*Hodgskin's Trav. in the N. of Germany*, i. 337.) At present, Eimbeck is less celebrated for its beer; but it has some breweries, with fabrics of woollen and linen cloth, linen yarn, stockings, shoes, leather, and chemical products, and a brisk trade in fax and other agricultural produce. In 1595, it suffered severely from fire.

EISENACH, a market town of Central Germany, duchy of Saxe-Weimar-Eisenach, cap. of the principality or prov. of same name, on a gentle declivity at the confluence of the Nessa and Hörsel, encircled by wooded hills, 44 m. W. by S. Weimar, and 91 m. N.E. Frankfurt-on-the-Mayn. Pop., with its suburbs, 9,325. It is the principal town in the Thuringian Forest, and is well built and laid out, paved and well lighted. It has five suburbs, with four churches, a handsome market-place, in which is the ducal residence, and the new citizens' academy, estab. 1825; a mint, four hospitals, a work-house, house of correction, town-hall, gymnasium, teachers' seminary, school for freestlers, schools for the indigent, and various other public and benevolent institutions. Formerly, this was the most flourishing of all the manufacturing towns between Leipzig and Frankfurt.

It was particularly noted for its manufacture of serge, cloth, and other woollen stuffs; but during the period of the "Omnipotent System" the capitalists of Eisenach directed the manufacture of wool for that of cotton, which, on the re-opening of the continental ports to British goods, was all but annihilated. It has now only one considerable woollen yarn factory, a few others of woollen and cotton fabrics, white lead and soap, and some tanneries and dye-houses. About 1½ m. S. of the town, is the celebrated castle of Wartburg, in which Luther passed his 10 months' duration, under the friendly arrest of the Elector of Saxony. Travellers are still shown the room he occupied, though the castle is, in great part, in a state of decay. (*Berghaus; Camerbach, &c.*)

EISELEBEN, a town of the Prussian states, prov. Saxony, distr. Merseburg, 19 m. W. by N. Halle, and 35 m. S.W. by S. Magdeburg. Pop. 7,528. It is situated on elevated ground, near the Biese, and is divided into an old and a new town, the former of which is encircled with walls and ditches. It has several suburbs; an ancient castle, formerly the residence of the counts Mansfeld; 4 churches; a Protestant gymnasium, and 2 hospitals; and is the seat of a council for the circle, a judicial tribunal for the circle and town, a board of mines, &c. But it derives its entire celebrity from its being the native place of the great reformer, Martin Luther, born here on the 10th of November, 1483; and who also died here on the 18th of February, 1546. The house in which he was born, and where he breathed his last, was almost wholly destroyed by fire in 1689. Being afterwards rebuilt, it was converted into a gratuitous school for poor children, and a teacher's seminary; the cap, cloak, and other relics of Luther, are preserved in it, and shown to visitors; and his bust is placed over the door. In one of the churches of the town is a pulpit, from which he occasionally preached; and here, also, are metal busts of himself and Melancthon. Luther was the son of a miner at Eiselenberg, and the greater part of its inhab. continue to work in the copper and silver mines in its vicinity; but it has also some potash and saltpetre factories, and one of tobacco, besides several breweries. (*Zedlitz; Berghaus, &c.*)

EKATERINBURG, a town of the Russian empire, gov. of Perm, near the foot of the E. declivity of the Oural chain, on the left, and in the line of the great road leading from Perm to Tobolsk. Pop. (in 1830) 10,695. It was founded by Peter the Great in 1723, and is regularly built and fortified. Besides being the key of Siberia, it is the cap. of the richest mining district of the empire; it has a board for the general direction of the mines, a mint for the coinage of copper, and extensive iron and copper foundries in its immediate vicinity. Its inhab., who consist mostly of bondsmen belonging to the crown and individuals, are almost wholly employed in the mines and working metals.

EKATERINOSLAUF, a gov. of European Russia, having the sea of Azov, and the gov. of Taurida on its S. frontier. Area and pop. both doubtful; but Schnitzler estimates the former at 25,500 sq. m.; and the latter at 610,000. Nearly two thirds of the surface consist of a vast steppe or plain, without trees, and with a thin arid soil. The portions on this side the Dniepr, by which it is traversed, are the most fertile. Grazing is the principal occupation of the inhab., who possess immense numbers of horses, cattle, sheep, goats, &c. The breed of sheep has been materially improved. Bees are abundant; and the silk-worm is raised in the vicinity of Mariopol. The pop. consists principally of Russians and Cossacks; but there are several other races, among whom may be mentioned 10,000 German colonists. Principal towns, Ekaterinoslauf, Bakhmont, and Mariopol.

EKATERINOSLAUF, the cap. of the above gov., on the Dniepr, immediately below the cataracts, lat. 45° 37' 30" N., long. 34° 35' E. Pop. 9,000. Catherine II. laid the first stone of this town, in presence of the emperor Joseph II. in 1787. It is designed on a large scale, and its broad rectangular streets are still very far from being completely filled up. Exclusive of the gov. office, it has a gymnasium, and some other literary as well as charitable institutions.

ELBA (the *Æthalia* of the Greeks, and the *Ilos* or *Insula* of the Etruscans and Romans), an island of the Mediterranean, or rather of the Tyrrhene sea, belonging to Tuscany, from which it is separated by the strait of Piombino, 7 or 8 m. across, being the largest and most important of those in the possession of the grand duchy; which lat. 43° 43' and 43° 53' N. and lon. 10° 15' and 10° 35' E. Shape irregular, but not very unlike that of the letter T, having the upper end towards the S. Length, E. to W., 16 m.; breadth, varying from 2 to 13 m.; circumference, about 68 m.; area, 156 sq. m. Pop. in 1835, 16,865. It is covered with mountains; a central chain runs through its whole extent, the principal summit of which, towards its W. extremity, is 2,364 ft. in height. Granite abounds, especially in the E. part of the island, and it in a great measure constitutes the numerous rocky shelves with which the coasts are

bristled. Geologically the island affords no traces of the action of fire. Secondary and tertiary formations, calcareous, aluminous, or magnesian, are plentiful in the W.; on the E. shore the surface is covered with a reddish vegetable earth, many feet in thickness, and furrowed with ferruginous veins. Iron is every where abundant:

Insula insubensis chalybeum generosa metallis. Strabo, l. 2, 174

besides which, copper, calamine, antimony, alum, asbestos, opal, tourmaline, and various kinds of marble are found. There is no navigable river, but there are many small rivulets used to turn mills; the largest are on the N. side of the island, where there are also some salt marshes. Climate excellent, the heats being neither excessive, nor of long duration; nor the cold severe. Except in a few particular localities, Elba is decidedly healthy. The appearance of the island is far from prepossessing; and the cultivable land is but of very limited extent. "Ruins scattered over the face of the country, wretched hamlets, two mean villages and one fortress—these, generally speaking, are all that meet the sight on the side of the island which extends along the channel of Piombino. The traveller, however, finds the scene changing on visiting Monte-Grosso (in the N.E.), covered with myrtles, rosemary, the mastic tree, laurel-thyme, &c.; and Monte-Giove, where the green holm oak, cork tree, laurel, yew, and a small number of wild olives, afford an agreeable repose to the eye. The branches of the hills, which stretch towards Lungone (S.E.) present only naked rocks, almost destitute of verdure. In the centre of the island the hills are overspread with olives, mulberries, and vines. On the W., the summits and declivities of the mountains consist of granitic rocks. Industry and toil render fertile the small quantity of earth which is collected at their base." (*Bernardus's Voyage to Elba*, pp. 94, 95.)

Though the soil is throughout hilly, and the vegetable earth generally shallow, little labour suffices to render it productive. Agriculture, however, is nearly confined to the lowest hill ranges, and the sheltered valleys between them. The corn crop is trifling; at the beginning of the present century De Bernaud says it would have hardly supplied the wants of the inhab. during ½ part of the year. Maize and pulse are grown. The produce of flax is very small, and hemp is not cultivated; the thread of its use is manifested from the leaves of the numerous aloes with which the fields of Lungone are covered. All kinds of fruit trees common to Europe grow, excepting the apple; but they are generally ill cultivated, and their fruit inferior. The vintage takes place in September. Both white and red wines are produced; the former are chiefly for home consumption; the latter in small quantity, and good; constitute a chief article of export. The most esteemed is the *Aleatico*, obtained from a superior red Muscadine grape. The oak, beech, chestnut, poplar, alder, buckthorn, &c., are amongst the forest trees; but timber fit for carpenter's work is rare, the island affording little more than mere underwood. Pasturage is scarce, and cattle few; they consist of asses, some mules, and a few stunted horses, oxen, and cows. The number of pigs, sheep, and goats is more considerable; but the breeds are very inferior. The sea around Elba swarms with fish, including tunnies, anchovies, soles, the *danzellina* (*labrus julis*, Linn.), mullet (*mullus barbatus*), &c. Of these the tunny and mullet are taken in large quantities, and from 5,000 to 6,000 tons of the former are annually exported, besides a considerable supply of the latter.

But the chief wealth of Elba is in its mines of iron and salt, which have been wrought from a very remote epoch. The principal mine, near the little town of Rio, on the E. side of the island, consists of an entire mountain about 530 ft. in height, which, to use the words of Pliny, is, *totus ex ea materies*. It supplies iron ores in every known variety; some yielding from 0.75 to 0.85 of excellent iron, from which a very good steel is obtained. The ancients made many deep excavations and winding galleries in this mine; and rich axes, nails, lamps, and various other antique articles have been from time to time discovered in it. The average produce of iron ore from Elba has of late years been nearly 18,000 tons a year, worth about 2½ s. a ton; the whole of which is taken to the opposite coast of Tuscany to be smelted. In 1836 there were 308 miners, and 60 carriers employed in conveying the ore to the place of embarkation. The miners work 8 or 9 hours a day, and are paid 40 lire (about 25s.) a month, 5 per cent. of which is deducted for a pension for the parents, for themselves or their widows. Marine salt is manufactured by evaporation in four basins, near Porto Ferrajo. About 4,000,000 lbs. are produced annually, and nearly 100 persons employed in the manufacture. The other branches of industry are principally domestic.

Commerce is chiefly limited to the importation from Leghorn and Marseilles of grain, cheese, cattle, and other articles of prime necessity; and the exportation of tunny, salt, iron ore, Vermont and Aleatico wines, vinegar, and granite. There are two towns—

Porto Ferrajo on the N., and Porto Lunigone on the E. coast. The former, which is the cap., is built on a peninsula, between which and the main land a spacious and good harbour. Pop. about 3,000. It is fortified; its streets, which are wide, clean, and well paved, are mostly terraces cut out in the rock; houses small, badly divided, built of brick, and generally two stories high. It is the residence of the governor of the island and of a military commandant, the seat of a civil and criminal court, and contains two churches, with a prison, lazaretto, hospital, and some subterranean corn magazines. Porto Lunigone, with 1,500 inhab., has a tolerable harbour, and is well fortified and difficult of access. The ordinary food of the pop. consists of dried pulse, cheese, bacon, smoked provisions, coarse bread, fresh fish, and a few vegetables; fresh meat and white wine are used only on holidays. Their houses and furniture are equally simple and solid. Bowls, nine-pins, quoits, tennis, and ring at a mark, are the chief sports of the men; there is not much gaiety exhibited in the amusements of the island generally. Robbery is rare, murder still more so; the number of paupers inconsiderable.

The Etruscans, Phocians, Carthaginians, and Romans successively possessed Elba; in the middle ages it was subject to the Saracens, Pisans, Genoevese, Luchese, the counts of Fiumicino, Orsini, &c. In the 16th century it was ravaged by Barbarossa, and soon afterwards fell to the crown of Naples. Under the French empire it formed part of the kingdom of Etruria; but its chief historical interest is derived from its having been the residence and empire of Napoleon from the 3d of May, 1814, to the 26th of Feb., 1815. During this short period a road was opened between the two principal towns, trade revived, and a new era seemed to have opened for Elba.

(*De Berneaud, Voyage to the Isle of Elba; Serristori, Statistica; Bowring, Report on Tuscany*.)
 ELBE (anc. *flumen inclytus; notum olim*, Tacit. Germ. § 41.), a large and important river of Europe, through the central part of which it flows, generally in a N.W. direction from Bohemia to the German Ocean. Its total length is about 720 m., during which course it passes through Austria, Saxony, Prussia, Anhalt-Dessau, Hanover, Mecklenburg, Denmark, and Hamburg. Its principal affluents are—on the left, the Moldau, Eger, Mulda, Saale, Ohre, Ietze, Pimenan, and Oste; and on the right, the Iser, Schwarz, Elster, and Elavel, with the Spree, Dresden, Teagan, Torgau, Magdeburg, Leutau, Lauenburg, Harburg, and Ilamburg, are situated upon its banks. It originates in several streams on the S. side of the Schneekoppo (*Snow-cap*), one of the Riesengebirge chain in the circ. of Bidschou in Bohemia, about 4,400 ft. above the level of the sea. At first its direction is E., next S.: at Pardubitz it turns W., and at Kolín N.W., from which direction it does not afterward greatly vary. After leaving Torgau it runs for the most part through a flat country. Near Königswitz, about 40 m. from its source, its elevation above the sea is only 658 ft., at Melnik 454 ft., at Schandau 341 ft., at Dresden 27 ft., at Magdeburg 186 ft., and at Arneburg (Braudenburg) 176 ft. only. Above Melnik it is navigable for only small craft, but vessels of 1,500 centners burden may come up to that town. Its volume receives a considerable augmentation by the union of the Moldau; and when it enters Saxony the Elbe is upwards of 350 ft. in width. Between Hamburg and Harburg it is divided into several arms, inclosing some large islands; but these soon afterwards reunite, and the river proceeds in an undivided stream to its mouth. Its estuary, opposite Cuxhaven, 12 m. wide, is encumbered with sand banks, which render its navigation difficult; but ships drawing 14 ft. water come up to Hamburg at all times, and those drawing 18 ft. come up safely at spring tides.

The bridges across the Elbe are numerous above Torgau; but below that town communication between the opposite banks takes place by means of ferries only. It is connected by the Finow and Frederick William canals within the Prussian dominions with the Oder and the Vistula, and by that of Stettin with the Trave near Lubek; while, by means of the railroad between Budweis on the Moldau and Linz, it has been placed in communication with the Danube; and besides this, it will shortly be connected with the Danube by means of the Bavarian canal, now in the course of being excavated. (See *ant.*, p. 208.)

In a commercial point of view, the Elbe is a river of the highest importance, being the channel by which the countries of N.W. and central Germany, from Hamburg to the E. parts of Bohemia, export their surplus products, and receive those they import from abroad. By the treaty of 1815 it was provided that its navigation should be free throughout its whole course. But the governments through whose dominions the river flows have contrived to evade this provision, and a series of vexatious tolls and heavy duties are imposed on foreign merchandise passing upward. Prussia obliges the transfer at Magdeburg of all goods (excepting mill-stones

and earthenware) passing downward, to her own vessels. (*Berghe, Orogaphie de l'Europe; Berghaus; E. Reise, &c.*)

ELBERFELD and BARMEN, two contiguous towns of Rhenish Prussia, circ. Elberfeld, distr. Düsseldorf, forming one municipal body, and constituting the most important manufacturing community in the Prussian dominions. They are situated in the valley of the Wupper, on the N. side of the river, and form, in fact, one town; 15 m. E. by N. Düsseldorf, and 23 m. N.N.E. Cologne; lat. 51° 15' N., long. 6° 33' 13" E. United pop. 55,745 (*Berghe*, 1839), of which Barmen has rather the largest proportion. Elberfeld, which has risen to its present extent and importance almost wholly within the present century, is not regularly built, but it contains some good houses, most of which have gardens attached to them. It is the seat of the council for the circle, of the judicial and police courts, a commercial tribunal, and a board of taxation, and has 2 Protestant churches, a R. Cath. church, gymnasium, citizens' and commercial schools, a school of industry, numerous elementary schools, a town-hall, exchange, theatre, general hospital, 2 orphan asylums, 2 workhouses, a *mont-de-piété*, founded in 1821, and a children's savings' bank, established in 1822. There are several *casinos*, or club-houses, and a new promenade has been laid out. In the winter there are frequent balls and concerts. Its principal manufactures are silk, which in the circle employ about 6,000 looms; with cotton and linen fabrics, linen and cotton thread, velvet, lace, ribbands, with establishments for calico printing, &c. In the cotton factories many steam engines are employed, and there are numerous water-mills and establishments for the bleaching of linen. But the most celebrated of the Elberfeld factories are those appropriated to the dyeing of Turkey red. In this art, whether it be owing to the air or the water, or to some secular process or mystery, the dyers of Elberfeld have acquired an unrivalled excellence; and notwithstanding all our efforts at rivalry, our colours are neither so lasting nor brilliant as theirs. So much so is this the case, that considerable quantities of yarn are annually exported from Glasgow and other places in the United Kingdom to be dyed at Elberfeld, and are again imported to be wrought up. Elberfeld is the seat of the Rhenish Foreign Trade Company, the German-American Mining Union, the Rhenish Prison-Society, a Bible and a scientific society, and many benevolent institutions, a general fire and life insurance office, &c.

Barmen is a long straggling town, formed by the union of several villages. It has 4 churches, one of which, erected in 1830, for the use of the R. Cath. pop., was liberally contributed to by the Protestants; a high school, a deaf and dumb asylum, exchange, 2 discount banks, a police court, and a commercial tribunal. Its manufactures are nearly the same as those of Elberfeld, with the addition of steel and plated articles, hardware, chemical products, and earthenware. Along the banks of the river are extensive fields of clover, and a branch of bleaching linen, which branch of industry contributed greatly to the rise of both towns. Numerous kitchen gardens surround Barmen, the cultivation of which occupies many individuals. The road through the valley of the Wupper, for a distance of perhaps 6 m. adjacent to these towns, is lined on either side with mills, factories, and habitations; this being the most populous as well as the most industrious district of the Prussian monarchy. It is estimated that altogether nearly 16,000 hands are employed in manufactures in and near Elberfeld and Barmen, and that the value of the manufactured goods annually amounts to 15,000,000 or 14,000,000 rix-dollars, or from 1,800,000*l.* to 2,100,000*l.* Wages, owing to the increasing demand for labour, are high at Elberfeld, and the working classes are comparatively well off. Mr. Symmons mentions that in the dye-works men earn about 12*s.* a week for the first-class work, and 9*s.* 1*d.* for the second class. Weavers earn from 8*s.* 6*d.* to 16*s.* a week, and in some rare instances as much as 3*s.* 4*d.* a day. (*Zedlitz, Der Preussische Staat*, iii. 427, 429.; *Berghe*; *Symmons's Atlas and Arctica*, &c. p. 78.)

ELBEUF, a town of France, dep. Seine Inférieure, cap. cant. on the Seine, a tributary of which intersects it, 11 m. S. by W. Rouen, and about the same distance N.W. Louviers. Pop. (1836) 13,076. It is generally ill built and ill paved, but it possesses a tolerably good square, and some handsome buildings. It has no public edifices worthy of notice except 2 churches, one of which has some stained glass, presented by the cloth manufacturers of the town in 1406, exhibiting a curious emblematical device indicative of their profession. Elbeuf has been long celebrated for its woollen manufactures, and is at the present moment the principal seat of that branch of industry in France. In 1787, Elbeuf produced about 18,000 pieces of cloth yearly; in 1814, the quantity had increased to from 30,000 to 25,000 pieces; and in 1834, the produce was estimated at from 60,000 to 70,000 pieces of 40 *ells* (*aunes*) each, of the value of about 50,000,000 fr., or 2,000,000*l.* sterling. The total amount

of capital vested in the manufacturing establishments was estimated at the same period at 150,000,000 fr. It was then also supposed that about 2,000,000 kilog. of wool were annually consumed in the manufacture, and that about 30,000 men, women, and children were employed in the different departments of the business; but of these many belonged to the surrounding districts, and returned from town at night to their lodgings in the country. "The working classes of Elbeuf enjoy, in general, easy circumstances; they have always lived happily, for two very powerful reasons: 1st, because the manufacturers are constantly in their workshops, work themselves with their workmen, know their wants, and identify themselves with all that happens to them for good or evil; the second, because the price of weaving varies very little, the proportion between times of prosperity and times of distress being 30 per cent. at most on the amount of wages, and that only in certain departments. The work-people are divided into 3 classes: the adults, the day labourers, and the weavers. The adults receive a salary which varies according to their age, strength, and intelligence, from 75 c. to 1 fr. 50 c.; largest number receive the average of 1 fr. 10 c. Young men from 12 to 18 years of age are classed as adults; children from 9 to 12 gain 50 c. to 75 c. per day. The day labourers, taken at large from 18 years to 60, are paid from 1 fr. 50 c. to 2 fr. per day, 1 fr. 75 c. being the average; this class is but little intelligent. The weaver gains from 2 fr. to 3 fr. per day, the ordinary average being 2 fr. 50 c. The women receive from 75 c. to 1 fr. per day. The young girls from 9 to 16 years old earn from 50 c. to 80 c. The day's work begins at 5 in the summer, and ends at 8 in the evening; half an hour for breakfast, and an hour for dinner. In winter they work from 7 to 10 hours. There are in Elbeuf a gratuitous school of mutual instruction for boys, a gratuitous institution for girls, an infant school, and a gratuitous Sunday school for the adult workmen; and independently of these public institutions, there are a number of private schools." (*Letter from the Mayor of Elbeuf, in Rep. of Hand-loom Weavers, 1839.*) M. Villermé states that, compared with the work-people of Rouen, those of Elbeuf are much the more correct in their morals and habits. They are, he says, for the most part industrious and economical, and many of them are supposed to have acquired a certain portion of their earnings, especially those who live out of town. Elbeuf is said to have existed in the 9th century, but its origin is uncertain. During the administration of Colbert, its manufactures were in a comparatively flourishing state; but they suffered severely by the revocation of the edict of Nantes. At the beginning of the 18th century, its manufacturers had begun to establish commercial relations with Spain and Italy; and it now has a direct trade not only with those countries, but with America, Germany, and the Levant. (*Villermé, Etat Physique et Moral des Ouvriers, &c.; Encyc. des Gens de Mande.*)

ELBING, a town of Prussia, prov. Prussia, cap. circ. on the Elbing, about 5 m. from where it flows into the S.W. angle of the Frische Haft, 31 m. S.E. by E. Danzig, and 56 m. S.W. Königsberg; lat. 54° 8' 20" N., long. 19° 22' E. Pop. 18,735. (*Berghaus.*) It is divided into the old town, new town, and suburbs, part of which are enclosed, together with the old and new town, within a line of fortifications. The ramparts and walls are lofty, flanked with towers and surrounded with ditches, but they have not been in a state of efficient defence since 1772. The town is entered by 7 gates. The new town is well built, but it is quite otherwise with the old town. Elbing is well lighted; it has a Catholic and 9 Protestant churches, a synagogue, a gymnasium with a library, 6 hospitals, an orphan and other asylums, a convent for old women, a house of industry, established by an Englishman named Cowie, in which 400 children are educated, and numerous schools for both sexes, and all classes; education among the poor having made great progress in this town. It is also the seat of a council, a judicial court for the circle, and a municipal tribunal. It has a garrison, a bank, exchange, fire insurance office, numerous warehouses, principally in one of its suburbs, and many sugar refineries, with pearl-ash, vitriol, tobacco, linen, sail-cloth, oil, starch, soap, chicory, and other factories, in some of which large steam engines are employed. The trade of Elbing is extensive: its exports consist chiefly of corn, timber and staves, hemp and flax, the produce of its own manufactures, feathers, horse-hair, wool, fruit, butter, packthread, &c. The Krahl canal connects Elbing with the Vistula. The Frische Haft is too shallow to be navigated by vessels of any considerable burden, so that the trade of the town by sea has to be carried on, by means of small vessels or lighters, through Pillau at the mouth of the Frische Haft. About 25 ships, besides river craft, belong to merchants of the town. Elbing was founded about 1237, and became afterwards one of the Hanse Towns. It was united to the Prussian dom. in 1772. (*Zedler, Der Preussische Staat, 1. 473—474; Berghaus.*)

ELCHE (an. *Ries*), a town of Spain, prov. Valencia, near the left bank of the Ebro, in a plain almost entirely covered with palm trees, 15 m. W.S.W. Alicant, and 8 m. W. from the Mediterranean. Pop., including that of the suburb of St. John, 22,936. (*Mémoires.*) It is surrounded by walls, has some good streets and squares, and 6 public fountains, but of these one only has potable water; 3 par. churches, the principal of which is a fine building, with a majestic dome; 3 convents; a magnificent old castle, belonging to the Duke of Arcos, on whose estate the town is built; a barrack for cavalry; 3 primary schools, and a grammar-school. It has manufactures of coarse linens and cottons; 10 flour-mills; with distilleries, tanneries, &c.

Elche might, with propriety, be called the "city of dates," being every where surrounded by plantations of palms. "It may," says Mr. Inglis, "be called a flourishing city. Besides its large produce of dates, the country round abounds in barilla, that exported from Alicant being chiefly raised in the vicinity of Elche. A great proportion of the dates imported into England as the produce of Barbary, are from this city. The wages of field labour here are 3 or 4 reals; and every thing is proportionally cheap: barley bread, which is much used in this neighbourhood, is sold at 3 quaters, less than 1 thing per lb. Elche has also the important advantage of being less overrun with priests and friars than most other Spanish towns." (*l. 237.*) Elche is the native country of Don George Juan, a distinguished mathematician and natural philosopher, the companion of Ulloa, in the commission sent to Peru, towards the middle of last century, by the French and Spanish governments, for the measurement of a degree of the earth's surface. Elche was recovered from the Moors in 1363.

ELCHINGEN, a small village of Bavaria, on the N. bank of the Danube, about 7 m. N.W. Ulm. This village was the scene of an obstinate engagement between the French, under Marshal Ney, and the Austrians, on the 14th of Oct. 1805: the former at length succeeded in carrying the bridge and position of Elchingen, and by this success contributed materially to the capture of Ulm, which, three days after, surrendered to Napoleon. Ney was rewarded for his gallantry on this occasion with the title of Duke of Elchingen.

ELEPHANTA, a small island on the W. coast of Hindostan, presid. Bombay, prov. Aurangabad, on the E. side of the harbour of Bombay. It is about 6 m. in circumference, and consists of two long hills and narrow valley between them. It is named *Gorapori* by the Hindoos: the Portuguese gave it the name of Elephanta, from a colossal elephant, about three times the natural size, hewn out of the solid rock, and standing about 2 m. from the landing-place, but which has now almost entirely fallen to decay. A gentleman who visited the island in 1836, reports, that only three legs and a part of the fourth were then remaining. This island is celebrated for some remarkable cave-temples, so many of which exist on the W. side of India. In the face of a hill, about 2 m. from the landing-place, is the first cave, little of which, however, appears to have been completed. About 2 m. farther, is the great cave, an excavation 1303 ft. from N. to S., by 123 ft. from E. to W.; its ceiling flat, varying from 15 to 17½ ft. in height, and supported by 26 pillars and 16 pilasters. It has three entrances,—on the N., E., and W.; the front of each consisting of 2 pillars and 3 pilasters; but the N. front is the principal, and directly faces the remarkable triad or three-headed figure,—the principal object within the temple. This is a gigantic bust, 15 ft. high, composed of three colossal heads; the front face having a placid and agreeable physiognomy; that on the left being to all appearance a female, and also mild looking; but that on the right, according to most travellers, having a repulsive aspect. The latter, as well as the front face, has the third eye in the forehead, so characteristic of Siva. Indeed, in the opinion of the best authorities (see *Erskine, in Trans. of the Bombay Lit. Soc. 1.*; *Sykes, in Journ. of the Asiat. Soc. v. 81—83.*, &c.), the whole three-headed figure relates to Siva only, and not to a triunity of Brahma, Vishnu, and Siva, as has sometimes been imagined. Similar busts abound in the Brahminical caves at Ellora (which see) appropriated to the worship of Siva. This figure has originally had 6 arms, each of the hands of which held some object; but all are now greatly mutilated.* The niches on either side the triad are of considerable size, and crowded with figures, among which, as well as in the other compartments around the temple, Brahma, Vishnu, Paravati, Kartik, Ganesa, and other Hindoo divinities, may be recognised, but always in a condition inferior to Siva. On either side of the principal figure is a small dark chamber, probably anciently devoted to the use of the Brahmins; and there are three

* In the corresponding triads at Ellora, most of which still perfect, the hands of the front figure contain a mace and a noose; of the left hand one, a lotus flower and a snake; and of the right hand one, a dish and a sword de repente. The snake alone is now conspicuous in that of Elephanta.

separate sanctuaries within the temple, each containing a figure of the *Isis*. The columns and other portions of this cave are ornamented in a most elaborate manner, and, altogether, the temple within presents an imposing appearance. From some cause, however, it is not much frequented by pilgrims: several of its pillars have been thrown down; it is in part mouldering away with damp, and becoming choked with earth; and unless some effectual means be speedily taken for its preservation, it will in a few years be in a state of irreparable decay. (*Erskine, in Bombay Trans.; Sykes, Asiatic Res.; Grindley's Vicus; Forbes, Heber, &c. &c.*)

ELEPHANTINE, the last of the larger islands, at the extremity of the cataracts of the Nile, immediately opposite to Assuan, near the S. boundary of Egypt; lat. 20° 5' N., long. 32° 54' 49" E. Placed at the threshold of the kingdom, Elephantine has been justly called the key of Egypt, and claims some importance as a military post. Under Ptolemy it contained an Egyptian garrison, to protect the country from the inroads of the Ethiopians. Herodotus (*Esuterpe*, § 30.) found it occupied with Persian troops; and in Strabo's time, the Romans had three cohorts there, to guard what Tacitus has expressively called the *Castra Romanorum imperii*. (*Strabo*, lib. 17.; *Theophrastus*, lib. 2. § 61.)

The base or kernel of the island is a granite rock, covered with the rich alluvial soil brought down by the river; and to prevent this from being again washed away, it has been protected by quays, which have been repaired from time to time, so that it is impossible to fix the epoch of their first construction. The richness of its soil admits of the island being cultivated in every part; and though it be less than 1 m. in length, and not $\frac{1}{2}$ m. broad, it presents a verdure and fertility equal to the finest spots of Egypt, and forms a refreshing contrast to the sterility to which, for many miles round, beyond the banks of the Nile, the country is doomed. Hence, the Arab name for Elephantine, is *Djesset el-Chaf*, "the islet of flowers." The S. extremity of the island only is rocky and elevated, and the bare rock comes down to the edge of the river; but the rest of it is covered with shrubs, groups of palms, mulberry gardens, acacias, dates, and sycamores interspersed amongst human habitations, mills, canals, and the ruins of temples. (*Ritter's Africa*, 3d division, § 26.; *Richardson's Travels*, &c.)

The wreck of the ancient town forms a sort of plateau, and gives to the island its greatest elevation. Here, till recently, were the remains of two temples, one dedicated to Cnephthis by the pharaoh Amenophis III.; and one dedicated to a triad consisting of Cnephthis, Sate, and Anouke, the latter being of the age of Alexander, son of Alexander the Great. But we regret to say that these interesting ruins no longer exist, having been barbarously demolished in order to employ the stones in building barracks and warehouses at Assuan. In the quay Champollion found fragments of edifices that had been constructed by the pharaohs Meris, Mandouel, and Rhames the Great, or Sesostri. (*Lettres de l'Egypte*, p. 172.)

The most interesting part of Elephantine is its quarries. These furnished, in the reign of Amasis, one of the greatest marvels Herodotus (*Esuterpe*, § 175.) saw at Sais—a single block of granite, out of which was cut an entire temple. No fewer than 3,000 men are said to have been occupied during three years in transporting this huge monolithic edifice down the Nile to its destination. The quarry affords ample proof of the mechanical skill and patient labour of the ancients. Immense columns have been evidently cut out of the solid rock in one mass. The marks of the workman's chisel and wedge are as fresh as if they had been imprinted yesterday, and the tracks of carriage wheels are equally distinct. Some sculptures are merely blocked out, while others appear in more advanced stages, and a large sarcophagus is two thirds cut out of the rock.

Besides the remains of Egyptian architecture, others have been found which would appear to belong to the Romans, particularly a large wall to the S. Another, from 40 to 45 ft. high, and 60 ft. long, of a convex construction, had a Nilometer fixed in it, which, there can be little doubt, was the one mentioned by Strabo (lib. xvii.). Champollion, however, says nothing of the Nilometer; and it may, perhaps, have been destroyed as well as the remains of the temples. Over the ruins of the ancient town are strewn many fragments of pottery, among which other memorials of the Romans have been found, consisting of tokens or coins of red earthenware, having the name *Antonius* inscribed on them in a Greek running hand. (*Ritter*, lib. i. *Jovetti's Christian Researches*, p. 40.; *Corder's Egypt*, ii. 191—193, &c.)

Elephantine is inhabited by Nubians, who are said to be kind and hospitable to strangers. The women are described by Dr. Richardson as possessing much personal beauty, somewhat too freely displayed. (*Light's Travels*, pp. 61—63.; *Richardson's Travels*, &c.)

ELGIN, a royal burgh and market town of Scotland, co. Elgin or Moray, on the Lossie, 5 m. from its influx into the sea; at Lossiemouth, 120 m. N. Edinburgh, and 59 N.W. Aberdeen. The situation of the town is very agreeable; having the Lady Hill, a beautiful verdant mount on the W., and the Quarrywood Hill on the E., clothed with wood to the summit. Pop. in 1831, 4,498; inhab. houses, 784. Pop. of town and parish in 1831, 6,130; being 3,634 females, and 3,205 males.

The town consists of one street, about a mile in length, with a few small streets intersecting it at various distances. The principal street is handsome, well paved, and so wide that a fine new church, recently built, stands in the middle of it, on the site of an old church, called St. Giles. This new church, which has a richly ornamented cupola 112 feet high, and a spacious Doric portico, is one of the most distinguished of the numerous public buildings which Elgin contains. Grey's Hospital (founded in 1819 for the reception of the sick poor of the town and county of Elgin), a building of two stories, of Grecian architecture, with a projecting portico of four Doric columns, and the centre crowned with a dome, stands on a rising ground at the W. end of the town, and forms a beautiful termination of the High Street. At the opposite end of the town stands the Elgin Institution, a quadrangular building, of Grecian architecture, founded by the late General Anderson, for the education of youth, and the support of old age. This institution, which cost 12,000*l.* (its founder having bequeathed 70,000*l.* altogether for the charity), is calculated to contain 10 aged and indigent persons, and 60 children, and to afford gratuitous education for about 230 children belonging to the town and parish. The other public buildings are the academy, assembly rooms, Trinity Lodge rooms, jail and court-house, and chapels belonging respectively to the Episcopalians, the United Associate Synod (two), the Independents, and the Roman Catholics. But Elgin, which was the seat of the bishops of Moray, is principally celebrated for the ruins of its cathedral, one of the most magnificent in the kingdom. It was built in 1234, the cathedral establishment having been transplanted at that time from Synnle to Elgin. The original structure (with other sacred buildings, and no small portion of the town) was burned in 1560 by the Earl of Buchan, youngest son of Robert II., known by the name of the "Wolf of Badenoch." It was rebuilt by the bishops of Moray, in the form of a Passion or Jerusalem cross, having 5 towers, one at each end, and one in the centre. The length of the building was 364 feet; the breadth of the traverse 114; while the height of the centre tower was 194. The cathedral was unroofed in 1568, by order of the Regent Morton, for the sake of its lead; and this venerable specimen of architecture and sculpture has since been allowed to fall into decay. The great centre tower fell in 1711. But the chapter-house, the turrets and walls of the east choir, and the towers on the west, are still remaining. Of the walls of the nave and traverse only a few fragments remain. Steps have recently been taken by the barons of exchequer in Scotland to prevent any further dilapidation. A college was attached to the cathedral, and contained not only the church and grave-yard, but also the bishop's house, and those of 22 canons. The eastern gateway, and part of the wall, are still standing. The ruins of a convent of Greyfriars, settled here by Alexander II. in 1234, are still to be traced S. of the town. Of the convent of the Observatines, established here in 1479, no remains can now be seen. A Maison Dieu, or religious hospital, once stood on the site now occupied by the Elgin Institution. (*Keith's Scot. Bishops*, by Russell, Edin., 1824, pp. 128, 141, 142, 444, 486.)

In addition to the two charitable institutions already mentioned (Grey's and Anderson's), there are eight other charitable endowments of a subordinate order, most of them old. One of these is the charity of the hospital, for the support of reputed old maids of the town of Elgin, with funds amounting to 3,000*l.* The seven incorporated trades, and the guildry, are each, in one respect, of the nature of provident institutions. The average number of poor on the roll is 160; but there is no legal assessment.

The academy, which is partly endowed, and partly supported from the town's funds, contains three separate schools, and has long been distinguished seminary. There are no fewer than ten schools in the town. There is a subscription and other libraries, as also a reading-room; with numerous benevolent and religious societies.

There are no manufactures, if we except a tannery and a brewery. There are two distilleries in the neighbourhood. The town has ten fairs yearly for live stock, and a weekly market for grain and other agricultural produce. It has, also, two printing presses, and a weekly newspaper. There are no fewer than five branch banks in the town, and a savings' bank.

Elgin can boast of great antiquity. In the 12th century it was a considerable town, with a royal castle

situated on the Lady Hill. The earliest charter of gildery was granted in 1284. It unites with Cullen, Baint, Petherhead, Kintore, and Inverary, in sending a member to the H. of C., and, in 1830-40, had 249 registered voters, including Bishop Mill, a small suburb on the opposite bank of the Lapsie, in the parish of New Bynnie. (*Shaw's Hist. of Moray; New Statist. Account of Scotland*, i. Elgin; *Boundary Returns; Chambers's Gazetteer*.)

EL JEM. See TAVOOS.

ELORA, or ELLORA (*Ellora*), a village of Hindoostan, dom. of the Nizam, prov. Aurangabad, in about lat. $19^{\circ} 56' N.$, and long. $75^{\circ} 28' S.$; celebrated for some remarkable cave temples, excavated in the solid rock, about 1 m. to the E., which in magnitude and perfection of execution, surpass all other structures of the kind in India. The site of these curious monuments of art is a crescent-shaped hill, of moderate elevation, the concavity of which faces W. or N.W. Its constituent rocks are chiefly basalt, a hard vesicular rock, and a rock of a loose, gritty, absorbent, and crumbling nature, interspersed with veins of quartz, siliceous stone, blood-stone, &c. The caves are cut in the W. slope or concavity of the hill above mentioned, extending, with intervals of various length between them, for about 1 m. from one extremity to the other. They may be divided into three groups: the N., which appear to have belonged to the Jain sect, since the purely Buddhist sculptures and emblems in them are intermingled with many Brahminic ones; the central, which are by far the most numerous, and are solely Brahminical; and the S., which are as decidedly Buddhist. Beginning at the N. extremity, a few hundred yards up the hill, cut in a mural rock of black basalt, is what is called the *Parinamuth*, a colossal figure of Buddha, 10 ft. high, apparently in a triumphal car, and seated on the folds of a large snake, whose seven heads form his canopy. Six attendant figures surround this statue, over which a handsome stone porch was erected about a century since. This idol is still held in much reverence by the Jains, many of whom make an annual pilgrimage thither. About 200 yards below this idol is what is called the *Indra Subbah*, or "Court of Indra," a temple consisting of three caves, opening one into another, and situated behind an area cut out of the rock, in which stand an elaborately sculptured pagoda, a handsome obelisk, and the figure of an elephant. The front of this temple is in many parts covered with sculptures in relief; and at the extremities of the verandah before it are two figures, a male and a female, the former seated on a couchant elephant, and the latter on a lion. These figures have been generally called Indra and Indraneel; but Col. Sykes contends that they represent the prince and his consort who founded this temple. (See *Journ. of the Asiat. Soc. of Bengal*, vi. (1837), 1038, &c.) The caves consist of two stories each; but the lower stories are greatly injured by damp, and partially choked up with earth. The three chambers on the story above vary from about 60 to 70 ft. in length, by nearly as much in breadth, and from 15 to 16 ft. in height, and their ceilings are supported by numerous pillars and pilasters. Each contains a colossal figure of Buddha, similar to that already described; and in the first and second chambers there are figures of other personages. The compartments round the walls of each of these rooms contain figures of Buddha, in various attitudes, "some standing and some sitting; the attendants are riding on elephants, tigers, and bulls." (*Sykes*.) None of these caves has any cells opening from it, which appendages are almost universally found in temples strictly Buddhist. About 40 or 50 paces farther to the E. there is a fourth cave, and still farther on, another; but both have much less to be seen.

The first of the series of Brahminical temples, proceeding from the W., is about 300 yards distant from the latter, and entitled *Doomar Leyna*, "the Nuptial Palace." This is the most extensive chamber of all, under one roof. It is 185 ft. in length, by 160 ft. broad; its ceiling averages 19 ft. in height, and is supported by 28 pillars and 30 pilasters. The entrance to this excavation is through a passage cut in the solid rock, 100 ft. long by 8 ft. broad. On the left-hand side of the W. entrance is an eight-armed figure of a revengeful character, representing Shiva in one of his forms; on the right are Shiva and Parvati together in a heaven, which Harun (the Hindoo *Brihannu*), a figure with numerous heads and arms, is endeavouring to shake. At the end of the central colonnade is a square sanctuary, entered by four doors, each guarded by two gigantic figures, 14 ft. 6 in. in height, and containing the *lingam*, which emblem is found in nearly all the second group of caves at Ellora. There are numerous small caves, all of which are considered to have been devoted to the worship of Shiva; in the front of each there is a bust of the celebrated trisid, a mutilated specimen of which exists at Elephanta. (See *Elephanta*.) Over the door of one cave is the image of Luxmies, attended by elephants; and another, a noble hall, 90 ft. long, 36 ft. wide, 15 ft.

in height, and adorned by highly-finished pillars, has numerous compartments full of figures, amongst which is a group supposed to represent the marriage of Shiva and Parvati.

But the most splendid temple at Ellora is that called *Kyles*, or "Paradise," a pagoda of a sugar-loaf form, 100 ft. in height, surrounded by five chapels, nearly similar in form; the whole, together with the area in which they are situated, being excavated in the solid rock, and covered with sculptures from top to bottom, both within and without. The extreme depth of the excavation is 401 ft.; the area itself is 323 ft. in depth, by 185 ft. in its greatest breadth (on the E. side). On the N., S., and E. it is surrounded by colonnades, varying in length from 165 to 116 ft., and having from 15 to 18 square pillars each; the walls which these colonnades surround are covered with sculptures, and in the front of the wall by which the area is enclosed on the W. side are niches filled by gigantic figures. *Kyles* contains the representations of nearly all the Hindoo Pantheon; but, as Col. Sykes observes, notices of its figures alone would fill a volume, and the temple must be seen to be duly appreciated. Those who wish for further information may resort to Captain Seely's work, and to the accounts of the Ellora caves, by Col. Sykes, in the *Trans. of the Lit. Soc. of Bombay*, iii. 261. &c.; Sir C. Malet, in the *Asiatic Researches*, vi. 382-424; Mr. Erskine, and others.

We must, however, notice the southern group of caves. There are four principal ones: the first has three stories; the second, 2; the third, 80 ft. long by 42 ft. broad, and 34 ft. in height, is in beauty inferior to none, and has an arched roof, supported by ribs of wood similar to that of Carlee, or the great cave at Kennerly; the fourth is accompanied by several smaller ones, and all are very highly finished. Each temple of this group contains a large figure of Buddha, and other characteristics of Buddhist temples. For some speculations as to the era of these caves, see *Journ. of the Asiat. Soc. of Bengal*, vi. (1837), 1038.

ELSINEUR, or ELSINORE (Dan., *Helsingør*), a marit. town of Denmark, on the E. shore of the isle of Zealand, at the narrowest part of the Sound, or principal channel leading from the N. Sea to the Baltic, 7 m. W. Helsingborg in Sweden, and 23 m. N. by E. Copenhagen; lat. $56^{\circ} 2' 17'' N.$, long. $12^{\circ} 38' 2'' E.$ Pop. (1834) 7,122. The town stretches irregularly over sloping ground towards the shore. It is well built, and has some good edifices. There are 2 churches, one of which, though externally very plain, contains many interesting objects of antiquity, and a lofty altar gorgeously ornamented. The public cemetery of Elsinour is large and handsome enclosure. Immediately adjacent to the town, on the N.E., is the castle of Cronborg. This edifice, built by Frederick II. in the boldest style of Gothic architecture, is said to be one of the finest structures of its kind in Europe. "Though of great extent, yet so elegant are its proportions, that it seems as light and graceful as a building raised more for ornament than for use. So far, however, from being a mere thing of show, it is a strong and substantial fortress, strengthened by all the advantages that military science can give to a position, and though very low, is still extremely important, from its sweeping the Sound most completely, both up and down. The approach, therefore, is garnished with lunos and demi-lunos, scarpees, ditches, stockades—in short, all the imposing external of a fortress kept in the highest order." (*Brewster*, i. 253.) From the summit of the lighthouse of this fortress the scene is one of surpassing beauty. Cronborg is now chiefly used as a prison; it was the place of confinement for some years of the unfortunate Mary, sister of George III. of England. All merchant ships passing to and from the Baltic are obliged to make certain reservations depending on the weather, to salute Cronborg Castle by lowering their topmasts when abreast of the same; and no ship, unless she belong to Sweden, is allowed to pass the Sound without clearing out at Elsinour and paying toll, according to the provisions in treaties to that effect, negotiated with Denmark by the different European powers. The first treaty with England having reference to this subject, is dated in 1450. The Sound duties had their origin in an agreement between the King of Denmark and the King of Sweden, who, Towns on the other, by which the former undertook to construct light-houses, land-marks, &c. along the Cattegat, and the latter to pay duty for the same. The duties have varied at different periods; the greater part of the inhab. of Elsinour are, in some way or other, connected with their management or collection. (See *SOUND*.) Former travellers speak of the bustle at Elsinour, from the number of foreign sailors constantly in its streets. The place is now very quiet; the captains, to prevent delay, seldom allowing their men to come ashore, unless occasionally to take in vegetables. So well organized is the system for collecting the dues, that ships are frequently not detained more than half an hour. Ships of war are exempted from payment. Most maritime nations

have consuls at Rismour. The principal communication between Denmark and Sweden takes place here; and regular boats sail three times a day to and from Helsingborg.

Rismour is well known to Englishmen, at least by name, from its being the scene of Shakespeare's noble tragedy of *Hamlet*. "The principal incidents of the play are founded on fact, but so deeply buried in remote antiquity, as to make it difficult to discriminate truth from fable. Saxo-Græmmatice, who flourished in the 12th century, is the earliest historian of Denmark who relates the adventures of Hamlet. His account is extracted, and much altered, by Belleforest, a French author; an English translation of whose romance was published under the title of *The Historie of Hamlet*, and from this translation Shakespeare formed the groundwork of his play, though with many alterations and additions." (*Cocce's Travels in the N. of Europe*, v. 90.)

ELVAS, a fortified city of Portugal, on the frontiers of Spain, prov. Alentejo, 190 m. E. Lisbon, 13 m. W. Badajoz, lat. 38° 40' N., long. 6° 52' 45" W. Pop. 16,460. It is picturesquely situated, on a hill covered with olive trees and orchards, between two other hills which command it, and on which are the fortresses of Santa Lucia and La Lippe. These and the other defenses of the town, reckoned the *chef-d'œuvre* of the Count de La Lippe Schomberg, and a model of their kind, render it so strong, that no impression could be made upon it, except by a large army and a regular siege. The principal street, Rua de Cadea, has an antique, venerable appearance, from the remains of Moorish houses and towers. The cadea, or prison, stands at one end, and opposite to it is the hospital for the townspeople, which is well conducted, and divided into wards, as in England, with separate apartments for infectious diseases. On the whole, however, the town is ill built, and the streets mostly narrow and dirty. The principal edifices are—the cathedral, arsenal, bomb-proof barracks for 6,000 or 7,000 men, theatre, &c. It has several churches and convents, with a college, a seminary, &c. There are manufactures of arms and jewellery; but the principal dependence of the inhab. is on the contraband trade carried on across the Spanish frontier. The Plaza, or great square, is remarkable for a singularly formed tower in front of the cathedral, and the houses exhibit specimens of domestic architecture from the days of Moorish splendour and elegance down to modern times. Several of the grotesque carvings are executed with great richness and delicacy. The rooms in the modern houses are large, lofty, and paved with bricks arranged in various figures; the windows not being glazed, but merely closed with latticed blinds. The decorations of some of the chapels in the cathedral are extremely elegant, the walls and ceilings being covered with a profusion of gilded carving, but the pictures are execrable. The grand altar is supported by Corinthian pillars of grey marble, surmounted by a canopy of crimson and gold silk, beneath which is a large picture of the birth of Christ; the altar itself is covered with crimson and gold silk, and is crowded with silver candles. There is no room in the town for public gardens, but the covered way from the Porta d'Esquina to the Olivença gate is planted with trees, and each *placé d'armes* has a fountain, and is tastefully laid out. The walk round the ramparts is extremely fine, commanding a view of the country for many miles in all directions.

The town is furnished with water, brought from an eminence about 3 a. w. from it (*Milano*) by an aqueduct constructed by the Moors, which supplies numerous fountains, one of which is of very large dimensions. In crossing the valley, 1½ m. in width, this aqueduct has four tiers of arches, each above the other, making together 360 ft. in height. It is supported by strong buttresses, and to add to its strength, it is built in a zig-zag direction. The environs are fertile in grain, wine, oil, and fruit. Manufactures, arms and hardware.

Elvas was a post of great importance during the peninsular war. Marshal Junot took possession of it in March 1808, and held it till it was given up, under the convention of Cintra, in August following. It has bomb-proof barracks for 6,000 or 8,000 men, and furnished the artillery and stores for the siege of Badajoz. The Duke of Wellington had a powerful telescope placed in the tower of La Lippe during the operations, by which the interior of the castle of Badajoz could be plainly looked into, and all the operations discovered. (*Napier's Peninsular War*, i. 144, 160, 202, ii. 128, iii. 510, iv. 185, 401. &c.; *Lusk's Journey through Portugal*, p. 120, et seq.; *Penny Magazine*, vi. 316, 317, 344, 345.)

ELY, a city of England, co. Cambridge, in the distr. called the Isle of Ely, on an eminence near the Ouse, 16 m. N.N.E. Cambridge. The city includes the parishes of Ely, Trinity, and St. Mary's; the extra-parochial district of Ely college, and the city of Chesham, comprising, in all, an area of 17,460 acres, and a pop. of 6,189, of which about 5,000 may belong to the city properly so

called. The latter consists principally of one long street, with a market-place in the centre; several of the houses are built of stone, and have an antique venerable appearance; and the place seems to have been but little affected by those changes that have so materially modified the appearance of most other towns. It owes its entire distinction to its being the seat of a bishopric, established here in 1107. Its cathedral is one of the most celebrated in England. Being partly of the reigns of William Rufus and Henry I., and partly of subsequent periods, it displays a singular admixture of the Saxon, Norman, and English styles of architecture; but notwithstanding the dissimilarity of its parts, it must, when considered as a whole, be regarded as a truly magnificent edifice. Its extreme length from E. to W. is 483 ft.; the length of the transept is 190 ft.; the height of the lantern on the summit of the dome over the celebrated octagon tower, is 170 ft.; the extreme height of the W. tower, one of the finest in the kingdom, is 270 ft.; the height of the E. front to the top of the cross is 113 ft. It has many interesting monuments. St. Mary's chapel, contiguous to the cathedral, now Trinity church, was commenced in the reign of Edward I., and is one of the most perfect structures of the age; it is 200 ft. in length inside, by 66 ft. in breadth; the height of the vaulted roof being 60 ft.; it has neither pillars nor side aisles, but is supported by strong buttresses. The cloisters and other buildings, which belonged to a monastery founded here at a very early date, have been long since demolished, with the exception of the refectory, that has been converted into a deanery. The Episcopal palace, near the W. end of the cathedral, retains few traces of its ancient architecture. The bishops of Ely formerly possessed powers within the Isle similar to those enjoyed by the Bishop of Durham, appointing their own chief justice and magistrates; but these were taken away by the act 6 and 7 William IV. cap. 87. The revenues of the see amounted, at an average of the three years ending with 1831, to 11,100*l.* a year; but a deduction was made from this income on the appointment of the present bishop in 1836, in pursuance of the recommendation of the ecclesiastical commissioners. The total revenue of the dean and chapter of Ely, at an average of the seven years ending with 1834, amounted to 7,386*l.* a year. The assizes are held here in the new shire hall, erected in 1831. Ely has a grammar-school, founded by Henry VIII.; a free school endowed by a lady of the name of Needham; and a national school supported by voluntary contributions. A considerable landed property left for the benefit of the city poor is vested in a body of incorporated trustees. There is an earthenware and tobacco-pipe manufactory within the city; but the inhab. are principally employed in gardening, which is extensively carried on in the vicinity. Ely sent 3 members to the H. of C. in the 23d of Edward I., but has not subsequently been represented. Market-day, Thursday. The Isle of Ely is included within the great level of the Fens, and is extremely fertile. (See *Bentham's History and Antiquities of the Conventual and Cathedral Church of Ely*, passim, &c.)

EMDEN, or EMBDEN, a sea-port town of Hanover, being the second in that kingdom in respect of size and importance; prov. Aurich, cap. cant., on the N. bank of the estuary of the Ems, or rather of the bay called the Dollart, 1½ m. S.W. Aurich, and 46 m. W.N.W. Oldenburg; lat. 53° 22' 30" N., long. 7° 19' 38" E. Pop. 12,000, mostly Calvinists. It is surrounded by walls and wet ditches, and divided into the old town and the *Faldern*; the latter being the best built. Emden has 6 churches, one of which is a fine edifice, a council-house, judicial tribunal, custom-house, exchange, commercial weighing-house, naval assurance office, school of navigation, house of correction, orphan asylum, lying-in charity, gymnasium, and vicar's parsonage, &c. A number of canals connects it with Aurich, and various others intersect the adjacent country, and the town, communicating with the port. The latter, which consists of two inner harbours opening into an outer harbour, is large, but shallow; so that vessels drawing more than 11 ft. can enter it only at high water, unless lightened of a portion of their cargo. But the roadstead, which is well protected, has water sufficient to float vessels of any size, and the holding ground is good. Emden has manufactures of linen and linen yarn, stockings, tobacco, brandy, leather, hats, soap, starch, &c.; its herring fishery was formerly of considerable importance, and employed 1,300 hands, who took about 13,000 tons of fish annually; but this branch of industry has greatly declined, and from 60 ships formerly engaged in it, the number is now reduced to 15. The general trade of the town has also declined. In the 16th century it had 600 sea-going vessels; and, in 1764, 273 of the aggregate burden of 19,389 lasts; in 1837, however, it has only 108 sea and river vessels and barges, of the united burden of 4,906 lasts 1 (*Zedler*, i. 284). In 1827-28, between 800 and 900 ships entered the port; whereas in 1838, this number was reduced to 623 (563 Hanoverian, and 21 foreign), of the burden of 16,196

lasts. By far the greater number of the vessels that now frequent this port, are inland craft.

Though Emden be a free port, the advantage it thence derives is in time of peace very insignificant. It has little communication with the interior of Germany, except with S. Friseland and the co. of Munster, of which it continues to be the emporium. The import trade it formerly carried on in colonial produce has been almost entirely transferred to Amsterdam, Hamburg, and Bremen, whence it is supplied at second hand. Its chief imports are hemp, potash, timber, &c. from the Baltic and Norway. The imports of timber are very considerable, the vicinity of Emden being singularly deficient in wood. It also imports considerable quantities of French wine. Its chief exports are oats, wheat, beans, rapessed, rye, barley, herring, butter, cheese, gin, tallow, honey, wax, wool, and hides. The annual exports of some of these articles may be estimated as follows, viz. wheat 1,200 lasts, rye 900 do., oats 3,000 do., beans 600 do., barley 400 do., rapessed 900 do., butter 18,000 firkins. The Dutch currency is that for the most part in circulation at Emden; but inland produce is often paid for in Louis d'ors at 8 dollars each, or in Prussian currency. (*Reden; Das Konig. Hannover; Berghaus; Private Communication from Emden.*)

ENGLA. See EGINA.

ENGLAND and WALES. This most populous, wealthy, and important portion of the U. Kingdom of Great Britain and Ireland comprises the most southerly, largest, and most fertile part of the island of Great Britain. It lies W. from and opposite to, France, Belgium, Holland, and the S. parts of Denmark, between $49^{\circ} 57' 30''$ and $55^{\circ} 47' N.$ lat., and $1^{\circ} 46' E.$ and $5^{\circ} 41' W.$ long.; being bounded by the German Ocean on the N.E. and E.; by the British Channel on the S.; by St. George's Channel and the Irish Sea on the W.; and on the N.W. and N. by Scotland, from which it is separated by a waving line extending in a N.E. direction from the mouth of the Sark, in the N.E. corner of the Solway Frith, by Peel and Carter Fells, and the Cheviots, to Carham, and thence along the Tweed to Berwick. Its S.E. extremity, at Dover, approaches to within 21 m. of the opposite coast of France. (*See BRITISH EMPIRE.*) Its shape approaches nearest to that of a triangle, of which Berwick may be considered the apex, and a line from the Land's End to the N. Foreland (342 m.) the base; a line from the former along the W. side (426 m.), and from the latter along the E. side (334 m.), complete the figure. The sea-coast, if measured from one headland to another, is about 1,200 m. in extent; but if its principal indentations are followed, it will be found to be fully 2,000 m. The bays and harbours on the S. and W. shores are numerous, and some of them rank among the finest in the world; but on the E. side there are few that can be called safe, or easily accessible; the ports of London and Harwich being the only really good ones between the S. Foreland and the Tweed. The area amounts to about 57,812 sq. m., or very near 37 millions of acres.

Aspect of the Country.—England combines within itself all that is most desirable in scenery with all that is most necessary for the subsistence and comfort of man. "Although its features are moulded on a comparatively minute scale, they are marked with all the agreeable interchange which constitutes picturesque beauty. In some parts plains clothed in the richest verdure, watered by copious streams, and pasturing innumerable cattle, extend as far as the eye can reach; in others, gently rising hills and bending vales, fertile in corn, waving with woods, and interspersed with flowery meadows, offer the most delightful landscapes of rural opulence and beauty. Some tracts furnish prospects of the more romantic and impressive kind; lofty mountains, craggy rocks, deep dells, narrow ravines, and rumbling torrents; nor is there wanting, as a contrast to these, scenes in which every variety of nature is a different charm, the vastitude of black barren moors, and wide unanimated heaths." (*Atlas of England Described*, p. 2.)

The distinguishing peculiarity in the aspect of England is, however, the exuberance of its vegetation, and the rich luxuriant appearance of its lower and far most extensive portion. It owes this distinction partly to

nature and partly to art. The humidity and mildness of the climate maintain the fields in a constant state of verdure; in winter they are seldom covered with snow, or blighted by long-continued frosts, and in summer they are rarely withered and parched by droughts. In this respect England is as superior to the most countries of continental Europe—as to Italy and Sicily, for example—as she is superior to them and to every other country in the amount of labour that has been expended in beautifying, improving, and fertilising her surface. It is no exaggeration to affirm, that thousands upon thousands of millions have been laid out in making England what she now is. In no other nation has the combination of beauty with utility been so much regarded. Though without any extensive forests, England is extremely well wooded. The country is portioned out into innumerable fields; and these being all, or nearly all, surrounded with hedges and rows of trees, it has, even in the best cultivated districts, a woody appearance, and sometimes almost resembles a vast forest. Since the middle of last century a great deal has been effected in this way. Most of the extensive, bare, and nearly worthless commons, that were then every where met with, have been in the interval subdivided, enclosed, and brought under tillage; making a vast addition to the productive capacities of the kingdom, and materially improving its appearance.

Another peculiar feature in the physiognomy of England is the number and magnificence of the seats of the nobility and gentry. These superb mansions, many of which are venerable from their antiquity, and all of which are surrounded with fine woods, and give to the country an appearance of age, security, and wealth that we should in vain look for any where else. The farm-houses and cottages have mostly also a substantial, comfortable look; and evince that taste for rural beauty, neatness, and cleanliness, that eminently distinguish their occupiers.

The number, and the prodigious size and splendour of many of the cities and towns of England, justly excite the admiration and astonishment of foreigners, and even of natives. They are the chosen seats of opulence, art, science, and civilisation. All the gratifications that wealth can command, or the caprices of taste or fashion require, may there be had in the utmost profusion; at the same time that art and industry are carried in them to the highest perfection to which they have attained, and are aided by every invention and discovery, how remote the country or distant the era of their origin.

Description of the Country.—Though the mountains of England nowhere attain an alpine elevation, they form one of its most interesting, as well as most prominent features. The principal chains, which are found in its N. and W. portions, have received the names of the Pennine, Cumbrian, Cambrian, and Devonian ranges. The first of these ranges extends from the Scottish border, where it is connected with the Cheviots, S. to near Derby; it occupies the W. portion of the co. of Northumberland, Durham, and York, and the E. portion of Cumberland, Westmorland, Lancaster, Chester, and the middle part of Derbyshire. Its highest summits are Cross Fell, in Cumberland (2,901 ft.); Shunner Fell, on the confines of Yorkshire (2,329 ft.); Great Whernside (2,368 ft.); Ingleborough (2,361 ft.); and Pen-y-Gant (2,370 ft.), in Yorkshire: at either end, however, the range declines considerably, so that at the part traversed by the old Roman wall, and the modern railway between Newcastle and Carlisle, its height does not exceed 445 ft.; and on the S. side, where the Liverpool and Leeds Canal is conducted across it, the elevation is not more than 500 ft.: still further S., the Derbyshire portion of the chain again becomes more elevated, attaining at Castleton and Great Axehill, 1,751 ft.; and at the Weaver Hill, near Ashbourne (the S. extreme), 1,164 ft. The breadth of the range between Sheffield and Macclesfield is about 22 m., and it comprises, in this portion, some very picturesque scenery; but such is very far from being the character of the N. portion of this mountain system, which may be generally described as with rounded summits, of gradual ascent from either side, having a scanty soil covered mostly with ling, and undulating in dreary succession; the patches of green sward being few and far between, and the aspect of the whole cheerless and monotonous. With the exception of the Thames and Severn, most of the great rivers of England have their sources in this chain: being much nearer the W. than the E. side of the island, the rivers that rise in its E. acclivities have generally the longest course, and are the largest and most important. Of the latter, the Tyne, Tees, the affluents of the Ouse, the Aire, Don, and Trent are the principal; the Eden, Ribbles, and Mersey are the principal rivers flowing W. from the Pennine chain. The beautiful vale of E. Eden, which separates the Pennine from the Cumbrian range, gradually expands into the Cumbrian plain, which extends N. to the Solway Frith, and occupies the whole tract from

Brampton, Crofton, and Renwick, at the base of the Pennine chain, W. to the sea, comprising an area of about 800,000 acres. On the E. side of the Pennine chain, from its N. extreme to the Coquet, the district, though hilly, has tolerably good pasture, and comprises a few breadths of well-cultivated land; S. of that stream, a large moorland tract extends through Northumberland, the middle of Durham and Yorkshire, to the Holm Moss in Cheshire, varying in breadth from 10 to 30 m., and in elevation from 500 to 1,000 ft.: its N. is its most sterile portion; but the whole tract consists of a series of monotonous wastes, furrowed, in the two N. coasts, by a few narrow glens only; towards the S., these widen and become more frequent, but without much affecting the general aspect, which is preserved, for the most part, through the whole extent of the district. Betwixt it and the sea are the vales of the Tyne and Tees, and the great Yorkshire plain; the latter extending N. and S. between 60 and 70 m., with an average breadth of between 14 and 20 m.: it widens towards the S., and every where presents a gently undulating surface of fertile and well-cultivated land. The E. moorlands and wolds, bounding the York plain on that side, have, at their N. limit, the fertile vale of Pickering, extending about 35 m., and extending from the base of the wolds to the sea, has a strong clayey soil, producing heavy crops of wheat and beans, as well as luxuriant pasture, and ranks amongst the most productive districts in the kingdom; an alluvial tract, of somewhat similar character, also extends along the base of the Lincoln wolds between the Humber and Wash; the low line of coast, forming the E. limits of these tracts, has a submarine forest stretching along it, which is traceable for 1 or 2 m. in breadth between the high and low watermarks.

The Cumbrian group of mountains occupies the central and S. portions of Cumberland, the W. and largest portion of Westmorland, and the N. and insulated portion of Lancashire. It extends N. and S. about 37 m., and E. and W. about as much. It contains the most elevated summits in the kingdom, and is intersected by deep narrow glens, some of which are occupied by lakes, that radiate in all directions from the central portion of the mass, so as to form several distinct ranges: the whole system declines more rapidly on the N. than the S. side. The highest and most remarkable summit is Helvellyn (3,655 ft.), Scafell (3,166 ft.), Bowfell (2,911 ft.), Conistone Fell (2,677 ft.), High Pike (2,101 ft.), in the central part of the group; at the N. extreme are Skiddaw and Saddleback (3,023 ft. and 2,787 ft. respectively; and at the S.W. end, Blackcombe rises 1,919 ft. above the sea. The Cumbrian mountains are mostly bold, steep, and rugged; their slopes are in general covered with a fine green sward, affording good pasture for sheep, and have little of the tame, monotonous character that belongs to the Pennine range. Except in some of the glens, opening on the N. and W. sides, the cultivable land among these mountains is not very considerable. The lakes embosomed in these mountains rather resemble the reaches of a large river than the expanded figure usually considered as belonging to a lake. Winander Mere, the most extensive of these sheets of water, is between 10 and 11 m. long, and from 1 to 1½ m. broad, with a depth, in some parts, of 85 fathoms. It has 13 or 14 small lakes or holms, the largest of which contains about 30 acres; its area, including these, is about 4,774 acres. Ulswater, the next in size, is about 8½ m. in length, by 1 m. at the broadest part, and sits in a N.E. direction from Patterdale. Derwentwater, Bassenthwaite, Buttermere, Waswater, Ennerdale, and Conistone Mere, are the names of the more considerable amongst the remainder: all of them abound in fish, chiefly trout, perch, pike, and eel; Ulswater, and one or two of the smaller tarns, have char; and Bassenthwaite salmon, which find their way thither by the Derwent. The scenery of the district occupied by the Cumbrian mountains is perhaps the most interesting and romantic of any in England; and in many parts, as at the head of Ulswater and the Kirkstone Pass, between that lake and Winander Mere, it assumes features of great power and magnificence. The line of road between Ambleside and Keswick, through the vale of St. John, may also be mentioned for the picturesque and beautiful scenery through which it winds; but the whole is too well known to require further notice. The poems and delineations of Southey and Wordsworth have made it, in some degree, classic ground; and it is annually traversed by thousands of tourists.

The Cambrian mountains extend, on the W. side of the kingdom, from the Irish Sea to the Bristol Channel, occupying nearly the whole of Wales. Of these, the Snowdonian range is the chief; its principal chain stretches N.E. and S.W., the whole length of Caernarvonshire, from Penmanmawr on the N. to the point of the peninsula of Llyn on the S. Several of its summits exceed 3,000 ft. in height: that of Wyddfa (the highest pinnacle of the huge mountain mass bearing the general name of Snowdon) has an elevation of 3,571 ft.: and commands a view of surpassing grandeur, which is only limited by the horizon. Two or three other chains branch from this main one, in a S. direction, many of whose summits reach 2,400 ft., and one (the Arennig Mawr) 2,399 ft. The country included between these ranges has a few picturesque and well-sheltered vales, such as those of Festiniog and Dolgelly; but its general character is that of an unclaimed pasture tract, comprising the most magnificent alpine scenery in the kingdom. Angleson, on its W. side, has several small ridges and detached hills and peaks, but it cannot be called mountainous. On its E. side the beautiful vale of Clwyd extends between the Hierathog hills and another parallel range stretching between it and the estuary of the Dee; and the vale of Mold and Llangollen, also celebrated for their beauty and fertility, extend on the same side, towards the great Cheshire plain.

The Berwyn mountains stretch across the whole principality, S. of the Snowdon ranges, from Llangollen, to the middle of Cardigan Bay: the highest summit, Cader Idris (2,914 ft.), gives its name to the portion of the chain between it and the sea, which narrows to a mere ridge, in parts, not more than 4 or 5 m. across. The general character of the country comprised within the Berwyn range is of the same kind as the former, but with less elevated and abrupt outlines; towards the vale of the Upper Severn, and between it and the Plynlimmon chain, a few strips of cultivated land occur. The famous mountain, whence this chain takes its name, is 2,463 ft. in height, and gives birth to the two great rivers, the Severn and Wye, flowing S. to the Bristol Channel, and to the Rhedidiol, which has its embouchure at Aberystwith, on Cardigan Bay. From Plynlimmon the chain extends in a curve to the Breidden hills, W. of the Shropshire plain, whose highest summit reaches 1,330 ft. The whole of the Plynlimmon range is characterised by smooth gradual slopes, and a succession of regularly rounded summits, clothed with a fine green sward, that supports numerous flocks of a small fine-woolled breed of sheep. The hilly tract extending through the S. of Shropshire to Wenlock Edge, may be considered as a continuation of this range, and is characterised by the same general features: its highest summit (Clee Hill) attains 1,805 ft. The mountain range, extending S. of the Plynlimmon chain to the Towy, and stretching E. and W. between the Wye and Dyfi, forms the largest waste in the kingdom, and consists of a succession of rounded, barren hills, enclosing vast morasses, amongst which a few spots covered with coarse herbage are sparingly scattered, and afford summer pasturage to a small hardy breed of sheep: Dwgan Hill, near the centre of this cheerless region, is the highest summit, and attains 2,071 ft. The Epynt hills, on its S. border, enclose many strips of good arable land, and are themselves clothed with a pasture; but the country on the W. side of this great waste, as to Cardigan Bay, is mostly of a rugged, desolate aspect, and comprises a series of table-lands, with broken surfaces and scanty vegetation: on the N. side the Yatwith, however, and along the courses of that stream, and the Rhedidiol, especially near Hafod, the scenery is picturesque, and includes many fine cataracts; and along the coast are several large pasture tracts of various degrees of fertility. S. of this, on to St. David's Head and the Bristol Channel, the country consists mostly of unclaimed table-lands of unequal surface, with occasional ridges and detached hills, all of a rugged, sterile aspect, with the exception of the district round Milford Haven, and the Peninsula of Gower, between the bays of Swansea and Carmarthen in the Bristol Channel, which are fertile and well cultivated.

The Radnor and Black Forest ranges, that stretch S. from the centre of the Plynlimmon chain, on either side the Wye, are mostly covered with vegetation, and form good sheep-walks: their offshoots stretch into Herefordshire and terminate in that fertile and undulating plain. - The districts on either side the range, especially the vales of the Wye and Usk, include much cultivated land. Two other main ranges complete the Cambrian mountain system, - those of the Forest Fawr and Glamorgan: the former stretches through Carmarthenshire and Brecknockshire to Abergavenny, on the Usk; the highest summits are the bescons named, from those counties, which are respectively 2,562 ft., and 2,563 ft. high. It comprises excellent and extensive sheep-walks. The Glamorgan range extends S. of the last in an E. and W. direction from Pontypool on the Usk to Swansea,

about 25 m., and in the widest part (from Merthyr-Tydfil to Llantrisant) about 15 m. The summits are nearly table-lands, with steep declivities on either side, intersected by deep narrow ravines, the whole having a rugged, shagreened aspect, but enclosing the most extensive level tract and iron deposits in the kingdom; the tract between these two basins is also of the same sterile character, and wholly unclaimed; but the plain stretching from the S. declivity of the Glamorgan chain to the Bristol Channel has a rich productive soil, and may, independently of its vast mineral treasures, be considered as the best and most fertile district of the principality: an alluvial tract, 3 or 4 m. in width, extends from the Taff to the Monmouth plain, and is of a similar character. The Welsh lakes are numerous, but for the most part small and uninteresting, rather absorbed by the majestic scenery round them than forming one of its essential features, as is the case with the Cumbrian lakes. The Bala Pool or Llyn Tegid is the largest of the Welsh sheets of water, and extends 4 m. from S.W. to N.E., with an average breadth of 1 m. and depth of 40 ft.; its waters cover an uneven rocky bed, and are remarkable for their purity and clearness: in common with most of the others, it abounds in red trout, pike, and eel, but the *grayling*, or silver skate, is peculiar to it. The Dee issues from the N.E. end, flowing by the vale of Llangollen, and the Cheshire plain, to the Irish Sea; the Clwyd, and the Conwy, discharging on the same side; the Selout, Maw, and Telfy, in the St. George's, and the Towy, Wye, and Severn, in the Bristol Channel, are the other chief rivers that originate in this the wildest and most mountainous portion of the kingdom.

The Devonian chain, stretching through the S. W. peninsula of England, between the Bristol and the British Channels, is the last that requires any special notice in this sketch. Dartmoor Forest, forming its wildest and most elevated portion, is an unbroken and extensive waste, affording summer pasturage for the store cattle of the lower and more fertile tracts surrounding it: the whole may be considered as a table-land (the average height of which is above 1,600 ft.), with an unequal surface, rising in large rounded swells, with corresponding concavities, and strewn with large boulders and fragments of granite, which also rises through the soil in irregular masses, or *tors*. Exmoor, at the N.E. extreme of the range, and considerable tracts intermediate between the two, are also unclaimed, and for the most part of a sterile character: the same description also applies to the central and northern parts of Cornwall, onward to the Land's End; but the less elevated districts on either side the range contain many extensive breadths of fertile land, more especially on the S. One of these, extending from Dartmoor to the sea, between the Dart and Yealm, and known as the South Hams, ranks among the most fertile corn districts in the kingdom. The chain gradually declines from Dartmoor to the Land's End, and also becomes more contracted in that direction. The chief summits are, Dunsbury Beacon, on Exmoor (1,698 ft.); Cawand Hill (1,782 ft.); Rippon Tor (1,549 ft.); Butterton (1,303 ft.), all on Dartmoor; and in Cornwall, Brown Willy (1,268 ft.), Carnmarth (849 ft.), Carn Brea (697 ft.); and, lastly, the cape itself (about 70 ft.). The Taw and the Torridge, which discharge in the Bristol Channel, and the Fal, Fowey, Tamar, Plym, Dart, Teign, and Exe, descending to the British Channel, are the chief rivers of the district. On the N. coast sand accumulates rapidly in many of the creeks and inlets, forming in some places extensive dunes, beneath which the remains of ancient churches and villages have been discovered. On the beaches of Bude Bay, and a few others, this sand is chiefly composed of comminuted shells, and forms the chief manure of those localities.

The surface features of the central region of England, whence her wealth and importance are mainly derived, though extremely diversified, are almost wholly devoid of the magnificence and romantic beauty of those previously described. The great plain of Cheshire and Shropshire, on its W. side, extends about 80 m. in a N. and S. direction, and from 10 to 30 m. in the opposite: a few heathy moorlands occur within its limits, but by far the greater portion is very fertile; the soil is either rich sand, of a reddish colour, or strong loam. This plain is remarkable for its verdure, and is one of the principal grazing districts, being largely appropriated to the dairy husbandry. Of a similar character are the vales of Severn, Evesham, and Gloucester. The first of these extends about 70 m. on either side the Severn, with a breadth varying from 5 to 13 m., and is alike fertile and beautiful. The district S. of these last has probably the most broken and irregular surface of any part of the kingdom; it is, however, for the most part fertile and well cultivated. Beyond it are the Mendips, Quantock, and Black Down hills, and the fertile and beautiful vales of Tetunot and Exe.

The basins of the Trent and Thames occupy the remainder of the central region: the former, in a general point of view, may be considered as forming an extensive

plain, with gradual swells and broad intermediate vales, but with very few remarkable elevations. The vale of Beilvor is one of its most fertile portions. In the district forming the basin of the Thames, and drained by that great river and its various tributaries, the surface is, for the most part, gently undulating, forming wide vales, often extending into plains: the principal elevations are near the valley of the Thames, but none of their summits reach the height of 1,000 ft. The geological character of the tract is perhaps the most diversified of any, which, of course, causes a corresponding variety in the soils; these, however, on the whole, are of a light chalky nature, and moderately fertile, with but few absolute wastes of any extent: the higher constitute the least fertile portions, most of which are obviously indebted to artificial cultivation and the humidity of the climate for a great proportion of their productiveness. The most fertile tract is the vale of Aylesbury, which has a fine loamy soil, not surpassed in fertility by any in the kingdom. The chalk hills, which (with some interruptions) range from the S. side of the Wash to the Thames, between Goring and Henley, to which part the name of the Chiltern Hills applies, form the S.E. limits of the basin, sloping gradually in this direction to the Thames, but with many abrupt escarpments on the other; whence extensive views are commanded of the country between the basins of the Trent and Thames, through which the Ouse, Great Ouse, and Welland flow N.E. to the Fens, draining Bedfordshire, Hants, Northampton, and Rutland, in their course through a district possessing very few striking inequalities of surface.

The courses of these rivers to their outfalls in the inlet of the German Ocean, called the Wash, are by channels and embankments, artificially formed, through the whole of the extensive, flat, and marshy district known as the Fens. (See BARROW LAYEL.) Deposits of mud and sand are constantly and rapidly accumulating in this portion of the E. coast, so that it is not without considerable difficulty that the outfalls of the rivers are kept open, and the harbours accessible. Additions are always being made to the surface of the district, by encroachments on the sea; and a plan is now (1840) in progress for securing no less than 170,000 acres of fertile land, extending seaward between the ports of Boston, Wisbeach, and Lynn Regis, all of which is, comparatively speaking, of recent formation.

The great plain S.E. of the Fens, comprising Norfolk, Suffolk, and Essex, has an undulating surface throughout; but the inequalities are greater towards the N. extreme, where, in some places, an elevation of 300 ft. above the sea is attained. In this quarter it is not very fertile, but it has been wonderfully improved; and many parts of Norfolk and Suffolk that half a century ago were mere sandy wastes, have, by dint of marling and the introduction of the turnip culture, become among the best and most productive barley lands in the kingdom. The soil of Essex is mostly a strong clayey loam, ranking in the first class with wheat and bean lands. The great plain of England, extending from Bagshot Heath to Salisbury Plain, and comprising both, may be considered as a sort of elevated table-land, no part of which, probably, is less than 300 ft. above the sea: Thorney Hill is 610 ft., and Westbury Down 775 ft. Both these eminences are on Salisbury Plain, the highest portion of the tract. This celebrated plain extends about 22 m. from E. to W., and 15 m. in the opposite direction; it is traversed by many considerable depressions, and has a light scanty soil, ill adapted to cultivation, but affording good sheep walks. The part of the country of this tract between Chichester and Southampton Water has a fair proportion of tolerably fertile and well-cultivated land; but further W. the Hants and Dorset downs occupy the surface nearly to Dorchester, and form a continuous heathy, dreary, and sterile tract, with but a scanty proportion even of sheep pasture.

To the E. of the Anton river are the chalk ranges of the N. and S. downs, which extend round the head district of Sussex, Kent, and Surrey; Beachy Head forming the E. extreme of the S. Downs, and the bold chalk cliffs of the Dover Straits that of the N. Downs. The Alton hills extend between and connect the two. The first are clothed with fine pasture, and form excellent sheep-walks; at their base extend the fertile plain of Chichester. The tract of which the N. Downs form the W. portion is, for the most part, well cultivated, and here and there attains considerable fertility, though, generally speaking, the soil is meagre and arid. The weald district, enclosed by the last ranges, has in some parts an undulating unequal surface; and there are a few detached hills that attain considerable elevations: taken as a whole, however, it may be considered as forming an extensive plain of about 1,000 sq. m. in extent, the more level portions of which are from 100 to 300 ft. above the sea. The soil is principally clay; in parts very stiff and adhesive, in others mixed with sand in various proportions. The whole is under cultivation, and includes many breadths of luxuriant pasture; at the E. extreme is Romney

Marsh, an alluvial tract of about 50,000 acres, which has been reclaimed from the sea, and is defended from its encroachments by embankments. This marsh is, for the most part, remarkably fertile.

Geology. A brief sketch of the geological structure of England will be best accomplished by commencing with the mountain ranges on its W. side, and thence following the general direction of the successive rock strata: of these, the primary and transition, or (as they are now more correctly designated) Plutonic and metamorphic formations, constitute the mass in the Cumbrian and Cambrian groups; and that of the S.W. peninsula, all of which have a general resemblance in their mineral composition, though presenting some points of local and minor difference: thus, granite, which is only traced to a very limited extent in one or two parts of the Cumbrian system, and scarcely at all in Wales, is extensively developed in the S.W. peninsula, where it occupies a considerable part of the most elevated portion of the range, in large interrupted masses, from Dartmoor to the Land's End; beyond which the Longship Rocks, and the Scilly Islands, continue the formation in the same general direction, and are supposed (with much probability) to have once formed continuous portions of the range. The veins of tin ore also appear to be limited to this last district. Neither gneiss nor mica slate (so abundant in the Grampians) occurs, to any extent, in either of the ranges under consideration; clay and graywacke schists, of very various composition and texture, forming the prevailing rocks in all of them. The whole of these strata are traversed by beds and veins of porphyry, hornblende, and trap, and are for the most part considerably inclined and contorted, every where presenting indications of powerful disturbing causes, and of having been upheaved, but there are no traces of volcanic action. In the Carnarvonshire ranges elevated beaches occur at the height of 1,000 ft. and upwards above the sea level, which are formed of gravel and fragments of recent shells, precisely similar to the present marine beaches; similar beaches also occur on the N. coast of Cornwall and S. coast of Devon, from 30 to 30 ft. above the present reach of the tides.

The veins of tin and copper which intersect the strata in Devon and Cornwall, and the S.W. peninsula, one of the most important mining districts in the kingdom. These veins, or lodes, have all a general E. and W. direction, and are intersected by others in an opposite (hence called cross-courses), which, by heaving or disturbing the regular course of the lodes, are often the cause of great perplexity and expense in mining operations; a large dike of this kind traverses Cornwall, from one coast to the other, through its chief mining district, intersecting and disturbing the course of every one of its lodes. Besides these lodes of tin and copper, which furnish the chief mineral riches of the range, lead ore occurs in some of the cross-courses, and has been extensively worked at Beer Alston on the Tamar, and one or two other localities; iron is also found in similar dike near Lostwithiel, in Cornwall, and at the Berryhead on the coast of Devon; from each of which places many thousand tons are annually shipped for the supply of the Welsh furnaces.

Plumbago and manganese occur on the E. side of Dartmoor, both which are worked to some extent, and shipped at Exeter for the manufacturing districts. Porcelain, pipe, and common potters' clay, are also productions occurring in this tract, and are largely shipped for the Staffordshire and other potteries; granite and roofing slate are also quarried in a few localities. This last forms the most important production in the corresponding rock formations of Wales, the quarries of Penrhyn and Llanberis, in Carnarvonshire, being the largest, and furnishing the finest slates in the kingdom; some copper veins also occur in various parts of this group, though of very minor importance compared with those of Cornwall; in the Parys mountain, however, on the N. side of Anglesea, a very extensive deposit of that ore was discovered in the course of last century, and formed for a considerable period the most productive mine in the kingdom; it is still worked, though at present the produce is very limited. (See ANGLESEA.) On the W. side of the same island mona marble, or verd antique, is quarried for various ornamental purposes, at the termination of a large porphyry dike which traverses the district.

In the Cumbrian group, the most remarkable mineral production is the famous graphite, or plumbago, which occurs in an irregular pipe-vein at Botalter in Borrowdale. A few lead veins also occur, and are worked to a limited extent, on the N.E. side of the range; at Conistone, copper veins are wrought on a small scale; and near Ulverston, hematitic ore, which produces iron of a very ductile quality, which is used in the manufacture of carding-wire; a few quarries of roofing slate are also worked in the same neighbourhood. Beyond the limits of the three main groups we have been describing, similar rock formations occur in a few isolated ridges, of which the most prominent are the Malvern Hills, that traverse

the coo. of Worcester and Hereford; the Lickle Hill, N.E. of the last; the Charnwood range in Leicestershire; and a few intermediate rocks along the N. side of Warwickshire. Basaltic rocks also occur in the Wrekin and Coradon hills, and about the limits of the mountain line, both in Derby and Durham; a large basaltic dike also traverses Yorkshire, from Middleton to the sea-coast S. of Whitby.

The mountain lime and coal formations are the next in order, being limited on the W. by those last described; and on the E. by the Ias, which formation may be traced, by a waving but continuous line, through the kingdom, from the N.E. coast (between the mouth of the Tees and Whitby), by Charnwood Forest, Evesham, Gloucester, Bath, and Axminster, to the S.W. coast at Lyme Regis. All the mineral riches of the kingdom, as well as the greater part of its manufacturing establishments, are situated on the W. side of this line, by which the three lower of what are usually termed secondary formations are limited. In the mountain lime of the Pennine range are the chief lead mines of the kingdom; in that part of it which extends through Allendale and Alston Moor, on the E. side of Cross Fell, the ore occurs in E. and W. veins, that are heaved and disturbed by N. and S. courses, as those in Cornwall. In the Derby portion of the range many lead mines also occur, which have been wrought from a very remote era; and others in the same formation in Flintshire, near the estuary of the Dee. The coal fields to which England, and, indeed, the empire, is mainly indebted for her manufacturing superiority (see ante, p. 451.), may be thus briefly enumerated: those of Northumberland and Durham extend from the Tweed to the Tees, between the mountain line and the sea-coast; the most northerly has only been partially explored, and is worked on a limited scale, chiefly for local purposes. The coal field of S. Northumberland and Durham extends about 50 m. N. and S., with an average breadth of from 12 to 16 m. The seams or beds dip S.E., and crop out successively in an opposite direction, so that none of the beds extend through the entire limits of the district: the two thickest and best (high and low main) are 6 ft. thick, and are separated by strata of shale, sandstone, and smaller seams of coal, of the aggregate average thickness of 360 ft. The mines in this district furnish annually a vast quantity of coal, of which about 4,700,000 tons are sent to London and the S. part of the kingdom, and 1,000,000 to foreign parts. Various and very discordant estimates have been framed of the period that will probably be required to exhaust this vast deposit of fuel. But the district has not been sufficiently explored to admit of such estimates being framed on any thing like solid grounds; and, no doubt, were any deficiency in the supply of coal apprehended, methods would be found for materially diminishing the immense quantities now left in the mines, as well as for reducing the waste.

The Whitehaven is a small but valuable field, between the Cumbrian mountains and the Irish Sea, under which the adits of several of its mines are driven: the coal is exported in considerable quantities to Ireland and elsewhere. The Yorkshire and Derby fields extend N. and S. about 70 m., from Leeds onward; their breadth, between Halifax and Aberford, being about 25 m., but it diminishes considerably through the Derbyshire part, to its S. extreme, near Nottingham.

Most of the coal raised in Yorkshire is consumed in its extensive woollen, iron, and hardware manufactures, and in the domestic economy of its numerous population. The Derby field supplies, through the medium of canals, many of the midland coo. The Lancashire field is parted by a range of hills from that of Yorkshire, and extends along their base from Macclesfield to Oldham, thence N. to Rochdale and Colne, and W. to Prescott near Liverpool, having Manchester on its S. border. Coal is extracted at various parts of this extensive field, which affords all but inexhaustible supplies for the various uses of the most important manufacturing district in the kingdom. S. of the above, occur some smaller fields in Leicestershire and Warwickshire, in the vicinity of Ashby-de-la Zouch, Tamworth, Atherstone, and Coventry. The Staffordshire field extends N. and S. about 10 m., with a breadth varying from 5 to 7 m. Numerous beds of coal are worked in various parts of this field, which also furnishes potter's clay, and is the site of the potteries. The Wolverhampton and Dudley field, in the same co., extends about 14 m. N. and S., with an average breadth of 4 m., and is the most valuable of any in the central part of the kingdom. Two beds of ironstone, each of considerable thickness, also traverse the field, and supply the innumerable furnaces of the district. The whole rests on transition lime, abounding in beautifully preserved fossils. A few small fields also occur in Shropshire and Herefordshire, of which the chief is that of Colebrook Dale, 6 m. long by 2 m. in breadth. This formation is also traversed by ironstone, and many furnaces and foundries are established in the locality, though of late years it has not maintained

be without the *asperities frigoris*. (Vlt. Agric. § 18.) The climate of England is chiefly characterised by the absence of extremes in temperature, by humidity, and by almost incessant variations within a limited range, peculiarities ascribable to the geographical position of the country, in contiguity with an extensive continent on one hand, and a vast ocean on the other: the latter with nearly the same temperature throughout the year, and exerting an equalising influence over the contiguous atmosphere; the other with a varying temperature, above that of the ocean in summer, and lower during the winter months. Hence the origin and direction of the prevailing winds at different periods of the year, according to which ever of those great surfaces exert most rarely power: those blowing from the continent being comparatively dry, whilst those from the ocean, being charged with its exhalations, bring the chief part of the rain that descends, 3-4ths of the whole of it falling on the W. side of the kingdom. Rains are more prevalent during the summer and autumnal months, when the higher relative temperature of the continent, and greater rarefaction of the atmosphere in contact with it, cause aerial currents from the ocean to set in that direction, in order to supply the comparative vacuum; whilst the E. and N.E. winds, that frequently prevail in winter and spring, are attributable to the higher temperature of the sea at those periods. According to a series of observations made under the direction of the Royal Society, the S.W. is the most frequent wind in every month of the year, but is more prevalent in July and August than in any other; the N.E. prevails most in Jan. and from March to June, inclusive; whilst the N.W. is most frequent from Nov. to March, and least so in Sept. and Oct. It also appears, from the same observations, that rain is less prevalent in March than in Nov., in the proportion of 7 to 12; in April than Oct., in the ratio of 1 to 2; and in May than Sept., in the ratio of 3 to 4: hence the summer, autumn, and earlier part of winter, are the most humid portions of the year. The minor differences of climate that exist within the kingdom itself are wholly in accordance with the above views and observations. In Cornwall, the annual average quantity of rain falling is 45 in. and in the W. part of the kingdom, generally, it is found to vary from 30 to 51 in.; in the S.E. counties, and also in the metropolis and its vicinity, the quantity is only from 20 to 25 in.; whilst Norfolk has, in all probability, the least humid climate in the kingdom: as yet, however, sufficient data do not exist to make other than an approximate calculation of the average that falls in any of the districts, and of course the general average of the whole can only be stated in the same qualified way. The estimate made by Dr. Dalton appears to be, on the whole, the most precise and satisfactory on this point; and he makes the whole annual quantity falling on the surface of England and Wales, 31 in.; to which he adds a depth of 5 in. supplied from the atmosphere in the form of dew, and calculates that 23 in. of the whole are carried off by evaporation, and the remaining 13 in. through the medium of the various rivers to the ocean. We have previously noticed the limited range of the thermometer, which at the coldest period (Jan.) seldom falls much below the freezing point, and at the warmest (July and Aug.) as rarely rises higher than 80° Fahr., though occasional instances of greater variation may be cited. In the N. cos. from their contiguity to the sea on either side, the range is still more limited, rarely exceeding 75° or falling more than 2° or 4° below zero: so that their mean annual temperature is within 2° or 3° of those on the S. coast. In a general view, however, the influence of the ocean in tempering the atmosphere (as well as in the humidity it imparts) is greatest on the W. side of the kingdom, and most so within the limits of the S.W. peninsula; the temperature on the ocean at this side being, during the coldest season, rarely so low as 50°; whilst that of the German Ocean, on the other, except in the height of summer, seldom exceeds 45° Fahr. On the whole, the most obvious difference that occurs in the local climates of the N. and S. parts of the kingdom is the lateness of spring in the former as compared with the latter; at an average about a fortnight between the cos. N. of the Mersey and Humber, and those of the S. and S.W. The local effect of the W. mountain ranges is considerable, and tends to increase, in a greater ratio than would otherwise be the case, the quantity of rain falling in their vicinity; but, as a whole, the elevation of the surface is no where so considerable as to have any remarkable influence on the general character of the climate. The fens on the E. coast, and the wolds of Kent and Sussex, are the only tracts of any extent where the superfluous moisture would, but for artificial means, be retained long enough to generate miasma; in almost every other part of the country the surface has sufficient elevation and inequality to facilitate the free percolation of water, and to conduct the superfluity by natural means to the numerous streams that intersect it; so that no where can its physical structure be said to exert an injurious influence on the climate.

The new red sand occupies nearly all the remaining portion of the surface on the S. coast; it consists of beds of clay, marl, gravel, sand, &c., of various texture, — the debris of older rock strata. Extensive deposits of gypsum, and yast and all but inexhaustible beds of rock salt occur in this formation, which will be elsewhere noticed. The upper secondary strata occupy the surface from the W. limits of the lias, previously described, to those of the chalk formation on the E.; which last has the same general direction, though forming a much greater curve, which terminates at either extreme of the lias, the strata included within these limits are of very various character, and abound in fossil remains: in some parts they furnish fine freestone for building purposes; in others, lime, fullers' earth, and pipe-clay. Their aggregate thickness has been estimated at between 2,000 and 3,000 ft., all formed by deposition in an oceanic basin, as the character and abundance of the fossil remains clearly indicate. The green sand formation rests on those of the lias, and is succeeded by that of chalk, both abounding in marine testaceous remains: the average thickness of the latter, when fully developed, being about 1,000 ft. It occupies the S. coast, from the Reculver Cliff to Folkestone, and from Beachy Head to Brighton, stretching inland from the former head the weald district, and from the latter inland towards Salisbury, and thence over the Hampshire and Dorset downs nearly to Dorchester: the lulkpen, in Hants (1,011 ft.), is the highest summit of the chalk. The general dip of all the strata, from the lias to the chalk inclusive, is S.E., and very gradual: a line from the N. escarpment of the chalk in Berkshire to the Malvern Hills, would intersect the E. coast, and the strata of the entire series. The deposits above these are chiefly limited to the S.E. cos., and have little of variety or well-marked character to distinguish them; the chief are those of the London and plastic clays, occupying the basin of the Thames. Formations of similar character extend along the sea-coast, from Brighton to Southampton, and occupy a portion of the Isle of Wight. The sandy strata that occur in several of the S. cos., and known by the general name of Bagshot sand; the mixture of ferruginous sand and clay with chalk fragments (crags) occupy the E. parts of Norfolk and Suffolk; and the still more recent alluvial deposits of Holderness, the Fens, and Romney Marsh; all obviously constituted of the debris of older rock formations, and the latter resulting from atmospheric, oceanic, and other presently existing influences now in active operation. Our limits will not permit more than a brief reference to other interesting geological phenomena, such as the boulders and fragments of rocks from the Cumbrian and Welsh mountains, that are strewn over some of the midland cos.; the beds of chalk, flint, and gravel, that occur at great distances from the chalk formations, and are found capping summits of others, wholly different; and the remains of mammiferous animals in the lime caverns of York and Devon; such as those of the extinct species of the elephant, hyena, bear, &c., which must once have ranged over the districts in which these relics are deposited.

The only medicinal springs of importance are those of the cos. Derby, Gloucester, and Somerset, which will be hereafter fully described under the heads of their respective localities.

Climate. — The British sky is truly said by Tacitus to be *crebris imbribus ac nubibus furtim*, but also to

The more general enclosure and cultivation of the surface within the last century must also have greatly augmented these facilities, and improved the salubrity of the climate, which, however, as regards its chief characteristics, seems to be much the same as when Cæsar and Tacitus described it. There appears but little foundation for the notion once prevalent that the climate has deteriorated, and become colder; an inference from the fact of vineyards having once been cultivated to some extent in various parts of the country: but the same accounts also prove that verjuice formed no inconsiderable part, and in some summers constituted the only produce of these vineyards. It is probable that a better result than this might be obtained in the present day, were favourable spots selected, and any probable advantage to be derived from the culture of the vine. The mean daily range of the thermometer on an average of the whole year has been estimated at 11° for the metropolis, 14° for the midland counties generally, and 89° for Cornwall; but the extent of the daily range of course varies with the different seasons, being greatest when the sun has most influence, and the processes of evaporation and radiation are in most active operation. The mean difference between the coldest and the warmest months of the year has been stated at, for London 36° , Cornwall 114° , and England generally 94° ; but, as the same similar calculations can only be considered as probable approximations to the truth, deduced from such series of observations as exist; which, however, are far too few and limited to make further details or generalisations of any practical utility.

The great drawbacks upon the climate are the prevalence of cold, biting N.E. winds in April, May, and June, which frequently render them the most disagreeable season of the year; and the occasional occurrence of wet summers and harvests. The crops in England are very rarely injured by droughts; but they not unfrequently suffer from excess of humidity. In Cornwall, where the climate is most equal, and the winters the mildest, the moisture and coyness of the summers are such that the fruit is inferior in flavour to that raised in the more E. and midland counties, at the same time that it arrives later at maturity.

Vegetable Productions.—The Flora of the kingdom comprises between 1,400 and 1,500 indigenous species of phænogamous plants, of which upwards of 100 are due to the grass family; together with the ferns (*Urtica europæus* and *maritima*), the three common heaths (*tetralix*, *cnicus*, and *vulgaris*), and the different kinds of rushes and sedges, occupy a very large surface, and perhaps characterise better than any other the nature and capabilities of the tracts they occupy. The oak (*Quercus robur*) is the king of native British trees, and supplies the timber of which our finest ships are built. Hence the oak is intimately associated with the maritime glories of England. Take it for all in all, it is probably the best timber of which we have any certain knowledge; it is harder, some more difficult to rend, and some less capable of being broken across; but none contains all the three qualities in such great and equal proportions; and thus, for at once supporting a weight, resisting a strain, and not splintering by a cannon-shot, it is superior to every other timber. In favourable soils it will flourish at an elevation of 700 ft. The ash, alder, and hawthorn, thrive, under similar circumstances, at 800 ft.; the fir (*P. sylvestris*—the only indigenous species) at 1,000 ft.; the mountain ash, and some of the smaller and petriate varieties of the willow tribe, ascend nearly to the highest summits; whilst the birch, alder, maple, poplar, and elm, flourish only in localities much less elevated than any of the preceding. The beech and sycamore reach 750 and 800 ft. respectively; but these, though long perfectly naturalised, are foreign introductions, as are also the larches, pines, chestnut, horse-chestnut, and many others that flourish and attain to considerable size in the extensive parks and plantations of the kingdom. Of indigenous fruits, the list is very scanty; the pear, corn, medlar, wild cherry, bullace, raspberry, blackberry, gooseberry, currant, strawberry, and cranberry, being nearly, if not quite, all that can be so called; and the greater part of these, in their natural state, can scarcely claim to rank as such in the more common acceptation of the word.

Every one is ready to admit that England is indebted to commerce, or to her intercourse with other nations, for a very large proportion of her superior wealth, and comforts. But it is now seen that her obligations in this respect are really much greater than is generally supposed. We are not indebted to foreign countries for mere luxuries and superfluities, but for the greater part of those plants and vegetables that supply the largest portion of our food. We have brought from abroad all our bread corns, our potatoes, most part of our garden stuffs and fruits; with hops, turnips, and a vast variety of useful and ornamental vegetable products. But it is the good fortune of England that most of these are so admirably suited to the soil, that, unless the contrary were

known, they might be supposed to be indigenous. Those species of fruits that require a powerful sun to bring them to maturity do not, indeed, answer in our climate, except artificial means be employed in ripening them. But the more useful kinds attain to perfection. *Solanum esculentum viticolum*, *et cetera calidioribus terris oriri sensu pleni frugum, fecundum; tardè mitescent cib proventum; cademque utriusque rei causa, multus humor terrarumque calique.* (Tacit. Agric. § 13.)

Of the smaller herbaceous plants our limits only permit the notice of a few most characteristic of the features of an English landscape, or which are otherwise distinguished for their beauty and rarity. Of these, the various grasses that may almost be said to be in a state of constant growth, and to cover so large a portion of the surface, in a liberal sense, with perpetual verdure, claim precedence; of flowers, the daisy, primrose, cowslip, violet, and lesser celandine, are the most common and most universal favourites, next which, perhaps, the woodbine, eglantine, hyacinth, harebell, and goldcup, contribute more largely to the adornment of the scenery: of the less common kinds, the tamarisk, musk, gentian, and a few others, are limited to the S.W. peninsula; the hop, briony, pheasant eye, &c., to the midland co.; the juniper, parsnip, and a few others, to the more elevated regions of Wales, and the N. coast; and the water lily can hardly be considered in its native locality when expanding its fine flowers on the surface of the Cumbrian lakes. The foxglove, henbane, hemlock, nightshade (*Atropa*), and the *Cicuta virosa* of the Cambridge fens, are almost the only species that possess active medicinal qualities. The wood, madder, teasel, hop, flax, buckwheat, clovers, tares, and mellots; together with the carrot, parsnip, cabbage, sea kale, and asparagus, comprise the chief indigenous species available for economical purposes; whilst the mistletoe and ivy claim a passing notice from traditional associations. Of cryptogamous plants there exist about 300 distinct species of moss, and upwards of 500 of *Alga*, that is, lichens and sea weeds: two or three of the lichens are identical with those extensively used as dyes, but they scarcely occur any where in sufficient abundance to be worth collecting: various species of sea weed are thrown abundantly on some parts of the sea-coast, and collected as a manure, but are no where, we believe, converted into kelp or barilla.

Zoology.—Without recurring to an older geological period, when the animals, whose bones are found in the limestone caves of Yorkshire and Devon, occupied the country, we find that, within a comparatively recent period, it was in a great degree overpread with vast forests, the abodes of many wild animals, which, as well as their coverts, have now wholly disappeared. The bear may be traced as an inhabitant of these down to A.D. 1067, and may have existed later: the beaver to 1168, when its habits were noticed and described by Giraldus Cambrensis, as witnessed by him on the Telf; many notices of its occurrence so recent as the reign of Edw. I., notwithstanding the war of extermination waged against them by Edgar. The New Forest in Hampshire was the latest resort of the wild boar, which must have been extirpated during the period of the last civil war: the wild cat has disappeared from its latest haunts—Cumberland and Westmorland—within living memory, but is still found in Scotland. The wild ox (*Ursus*) has only escaped a similar fate, by having been preserved as a curiosity in Chillingworth Park near Berwick, and in one or two other localities, where this fierce and distinct breed (with cream-coloured hide, black muzzle, and downward-bent horns) may still be seen. The stag, fallow deer, and roe have also been saved by similar interference and protection. The indigenous quadrupeds now existent in a wild state are—the fox, badger, polecat, beech and pine martens, otter, weasel, stoat, hedgehog, mole, land and water shrews, squirrel, hare, rabbit, dormouse, field and water lemmings, black rat, common field, and harvest mice, and six species of the bat tribe. Of cetaceous mammals, the porpoise and porpoises are the only species that occur with any frequency, though such lists as comprise stragglers on coasts or in others, as of occasional occurrence on the 13. The Norway rat is an ascertained immigrant, which has warred with the indigenous species, and made it by far the scarcest of the two. The domesticated animals and poultry will be noticed under another head. The great bustard appears to be almost the only species of bird that has been banished from the kingdom by the extension of enclosure and cultivation; although the bittern and two or three others have become scarcer, and have wholly deserted many of their ancient haunts, yet they may still be met with, whilst the former has wholly disappeared from its latest locality, the Wiltshire downs. Pennant, in 1777, notices bustards as occurring in flocks of 50 or more, on most of the open tracts of the S. and E. counties, from the Dorset downs to the Yorkshire wolds. Of those species which are either indigenous or habitual visitors, 30 are birds of prey; of gallinaceous birds (grouse, pigeons, &c.) there are 80 species; of *insectivores*, or the tooth-billed tribe (skippers,

ENGLAND AND WALES.

707

returns in 1877, it appears that 1,367,328 persons paid the assessment levied upon every lay person, whether male or female, of 14 years of age, mendicants only excepted. But Wales, Chester, and Durham are not included in these returns; and there are doubtless many omissions in the returns that were given in. Little dependence can, therefore, be placed on them; but Mr. Chalmers has, therefore, concluded that the pop. at the period in question amounted to 2,350,000. Perhaps, however, this estimate is rather under the mark; for, in 1877, the country could hardly have recovered from the disastrous influence of the great pestilence of 1849; and it is highly probable that the children and persons under age then exceeded a third part of the pop. at which they are estimated by Mr. Chalmers. Harrison and Sir Walter Raleigh set down the number of fighting men in the kingdom in 1875 and 1883 at 1,173,000. But this was probably little better than a rough guess; and unless it included all the able-bodied individuals between certain specified ages, it would afford but very slender means by which to estimate the pop. Perhaps, however, we may conclude that it was then somewhere about 4½ or 5 mil-

lions. There is no reason to suppose that the pop. was materially affected by the civil war under Charles I.; and the period from the Restoration to the Revolution was one of considerable prosperity. Previously to the Revolution, a hearth tax had been imposed; and the celebrated Gregory King, founding on returns obtained under this act, estimated the pop. of England and Wales, in 1686, at 5,600,000; and we are inclined to think that this estimate came very near the mark. A great deal of discussion took place in the course of last century with respect to the progress of pop. Dr. Price and others contending, on the one hand, that it was progressively diminishing; while Mr. Howlett, Mr. Wales, and others, contended, on the other, that there were really no grounds for this conclusion, and that, instead of diminishing, the pop. was rapidly increasing. The census of 1801 put an end to these disputes, and showed that, supposing Gregory King's estimate to have been nearly correct, the country had gained an accession of about 5,373,000 inhab. in the course of the 18th century! We subjoin the returns of the censuses of 1801, 1811, 1821, and 1831:—

POPULATION OF ENGLAND AND WALES, exclusive of Army and Navy, in 1801, 1811, 1821, and 1831; showing its Amount at each Period in each County, with the Ratio of its Increase in each decennial Period.

The increase having been about 16 per cent. during the 10 years ending with 1830, or nearly 1½ per cent. per annum, if we suppose, as is most probable, that the increase has continued in a nearly similar ratio since 1830, the pop. of England and Wales in May, 1839, exclusive of the army, navy, &c., will have been about 15,577,000 persons.

Until 1837, when a new system of registration was established under the direction of the Registrar General, there were no means by which to form a correct estimate of the numbers of births and deaths. In 1838, the clergy were required to keep registers of these, as well as of marriages, in their respective parishes; and in 1803 the injunction was renewed; but the rite of baptism in the parish church being objected to by numerous sects of Dissenters, the registration of births has been at all periods very defective. The same was the case, though in a less degree, with respect to the registers of deaths, various classes of Dissenters having their own cemeteries, in which their own forms of burial were adopted; and it happened that in many places a reference to the parish registers merely supplied the means of making an approximate estimate of the number of deaths. The statute of the 36th Geo. II., which made registration indispensable to the validity of a marriage, having come into operation in 1754, the registers of marriages have been since nearly correct. The following

tables, extracted from the official returns, and compiled with great care and industry by Mr. Hickman, embrace all the information that it has been possible to bring together with respect to the progress of population in England and Wales, from parish registers, for a pretty lengthened period.

TABLE, showing the Number of Marriages in each Year from 1754 to 1800.

Number of registered Marriages in each Year from 1753 to 1800.					
Years.	Marriages.	Years.	Marriages.	Years.	Marriages.
1755	49,379	1771	60,612	1786	68,922

Middle								

It is seen from this table, that the proportion of marriages to the whole pop. during the last quinquennial period is 1 to 129. About 4/5 births is the estimated proportion to each marriage, allowance being made for defects of registration; and the proportion of male to female births is as 19 to 18. It appears from the burial registers, that the proportion of deaths to the pop. for the 5 years ending with 1800, as compared with that of the 5 years ending with 1890, had decreased from 1 in 48 in the former period, to 1 in 51 in the latter; and the annual report of the Registrar-General, for the year ending 1890, gives the number of registered births 900,135 (an amount probably defective by 1-5th at least), marriages 111,461 (107,901 of which were according to the rites of the established church), and deaths 338,660. We have elsewhere given some statements illustrative of the diminished rate of mortality, and improved health of the community, to which we beg to refer the reader. (See *ant.*, 460.) At present, after deducting the deaths consumed by the diseases of infancy, &c. the whole ascribed to tubercular consumption, consumption, mæsticæ disease, &c. Next to these, fever, dysentery, and small-pox must be considered as amongst the most frequent causes of death. The two former, which, together with plague and cholera, caused in the 16th century 4-10ths of the total mortality, sweeping off annually 31 in every 1,000 of the existing pop. (or about 8 times as many as now fall victims to consumption), are now much less frequent. Small-pox, which between 1760 and 1780 was estimated at an annual average of 3,250 deaths in the metropolis, and 1,740 during the same period in the provinces, did not, during the 5 years ending with 1823, occasion more than 100 deaths in the metropolis, and 1,000 in London.

Table of Population.—The table previously given contains the information obtained under the census of 1870, as to the density of the pop. per sq. m. and per sq. mi. But all inferences as to the condition of society, derived from such tables are most likely to be erroneous, unless it be known what proportion of the pop. live in towns and villages, and what in the country; and whether the increase of pop., when such is taking place, be the result of an increase of the town or of the country pop. Great density of country pop. is generally accompanied by a scanty subdivision of the land, and indicates a low

which take a high rate of civilisation. But if great density of pop. be the result of the growth of the towns and villages, whilst being accompanied by the too great subdivision of the land, it is one of the most pernicious circumstances of a high state of civilisation, and of great improvement to the state. The example of Ireland and of England, notwithstanding the great increase of pop. in both countries, will better the point, as exceedingly dense; but that density not being the result of any increase of manufacture or commerce, or of town pop., but of the purely agricultural pop., constituted by the endless division and subdivision of the land, is, in reality, proof of the low state of the civilisation, and of the vicious economical condition of the country. Luckily, the increase of the pop. of the towns and villages, has been the result of the unrepresented increase of manufacture and commerce; and has, consequently, been almost wholly confined to towns and villages. We judge, as exemplifying this increase, an account of the pop. of the principal towns in England, in 1811, 1821, and 1831, specifying the number of inhab. in 1811, 1821, and 1831, and the number of inhab.

Town.	Populat. 1811.	Populat. 1821.	Populat. 1831.	Inhab. Houses, 1831.	Inhab- itants to a House, 1831.

Industry—Tenures, Estates, &c.—The tenures under which land is held have varied very much at different periods of our history. At present, they may be divided into freehold, copyhold, and leasehold. By the first, an estate is held unconditionally, under the constitutional laws of the kingdom, liable to neither fine nor forfeiture. By the second mode, estates are held of corporate bodies, or of individuals, as portions of some manor or other possession, and subject to certain claims, customs, &c. Leaseholds are either long, as for 1,000 years; life leaseholds, contingent on one or more lives; or subject to certain fines or conditions, but at all times giving a power of alienation or transfer to the lessor. Such leases as do not convey this power do not strictly come under the designation of tenures; they form, however, a large and important class of holdings, usually varying from terms of 7 to 14 years, and the conditions and stipulations in them have a powerful influence over agriculture and the value of property, in the districts in which they prevail. Lands held merely from year to year, at the option of either party, are said to be held at will, and form a large proportion of the lands of the country. The size of estates varies exceedingly; but despite the great number of very large estates, it is still true that landed property in England is very much divided; by far the largest portion of the kingdom being portioned out into estates, under 1,000*l.* a year. Dr. Becke, in 1801, estimated the number of proprietors in England and Wales at 200,000; and if the total gross rental of the kingdom be estimated at 36,000,000*l.*, it will give 160*l.* as the average annual value of each estate. But as a great number of estates are much above this average, it follows that the majority must be proportionally below it.

Agriculture.—According to the census of 1831, the number of families chiefly employed in agriculture, was 834,543; the number of agricultural occupiers of land employing labourers, amounted to 161,188; the occupiers not employing labourers, to 114,799; and agricultural labourers, to 799,875.

Arthur Young, in 1770, estimated the capital employed in agriculture at 42*l.* per acre; at present it may, perhaps, be taken at from 6*l.* to 7*l.* an acre, which, on 31,000,000 acres, will give between 186,000,000*l.* and 217,000,000*l.* The rental of the land in England and Wales may be estimated at between 1-4th and 1-5th part of the value of the total produce. It amounted, according to the returns obtained under the Property Tax Act, in 1810-11, to 29,503,070*l.*, being an average of 1*l.* 11*sd.* per acre; and it is believed that this is not very far from its present amount, the fall that has taken place in prices having been every where partial, and in many parts more than counterbalanced, by the spread of improvements, and the opening of new and better markets for all sorts of produce. (*Statistics of British Empire*, i. 534. 2d ed.) Under the Property Tax Act the profits of the farmers were estimated at two-thirds of the rent; and though this was an absurd and most unjust rule by which to tax individuals, yet it is believed that, at an average, it was not very wide of the mark. Perhaps at present (1838) the gross profits of the farmers may be estimated at 21,000,000*l.*, or 22,000,000*l.* Farms in England are of a medium size, their average being probably about 150 or 160 acres. Wheat, barley, and oats, but especially the first, which may be emphatically said to be the bread-corn of England, are the principal crops. The best wheat, as well as the greatest quantity, is raised in Kent, Essex, Suffolk, Rutland, Herts, Berks, Hants, and Hereford. From 24 to 3 Winch, bushels per acre are required for seed, and the average produce in the above cos. may vary from 22 to 32 bush. per acre. Barley is grown principally in the eastern, and some of the midland cos.,

† The apparent falling off in the amount of population is principally ascribable to the exclusion of seamen from the returns in 1831 that were mentioned in those of 1821.

‡ The parish of King'swinford contains 7,120 acres.

§ The chapelry of Saddleworth contains 15,260 acres.

and chiefly for malting; oats are principally in demand for horses; and the extraordinary increase of the latter has occasioned a proportional increase in the culture of oats. They are grown more especially in the N. and N. E. cos.; in the midland cos. their culture is less extensive, but it is prevalent throughout most parts of Wales. Rye is scarcely at all raised for bread, except in Durham and Northumberland; where, however, it is usually mixed with wheat, and forms what is called *malsh*, a bread corn in considerable use in the N. Seas and beans are important crops, and in some parts are pretty largely raised; but the produce of the former is subject to much fluctuation, and perhaps the average of the whole kingdom is not more than 20 bush. per acre. That important vegetable, the potato, has become pretty general throughout the kingdom, but is most extensively raised in Lancashire and Cheshire, where it also comes to the greatest perfection. The introduction and general extension of the turnip husbandry has effected a revolution in the agriculture of England, second only to that which the inventions of Arkwright have effected in manufactures. They have now all but superseded fallows on the lighter lands. But the giving a valuable crop to the farmer, where there was none, without in any degree diminishing the facilities for clearing the land, is but a part of the advantages resulting from the turnip culture: while it enables the farmer to keep and fatten a much larger stock, it also enables him to accumulate a vastly greater supply of manure—of that invigorating power which adds to the productiveness of the best lands, and without which the middling and inferior would hardly repay the husbandman's toil. It is not easy to estimate the prodigious additions that have been, in this way, made to the productive capacities of the soil; and the recent application of bone manure to the turnip husbandry has already extended, and no doubt, will continue to extend, its advantages still further. Rape is grown for its oil, or as food for sheep, in all parts except the cos. N. of Yorkshire; and cabbages and carrots are chiefly produced in the E. Flax and hemp are at present but little raised, being found less profitable crops than most of the foregoing; the former is most abundant in the cos. of Somerset and Dorset. Hops are for the most part confined to Kent, to the vicinity of Farnham in Surrey, and to Herefordshire; their crop is the most uncertain of any, varying in the same localities, in different years, from 1 to 20 cwt. an acre. The total annual produce may be estimated at about 30,000,000 lbs. The apple orchards of Devon, Somerset, Gloucester, and a few other neighbouring cos. are important, on account of the cider they furnish; Devonish is the most noted cos. for this kind of produce; but that of Hereford and Gloucestersh. is of better quality. Perry is made chiefly in Worcestersh. Kent is famous for its cherries and filberts.

The best farming counties are on the E. coast; and Northumberland, Lincoln, and Norfolk, may bear a comparison with Berwickshire or E. Lothian. Such, however, is not the case in very many districts; and we believe it may be safely affirmed that the available produce of the kingdom might be doubled, were it generally cultivated on the principle, and according to the practice followed in the best farmed districts. Winter wheat sowing usually takes place from Sept. to Nov.; drilling is more in use for barley than wheat, which is mostly sown broad cast. The grain harvest is commonly at its height in Aug. and Sept. Potatoes are taken up, and stored for winter use in Oct. and Nov., which are also the chief cider months.

The farm implements in common use in England are decidedly superior to those of most other countries; though a good deal remains to be done in the way of their improvement. Perhaps few classes of people maintain their prejudicial with such obstinacy as agriculturists, and especially agricultural labourers; and to this must be mainly attributed the continued use of the old-fashioned clumsy ploughs which are to be seen in some districts; and what is far less excusable, the employment of 3, 4, 5, 6, and sometimes even 7 horses, to do what might be as well or better done by 2! The use of horses in farm labour is universal, except in Sussex, and some of the W. counties; and machines for thrashing, &c. have become common.

Britain has been celebrated from the era of Cæsar for the extent and excellence of her pastures, and the abundance of her cattle. A full half or more of the arable land of England is applied to grazing husbandry. The best grazing lands are in the vale of Aylesbury, the Fens, Romney Marsh in Kent, and some of the midland and W. counties. Hay is made from natural grasses, and from clover, rye-grass, and in the S. counties sainfoin and lucern; the natural sward yielding from 1 to 1½ tons an acre, and the artificial crops from 1 to 3 tons. Middlesex is justly celebrated for the perfection to which hay-making has been carried in it. The hay-harvest throughout the country takes place pretty generally in June and July.

There are several breeds of horses, the aggregate

stock of which, at the present time, probably reaches 1,800,000 head, worth, perhaps, about 18,000,000. sterling. Of this number it may be estimated that 2-3ds are employed in agricultural labour. The old English horse is now nearly extinct; the large dray-horse, so admirably adapted for draught, which is believed to have been originally imported from the Low Countries, is bred in considerable numbers in some of the midland counties. Yorkshire is celebrated for its carriage horses, especially the Cleveland bays; and the farm breed of Suffolk is also excellent. The English race-horse, derived from the Arab, Persian, and Barb, is superior to every other breed in speed, and inferior to none in bottom and beauty. Mules and asses are very little used in England; the former are almost unknown, and the latter being chiefly to the poor.

The stock of cattle may be estimated at little short of 4,000,000, about a fourth part of which are annually slaughtered. They are divided into long-horned, short-horned, and polled: the first division comprising the Lancashire; the second, the Holderness, Northumberland, Durham, N. Devon, Hereford, and Sussex; and the last, the Suffolk duns, &c. Butter and cheese are most important products: Epping Forest, in Essex, Cambridge, and Dorset, are the most celebrated districts for the former; and Cheshire, Gloucestershire, Wilts, and other W. counties, and Leicestershire, for the latter. The rich and fine cheese, called Stilton, is made wholly in Leicestershire. Milk is an important marketable article in the vicinity of large towns, and the cows kept for the supply of this article to the metropolis alone have been estimated to amount to 12,000 yielding milk to the value of 700,000. sterling a year. Sheep, the total number of which in England and Wales may be about 36,000,000, are divided into long-woolled and short-woolled; the former, including the Romney Marsh, Teeswater, Lincoln, and New Leicester breeds; and the latter (which far excel the former in the quality of the mutton), the South-Down, Dorset, Wilts, Hereford, &c. breeds. The Merino breed, introduced from Spain towards the end of the last century, has been chiefly useful in crossing and improving the fleece of other breeds. In some parts of England sheep are kept on fallows, for the benefit of their manure. Great numbers are fed on the open chalk downs of the S. counties. The total produce of wool in England annually is estimated at about 470,000 packs of 240 lbs. each. Hogs are fattened on most farms, and are also kept with advantage by millers, dairy-men, brewers, distillers, &c., whose refuse they consume. The Hants, Berks, Gloucestersh., and Herefordsh. are the best of the large breeds, and that of Suffolk is distinguished amongst the smaller ones. Yorksh. and Westmoreland are famous for their hams; Hants, Wilts, and Berks for their bacon. Poultry are reared on most farms, and by the majority of agricultural cottagers. Large flocks of geese are kept in the great fens, and plucked once a year for their quills, and 4 or 5 times for their feathers. Fowls are largely reared at Oakingham in Berks, and Dorking in Surrey has acquired a name for a fine and large five-clawed variety. Ducks are plentiful in Bucks, and pigeons in almost every co. Since the foundation of our W. India colonies, and the importation of sugars, the demand for honey has declined; this, however, has not affected wax, so that bees still keep their ground as appendages to almost every farm, and many cottage gardens. Goats are not reared except in the few mountainous parts of England, and deer are now mere articles of luxury, kept in the parks of noblemen and gentlemen. There are still some extensive rabbit-warrens in Norfolk and Cambridgeshire, but they have greatly decreased.

About 122,620 acres of land are occupied by the royal forests, 63,620 of which are inclosed for the growth of timber. As already observed, England is very well wooded, especially the S. and W. cos. Oak, the most valuable species, grows in the greatest perfection in the weald of Kent, Sussex, and Surrey. The oak-bark harvest takes place in May. For an estimate of the quantity and value of the agricultural produce, live stock, &c. of England, see *ante*, 453. &c.

Agriculture received its first great impulse in England during the reign of Henry VII. from the policy of that monarch; and together with all kinds of commercial enterprise throughout Europe, it derived a stimulus from the great discoveries of the period. But the breeding of sheep was the branch of rural industry the first to extend, and throughout this and the succeeding reigns for a lengthened period wool was extensively exported. The first English treatise on agriculture was written in the reign of Henry VIII., and the hop, as well as several of the common garden vegetables, are introductions of the same period. Sir W. Raleigh has the credit of introducing the potatoe, which, in the early part of last century, appears to have been a tolerably frequent crop in Lancashire, from which its culture extended to other parts of the kingdom. Turnips seem to have been first cultivated on a large scale in Norfolk, also in the early part of the same century. Pope speaks of "All Townsend's turnips." The

old duties and restrictions on the exportation of corn were abolished at the Revolution, and a bounty was then also given on its export.

This, no doubt, gave a stimulus to agriculture, which has been still further promoted by the restrictions that have been imposed on importation from abroad. But we incline to think that the influence of this encouragement has been much overrated; and there can, we apprehend, be no question that agriculture in England is mainly indebted for its progress and the high state of improvement to which it has attained to the operation of the poor laws in preventing the splitting of farms and the building of cottages, and, above all, to the extraordinary increase of manufactures and commerce since 1760. This occasioned a corresponding increase of the town population, accompanied, at the same time, by a great increase of luxury and refinement, which led not only to a proportionally increased demand for the products of the soil, but especially for those of an improved species. Hence the great comparative increase in the culture of wheat, and the extraordinary increase that has taken place in the demand for butchers' meat. During the latter years of the war prices were comparatively high in England, and large quantities of foreign corn were imported; but on the renewal of peace, and the intercourse with the Continent, the prices gave way; and such has been the progress of improvement, that, despite the wonderful increase of population, the prices of agricultural products in England since 1830 have been but little above the level of the Continent (*see DANTZIG*); while the importations have been of comparatively limited extent. And considering what has been already accomplished, and the vast field that still remains for improvement in England, and still more in Ireland, it is really not too much to expect that our prices should, at no distant period, be once more reduced to the level of the Continent; and that we should again, as formerly, be an occasionally exporting country.

Fisheries.—These are not commensurate, either in extent or importance, with the extent of coast; and have never been a principal source of national wealth. The herring fishery is the principal, and the capital employed in it has been estimated at 250,000*l.*; but until the middle of last century most of the fish taken on the E. coast (its chief seat) were captured by Dutch smacks. Yarmouth may be the principal resort of the herring, and about 100 thousands of from 40 to 50 tons each, belong to the town of Yarmouth, where the fish, smoked for sale, have obtained an extensive celebrity under the name of "Yarmouth bladders." At Sunderland and Whitby, where there are also herring fisheries, the fish are mostly salted. The cod fishery, including those of haddock, whiting, ling, hake, &c., ranks next in importance. According to the Report on the Channel Fisheries, p. 17., the number of boats occupied in the herring, cod, ling, &c. fisheries, was 239, manned by 5,974 men and boys. The oyster fishery is exclusively confined to the coasts of Devon and Cornwall. A portion of the fish caught are eaten fresh or salted in those counties; and the rest, to the yearly amount of about 30,000 hds., are salted, and exported chiefly for the Italian markets. About 1,000 boats and 3,500 men are employed in the pilchard fishery, exclusive of 1,500 hands, chiefly women, occupied on shore in curing the fish. Mackerel are very abundant, and extensively consumed during their season; sprats, which arrive in immense shoals on the E. and S.E. coasts, are caught in great numbers for manure. Oysters, which meet with so rapid and extensive a sale in the markets of the metropolis and other large towns, are found on many parts of the coast; and they are largely bred near Milton on the Kentish shore of the estuary of the Thames, and in the tideways of the creeks on its Essex shore. Some very fine oyster-beds also exist at Emsworth, in Hampshire; others of a larger kind come from Poole, Jersey, &c.

Mining Industry.—Coal stands at the head of the mineral products of England; and we are probably more indebted to our inexhaustible supplies of this valuable mineral than to any thing else, for the extraordinary progress we have made in manufacturing industry. (*See ante*, p. 450.) The coal-mines are all in the N. and W. parts of the kingdom; and these, consequently, are the great seats of our manufactures.

The following is an estimate of the total produce of coal in Great Britain in 1839:—

	Tons.
Domestic consumption and smaller manufactures	18,000,000
Production of pig and bar iron	6,000,000
Cotton manufacture	800,000
Woolen, linen, silk ditto	800,000
Copper smelting, brass manufactures, &c.	925,000
Salt works	350,000
Lime works	500,000
Railway carriages, steam-boats, &c.	1,900,000
Exports to Ireland	28,275,506
Little to Colonies and Foreign parts (1839)	1,000,000
Total	31,084,417 *

* This estimate differs from that on p. 451.: it is, however, the more accurate of the two; and, if any thing, it is still rather under than over the mark.

During the same year the imports of coals into London amounted to 2,639,256 tons, of which 2,626,323 were brought coastwise, and the residue by internal navigation. It is difficult to discriminate between the consumption of England and Scotland; but we are not inclined to estimate the consumption of the latter at above 6 millions of tons. Supposing the above quantity of coal to cost the consumer 10s. a ton at an average, it will cost in all 16,512,268*l* !

Of this quantity, the Tyne and Wear districts in Northumberland supply above 6,000,000 tons, or rather more than 1-5th part of the whole. These districts employ about 23,000 miners, &c.; and multiplying this sum by 6, and adding thereto 25,000 for the number of seafaring men employed in its transport, we have a total of 140,000 individuals directly deriving their support from their manual labour in the coal trade.

Iron ranks next in importance to coal. It was known to exist at a very early period, and the Romans, and perhaps, also, the Britons, had iron-works in the Forest of Dean, and elsewhere in the kingdom. Iron ore is very generally diffused; at present, however, all the great iron-works are situated in the coal districts, an abundant supply of coal being indispensable to the extensive production of iron. But in the infancy of the iron trade, when timber was the only fuel employed in smelting the ores, Kent and Sussex being the best wooded counties, were also those in which most iron was made. In 1740, the total quantity of pig iron made in England and Wales did not exceed the trifling quantity of about 17,000 tons, and we were then, and for a considerable time afterwards, mainly dependent on foreign supplies. But about this period coal began to be successfully substituted for timber in the preparation of iron, and its production was, in consequence, materially augmented. In 1750, the quantity produced did not, however, exceed 20,000 tons; but in 1788 it had increased to 68,000 tons, and in 1796, to 125,000 tons. The progress of the trade has since been rapid beyond all precedent. In 1806, a project (a most insane one certainly) was entertained for laying a tax on pig iron; and it was then ascertained that the production amounted to about 250,000 tons a year. In 1820 the produce had increased to about 400,000 tons; and in 1830, it was carefully estimated at about 641,000 tons! But owing to the great demand for iron for railways, and other public works, the increase of the business during the last 10 years has been still more considerable; and we are well assured that, at this moment, the produce of iron in England and Wales is not under 1,000,000 tons a year! We subjoin an account of the quantity of pig iron produced in England and Wales in each of the principal seats of the business in 1839:—

	Tons pig iron.
Glamorganshire	180,000
Monmouthshire	200,000
South Staffordshire and Worcestershire	340,000
North Staffordshire	15,000
Shropshire	100,000
North Wales	55,000
Yorkshire and Derbyshire	100,000
Northumberland, Forest of Dean, and sundries	80,000
	1,000,000

The first four items in the above statement have been ascertained with great accuracy: the other items are less certain, but they cannot vary materially from the mark. It may be worth while to mention, as evincing the extraordinary progress of the iron trade, that it could hardly be said to exist in S. Wales previously to 1760. So much indeed, was this the case, that in 1755, the land and minerals for several miles round Merthyr Tydyl—then an inconsiderable village, but now the seat of the greatest iron works in the kingdom—were let for 99 years for a rent of 200*l*. a year!

Supposing its average price to be 6*l*. 10*s*. a ton, the pig iron annually produced in England and Wales will be worth 6,800,000*l*.; and adding to this 1,500,000*l*. for the labour required to convert the pig iron into bar iron, that is, into bars, bolts, rods, &c., the total value of the iron produced in England and Wales will amount to 8,000,000*l*. a year. Besides supplying the prodigious demand for iron for the hardware manufactures, and other channels of consumption at home, we now export about 255,000 tons, the value of which, in 1839, exceeded 2,700,000*l*. We still, however, continue to import about 20,000 tons a year of foreign iron, principally Swedish, for conversion

* In the estimate of the mineral produce of Great Britain, given *ante*, p. 451, the total produce of pig iron is set down at 1,150,000 tons, it being supposed that the produce of Scotland and Wales might be taken at 150,000 tons a year. But we have since procured an elaborate and carefully drawn up account of all the Scotch iron works, and of their produce, from which it appears that, in June, 1840, there were 61 furnaces in blast in Scotland, producing at the rate of 329,500 tons a year! Several new furnaces were then also in the course of being built. In June, 1835, there were only 29 furnaces in blast in Scotland, which were estimated to produce 75,000 tons; it appears, therefore, that the production of iron has more than tripled in the course of the last five years—an almost unexampled fact in the history of mining industry.

into steel, for which it is better fitted than British iron. It is estimated that from 210,000 to 250,000 individuals are directly dependent for subsistence on the iron trade.

The production of tin is confined to Cornwall and Devonshire; these are also the great copper co.; but copper is likewise produced, though in smaller quantities, in N. Wales, and some other parts. The total annual produce of tin may be taken at 4,500 tons, worth from 6*l*. to 80*l*. a ton; and that of copper at 13,000 tons, worth 90*l*. or 100*l*. per ton. (See CORNWALL.)

Lead mines have been wrought in England from a very remote epoch. At present the most productive are in the N. co.; their total produce is estimated at from 45,000 to 50,000 tons, of which from 10,000 to 15,000 tons are exported. It is believed that about 25,000 tons of the lead, raised in England and Wales yields, at an average, 8*oz*. a ton of silver. In consequence of improvements in the processes, it is found to be profitable to extract this silver; and about 30,000*l*. worth of silver is now obtained in this way. Zinc is found in Derbyshire, &c., manganese in Somersetshire, and plumbago or black lead of a very superior kind at Borrowdale, in Cumberland. Salt, one of the most important of the British minerals, is procured in immense quantities from both fossil beds and brine springs, in Cheshire and Worcester-shire. Previously to the discovery of the fossil beds, during the 16th century, and subsequently, a good deal of salt continued to be made by the evaporation of seawater in salt-pans, at Lymington, near Portsmouth, and at other places; but the works at these places are now all but abandoned, while the article in question has become greatly improved in quality; and instead of being imported, as formerly, is very largely exported. The consumption of Great Britain only, exclusive of Ireland, amounts to about 180,000 tons, and the foreign exports to about 300,000 tons a year; mostly sent to the U. States, British N. America, the Low Countries, Russia, Denmark, &c. Before 1823, an oppressive tax of 4*s*. a bushel, or about 30 times the original cost price of the article, was imposed on salt; but in that year this enormous tax was totally repealed. Alum, fullers' earth, chalk, and lime, are amongst the remaining useful minerals; clay for bricks, tiles, earthenware, &c., is also a product of considerable importance. Freestone is very abundantly diffused; but most of our buildings being constructed of brick, its use is limited, except for pavements, &c. Bath or Portland stone, which has hitherto been mostly used for building, there are granite quarries at Dartmoor, Haytor, &c.

Manufactures.—Of these the most ancient is that of woollen, the chief seats of which are the W. Riding of Yorkshire, and the cos. of Gloucester, Wilts, Devon, Lancaster, and Somerset. The first impulse towards the improvement of the woollen manufacture was given in the 14th century, by Edward III., who invited a number of Flemish manufacturers to settle in England. But the manufacture, though now grown almost to our own day, under a number of vexatious and oppressive restrictions; and it did not begin to make any very rapid progress, or to participate in the wonderful improvements made in the cotton trade, till the introduction of the gig-machine, &c., in 1802, and the repeal of the prohibitory acts of Edward VI. and Mary, in 1807. Leeds, Wakefield, Huddersfield, and Saddleworth, are the great centres of the broad-cloth manufacture; Halifax is noted for its flannels and balizes, and Bradford for worsted spinning, &c. Narrow cloths are made at and near Huddersfield; and blankets, flannels, &c., between that town and Leeds. At Dewsbury and Batley there are large establishments, called *shoddy mills*, in which old woollen rags are torn to pieces, respun, and remanufactured, sometimes with and sometimes without an admixture of new wool, into various descriptions of coarse cloth. (See DEWSBURY.) Rochdale in Lancashire is also a great seat of the woollen manufacture.

Gloucestershire has numerous fine broad cloth factories; but Bradford in Wilts is the principal centre of the superfine cloth trade. At an average of the 10 years ending with 1837, there were annually produced in Gloucestershire 1,784,528 yards of every description of cloth. (*Hand-loom Report*, v. 365.) The cloths of Somerset are of inferior quality. Serges, or long ells, are made in almost every town and village in the co. of Devon, and also to a considerable extent at Wellington, in the co. of Somerset. Carpets are principally made at Axminster, Kidderminster, Ashton, Wigan, &c. Salisbury is noted for its flannels, and Witney, in Oxfordshire, for its blankets; though most of what are called Witney blankets are in reality made in Wales. Norwich was long the principal seat of the worsted manufacture; but the command of coal, and the greater facilities for carrying on the business enjoyed by Bradford, and other places in the West Riding of Yorkshire, have given them a decided superiority. The manufacture of woollen and worsted stockings is principally carried on in Leicester-shire; about 12,000 stocking-frames being supposed to

be at work in that county. Coarse woollens, druggets, &c., are made in Cumberland, bazels, &c. in Essex and Suffolk, and a few articles are made in North Hants and Surrey; but the woollen manufactures of the S. cos. are comparatively unimportant. The total value of the exports of woollen goods in 1839, amounted to 6,271,647*l.*, of which the exports to the U. States made 2,142,352*l.* The woollen factories of England and Wales employed, in 1838, 30,115 males, and 18,387 females.

Cotton Manufacture.—We have already noticed the rise and progress of this great department of British industry. (See *anál.* p. 455.) Vast as this manufacture now is, it may be said to have almost entirely grown up since the accession of Geo. III., in 1760. The first grand stimulus was given to it in 1767, by the invention of the spinning

Jenny; and the subsequent, and all but miraculous inventions of Arkwright, Watt, Cartwright, Crompton, and others, have carried it to the extraordinary state of improvement to which it has now arrived. Cotton goods of great beauty and excellent quality have been so much reduced in price, as to be within the command of all but the merest beggars. Hence the astonishing increase in the demand for them; the produce of the British manufacture being now widely diffused over the remotest countries of America and Asia. The following table, drawn up by Messrs. Holt and Co. of Liverpool, contains a comprehensive view of the more important particulars connected with the progress of manufacture from 1816 down to 1839, both inclusive:—

STATEMENT of the Consumption, Exportation, &c. of the different Sorts of Cotton Wool, in and from Great Britain, in Different Years, from 1816 to 1839, both inclusive.

	1816.	1820.	1825.	1830.	1835.	1836.	1837.	1838.	1839.

Do. do. Surata	-	15½d.	8½d.	8½d.	7d.	6½d.	4-8½d.	5d.	5½d.

N. B. Messrs. Holt and Co. estimate the average weight of the packages imported in 1839 at 330 lbs. per bag Upland; 411 lbs. Orleans and Alabama; 325 lbs. Sea-island; 173 lbs. Brazil; 215 lbs. Egyptian; 354 lbs. East Indian; and 154 lbs. West Indian.

The above table is applicable to Great Britain; but it appears from *Burn's Glance*, a tabular statement of high authority, annually compiled at Manchester, that the whole quantity of yarn spun in Great Britain, in 1839, amounted to 342,826,571 lbs., of which only 30,033,071 lbs. were spun in Scotland. The manufacture in Ireland is confined to the neighbourhood of Belfast, and is quite inconsiderable. Lancashire is the grand seat of the English cotton manufacture; and next to it, but at a great distance, are Cheshire, Derbyshire, and Yorkshire.

Various estimates have been given of the value of this great manufacture, and of the number of persons employed in, and dependent on it. Perhaps we shall not be far wrong if we estimate the total value of the various descriptions of cotton fabrics and yarn now annually produced at 35,000,000*l.*; and the total number of persons of both sexes, and all ages, employed in all departments of the business, at about 700,000. If we be right in this latter estimate, it will follow that about 1,400,000 individuals may be regarded as depending for support on this great manufacture. (See *Statistics of British Empire*, i. 656. &c., 2d ed.)

Estimating the entire annual value of the cotton fabrics of Great Britain at 35,000,000*l.*, the value of those annually produced in Scotland may, perhaps, be estimated at nearly 5,000,000*l.*; for, as a large proportion of the fabrics made in Scotland are of a comparatively fine description, their value exceeds what might be inferred from the amount of yarn produced in Scotland as compared with that produced in England.

The value of the cotton goods annually exported amounts to about two-thirds of the value of those annually produced. Thus, in 1839, the declared value of the exports of cotton fabrics amounted to 17,694,803*l.*; and that of the yarn to 6,897,826*l.*; making together the sum of 24,592,629*l.* Germany and Holland, the United States, India, Italy, Brazil, Turkey, Russia, the W. Indies, &c., are the principal markets.

The linen manufacture is seated chiefly in Yorkshire, Lancashire, Durham, and Dorset. In 1838 the linen factories employed about 16,500 hands, about 2-3ths of whom were employed in the former co. The silk manufactures are more important. The metropolitan district of Spitalfields, Manchester, and Macclesfield, are the chief places in which broad silks and handkerchiefs are made; Coventry is celebrated for its ri-

band factories. Crapes are made mostly in the E. cos.; but this branch of manufacture is declining. A great revolution was effected in the silk manufacture in 1827. Previously to that epoch the legislative enactments with respect to it were the most contradictory and impolitic that can well be imagined. The importation of foreign silks was prohibited under the severest penalties; but the advantage that this prohibition was believed, though most erroneously, to confer on the manufacturer, would, under any circumstances, have been more than neutralised by the imposition of oppressive duties on the raw material. This vicious system was productive of a twofold mischief; for, by teaching the manufacturers to depend on custom-house regulations for protection against foreign competition, it made them indifferent about new discoveries and inventions, while, owing to the exorbitant duties on the raw material, and the want of improvement, the price of silks was maintained at such a price as to restrict the demand for them within comparatively narrow limits. In 1825, however, a new and more reasonable order of things was introduced. The duties on the raw material were greatly lowered; at the same time that foreign silk goods were allowed to be imported on payment of a duty of 30 per cent. *ad valorem*. This new system was vehemently opposed at its outset, and it was confidently predicted that it would occasion the ruin of the manufacture; but the result has shown the soundness of the principles on which it was bottomed. The manufacturers were now, for the first time, compelled to call all the resources of science and ingenuity to their aid; and the result has been that the manufacture has been more improved during the last dozen years than it had been in the whole previous century; and that it has continued progressively to increase.

The total quantity of raw silk imported for home consumption in 1838 was 3,395,816 lbs. The total number of individuals directly engaged in the manufacture has been estimated at upwards of 207,000, but we incline to think that this is very decidedly beyond the mark. The value of the silks annually produced may, perhaps, be estimated at from 10,000,000*l.* to 12,000,000*l.*

We subjoin a table, compiled with great care and no little labour, from the bulky volume (*Parl. Papers*, No. 41. Sess. 1835.), embodying the Reports of the Factory Inspectors, containing an

ENGLAND AND WALES.

773

ACCOUNT of all the Cotton, Woollen, Worsted, Flax, and Silk Mills or Factories in each County of England and Wales, and in the Kingdom, in the Year 1833; specifying the Amount and Description of the Moving Power, and the Number, Age, and Sex of the Persons employed in the same.

Health of Persons employed in Factories.—Children, that is, young persons, between the ages of 9 and 14 years, as well as adults, are largely employed in factories; and while the health and morals of the latter are said to suffer severely, the former have been described as being stunted in their growth, and rendered decrepit and miserable for life, by the prolonged confinement, drudgery, and ill treatment to which they are exposed. Those representations of the injurious effects of what has been called white slavery were embodied in a Report of a Committee of the House of Commons, in 1832. We believe, however, that we run little risk in affirming that this report contains more false statements and exaggerated representations than any other document of the kind ever laid before the legislature. It made a great sensation; and the discussions to which it, or rather the proposal that grew out of it, for limiting factory labour to 10 hours a day, gave rise, induced government to appoint a commission to inquire, on the spot, into the actual condition of the labourers, and especially of the children employed in factories. This commission collected a great deal of valuable and authentic information; and much light has since been thrown on the question of factory labour. It were absurd to pretend, as some have done, that the statements and representations, as to its pernicious influence, were proved to be wholly destitute of foundation, but they were shown to be very greatly exaggerated. That great inattention to cleanliness, and some very revolting abuses, existed in some factories, particularly in those of the smaller class, is quite certain; but the instances of abuse bore but a small proportion to the total number; and, speaking generally, factory work-people, including non-adults, are as healthy and contented as any class of the community obliged to earn their bread in the sweat of their brow.

We do not, however, know that we should object to the total exclusion of children, from 9 to 13 years of age, from factories, provided we had any reasonable security that they would be moderately well attended to, and instructed at home. But no such security is to be looked for. The parents of such children frequently want the ability, oftener the opportunity, and sometimes the wish, to keep them at home in any thing like a decent condition; to provide them with instruction, or to impress on them the importance of habits of cleanliness, sobriety, and industry. Were they turned out of the factories, few would either go to the country or to school. Four-fifths of them would be thrown loose upon the streets to acquire a taste for idleness, and to be early initiated in the vicious practices prevalent amongst the drags of the populace in Manchester, Glasgow, Leeds, and other great towns. Whatever may be the state of society in these towns, we hesitate not to say that it would have been ten times worse but for the factories. They have been their best and most important academies. Besides taking the children out of harm's way, they have imbued them with regular, orderly, and industrious habits, their earnings are considerable, and are a material assistance to their parents; at the same time that they make them perform their tasks with a zeal and alacrity that is rarely manifested by apprentices serving without pay, merely that they may learn some art, trade, or mystery. Many factories have also day schools, or Sunday schools, or both, attached to them, which the children attend. But inde-

pently of this, the training they undergo in factories is of inestimable value, and is not more conducive to their own interests than to those of the public.

The regulations adopted under the act 3 and 4 William IV., in relation to the employment of children in factories, and the inspection to which the latter are subjected, have gone far to eradicate the abuses that formerly existed, and have been productive of much advantage.

The hardware manufacture is one of the most important carried on in England: it comprises all kinds of articles, from the anchor of a man-of-war down to the delicate furniture of a lady's work-box. The more ponderous are wrought in Staffordshire, Colebrook Dale, and elsewhere; cutlery, and the finer kinds of articles, are made chiefly in Birmingham and Sheffield. In Birmingham steam engines of the largest size are also produced, and the whole tract to the N.W. for a considerable distance is one immense field of smithies and forges, and the goods made in it and its immediate neighbourhood are estimated to be worth more than 3,000,000, annually.

Fire-arms, needles, &c., are made in great quantities in London. Watch and clock works are made especially in Lancashire. The total number of hands employed in this great branch of industry is probably upwards of 300,000, and the total value of the goods produced amounts perhaps to 17,000,000, a year. The value of the hardware exported in 1838 amounted to 1,498,327*l.*, of which the exports to the U. States made 661,704*l.* The manufacture of leather is nearly equal in importance to that of hardware. Worcester and Yeovil are the principal seats of the glove factories, and furnish together upwards of 800,000 pairs of leather gloves annually. Many more are manufactured in Woodstock, London, Nottingham, Ludlow, &c. Shoes, harness, and saddlery, are made in most large towns, and especially in the metropolis. Boots and shoes are also made in great numbers in Northamptonshire and Staffordshire. The leather manufacture is estimated to employ, in all, nearly 224,000 hands, and to produce goods to the value of 13,000,000, a year, or upwards.

The N.W. part of Staffordshire is devoted almost wholly to potteries. British earthenware, so highly improved by the intelligence and ingenuity of Mr. Wedgwood in the last century, now rivals the best produced on the Continent in elegance and excellence, and is much superior in point of cheapness. Hence the earthenware and China of England is very widely diffused; and is the only species to be seen in most parts of the Continent and of America. China-ware is made at Derby, Worcester, &c. The total value of the articles manufactured in both branches of the trade is estimated at about 2,800,000*l.* The glass manufacture has grown up since the end of the 16th century, but has especially increased within the last 40 years. Bottle and crown glass are made chiefly at Newcastle and S. Shields; plate-glass exclusively at the former town, and at Ravenhead in Lancashire. There are numerous glass-works in the W. and N.W. co.; and the total produce of glass articles is valued at 2,000,000*l.* a year, their manufacture employing 50,000 hands. This branch of industry has been materially injured by oppressive duties; but these, however, were considerably reduced in 1835, but they are still exorbitant in amount, while the regulations under which they are collected lay the manufacturer under considerable inconvenience. Paper is made in Hertfordshire, Kent, Lancashire, Yorkshire, &c. It is estimated that there are in all about

700 mills at work in England, employing about 24,000 individuals, and producing goods to the value of about 1,600,000. a year. Paper, like glass, has been subjected to oppressive duties; but these were reduced a half, or from 8d. to 1½d. per pound in 1836. Hats to the value of between 5,000,000. and 6,000,000. bricks and tiles to an enormous extent; soap, candles, gunpowder, starch, vinegar, dyes, coaches, furniture, straw plait, &c. &c., are amongst the remaining principal articles produced by the manufacturing industry of England; and extensive sugar-refineries are established in London, Liverpool, Bristol, &c.

The conversion of grain into fermented liquors gives rise to three very important and extensive branches of manufacture and trade, those of malting, brewing, and distilling. Malt, which in 1809 was made to the extent of 30,338,376 bushels, was in 1838 produced to the amount of 33,823,984 bushels. The breweries throughout England in 1830 yielded upwards of 4,678,000 barrels of beer of all sorts; and from 1,800,000 to 2,000,000 barrels are supposed to be annually supplied by the porter breweries of London, which are the largest and finest establishments of the kind in the empire. There is also a very large consumption of spirits, particularly gin, in England. But, notwithstanding the numerous allegations to the contrary, there can be no doubt, comparing the consumption with the population, that it is decidedly less at present than it was in the reign of George II., and at more recent periods. This is established beyond all question by the statements made in parliament in the debates on the Gin Act in 1742, and by the details given in the tract of the celebrated Henry Fielding on the Increase of Robberies (London, 1752), and other authentic documents. No doubt there is, still, in this respect, ample room for improvement. Nothing, however, can be more unfounded than the complaints so often put forth of the increase of drunkenness; that the lower classes are not so temperate as could be wished for, is most true; but they have improved, and are now less given to intoxication than at any former period of our history. We subjoin an

ACCOUNT of the Quantity of British Spirits consumed in England, Scotland, and Ireland, respectively, in the Years 1837, 1838, and 1839.

Years.	Gallons of British Spirits consumed in		
	England.	Scotland.	Ireland.
1837	7,155,469	6,124,035	11,235,635
1838	7,230,490	7,020,711	12,296,542
1839	8,186,552	6,188,582	10,815,709
Rates of duty per gall.	7s. 6d.	5s. 4d.	2s. 4d.

Ship-building may be classed among the principal manufactures of England. The government dockyards are at Portsmouth, Plymouth, Chatham, Sheerness, and Milford; the other ports at which vessels are mostly built are London, Sunderland, Newcastle, Hull, Yarmouth, Liverpool, &c. (See *anté*, p. 460.)

Internal Communication.—The turnpike roads of England are at present, perhaps, the best in the world. They are placed under the direction of trusts, and kept in repair by tolls levied on passengers and carriages, and rates, which the surveyors of roads are empowered to levy by the act 5 & 6 Will. 4. c. 50. According to a parliamentary paper, printed in 1833, there were in 1829, in England and Wales, 19,798 m. of turnpike road, the tolls levied on which amounted to 1,305,014*l.*, and since that period several hundred additional miles of road have probably been added. The construction of canals in England originated during the latter half of the last century. Most of them are in the N. W. or manufacturing districts. The principal are the Lancaster canal, from Kendal to Wigan; the Liverpool and Leeds; Burnley and Skipton; Aire and Calder Navigation; Duke of Bridgewater's canal, from the head of the Mersey estuary to Manchester; those connecting Bolton and Bury with the latter town; the Rochdale from Manchester; Huddersfield, from Manchester by Ashton-under-Line; Peak-forest; Trent and Mersey; Ellesmere; Hereford and Gloucester; Thames and Severn; Berks and Wilts; Arundel; Grand Junction, from the Thames at Brentford to Northampton; Paddington and Regent Canal, on the N. side of the metropolis, &c. The total length of the canals traversing England exceeds 2,200 m. All have been constructed by private companies or individuals, and several exhibit splendid triumphs of art over nature; as, for instance, the Ellesmere, which in one place is carried over the Dee at an elevation of 125 ft. above that river, by means of a course of cast-iron plates supported on 19 pairs of stone piers. The Grand Junction has a tunnel 3,080 yds. long, and the Duke of Bridgewater's canal is excavated subterraneously for a total distance of several m. But the extension of canals has been nearly suspended since railways came into vogue. These originated also in the latter half of the last century in the N. mining district. The wooden rails at first used gave

way to others of iron. The Stockton and Darlington railway, opened in 1825, was the first intended for public use: but it was not till 1830, when the Liverpool and Manchester railway was opened, that their vast importance became manifest. The formation of railways would, however, have been of comparatively little value, but for the invention of locomotive engines, which being successfully introduced on the Liverpool and Manchester railway, made its opening a memorable era in the history of internal communication. By means of these engines long trains of carriages, loaded with passengers and goods, are now impelled along railways at a speed varying from 25 m. to 45 m. or upwards an hour! Hence it is that time and space are nearly annihilated in as far as railway travelling is concerned. This extraordinary speed has also been attained with a great increase of comfort and of security; the accidents by railways being very decidedly fewer, as compared with the number of passengers, than those arising out of travelling by common coaches. The latter, in fact, will soon be wholly superseded on all the great lines of road. Railways have been already opened from London to Birmingham, Manchester, and Liverpool, and from London to Southampton. Railways are also far advanced between the metropolis and Bristol and Brighton; and numerous undertakings of the same kind have been undertaken and a few completed in other parts of the kingdom.

CONSTITUTION AND GOVERNMENT.—The legislative power, by the constitution of Great Britain, is vested in the great council of parliament, consisting of the King and the three estates; that is, the Lords Spiritual, Lords Temporal, and Commons.

The early history of the parliament of England is enveloped in great obscurity. This much, however, is certain, that previously to the Norman invasion it was usual to consider and debate matters of public importance in the *Witenagemote*, or great council of the nation. After the Norman invasion, and the establishment of the feudal system, the king, as lord paramount, was assisted by a great council composed of the principal feudal superiors, or tenants *in capite*, whose concurrence was necessary in matters of general or national importance. In *Magna Charta*, signed by King John on the 15th of June, 1215, it is stipulated that "no scutage or aid shall be imposed on the kingdom, beyond the ordinary liabilities of the feudal tenure, unless by the common council of the kingdom." This shows that even at this early period the principle was recognised, that the nation should not be taxed except by its own consent. The great number of tenants *in capite*, or of those who, as they held directly from the crown, were entitled to a seat in the great council or parliament, and the disinclination and inability of many of them to attend, gave rise to the practice of summoning, by name, a few only of the most distinguished, or of those called the greater barons, whence originated baronies by writ; while the others, who were not summoned, adopted, in no very long time, the practice of sending representatives. The latter consisted of two knights for each shire, and of one or more burgesses for the free boroughs, or of those holding of the crown. Different opinions are entertained as to the period when these important innovations took place; but, at all events, there is no doubt evidence to prove that burgesses attended the parliament summoned by Simon de Montfort, Earl of Leicester, in 1265. At this time, also, the clergy were summoned to attend by their procurators (proctors); but they struggled successfully to rid themselves of this burden (as it was then considered), and obtained the privilege of meeting in convocation for each of the two provinces: the bishops and mitred abbots only continuing to attend parliament. Under the reign of Edward I. knights and burgesses were regularly summoned; and in that of Edward II. parliament appears to have been

divided into two houses; that is, into the House of Lords, consisting of the great feudal lords who directly attended; and the House of Commons, consisting of the representatives of the smaller tenants and burgesses. In the same reign parliament seems for the first time to have exercised, in a regular manner, the functions of a legislature. In the reign of Henry IV. we first find the right of the Commons to originate all supplies noticed as an existing institution. From this period, the history of parliament is closely interwoven with that of the nation. The number of burgesses was gradually increased by the enfranchisement of fresh boroughs; and the popular influence in the legislature progressively gained strength with the increasing wealth and intelligence of the nation. But for a lengthened period the nature of the government was not well defined, and the rival powers of the crown and of parliament were frequently coming into contact. During the reigns of Henry VIII. and Elizabeth, the regal power attained to a maximum. But the growth of commerce under the latter, combined with the powerful influence of the Reformation, and other causes, not only gave a great accession of strength to the bulk of the people, but made them better acquainted with their rights, and less disposed to submit to their invasion. The princes of the House of Stuart wanted sagacity to appreciate the changes that had thus taken place in their position with respect to the public. Their maxims of government were as arbitrary as those of the Tudors, but they had neither their ability nor their power. Their attempts to govern without a parliament, and in defiance of principles that had been sanctioned from the earliest periods of the monarchy, produced, in the end, a civil war, that happily terminated in favour of the popular party. But it was not till the Revolution of 1688, when the Stuarts were finally expelled from the throne which they had shewn themselves unfit and unworthy to fill, that the principles of the constitution were clearly established. The celebrated statute, called the Bill of Rights (1 Will. & Mary, sess. 2. 1689), declared that the suspension of laws, or their execution by regal authority, without the consent of parliament, was illegal; that parliament had the exclusive right to levy money from the subjects; that the debates or proceedings in parliament were not to be questioned in any court or place out of parliament; that it was the right of subjects to petition the king; that jurors were to be duly pannelled and returned; and that parliaments should be held frequently. By the Triennial Act (1704) the duration of parliaments was limited to three years. In 1715 it was extended to seven, at which period it has continued fixed. The union with Scotland (1707) and Ireland (1800) increased the number of members to 658. We have elsewhere adverted to the circumstances that occasioned the passing of the Reform Act of 1832. (See *ante*, p. 462.) This important statute made some material changes, by enfranchising some of the greater and disfranchising some of the smaller boroughs; and by modifying the electoral franchise, and creating a new right of voting in all occupiers of premises of the value of 10*l.* a year in boroughs, throughout the Three Kingdoms.

The king, as a constituent part of the parliament, has the prerogative of giving a final assent or negative to any bill which has passed the two houses. But the royal veto, though conceded by the theory of the constitution, has long ceased to be exercised; and the assent of the sovereign is now nothing more than a for-

malty, necessary to give an act of parliament the force of law.

The descent of the crown of England is limited partly by customary law, partly by statute. By the Act of Settlement (12 & 13 W. 3.), it is vested in the descendants of the Princess Sophia, youngest daughter of Elizabeth, Queen of Bohemia, and granddaughter of James I., being Protestants; and every person marrying a Papist is rendered incapable of possessing or enjoying it. Subject to these limitations, the crown descends, as of hereditary right, first to the male, then to the female issue in succession. There is no minority in the case of an heir to the crown; and whenever a minor is likely to be called to it, it is usual for parliament to make beforehand a special provision for the emergency.

The House of Lords consists of the lords spiritual and temporal.

The lords spiritual are, the 2 archbishops and 24 bishops of England; with 1 archbishop, and 3 bishops of Ireland, who succeed in rotation, and sit for a session only. Before the Reformation, 27 abbots and 2 priors sat in the English parliament. In consequence of the distinction between the two estates (spiritual and temporal), doubts were felt, even so late as the time of Coke, as to the validity of bills which might pass the House of Lords by the votes of one estate only, against or without the voice of all the spiritual or temporal peers. But such scruples are no longer entertained by any constitutional lawyer, and no distinction remains between the two estates.

The temporal lords of parliament are, 1. English peers; viz. dukes, marquesses, earls, viscounts, and barons. Peerages are said to be held by *tenure*, or created by *writ* or by *patent*. The former, which appears to have been the most ancient species of peerage, consisted in the holding of certain baronial estates or "honours," which are supposed to have entitled the owner to be summoned by name as of right to parliament. It has been in effect long obsolete: a few baronies are still asserted to be held by tenure, but it is doubtful whether the claim, if preferred, would be admitted. Creation by writ is a summons to the individual, by the name and style of the peerage conferred, to attend parliament. Creation by patent, at present the ordinary mode, is the grant of a peerage by the crown, with specific limitations as to the descent, usually, in modern times, to the heirs male of the body of the peer, with or without remainder to other branches. The right to a contested or claimed peerage is tried by the House of Lords. 2. Sixteen Scotch peers are elected every parliament by the whole peerage of that country. 3. Twenty-eight Irish peers are elected in like manner for life. Scotch or Irish peers, who have also English peerages, sit and vote in parliament by the title of those peerages. The chancellor, by virtue of his office, is speaker of the House of Lords. This house claims the privilege of originating all bills for the restitution of honours or blood.

The number of members of the House of Commons, has been, since the union with Ireland, 658. The number of English representatives was fixed by ancient usages and charters, and that of Scotch and Irish by the respective Acts of Union of those two countries with England; but the distribution of members was materially altered by the changes introduced by the Reform Act of 1832. Aliens and denizens are disqualified from sitting and voting in the house; so are peers of parliament, and Scotch (but not Irish) peers, the

clergy, and the holders of various offices: while other offices only render it necessary to vacate a seat in parliament, the holder remaining eligible. Bankrupts, persons attainted of treason and felony, and outlaws (in criminal cases), are also excluded. The necessary qualification of estate is, for counties, the possession of 600*l.* a year issuing out of land (held for the life of the member, or a greater estate); for boroughs, that of 500*l.* Members for the universities alone are exempted from the necessity for this qualification.

We have elsewhere given (*anté*, p. 462.) a statistical view of the representation of the different parts of the United Kingdom, to which we beg to refer the reader.

Of the English boroughs, 50 return 1 member each; London 4, the remainder 2: 6 counties return 2 members each; 7 return 3 members each; 26 return 4 members each, being 2 for each of the districts or divisions into which they were apportioned by the Reform Act. Yorkshire returns 6 members, being 2 for each Riding. The Isle of Wight has 1 member. Welsh counties, 1 each; with the exception of Caernarvon, Caermarthen, Glamorgan, 2. Welsh boroughs, 1 each. Scotch counties, 1 each: boroughs, 1 each, with the exception of Edinburgh and Glasgow, which return 2. Irish counties, 2 each: boroughs of Dublin, Cork, Belfast, Limerick, Galway, Waterford, 2; the remainder, 1. The right of voting for county mems., in England, is in all freeholders possessing land of the value of 40*s.* per ann., if of inheritance, or in actual occupation, and not acquired by purchase: the latter conditions being introduced to guard against the creation of fictitious votes. An estate for life of 10*l.* per annum is sufficient under any circumstances. Copyholders to a certain amount, and leaseholders to a certain amount and duration, are now also in the possession of the franchise; as are all tenants, whether with or without leases, who pay a *bonâ fide* rent of 50*l.* a year. In Scotland, besides certain votes on account of ancient rights of a peculiar description, termed superiorities, freeholders of 10*l.* per annum have the right of voting, and tenants nearly as in England. The right of voting for counties in Ireland is also fixed at 10*l.* per annum, for freeholders; leaseholders and copyholders nearly as in England.

In English boroughs a uniform franchise, created by the Reform Act of 1832, is possessed by the occupiers of a house or other building, or building with land, of the value of 10*l.* per annum. In cities that are counties of themselves, freeholders vote as in counties. Besides these, there are in all the boroughs, except such as were enfranchised by the Reform Act, certain ancient rights, reserved to those who were in the possession of the franchise at the passing of that act. These vary according to the usage of particular boroughs. Such are the ancient franchises of pot-wallopers, or pot-boilers, payers of scot and lot, freeholders, burghage tenants, and freemen admitted to the freedom of corporations. But in all these cases provision is made for the gradual extinction of the ancient franchises, no new claimants being registered unless they have acquired the right in certain excepted ways. In Scotland and Ireland, also, the occupiers of houses of the value of 10*l.* per annum in boroughs possess the franchise, with reservation of certain ancient rights in the latter country. Voters for the universities are such as have attained the degree of master of arts, and have kept their names on the books.

The following is, perhaps, a tolerably fair estimate of the mode in which the present House

of Commons is constituted. There may be still from 20 to 25 nomination boroughs; that is, boroughs the members for which are habitually appointed, without opposition, by individuals, generally large landed proprietors in the neighbourhood, who possess a paramount influence over the constituency. There are 6 or 7 in which government exercises great or paramount influence. In the remainder, the local influences, as, for instance, of landed property, great manufacturing or mercantile establishments, &c., vary in degree (frequently acting so as to counterbalance each other), according to the comparative "openness" of the constituency, until in the greater boroughs they can scarcely be said to exist, unless in the case of freemen who are swayed by old corporation politics. Counties are generally, though with differences of more and less, governed by the landed aristocracy of their soil.

In Scotland, the county constituencies have been supposed to be more independent of the great landlords than in England; but we doubt whether there be any real foundation for this opinion. Owing to the differences as to religion in Ireland, the tenants, who are mostly all Catholics, have of late years been very frequently opposed to their landlords, who are mostly all Protestants. But when no such powerful influence as that of religious feelings or prejudices come into the field, tenants usually support the candidates patronized by their landlords. If the admission of the occupiers of 50*l.* farms to the elective franchise in 1832 were meant to increase the already paramount influence of the landlords, or to balance the inroads made on it by other parts of the Reform Act, it was judiciously devised; for, no doubt, it has had that effect to a great degree. We attach little consequence to the distinction between tenants at will and tenants occupying under a lease of reasonable duration. The object in forming a constituency should be to vest the franchise in the persons who may be supposed most likely to give their suffrages to those candidates only of whose political principles and public conduct they really approve. Assuredly, however, the occupiers of land do not, speaking generally, belong to this description of persons. Taken as a class, they are, perhaps, the most dependent of any in the country. Many of them are indebted to their landlords; and the number of those who are in a situation to act on their own convictions, without caring for the consequences, is extremely limited indeed. Even in Scotland, where leases are universal, and the occupiers mostly in comfortable circumstances, the number of those who vote otherwise than their landlords is so very inconsiderable, that, in estimating the chances which any candidate has of succeeding in a county, no one ever thinks of inquiring into the politics of the tenants, but merely into those of the landlords; it being supposed that the former will, as a matter of course, follow the latter.

The House of Commons is summoned by warrant of the king to the lord high chancellors of Great Britain and Ireland, or to the keepers or commissioners of the great seal, to issue their writs for the election of knights, citizens, and burgesses. When a new parliament is summoned, 40 days must elapse between the date of the writ and the return to it. On vacancies occurring during the session, the writ is issued to the clerk of the crown in chancery, on warrant from the speaker; and the speaker also makes out a writ on vacancy occurring during the recess. The writs are delivered to the sheriffs of counties and returning

officers of boroughs, who are bound to give the proper notices. If the member or members be not elected by show of hands on the nomination day, a poll is demanded, and takes place on the next day but 2 in counties, and lasts 2 days; on the next day in boroughs, lasting one day only. Votes are publicly given and recorded. In Scotland the poll for boroughs may continue 2 days; in Ireland 5, both for counties and boroughs. The name of every elector who is admitted to poll must (since the Reform Act) appear on the register of voters, which is constructed in a different manner, and by different officers, in the 3 countries. Where votes are equal, it is usual for the returning officer to make a double return.

The validity of a return may be questioned by petition to the House of Commons, not only on the ground of irregularity in making it out, but also of riot, of treating or bribery by the member elected, and of the admission of unqualified voters or rejection of good ones. The trial is before a committee of the House of Commons, regulated in its appointment and proceedings by a variety of statutes. The impression, however, is, that the decisions of these committees are influenced more by political biases than by regard to the merits of the cases brought before them; and repeated efforts have been made, though with no very marked effect, to render them more impartial. The law as to bribery and treating seems also to stand much in need of amendment. A landlord or great manufacturer supports a particular candidate on the implied, perhaps, though often on the agreed, and always distinctly understood condition, that if the candidate in question be returned, he will do his best to promote the views of the individual supporting him, by recommending his family or connections to government, or to the leaders of his party, as deserving of their especial support and patronage. This is held to be a fair legitimate transaction; but if so, — if a commission in the army, or a place in the customs or excise may be thus bargained for, — where is the justice of prosecuting and punishing the needy tradesman or shopkeeper, who contents himself with stipulating for payment of some £l. or 10l.? The fact is, that it is altogether impracticable to put down bribery at elections, taking the word in its enlarged sense. Where poor men have that in their possession which rich men are eager to acquire, it is the merest drivelling to suppose that it is possible to hinder the former from selling, and the latter from buying. A traffic in votes has always been, and always will be, practised indifferently by all parties. We doubt whether the institution of prosecutions has the slightest influence over its amount. It, no doubt, makes the traffic be transacted less openly, and tends, in fact, to make the disgrace, like that attaching to theft in Sparta, be applied rather to the circumstance of its being so clumsily conducted as to lead to a discovery, than to the perpetration of the offence! Perhaps, however, it might be unwise wholly to abstain from prosecutions for treating, and for that particular, though least common form of bribery, which consists in the payment of money to voters; but there is really no way by which materially to lessen the amount of this species of bribery other than by establishing a property qualification, and conferring the franchise on those only who may be presumed to be in a condition to be above being influenced by pots of beer and small sums of money.

The House of Commons claims the privilege of electing its speaker; and also that most im-

portant one, which is a fundamental principle of the constitution, the right to originate all bills imposing any tax or levy on the subject, technically called money bills, or bills of supply. Should the Lords, in amending bills sent up from the Commons, introduce clauses containing such impositions, they are invariably rejected by the latter, as infringing on their undoubted privilege.

By the Septennial Act (1 Geo. 1. 1715), a new parliament must be summoned every seven years; but as the crown has the prerogative of arbitrary dissolution, and as there is a dissolution also on the demise of the crown, the length of a parliament has rarely approached that limit. The sessions of parliament are annual. It does not appear that there is any statutable necessity for its being summoned oftener than once in three years; but as the supplies are annually voted, it is impossible to dispense with a yearly summons. The ordinary session of parliament lasts about six months, from February to August; but it has of late years been often of longer duration. Parliament is *adjourned* from day to day, or over a short recess (as at Easter), by the authority of each house separately. It is *prorogued* by the king's authority, and frequently in his presence, by the lord chancellor, at the close of the session: but, in practice, for two months only, at the end of which it again meets *pro forma*, and is again prorogued, and so on to the commencement of the session. It is dissolved, as has been said, at the will of the crown, or by efflux of the seven years, or on the demise of the crown: in the latter case, it continues six months after such demise, unless sooner prorogued.

Privilege of Parliament is a comprehensive term, embracing both the personal privileges enjoyed by every member of the legislature, and also the general rights of the body. To the former class belongs, for example, the freedom from arrest in civil proceedings enjoyed by every member: to the latter, the freedom of debate, authority to punish for contempts, and the various other safeguards to the liberty and power of the legislative assembly, which have from time to time been acknowledged as principles of our law. The extent of these privileges, and the mode by which they are to be ascertained, are questions to which as yet no authoritative decision has been given. The assertion of those who rate the authority of parliament highest, is, that when either house claims a privilege, other tribunals have no authority, either to reject such claim if the privilege be proved, or to decide whether the privilege be proved or not; parliament alone (that is, each house for itself,) being the judge of its own privileges.

The great council of parliament possesses exclusive legislative authority. In this character it is said to be legally omnipotent; that is, that there is no recognised power in the constitution to check or overrule it. This legislative authority is commonly exercised, not only in matters of public interest, but also in the passing of laws at the request and for the benefit of private individuals or associations, to give them powers which without such authorisation they could not possess.

The course of legislation in ordinary cases is as follows: — Any member of parliament may bring in a bill, or draught of a law, which (except in certain cases, before enumerated) may commence in either house. In the House of Commons, however, it is necessary first to obtain leave from the house to bring in the bill. The

bill is then "read for the first time," with or without discussion, which, except on questions of great public interest, does not usually take place on this first stage. It is then printed, and a day fixed for the second reading. The principal debate ordinarily takes place on this occasion. If it pass the second reading, it is referred, if of public importance, to a "committee of the whole House;" private bills, and others of less consequence, are usually referred to select committees. In committee, the clauses of the bill are considered one by one. On the report of the committee, the third reading of the bill takes place, with the amendments which the committee may have made upon it. If it be not rejected on the third reading, it is sent to the other House, where it passes through similar stages. If the other House amend, the bill is sent back to that in which it originated. If the two Houses disagree as to the amendments, a succession of "conferences" may take place; and if no agreement be thus effected, the bill drops; otherwise it proceeds to receive the royal assent, and thus becomes an act of parliament, or a statute law.

Bills of supply, or for the providing of the funds required for the carrying on of government, must originate, as has been said, in the Commons. They must always begin in a committee of the whole House, moved for at the commencement of every session by the Chancellor of the Exchequer. All applications for grants of public money come in the form of messages from the crown. Bills of supply, when they have received the assent of the Lords, return again to the Commons.

Committees are either of the whole House, in which case the principal departures from the usual course of business are, that a private member is voted into the chair, instead of the speaker, and that the same strictness is not observed in the usages of debate, members being allowed, for example, to speak more than once; or permanent, nominated by each house at the commencement of the session, which has now become a mere formality; or consisting of a small number of members selected by the Houses, at their discretion, for the purpose of having bills referred to them. Committees have power to examine witnesses; but those of the House of Lords only examine on oath.

It is well known how extensive a control is exercised by parliament over the conduct of the executive, not merely by legislation, but by various established methods of expressing satisfaction or dissatisfaction. Such are *motions* made by individual members, either founded on *petitions* (which it is a peculiar part of the business of both Houses to receive and consider), or otherwise; on which *resolutions* may be adopted by the House, *addresses* to the crown moved, *committees* appointed to examine and report, and so forth. The right of parliament to exercise this species of superintendence is unquestionable. But the extent to which it may or ought to be carried in any particular case must always depend on circumstances; and will be differently judged by different parties, according as they happen to be more or less swayed by monarchical or democratic tendencies.

Should the prime minister for the time being happen to be a peer, as is very frequently the case, some member of the cabinet, usually the home secretary or chancellor of the exchequer, acts as "leader" of the ministerial body, and principal representative of the government in the House of Commons, in which the conflict

of parties is chiefly fought. So convenient is this species of leadership found, that any considerable body in opposition usually find it advisable to select a similar head. A certain majority in the Commons, on ordinary occasions, however small, is absolutely necessary for carrying on the government, which may be said to be strong or weak according to the magnitude of this majority. The truth is, whatever may be said in theory of the balance of power in the different branches of the legislature, that the House of Commons has been since the Revolution of 1688, and still more emphatically since the Reform Act of 1832, the paramount power in the state. Supposing the majority of the House of Commons to be decisive and firm to its purpose, it may compel either the Crown or the House of Lords to give way; for, by resorting to the extreme measure of stopping the supplies, it might, were its demands not acceded to, stop the whole machine of government.

Acts of parliament are either public or private. There is no distinction between those two classes as to the binding character of their authority: the only difference being that judicial tribunals are bound to take cognizance of all acts declared "public," but not of others, unless specially exhibited and proved before them.

The Executive.—The whole executive and administrative functions of government, as well foreign as domestic, are performed in the name of the king. He has the sole power of making war and peace; and, as incident to that power, the command and disposal of the army, navy, and other forces of the kingdom. He is conservator of the public peace, in which character all criminal prosecutions are carried on in his name; and all the civil power of the kingdom is placed at his command. He is the head of the judicial system of the country; and, by fiction of law, is supposed to be present in all his courts when justice is administered. He has the power of granting pardons for offences, with some exceptions created by statute. He is commonly called the "fountain of honour;" in which character all honours, titles, and privileges are conferred by him: he can also erect and dispose of offices, but no remuneration can be attached to them without consent of parliament. He is also supreme head and governor of the national church. He has the regulation of internal commerce—establishes fairs and markets, regulates weights and measures, and coins money.

Substantially and in fact, however, the power of the crown is comparatively limited. It is a constitutional principle that "*the king can do no wrong*;" but, though he be not, his ministers are held to be responsible for all illegal or unconstitutional acts committed in his name. It is farther indispensable that his ministers should be able to command a majority in ordinary cases in the H. of C. Unless they can do this, the countenance and approbation of the sovereign will avail them but little; and the king will be compelled to dismiss them to make room for other ministers, which, though less acceptable to himself, are more agreeable to the majority of the House. The latter has therefore, in effect, a veto on the choice of the king. He appoints ministers; but it belongs to the representatives of the people to confirm these appointments, to inquire into the fitness of ministers for their situations, and to determine whether they shall continue in office or be displaced to make room for others.

Practically, too, the power of the crown to elect ministers is a good deal narrowed by the ne-

cessity of choosing those individuals only for the more prominent situations who are members of the House of Lords, or can procure their return to the House of Commons. However well qualified an individual might be to fill the office of Secretary of State, for example, he could not be appointed unless he were a peer, or could recommend himself to some constituency; and the Chancellor of the Exchequer, the Attorney-General, Lord Advocate, &c., must necessarily be members of the H. of C. Previously to the passing of the Reform Act this was a less serious control over the free choice of the sovereign than it has since become, a much greater number of nomination boroughs being then at the disposal of the crown. Now, however, it frequently happens that less competent individuals have to be appointed in preference to others, merely because they are able to command seats in the H. of C. To obviate this inconvenience it has been proposed to give ministers *ex officio* seats in the H. of C., which should entitle them to speak but not to vote; and probably, on the whole, this would be an improvement.

King's Councils.—Every peer of the realm is, according to the theory of the constitution, an hereditary counsellor of the king, and may be called to advise him, whether parliament be sitting, or not, but this principle has no practical consequences.

Privy Council.—To understand the manner in which this body was formed out of the great council of the nation or parliament, it must be remembered that one of the original objects of that institution was the summary redress of grievances which the ordinary legal forms did not avail to meet. The privy council was thus, in its origin, a species of committee of the great council, but nominated by the king, to which such complaints were preferred; and in the course of time its sittings became permanent, to afford relief when parliament was not assembled. From the reign of Richard II. to that of Charles I. we find the privy council (consisting usually of some of the chief officers of state, and some inferior members personally nominated by the king,) exercising, in various ways, a very extensive jurisdiction, especially in matters, whether civil or criminal, in which the state was, however remotely, concerned. Under the Tudors and first Stuarts, the privy council was in the habit of granting warrants for the arrest, imprisonment, and even torture of the subject. The court of Star Chamber, and other tribunals of the same description, were offices of the privy council. Its political functions were also extensive, though not admitting so easily of definition. In the reign of Charles I. (1640) the writ of *habeas corpus* was granted to persons arrested under warrants from the privy council; and its power in this respect was thus placed on a level with that of ordinary magistrates. The judicial functions of the council were thus effectually annulled; nor have they been revived, except as a court of appeal from the civil law courts, and from the local tribunals subsisting in our colonies and foreign dependencies. The number of privy counsellors, originally inconsiderable, was in the course of time greatly extended: limited by Charles II. to thirty, it has since his time again become indefinite. The political functions of the privy council are now virtually annihilated; and the title of privy counsellor is only one of distinction. The appellate jurisdiction already alluded to is exercised by a body selected from the mass, termed the judicial committee of the privy council.

The cabinet council is a body which, though without any recognised legal existence, directs, in effect, the government of the country. It consists of a certain number of privy counsellors, usually consisting of the principal ministers of the crown for the time being, summoned to attend at each meeting. The name is said to be derived from the cabinet of Queen Henrietta, in which the advisers of Charles I. were accustomed to meet. The number is usually from 12 to 15. The first lord of the treasury, the chancellor, the chancellor of the exchequer, the president of the council, the three secretaries of state (home, foreign, and colonial), are always, in practice, members of the cabinet: some other offices are usually, but not invariably, accompanied by a seat in it.

The influence which the sovereign exercises over the deliberations of the cabinet, and the degree of executive power that centres in him personally, necessarily differ very greatly at different periods, inasmuch as they must materially depend on his character and capacity, and on the state and character of parties. At different periods since the Revolution Parliament has compelled the crown to dismiss one set of ministers and choose another in opposition to its own predilections; but such ministries have rarely enjoyed much real power or been very lasting. Whichever party in the state was known to have the countenance and to enjoy the confidence of the crown, has generally contrived, in no very long period, to secure a majority in parliament. Hence it is that from the Revolution down to the accession of George III., the Whigs, with the exception of a few short intervals, were constantly in power; and that the Tories held, with similar exceptions, the reins of government from the accession of George III. down to the introduction of the Reform Bill. But it is doubtful whether such will be the case in future. It was comparatively easy for the crown to deal with the proprietors or patrons of nomination boroughs; but the support of such persons is no longer sufficient to secure a majority: the favourable opinion of the constituents must now be also conciliated; and no ministry whose proceedings were disapproved by the bulk of the middle classes could hope to obtain a majority in the event of a dissolution, however high they might stand in court favour. Whether the nation shall be better or worse governed in time to come than it has been since the Revolution, experience only can decide; but there can be no doubt, speaking generally, that the government must henceforth be conducted more in accordance with the opinion of the public. Still, however, the influence of the crown is very considerable; and when parties are nearly balanced in the country and in the H. of C., it may be able to turn the scale in favour of whichever party it espouses. But it is no longer in the power of the crown to make any effectual resistance to a decided majority in parliament, otherwise than by enlisting the public sympathies in its favour. If it cannot do this, there is nothing for it but to submit to be dictated to by the leaders of the dominant party for the time being. And this, in fact, is the decisive criterion of a free government—that the highest authority in the state should be obliged to act in accordance with the public voice as expressed by its representatives.

Not only are the legislative measures proposed by the crown, and the conduct of the internal government of the country and its foreign relations with other states, entrusted to ministers,

but they have also the disposal of all or by far the greater part of the patronage belonging to the crown. Offices involving no political responsibility, such as those of the household, have been sometimes excepted from this rule, and left to be filled up by the sovereign according to his personal predilections; but this is not by any means a uniform practice, and ministers have repeatedly required and obtained the disposal of these offices.

Generally speaking, patronage in a country like England is always exercised with a view to the acquiring or preserving parliamentary support. Napoleon, the king of Prussia, and the emperors of Austria and Russia, might select individuals to fill offices on the sole ground of their superior fitness to discharge their duties. But in a free country suitability for office is not the only thing to be attended to in deciding as to the comparative claims of candidates for official preferment: if they possess it, so much the better; but the primary consideration is, how is the government to be carried on? Now that, it is plain, will be best effected by securing the active support of the friends of government, and by weakening the party of their opponents; and the distribution of patronage is one of the principal means by which these objects are to be realized. A government that should neglect to avail itself of this power could not long exist. Hence in England nine out of every ten situations are disposed of on the recommendation of persons possessed of parliamentary influence. This, in fact, is here the *via regia* to preferment and state distinction. In filling up the more conspicuous situations, the talents and acquirements of the candidates, as well as their recommendations, must necessarily be taken into account; but in the great majority of cases parliamentary patronage is the *sine qua non*. Were the government more popular than it is, this result would be still more apparent. A man of ability in Prussia without connections has a much better chance of getting on, if he devote himself to the public service, than in England; but, at the same time, the chances of such a person being advanced are infinitely greater here than in the United States. In the latter, every thing is sacrificed to party considerations; and the most splendid talents and capacity to render great public services would never advance their possessor one step on the ladder of promotion if he happened to be of a different party from that in power at the time, or to want party support. The reason is, that in England parliamentary influence predominates merely, whereas in America it is every thing; and every thing must, in consequence, be made subservient to its support.

Officers of State, and King's Ministers.—In England, and in other countries, the sovereigns early found the advantage of surrounding themselves with counsellors, or rather with servants, more submissive, and more useful for their purposes, than those great functionaries of state whose dignity nominally entitled them to the chief weight and influence in their several departments. Hence, of the ancient great offices of state, one only can be regarded as now subsisting in the full extent of its power and importance.

Some have become altogether obsolete; others are kept in commission, and their duties thus divided among several persons; others confer little more than titular dignity.

The great officers of state were,—

1. The lord high steward. This officer is now only nominated on the occasions of a co-

ronation, or an impeachment, in which case he acts as president of the House of Lords.

2. The lord high chancellor. He is entrusted with the care of the king's great seal. If there be no chancellor, the seal is in the hands of an officer styled the lord keeper, or is put in commission. In precedence, he ranks next to the Archbishop of Canterbury, and above all other lords temporal and spiritual. He acts as speaker of the House of Lords; he is always a member of the cabinet, and generally has great influence. Besides various other important duties, he exercises the functions of chief judge of the Court of Chancery, in which capacity he will be afterwards noticed.

3. The lord high treasurer. For a very long period this office has not been filled. It is placed in commission, in the hands of officers styled lords of the treasury. The first lord of the treasury is usually prime minister for the time being. The treasury has the control of all matters connected with the receipt and expenditure of the public money, the appointment and superintendence of the boards and offices of customs and excise, stamps and taxes, post-office department, &c.

4. The lord president of the council (privy council), an office of great antiquity, revived in the reign of Charles II., and which has ever since continued. Its duties are little more than nominal; but it is attended, by custom, with a seat in the cabinet.

5. The lord privy seal. This officer has the custody of the king's privy seal, for the purpose of affixing it to charters, &c., as the lord chancellor has of the great seal. He also usually sits in the cabinet.

6. The lord great chamberlain. This office is hereditary, and has passed in succession to several great families. It is at present vested in females, by whom the deputy chamberlain is appointed. It is now merely a titular office, and not to be confounded with that of the lord chamberlain of the household.

7. The lord high constable was also a hereditary officer, and had extensive military authority. None has been appointed, except on special occasions, such as coronations, &c., since the attainder and execution of Stafford, Duke of Buckingham, in 1521.

8. The earl marshal. This dignity is hereditary in the family of Howard, Duke of Norfolk. The earl marshal has various ceremonial duties, and a jurisdiction extending for a certain distance round the king's palace at Westminster, which is executed by deputy.

9. The lord high admiral. This office has generally, although not uniformly, been in commission since the Revolution. The commissioners are styled lords of the admiralty, and the first lord is usually a member of the cabinet. The Board of Admiralty has the control and direction of all matters relating to the navy of the kingdom, the naval dockyards, &c.

The office of secretary of state appears to have originated, or rather to have first assumed a character of importance, in the reign of Queen Elizabeth. At that time, however, the secretary of state was not yet elevated to the rank of a member of the privy council, but attended its deliberations in an inferior capacity. The number of secretaries of state has varied at different times; but the office has continued to increase in importance, and at present may be said to discharge most of the higher functions of the executive in these kingdoms and their dependencies. It is divided into four branches,—the

offices of the secretary of state for the home department, foreign department, colonies, and the secretary to the lord lieutenant of Ireland. Each office has two under secretaries: one permanent, for the discharge of the regular business of the office; the other a political functionary, depending on the changes in the cabinet. The home office exercises a general superintendence over the police and magistracy of the country, and over the execution of justice. The duties of the foreign and colonial offices extend to all the general business of those departments. The secretary of state for Ireland is the representative, in parliament, of the Irish government, and is usually, in effect, the officer principally charged with its conduct. All four are members of the cabinet. The government of Scotland is, in effect, vested in the Lord Advocate, or principal law officer for that part of the kingdom.

The secretary at war has a distinct department, being the ordinary channel of communication between the government and the military authorities. The affairs of our East Indian possessions, so far as these are subject to the control of the king's government, are transacted, according to the provisions of Mr. Pitt's act of 1784, by a board of commissioners, commonly termed the board of control.

10. The board of trade and plantations is a committee of the privy council: it has cognizance of all matters relating to the commerce and navigation of the country.

11. The post-office is under the control of an officer styled the postmaster-general.

12. Executive officers of the crown, employed in the administration of justice, &c. Of the lord chancellor and the judges, more will be said under the head "Courts of Law." In each county the sheriff is the principal executive officer. He is annually appointed by certain officers of the crown. His principal duty is to carry into effect the process of the law within his local jurisdiction. He is also judge of the county court; decides the elections of knights of the shire and coroners; and performs various other duties. There appears to be no strict legal qualification for the office of sheriff; but, in practice, it is usual to appoint men possessed of considerable landed property; and, as the exceptions and legitimate excuses are numerous, and the expenses are sometimes heavy, the appointment is felt as a burden by those on whom it falls. The legal duties of the sheriff are executed in practice by his under-sheriff, usually a solicitor, appointed by him.

The *custos rotulorum* has the custody of the rolls and records of the sessions in each county. This office is usually joined with the military dignity of lord lieutenant. His deputy is the clerk of the peace, who performs the ministerial business of the court of quarter sessions in his behalf.

The coroner is chosen by the freeholders in the county court: the office is generally filled by an attorney. His chief duty consists in holding inquisitions in cases of sudden death, where the body is found; for which purpose he summons a jury of four, five, or six persons.

The justices of the peace are commissioners, appointed under the great seal. Their general duty is to keep the peace, and any two or more of them to inquire of and determine felonies and misdemeanors. New commissions are always made out on the demise of the crown, and on other occasions when deemed advisable. The only legal qualification seems to be property to

the amount of 100*l.* per annum; but, in practice, the principal gentry of the counties, and respectable inhabitants of the towns, discharge these important and gratuitous functions. The powers of justices of the peace are extended and defined by a great variety of statutes. They have summary jurisdiction, either singly or in their petty or district sessions, over various minor offences, and in some civil disputes, as between masters and servants respecting wages. They hold, four times a year (in some counties more frequently), courts of general sessions, for the trial of felonies and misdemeanors, and other business. They levy rates, and direct the application of the funds thus raised to purposes of county expenditure.

In towns having municipal corporations, the municipal officers were formerly *ex officio* magistrates: but since the late act (1835), the crown issues commissions of the peace in such boroughs. Police magistrates (stipendiary) are appointed in the metropolis under various acts of parliament, and may be appointed, on petition, in any borough.

Constables are either *high*, appointed by the justices of the peace for the several hundreds; or *petty*, inferior officers charged to keep the peace in each town or parish. They are chosen by the jury at the court leet; or, in default of such court, appointed by two justices of the peace. The police force now established in London was created by Sir R. Peel in 1829. It is under the superintendence of commissioners of police, and acts under the direction of the magistrates.

Churchwardens, and overseers of the poor, are officers appointed by the inhabitants of every parish, meeting in vestry, under the authority of various statutes; the first to superintend the preservation of the church, the latter the affairs of the poor. Their duties are much curtailed by the recent changes in the poor laws, under which a number of parishes are united, so as to form a district; and every union has its guardians of the poor, — partly magistrates, who act *ex officio*, — partly chosen by the vestry for every parish.

13. Municipal corporations, are bodies established for the purposes of municipal government in borough towns. The limits of boroughs, to which their jurisdiction extends, are fixed by act of parliament, or by prescription. Municipal franchises began to be granted at an early period of our history, and generally to the whole body of townsmen in every place which obtained them. But in the course of centuries their charters became more narrowly interpreted, or were renewed, with different and more oligarchical provisions. Hence, in most towns in the three kingdoms, exclusive governing bodies were formed, to which the right of admission (freedom of the borough) was vested in the municipality itself. But of these bodies the mayor and aldermen, or other governing magistrates, were chosen according to the usage of each particular place. The business of these corporations consisted in superintending the administrative government, and preserving the peace of the town; managing the corporate funds, which were often considerable; and exercising (by properly appointed officers) judicial functions in courts both of criminal and (in some instances) civil jurisdiction. The Municipal Reform Act of 1835 effected a most extensive change, by abolishing the exclusive government of the English boroughs, and extending the municipal franchise to occupiers in general. The common council or deliberative body, the aldermen, and the mayor, are now chosen by open election; the recorder, who

executes the judicial functions of the corporation, and the magistrates, are appointed by the crown.

Courts of Justice.—The king, as head of the executive, is also the fountain of justice. He is, by a fiction of law, supposed to be present in his courts of justice by the persons of his judges. No court of justice can be created, except by the king's commission; this, however, cannot be issued without the authority of parliament.

In early times it was customary for the sovereigns to hear and decide cases in person; but this function has been long delegated to judges, whose jurisdiction is regulated by certain established rules, which cannot be altered except by statute. In England, previously to the Revolution, judges held their situations *durante bene placito*, and might be removed by the sovereign; but when this is the case, as it still is in many countries, it would be too much to expect that the judges should manifest much independence in cases in which the crown is concerned. Subsequently to the Revolution it was enacted, in order to provide in as far as possible for the independence of the judges, by the stat. 13 Will. 3. cap. 2., that the commissions of the judges should be made *quamdiu se bene gesserint*; that their salaries should be ascertained and established; and that they should not be removable except by an address from both houses of parliament. Their commissions, however, continued to be vacated by the demise of the sovereign till the accession of George III., when it was enacted that the demise of the crown should no longer vacate the judges' commissions.

But, as already stated (p. 463.), the great security for our liberties, and for the fair and impartial administration of justice, depends not so much on the laudable precautions taken to secure the independence of the judges, and to prevent their being biased in favour of the crown, as on the institution of juries. In the common law and criminal courts, juries are the only judges of the facts of any case, and they may also decide as to the law. So long, therefore, as the grand institution of jury trial is preserved, and as juries are fairly and impartially selected, we have little to fear from the weakness or corruption of judges. It is the proud distinction of the English people, that they are self-judged as well as self-governed.

Courts of justice are either general or local. The first of these are—1. The courts of common law; 2. The courts of equity; 3. The Court of Bankruptcy; 4. The Insolvent Court; 5. The ecclesiastical courts; 6. The courts maritime. To these may be added the courts of assize and gaol delivery, the courts of quarter and general sessions, county courts, &c., which, although each, strictly speaking, is limited to its own locality, are parts of the general system, and subject to the same general principles of law.

Courts of Common Law.—1. The superior courts of common law are three,—the K.'s Bench, Common Pleas, and Exchequer. Each consists of a chief justice, and five inferior or *puisne* judges—in the last court termed chief and puisne barons. They must be barristers of the degree of serjeant. Their appointment is nominally in the crown, but substantially, like all other appointments, in the minister for the time being. Criminal jurisdiction, and a general power of superintendence over inferior courts, corporations, and magistrates, throughout the kingdom, are reserved to the court of King's Bench: that of Common Pleas has the exclusive juris-

diction in real actions, now (through the effects of various statutes) becoming obsolete. Suits in matters relating to the king's revenue are mostly determined in the Exchequer. With these exceptions, no difference now exists between the authority of the three courts; in either of which ordinary civil actions may be carried on indiscriminately.

From the decision of any one of the three courts, an appeal (by way of writ of error) lies to what is termed the court of Exchequer Chamber,—a court of appeal, formed by the judges of the two other courts: thus, decisions of the K. B. are reviewed by the C. P. and Exchequer, and so forth. This court derives its name from the apartment in which it commonly sits, being an appendage of the Court of Exchequer.

From the court of Exchequer Chamber, a writ of error lies to the House of Lords, the highest appellate authority of the country.

Of the inferior courts of common law, of general jurisdiction, those principally deserving of notice are—the county courts, presided over by the sheriff of each county (always in practice by deputy), in which civil suits of small value are tried; and the courts of sessions, held by the magistrates of the several counties, vested, by various statutes, with a civil jurisdiction in certain matters of public interest (such as questions of the settlement of paupers between parishes), and with a criminal jurisdiction assisted by juries. The nature of the courts of assize and gaol delivery will be best explained when describing the course of the administration of justice.

2. The courts of equity, originally established, as the name implies, to render substantial justice in cases where an injury would be inflicted by abiding by the strict rules of law, are now divided into two: 1. The Court of Chancery, consisting of two subordinate courts—one presided over by the vice-chancellor, the other by the master of the rolls; and one superior, presided over by the lord chancellor, which in part adjudicates on matters brought before it on appeal from the other two divisions, and has in part an original jurisdiction. The chancellor is also judge of appeal in the last resort from the Court of Bankruptcy. 2. What is termed the equity side of the Court of Exchequer, *i. e.* a court presided over by a single baron of the exchequer, and subject likewise to appeal to the lord chancellor. From a decree of the chancellor, appeal lies only to the House of Lords.

3. The Court of Bankruptcy consists—1. of six commissioners, who carry on the ordinary legal proceedings consequent on the state of bankruptcy in a trader in the metropolis; 2. of a Court of Review (now consisting of three judges), which reviews their judgments, with further appeal to the chancellor. There are also a large number of country commissioners, generally practising barristers or attorneys, who adjudicate on bankruptcies out of town.

4. The Insolvent Court consists of three commissioners, who sit in London, and also hold circuits in the country, for the discharge of prisoners detained in execution for debt, on delivery of their property to creditors under certain statutes. The powers of this court are materially altered and extended by the late enactment abolishing arrest on mesne process.

5. The ecclesiastical courts have jurisdiction in some civil causes, *viz.* testamentary and matrimonial; some that are termed mixed, of which suits for tithes are the principal; and some termed purely *spiritual*, *viz.* in the correction

of certain offences, both of the clergy and laity. Justice is administered in them according to the civil and canon law. The principal ecclesiastical courts are—1. The provincial courts of the two archbishoprics, of which the Court of Arches, in that of Canterbury, is the supreme court of appeal; 2. The diocesan or consistorial courts of each diocese; 3. The courts of the archdeacons; 4. Peculiars (which indeed are local courts), of a small exclusive jurisdiction, which are very numerous.

6. The Court of Admiralty is held before the lord high admiral or his deputy: it consists of the Instance Court, which takes cognizance of contracts, and injuries on the high seas; and the Prize Court, which adjudicates on prizes taken in war. This court also professes to follow the civil law.

Local courts, both of criminal and civil jurisdiction, are extremely numerous, and governed by a variety of different usages. Such are the courts of the boroughs having municipal corporations; manor courts; the courts of various exclusive jurisdictions, such as the Marshalsea or Palace Court in Westminster, the Stannary Courts of Cornwall, &c. &c. They are all subject to the general jurisdiction of the King's Bench. Such is the form and constitution of the principal English courts of justice. But their machinery will be best understood by a very brief sketch of the mode in which justice is administered by their means; which, for the sake of brevity, must be confined to the superior courts.

1. If a party have a complaint of civil injury against another, either in a matter of contract, or *tort*, i. e. civil wrong, such as trespass and the like, (unless for a debt below a certain amount, for which, by various statutes and customs, the plaintiff may sue, if he please, before various local and inferior tribunals—or for certain small trespasses cognizable by magistrates,) he commences a suit in one of the superior courts of common law. The first step in the action is technically termed a writ of summons. If the suit were for a sum certain, the plaintiff had formerly the right to arrest or hold to bail the defendant; but this right is now extinguished, and the ordinary (or “non-bailable”) process substituted for it, except in certain peculiar cases. The writ of summons is followed by a statement of the cause of action, termed a *declaration*; which the defendant answers by one or more *pleas*; and these reciprocal allegations are continued (being drawn up in a technical form, and shown by the one party to the other) until a direct contradiction (technically an *issue*) is arrived at, either in point of law or of fact. If the former, the case is argued before the court in which the action is commenced, and judgment given: if the latter, the cause is sent to be tried before a jury.

The three courts of common law hold four terms in the year (each of about 3 weeks' duration), during which the judges of each sit together. In these sittings they decide on issues of law; hear applications in causes already decided by juries, to have them sent down again for what is termed a new trial; set aside, or maintain, the verdicts of juries on grounds of law; and perform other business, which it is impossible here to particularise. The Court of K.B. also exercises at this time its appellate jurisdiction over inferior courts.

To try issues of fact, juries are summoned—1. In London and Middlesex, four times a year, before each of the three courts, for a certain number of days during and after each term. A single

judge (usually the chief) of the court in which the action is commenced, presides at its trial by the jury. 2. The remainder of England and Wales is divided into seven circuits: two of these (the Welsh) are travelled by a single judge each, who meet in the county of Chester. In the remaining five, two travel together. These circuits are held twice a year—spring and summer—occupying from seven to four weeks. In the course of them, the judges visit every county town. The selection of circuits is left to the choice of the judges. They hold several commissions, of which the principal are those technically termed of assize, nisi prius, oyer and terminer, and general gaol delivery. The first of these is now nearly obsolete. By virtue of the two second (through various fictions originating in ancient usages), they hold courts at which juries are summoned to try causes, in the manner before explained, in each county. It is evident, from the foregoing sketch, that the issues of fact in an action are not necessarily tried before a judge of the court in which the action was commenced; but if it be sought to set aside that verdict, or obtain a new trial, application must be made to that court.

Persons are qualified to serve on juries by the possession of certain species of property; chiefly freeholders of 10*l.* per annum, and householders of a certain value. There are numerous causes of exemption, which practically extend to all the higher classes of society. Jurors are summoned by the sheriff, on a system intended to take all qualified persons in the county as nearly as possible in rotation; and twelve are selected by ballot from the list of those in attendance for the trial of each cause,—*challenges* being allowed under certain legal restrictions, but to such an extent as to exclude all individuals who can be fairly supposed to be biased in favour of either party, or in a situation to hinder them from bringing in a conscientious verdict. Plaintiffs or defendants may, if so inclined, pray for a special jury; persons qualified to serve on which belong to a higher class of society. Witnesses are examined *nisi voce*, in open court. On verdict given, the court pronounces judgment, with damages and costs, according to the principles of law applicable to each case.

Such is the course of an action *at common law*; but if the question arising between the parties touch on matters of equitable jurisdiction, (which, in technical language, is said to extend to *trusts, charities, matters of account, fraud, accident, and mistake*,) in some cases the preferable, in others the exclusive, mode of obtaining justice, is by application to a court of equity. That application is by a suit commenced by *bill on information*: questions arising in the progress of the suit are determined on *petition or motion*. Not only the pleadings, as in courts of common law, but the examination of witnesses, are conducted in writing. The judgment of the court is styled a decree. When a doubtful question of fact arises, the judge will sometimes send the question to be tried by way of issue before a jury in a common law court; but he is not bound by its verdict in making his decree.

It is a general principle in courts of law and equity, that all the proceedings in a cause (with some very trifling exceptions) may be carried on by plaintiff or defendant in person; but this is very rarely done, from obvious causes. If not in person, the party can only carry them on by the authorised officers of the court—viz. 1. Attorneys, or solicitors, who are employed in carrying on all or most of the preliminary pro-

ceedings; 2. Barristers, or counsel, retained by the former to conduct the proceedings in court. Without entering into technical distinctions, it is sufficient to state that barristers (beginning with the lowest order) are classed as—1. *Utter*, or *within the bar*, ranking by seniority; 2. *Serjeants*, a body formerly possessing the exclusive right to practise in the Court of Common Pleas, — now confounded, in practice, with the next, or third class; 3. Counsel within the bar, — to which rank they are admitted by patent either as king's counsel or of precedence, enabling them to take rank according to the date of their patent. The attorney and solicitor general rank at the head of the bar. These officers are the counsel employed by the crown in various contingencies, and considered as forming part of the administration — going out of office along with it. There are also other classes of practitioners, not necessarily barristers, viz. pleaders, employed in drawing pleadings at common law; and conveyancers, whose business consists in drawing deeds relating to property.

In the ecclesiastical and admiralty courts, the pleadings are according to forms derived from the civil law: evidence is documentary. The duties of the attorney are executed by officers styled proctors; and the counsel are doctors of civil law, graduates of the universities.

Criminal Process. — Crimes are divided by the ancient customary law of England into treasons, felonies, and misdemeanors: the latter, being generally offences of inferior importance (such as breaches of the peace, riots, attempts to commit certain other offences, &c.), are punishable by fine or imprisonment only. Parties suspected of criminal acts may be apprehended on the warrant of a justice, granted only on the sworn testimony of one witness at least, directed to the constable or other peace officer of the district; but any one may lawfully arrest one who has committed felony, or breach of the peace, in his presence. The offender is then carried before a justice of the peace. Unless the case be one of those minor offences for which the justice has power to punish on summary conviction, without the aid of a jury, the party charged is committed to gaol, or admitted to bail, according to the nature of the offence. He is committed to take his trial, in most cases, at the next ensuing sessions of the peace (either in boroughs or counties), or at the next gaol delivery, by the judges at the assizes, whichever may happen first; but capital, and in general the most serious, class of offences are tried at the assizes only. In Middlesex and certain adjoining parts, offences are now tried by the Central Criminal Court, which sits twelve times a year at least, and is usually attended by two or more judges of the superior courts, and the judicial authorities of the city of London. The prosecution is then carried on, in the name of the king, by indictment before the grand jury. This body, consisting of from 12 to 23 persons, (at the assizes, persons of rank in the county; at the sessions, persons of somewhat inferior station,) receives all indictments, and hears the evidence on the part of the prosecution. If the indictment be dismissed, it is returned to the court with the endorsement "no bill," and the accused is free. If the evidence appear to them *prima facie* satisfactory, the bill is said to be *found*, and the prisoner or defendant is put on his trial. (The grand jury is also summoned to find bills against parties not in custody or on bail for offences for which there is no previous arrest, such as perjury; and these are tried at

the ensuing gaol delivery.) There is also, in certain offences, chiefly of a public nature, a mode of proceeding by *information*, which supersedes the necessity of an indictment.

The accused, when brought into court under this preliminary process, is *arraigned* before a petty jury, summoned in the same manner as the jury in civil causes just described. If he plead guilty on arraignment, his plea is recorded, and judgment given. If he plead not guilty, the trial proceeds. [There are also certain pleas in bar, or defences to the prosecution of a technical nature, rarely resorted to, as the accused by pleading them waves the trial by jury.] The witnesses are then heard; and if the jury find the prisoner "not guilty," he is released; if "guilty," he is convicted, and judgment passes. A judgment may be reversed for error of law, by the superior court; and pardon may be granted, either by act of parliament, or by the king's letter patent under the great seal. Pardon, and remission of part of the sentence, is, in point of fact, obtained through the agency of the Home Office. The sheriff is the officer to whom the execution of the sentence of the law is intrusted.

Crimes and Punishments. — If the returns as to the number of criminal offences might be depended on, it might be concluded that there had of late years been a great increase of crime. Little dependence can, however, be placed on these returns; and by far the greater part of the apparent increase of crime that has taken place of late years is to be ascribed to the greater vigilance and efficiency of the police, and to the committal of many persons for offences that were previously hardly thought worthy of notice.

There has been of late years a great decrease in the number of most sorts of crimes of violence. The detestable crime of *arson*, or malicious fire raising, has, however, considerably increased; and there has also been a considerable increase of stabbing and maiming. Poverty and destitution have always been the great incentives to crime; and the measures best calculated to mitigate or avert the former, are, at the same time, the best calculated to mitigate or avert the latter. It would seem that the constitution of the police force in great towns might be materially improved. At present it is extremely well adapted for preserving order and preventing the committal of crimes, but it is ill-fitted for their discovery when committed; and it would, therefore, seem to be worth consideration, whether a select police force especially devoted to the discovery of crime should not be added to the present preventive police.

The criminal law of England might formerly, perhaps, have been justly characterised as sanguinary; but in this respect a great change has been effected within these few years, and capital punishments are now never inflicted except for murder and other atrocious offences. It is, indeed, believed by many, and, perhaps, not without good reason, that, in this respect, we have recently gone too far on the side of leniency. Prisons have, also, within these few years been much improved; and great attention is now paid to the classification of prisoners, and to the maintenance of an efficient prison discipline.

Among the secondary punishments, transportation has long occupied a prominent place; but recently a notion has been gaining ground unfavourable to its efficiency; and, perhaps, it will, at no very distant period, be abandoned. But we incline to think that the abuses by which

it has been infected might be removed by judicious regulations; and that it will not be easy to substitute any punishment in its stead that will, on the whole, answer so well. We subjoin an

Account of the Number of Persons convicted for the different Description of Offences in England and Wales during each of the Four Years ending with 1837.

	1834.	1835.	1836.	1837.
Offences against the person	1,443	1,194	1,219	1,016
Do. against property, with violence	1,027	934	911	1,021
Do. without violence	13,177	11,372	11,709	13,970
Malevolent offences against property	66	48	46	78
Forgery and offences against the currency	361	287	294	358
Offences not included in above	921	894	892	637
Total convictions	15,995	14,729	14,771	17,080

Church of England.—The king is head and supreme governor of the national Church of England; in which character he has the right to assemble, prorogue, and dissolve all synods and convocations of the clergy; is the ultimate judge of appeal in ecclesiastical causes (an authority exercised by the lord chancellor); and has the nomination to bishoprics and some other ecclesiastical preferments.

The clergy of the Church of England are divided into three degrees or orders, —bishops, priests, and deacons. There are 2 archbishops and 24 bishops within the realm of England. They are nominated to their respective dioceses by the crown; the election being by a writ of *congé d'élire*, or license to elect, addressed to the dean and chapter of the diocese, accompanied by a letter from the sovereign, directing them to elect a certain specified individual. By the canons of the church, every candidate for holy orders must be examined and approved by a bishop. The bishop has episcopal jurisdiction in his court in ecclesiastical matters; and the general superintendence over the clergy. An archbishop is the chief of the clergy in his province; has the inspection of the bishops and inferior clergy; and exercises an appellate jurisdiction from the episcopal courts.

Magnitude and Emolument of Bishoprics.—The discrepancy that prevailed in ancient times in the size of bishoprics, though somewhat diminished by the erection of new ones at the Reformation, has continued down to the present times, and the inconveniences thence resulting have been greatly augmented by the wonderful increase that has taken place since 1760 in the population of certain districts compared with others. [A Table, giving a view of the population, parishes, &c. contained in each bishopric, as they existed on the 1st of May, 1831, is inserted at top of next column.]

The revenues, too, as well as the territorial extent and pop. of the different sees, differed very widely; so much so, that while the bishop of Durham had a nett revenue of from 18,000*l.* to 20,000*l.* a year, the revenue of the see of Llandaff did not exceed from 900*l.* to 1,300*l.* a year! and there were other instances in which the discrepancy was not much less striking. This difference was partly owing to circumstances connected with the original establishment of the various sees, and partly to the property attached to some having, from various causes, become in the course of time much more valuable than that attached to others.

But, however the inequalities referred to may have originated, it has long been felt that a new arrangement of the bishoprics, both as respects their territorial magnitude and their revenues,

Benefice, Parishes, Churches and Chapels, and Population of the several Dioceses in 1831.

Diocese.	Number of Benefices.	Number of Parishes.	Churches and Chapels.	Population.
St. Asaph	160	139	145	191,166
Bangor	131	179	192	163,712
Bath and Wells	440	479	485	403,795

Total	10,555	11,077	11,825	15,997,187

would be highly desirable; and such an arrangement is now in course of being effected. Commissioners appointed in 1834 recommended that two new bishoprics—those of Manchester and Ripon—should be formed in the principal manufacturing districts, chiefly out of deductions made from the territories included in the dioceses of York and Chester. They further recommended that the bishopric of Bristol should be united with that of Gloucester, and that the bishopric of Sodor and Man should be suppressed; and that various changes should be made in the distribution of the territories of the other bishoprics. These recommendations have since been confirmed in all their essential particulars, and are now in course of being carried into effect. Ripon was formed into a bishopric in 1836; the sees of Gloucester and Bristol have been united; and Manchester will be constituted a bishopric so soon as the avoidance of the existing sees enables that to be done without adding to the total number of bishoprics.

The nett revenue of the different sees, as returned to the Commissioners of Ecclesiastical Inquiry, at an average of the three years ending with 1831, amounted to 160,392*l.* a year, distributed as follows:—

Archbp. of Canterbury	19,182	Bishop of Hereford	2,516
York	12,699	Llandaff	994
Bangor	6,301	Lichfield	3,923
Bath and Wells	4,654	Coventry	4,542
Bristol	5,946	London	13,929
Carlisle	2,351	Norwich	8,395

Chichester	3,251	Peterborough	3,103
St. David's	4,229	Rechester	1,429
Durham	1,897	Salisbury	3,839
Ely	19,066	Winchester	13,581
Exeter	11,105	Worcester	6,669
Gloucester	2,713	Sodor and Man	2,555
	2,382		

Supposing this sum of 160,000*l.* were equally divided, it would give 5,925*l.* a year to each see. But it is right that the revenues of the archbishoprics should exceed those of the bishoprics; and there may be good grounds for making distinctions in the revenue of the latter, though not to the present extent. The commissioners, therefore, suggested, that, saving the rights of the (then) present incumbents, the revenue of the bishop of Durham should be reduced to about 8,000*l.* a year,—which recommendation has since been carried into effect; and that such deductions should be made from the revenues of the sees of Ely, Winchester, Worcester, and London, as should yield, with the surplus de-

rivable from the see of Durham and the suppressed bishoprics, a fund of about 28,000*l.* a year, which would be sufficient for the endowment of the two new bishoprics, and for augmenting the revenues of such of the old bishoprics as are inadequate for the proper support of the episcopal dignity. The revenue of the bishop of Ripon is fixed at 4,000*l.* a year, and that of Manchester is to be the same. The revenues of most of the other sees are either already raised or are to be raised to about that level.

Every diocese has a chapter, consisting of a dean and a certain number of canons and prebendaries. The chapter is often styled the council of the bishop; but it exercises, in point of fact, no sort of interference with the ecclesiastical jurisdiction, or with the general superintending authority of the bishop. The chief duty of its members consists in maintaining the constant celebration of divine service in the cathedral church. Deaneries are in the gift of the crown; some by the form of election by the chapter (as in the case of bishops), others by the king's letters patent. The canons are variously appointed, — by the crown, by the bishop, or by election among themselves. Besides the chapters in cathedral churches, there are also chapters in a few others, which are styled collegiate churches.

Archdeacons are church officers, appointed (in most cases) by the bishops, for their assistance in various matters connected with the superintendence of the diocese.

Parsons are the incumbents of parish churches. They must be priests; and derive their title by presentation, induction, and institution. They are termed rectors or vicars; — the former being such as are entitled to the whole tithes of the parish; the latter, only to a certain portion. The number of parochial benefices in England and Wales amounts to above 10,500. Of these, the *advowson*, or right of presentation, to about one half is in the hands of private owners; the remainder belong to the crown (of which the patronage is exercised, as to the livings of inferior value, by the chancellor), to archbishops and bishops, ecclesiastical corporations, universities, &c. The residence of incumbents in their benefices, and the restriction of the right to hold more than one benefice, have been the objects of a variety of regulations both in canons and statutes. Incumbents may be deprived either by sentence in the ecclesiastical courts for particular offences, or in pursuance of certain penal statutes. *Curates* are likewise priests, licensed by the bishop of the diocese, and nominated to serve cures. Stipendiary curates are such as are appointed by rectors, either to supply their place in case of non-residence, or to assist them; whose salary is regulated by statute, or episcopal authority. Perpetual curates are appointed to churches in which there is neither rector nor vicar; or to chapels of ease, parochial chapels, and free chapels, that is, district churches in large parishes.

The order of deacon, in the constitution of the English church, serves merely as a necessary preliminary to that of priest. By the canons of the church, no bishop can admit any one to holy orders, "who is not of his own diocese, except he be either of the universities of this realm, or except he bring letters dimissory from the bishop of whose diocese he is." But, in practice, it is not usual for any bishop to admit to holy orders any one who has not taken the degree of Bachelor of Arts, or its equivalent, at the university of Oxford or Cambridge. Exceptions are made in favour of the new university of Durham for students of the North of England, of the college

of Lampeter for Welshmen, &c., and, in some cases, of Trinity College, Dublin.

The canons of the Church of England were made by the archbishop and clergy of the province of Canterbury convened in convocation in 1603, and ratified by James I. They have not been established by act of parliament, and consequently are binding on the clergy only.

The convocations of the clergy had, originally, the exclusive right of imposing taxes on that body, as well as of deliberating and making canons for the government of the church. They were summoned by the king; and consisted, in each province, of the archbishop, bishops, and deans, and a certain number of representatives (styled proctors) from the chapters and parochial clergy. They are still formally summoned at the commencement of every parliament; but have not been assembled since the reign of queen Anne.

The revenues of the church are derived partly from land, and partly from tithes. The latter formed the original endowment of every parochial church. But a very large proportion of them fell gradually into the hands of ecclesiastical corporations; and a part of these again, at the dissolution of monasteries, into the hands of private individuals. Out of the 10,500 benefices, more than 3,000 have had their "great" tithes, or those of corn, wool, &c., appropriated or impropriated; in most of these instances, however, the "small tithes," as they are termed, or those of fruit, milk, pigs, and such like articles, are reserved for the maintenance of the church. Nearly a third part of the land of England and Wales is wholly tithe-free, owing to exemption enjoyed in former times by religious houses. Tithe is now, by an act passed in 1837, under a course of commutation for an invariable corn rent, to be converted into money, at the prices of the day.

The Commissioners of Ecclesiastical Inquiry have given the following details with respect to the incomes of the clergy: —

"From the returns of our inquiries, arranged and digested in the tabular statements before mentioned, it appears that the total amount of the gross annual revenues of the several archiepiscopal and episcopal sees in England and Wales, is 181,631*l.*; affording an average of 6,727*l.*; and the total amount of the nett annual revenues of the same is 160,292*l.*; affording an average of 5,936*l.*

"The total amount of the gross annual revenues of the several cathedral and collegiate churches in England and Wales is 284,241*l.*, and the total amount of the nett annual revenues of the same is 208,289*l.*

"The total amount of the gross annual separate revenues of the several dignitaries and other spiritual persons, members of the cathedral and collegiate churches in England and Wales, is 75,854*l.*; and the total amount of the nett annual separate revenues of the same is 66,465*l.*

"The total number of benefices, with and without cure of souls, the incumbents whereof have made returns of our inquiries, omitting those which are permanently or accustomably annexed to superior preferments, and which are included in the statements respecting those preferments, is 10,540. The total amount of the gross annual revenues of these benefices is 3,197,225*l.*, giving an average income of 303*l.*; and the total amount of the nett annual revenues of the same is 3,004,721*l.*, giving an average income of 285*l.*

"The total number of benefices, with and without cure of souls, in England and Wales.

including those not returned to us, but exclusive of those annexed to other preferments (about 24 in number), is 10,718; the total gross income of which, calculated upon the average of those returned, will be 3,251,159*l.*, and the total nett income thereof will be 3,055,451*l.*

"The total number of curates returned to us as employed by resident incumbents, is 1,006, whose annual stipends or payments in money amount to 87,075*l.*, affording an average of 86*l.* Those employed by non-resident incumbents are 4,224; the amount of their stipends 337,620*l.*, and the average 79*l.*: and the average of the whole of the curates' stipends is 81*l.*"

But there are good grounds for thinking that these returns are very decidedly under the mark. They were made by the clergy; and it is natural to presume that, speaking generally, they should have been disposed rather to underrate the amount of their incomes. This, indeed, is fully established by the claims the clergy have set up in cases relating to the commutation of tithes: these have, in most instances, very decidedly exceeded what might have been inferred from the returns alluded to above.

Although the Church of England be still recognised as the national establishment, the exclusive privileges formerly enjoyed by its members, and, indeed, all legal distinctions between different classes of subjects on account of religious opinion, have, by a series of changes, been nearly abolished. The chief remaining rights, privileges, and liabilities, which connect the church with the state, are nearly as follows:—

1. The headship of the king: as a necessary consequence of which, the sovereign must himself be a member of the national church. This headship, all persons taking certain offices are required to recognise, by the oaths of abjuration and supremacy, for which a declaration is substituted in the case of Roman Catholics. Roman Catholics are also specifically excluded from the office of chancellor, and a few other high dignities.

2. The form of public prayer and administration of the rites of the church, its articles of belief, and various points in its discipline, originally settled by convocation, are established by the authority of parliament.

3. The archbishops and bishops sit and vote in the House of Lords.

4. Although the free enjoyment of their different forms of worship be now guaranteed to all Christian dissenters, and that of others (as Jews) tacitly tolerated, there are still some legislative provisions respecting them, by which the superiority of the established church is recognised. Thus, Roman Catholic archbishops and bishops are forbidden to assume the titular dignities of their respective dioceses; public functionaries are forbidden to attend dissenting places of worship with the insignia of their office, &c.

5. The clergy of the Church of England have long acted as officers of the civil power, in the character of registrars of births, marriages, and deaths; but the late act, by establishing a new system of registration, has materially altered their position in this respect, and their exclusive authority is now taken away.

A great deal of discussion has taken place at different periods with respect to the right of parliament to interfere with the property and revenues enjoyed by the church. It is now, indeed, pretty generally admitted, that parliament is entitled to alter the *distribution* of the church revenue; but it is contended by many that it has no right to take away any portion of such revenue, and that it would be sacrilege to

apply any part of it to any purpose other than the support of the church! But a pretension of this sort is totally inadmissible. Whether it would be wise and proper to make any such diversion is a matter dependent on circumstances, and to be judged of at the time; but certainly there is no principle or right of any kind to hinder parliament, should it be so disposed, from dealing with church property as it would deal with any thing else. An established church is neither *pari* nor *parcel* of religion: it is a mere human institution, with functionaries appointed and paid by the state; and should parliament be honestly impressed with the conviction that the great interests of religion and morality will be better promoted by diverting a portion of the church property to other purposes, it is not entitled merely, but it is its bounden duty so to divert it. The rights of existing incumbents ought, of course, to be protected; but provided this be done, parliament is quite as much entitled to remodel the church, and dispose of its property, as it is to remodel the army or the navy, or to disband a regiment, or pay off a line of battle ship.

Dissenters from the Church of England are now, after more than a century of struggles, placed entirely on an equal footing with its members in respect of political rights and privileges. The dissenters consist principally of:—

1. The Roman Catholics, who have increased, chiefly through the immigration of Irish labourers, from 60,000 to 500,000 or 600,000 since the accession of George III. 2. The members of what are commonly called the three denominations, — Presbyterians, Independents, Baptists: of these, the first, since the period of the civil wars, when for a short time they had political power and the revenues of the church in their hands, have rapidly diminished. Many of their churches have become Unitarian. The Independents or Congregationalists are so termed from asserting, as their fundamental principle, the *independence* of each separate congregation. They are numerous, and, unlike the Presbyterians, have, for the most part, retained the fundamental doctrines professed by the great majority of Christians. The Baptists are divided into general (or Arminian) and particular (or Calvinistic.) These three bodies do not appear to advance in numerical strength. 3. Of the Methodists, there are likewise two principal divisions. The Wesleysans, the most powerful and important, whose origin was about a century ago, now number about a million of members. Their dissent from the church is less complete than that of other sects. The Calvinistic Methodists are chiefly established in Wales. 4. The Quakers are more remarkable for the singularity of their tenets and observances (although their strictness in the latter appears to be on the decline), than for their numbers. 5. Jews are not numerous in England; but are supposed to have augmented considerably of late years, and to amount at present to 20,000 or 25,000.

The following table of the number of congregations belonging to the more important bodies of dissenters from the Church of England was framed in 1836, and is supposed to be nearly accurate:

Roman Catholics	-	-	416
Presbyterians	-	-	197
Independents	-	-	1,840
Baptists	-	-	1,301
Calvinistic Methodists	-	-	427
Wesleyan Methodists	-	-	2,618
Other Methodists	-	-	686
Quakers	-	-	396

For details as to the military force, navy, revenue, &c., of the kingdom, see *anti*, p. 464, &c.

Public Education. In England no system of public instruction has been established by authority of the legislature. Schools have, however, been established in most parishes, and very large sums have been left by private individuals for the purpose of supplying gratuitous instruction. Almost all the grammar schools in the kingdom owe their origin to this source; and there is, perhaps, no country in which so great an amount of property has been appropriated for the education of youth. Unluckily, however, these bequests have not been subjected to any controlling authority, so that they have not unfrequently been embezzled and diverted to other purposes than those for which they were originally destined. Still, however, the amount of property applicable to educational purposes in England is very large; but it is made of comparatively little avail by the conditions which regulate its application, and which vary according to the rules laid down by the founders. It is not easy, indeed, to say in how far it would be prudent for the legislature to interfere with the regulations as to bequests or endowments; but it is inconsistent alike with principle and common sense, that the application of property left to promote the education and well-being of the community, should be made to depend, in all time to come, on the conditions in wills dictated in a less enlightened age, or by capricious and uninstructed, though benevolent, individuals. The public interest should, in all cases, be the paramount consideration; and the conditions in wills and testaments should be respected in so far only as they are consistent with its advancement.

It is believed that, at this moment, the incomes of the estates and other property left for educational purposes, would amount, if properly managed, to about 400,000*l.* a year. But it is well known that the management of such property is far from efficient; and the utility of the funds that are realised is, as stated above, greatly impaired by the conditions and restrictions under which they are applied. It were, therefore, much to be wished, that something were done to obviate the abuses in this important department of the public economy, and to administer the funds left for the advancement of education, so as to render them productive of the greatest amount of national advantage.

The grammar and endowed schools appear to have been principally intended for the use of the upper and middle classes, especially the latter; and it was not till a comparatively recent period that any vigorous effort was made to supply the lower classes with education, or to bring this most important instrument of civilisation and advancement within the command of the children of the poor. But during the present century a great many schools have been founded, having this object in view. These consist principally of what are called National, British and Foreign, and Sunday schools. The first, under the control of the National Society, are conducted on the system recommended by Dr. Bell of Madras, and use the catechism of the church of England, with which they are closely connected. The schools of the British and Foreign Society are not connected with any religious sect, but are open to all pupils of whatever creed. Sunday Schools, so called from their being taught on the Sunday evenings, sometimes belong to one sect and sometimes to another, and sometimes, though more rarely, to none.

The estimates that have been framed of the number of children at school are but little to be

depended on; and though the numbers were accurate, the want of any proper classification of the pupils, according to the objects of study, renders them of little or no value. Perhaps, at an average of England and Wales, from one tenth to one eleventh part of the pop. may be attending schools and seminaries of one kind and another. We believe, however, that, speaking generally, this education is of a very inferior description; and that, in point of quality, it is decidedly below the standard of Prussia, Holland, and some other countries. It is to the freedom of our institutions, and the scope given to talent and enterprise to elevate their possessor in the scale of wealth and distinction, and not to our educational systems, that the progress made by Englishmen, and the triumphs they have achieved in all departments of industry, science, and literature, are to be ascribed.

The superior grammar schools, and the two great universities of Oxford and Cambridge, are especially appropriated to the education of the higher classes. We have given some account of them under the articles CAMBRIDGE, ETON, OXFORD, &c. The London University is merely a board authorised to examine individuals educated at certain specified places, and to grant degrees to qualified parties.

A compulsory provision for the support of the poor has long existed in England. It grew out of the impotent attempts made in the reigns of Henry VIII., Edward VI., and the earlier part of that of Elizabeth, to suppress mendicancy, and at the same time to provide for the poor by voluntary contributions. At length, the earlier statutes on the subject were consolidated, and the principle of compulsory provision carried to the fullest extent by the famous statute of the 43 Eliz. c. 2., which enacted, that all maimed and impotent persons should be provided for at the expense of their respective parishes, and that employment should be found for the unemployed able-bodied poor. From this remote period, the law of England has regarded every parish in the light of a family, the richer members of which were bound to provide for those who, through inability, misfortune, or want of work, could not provide for themselves. This, also, is the principle embodied in the law of Scotland with respect to the poor; and provided the means for carrying it into effect be so contrived that indigence and suffering may be relieved, without at the same time encouraging indolence and vice, the system would seem to be quite unexceptionable. Practically, however, this has been found to be a problem of exceedingly difficult solution, and not a few have concluded that, however administered, all systematic attempts to relieve the poor are necessarily, in the end, productive of increased want and misery.

The poor, no doubt, are naturally anxious that the compulsory provision for their support should be raised to the highest limit, and that their necessities should not only be relieved, but that they should be able, without molestation, to eat the bread of idleness. But wherever the assessment and administration of the provision for their support is left to the care of those on whom the burden of its payment really falls, this tendency to abuse is not long in being effectually provided against; and the sustaining and beneficial influence of the system alone remains. The complicated code of laws respecting settlements, and the establishment of workhouses, owes its origin to this principle—to the wish of the legislature to relieve the poor, and, at the same

time, to prevent the abuse of the rates; and there is unquestionable evidence to show, that, from the establishment of the system in 1603, down to about 1780, the devices in question were effectual for their object; and that while poverty was relieved, no encouragement was given to sloth, or to early and improvident unions. But soon after this period various innovations were made on the old law, which broke down most of the securities against the abuse of the rates; and, in 1795, the pernicious principle was adopted of mixing together wages and poor-rates, and of eking out what was supposed to be a deficiency in the former by payments from the latter! In consequence of this subversion of the principle on which the poor rates had been previously administered, they began rapidly to increase, and threatened to swallow up the whole, or, at least, a very large part of the surplus produce of the land. Various devices were resorted to, in the view of checking the evil; but, unaccountable as it may appear, not one of them had for its object to revert to those practices and mode of administering the law, which the experience of more than 250 years had shown were fully effectual for the prevention of abuse. At length the Poor Law Amendment Act was passed in 1834, which introduced a totally new system for the administration of the poor laws. Under this act the country has been divided into unions of more or fewer parishes, according to circumstances, the administration of all matters relating to the poor in these unions being intrusted to a board of guardians elected by the rate payers: But these guardians are themselves controlled by, and, in fact, are merely the executive officers of a central board of three commissioners established in London, who have power to issue rules and regulations as to the management of the poor, which all guardians, and other inferior officers, are bound to obey. The central board is assisted by deputy commissioners, who attend at meetings of guardians, explain the law, and adjudicate or report upon extraordinary cases, and see that the rules laid down by the central board are complied with. We have elsewhere stated our opinion as to the policy and probable operation of this new system. (See *Wealth of Nations*, McCulloch's ed. 1 vol. 8vo. note xxii.) The whole that can be said in its favour is, that the poor rates have been materially reduced since its introduction; but we incline to think that the reduction would have been about as great, had the system for the regulation of the compulsory provision that prevailed in the reign of George II. been revived, with a few alterations; while many pernicious consequences, inseparable from the existing system, would have been avoided.

We subjoin a table of the sums expended for the relief and maintenance of the poor of England and Wales at different periods since 1748, with an estimate of the pop. at these periods:—

Years.	Sums expended on Poor.	Population.
<i>Average.</i>	<i>£.</i>	
1748, 1749, 1750	689,971	6,000,000
1775, 1776	1,530,800	7,000,000
1785, 1786, 1785	2,004,239	8,000,000
1801	4,017,571	8,875,000
1815	6,666,100	10,180,000
1821	6,959,349	11,978,000
1831	6,798,388	15,897,000
1838	6,536,418	16,750,000
1859	4,406,907	15,577,000

Public Amusements.—There are few ways, probably, in which national character and habits are displayed more truthfully than in popular sports and amusements; and though none of

these be in any way associated amongst us with civil or religious polity, as in ancient Greece and Rome, and some modern Catholic nations, they are still of sufficient importance to justify and require a short notice. Field sports comprised almost the whole pastimes indulged in during the early period of our history: they were materially modified by the game laws introduced at the Norman period, and which have descended down to our own times. Many generations have passed since the chase was mimicry of noble war; but so far as danger and excitement are concerned, fox-hunting and steeple chases may be considered as excellent substitutes for the chase of the wolf and the boar. Archery ranked amongst the most popular and important of the old English sports, and constituted the peculiar boast of the ancient yeomanry: but we must refer the reader to the ballads, that form so peculiar and valuable a portion of our earlier literature, for the most faithful and striking illustrations of this and other matters connected with the habits and manners of the commonalty. By their means the fame of the outlaw, Robin Hood, has already outlived that of many a legitimate hero, and bids fair to outlive that of many more. The wild boar was an object of the chase down to the Stuarts, and deer may, in a limited sense, be still considered as such. The fox, hare, and otter are at present the only wild animals that can in a general sense be said to perpetuate the chase. Fox-hunting may, in fact, be said to be in an especial manner the outdoor sport of the country gentlemen of England at the present day; and it is not to be denied, that it is highly exciting, manly, and invigorating. Coursing and falconry were sports restricted to those of gentle blood; the latter has long been obsolete, in any popular sense, though, like archery, it is indulged in by a few individuals. Partridge and grouse shooting are universally popular amongst the country gentlemen; and fishing is also extensively practised. Amongst the lower classes wrestling is one of the most popular of the out-door sports: it is followed principally in the northern and western cos., but the modes are essentially distinct, that of the former more nearly resembling the fashion of the ancient athletes. Quarter staff and boxing must also be considered as peculiarly English in their character: luckily, prize-fighting appears of late years to have got quite out of fashion, and the same may be said of bull-baiting and cock-fighting, once so general, with other sports of a like brutalising character. Horse races are of comparatively modern origin, and have attained to the acme of popularity with all classes, from the highest to the lowest. The races at Epsom, Doncaster, Ascot, &c., attract vast crowds of visitors; and no where is there to be seen such a display of magnificence, numbers, good humour, and love of enjoyment, as may be witnessed at these meetings. Cricket grounds and bowling greens maintain their popularity amongst the more respectable classes, as those for skittle playing do amongst the lower. Boat-racing may be noticed as a popular amusement that seems to be gaining ground; and the regattas, or boat-matches, that are now annually got up in several sea-port towns, are very well attended. The holiday fair or wake comprises most of the various amusements in vogue, and is usually annual: some of the more ancient of these appear to have had a religious origin, others had business, wholly or partly, in view: as popular festivals, they are all fast degenerating,

and bid fair to disappear altogether, at no very distant period. In-doors, billiards have replaced the ancient shuffle-board, and cards, though still pretty general, are rapidly giving way to music and conversation: many minor customs, once universal favourites, might be named, that have wholly disappeared, and though the holly and the mistletoe are still seen in the majority of houses at Christmas, few other of the older customs or sports can be said to survive, in any state of vigour: even blindman's buff, and hunt the slipper, are now but rarely practised, and never in genteel society. Dancing keeps its ground, changing its character according to the changes of fashion. The mutations that have occurred in dramatic representations from the time when they were associated with the festivals of religion, and chiefly limited to scriptural subjects, down to the allegorical masques of B. Jonson, which Milton's *Comus* shows lingered on to a later period, form a wide field for investigation. The Christmas mumming (that may still, perhaps, be witnessed in some remote corners, improving the stories of St. George and the Dragon, or Fair Rosamond,) seems a lineal descendant of the old mysteries; the mountebank and his merry Andrew, and Punch and Joan, appear to have made their final exit from the scene. It would require far more space than can be afforded, to mark the various changes in what has been called the legitimate drama, whose masterpieces were produced in the earlier part of its career during the reigns of Elizabeth and James I. The two great London theatres of Covent Garden and Drury Lane have lost the greater part of their predominating influence, for which two very sufficient causes may be assigned: they have ceased, owing to the greater lateness of the dinner hour, to be the resort of fashion, whose influence in England is all but omnipotent; and they are monopolies which, in the long run, always have a deteriorating influence over literature as well as industry.

In so far as the metropolis may be considered an index to the community at large, music would seem to be rapidly advancing in popular favour; nor can it escape notice, that the means taken to popularise sculpture and painting are fast neutralising the propensities which naturally resulted from want of perception and sympathy with works of art. The results of all this are sufficiently obvious, in the more tranquil and refined tone that pervades most places of public resort, and in the greater taste for country excursions, reading, &c. Gin-drinking is still, no doubt, very widely diffused; but, as already stated, there has been in this, as in most other respects, a material improvement within the present century. The influence of gas in making our streets almost as brilliant by night as by day, has powerfully contributed to repress crimes and disorders.

The *English Language*, the use of which is now universal in all parts of the country, is principally of Anglo-Saxon origin. The Gothic or Belgic occupants of the lower and more fertile parts of the country, at the epoch of the Roman invasion, and the Saxons by whom the country was overrun subsequently to the withdrawal of the Romans, were congenerous races; so that the language of the latter easily became that of the people generally. (*Statistics of British Empire*, i. 396.) After the conquest of the kingdom by William Duke of Normandy, the Norman language became that of the court, the nobility, and the courts of law; but the influx of Norman settlers was too inconsiderable to have

any material influence over the language of the bulk of the people, which continued to be essentially Saxon. In the course of time, the prejudices of the English monarchs of the Norman line in favour of their continental dominions and subjects, lost much of their influence, and being bred in England, they began to become familiar with, and use the language of, their English subjects. In 1216, Henry III. issued a writ in the Anglo-Saxon tongue. Not long after, English was substituted instead of French, in *vivâ voce* proceedings in the courts of law; and though written proceedings in courts were carried on for a considerable period longer in a barbarous jargon, half French and half English, the latter was ordered by statute, in the reign of Edward III., to be thenceforth exclusively used in the courts. It is curious, however, that, notwithstanding this enactment, the statutes continued to be promulgated in French down to the reign of Richard III.

During all this period the Anglo Saxon was gradually acquiring the distinctive characters of the English language. A great many French (and consequently Latin) words, through our long-continued connection with France, successively found their way into the language; and it also was enriched by words derived from the Greek and other tongues. Wycliffe and Geoffrey Chaucer, who flourished in the 14th century, may be regarded the one as the father of English prose, and the other of English poetry. During the 15th century, the language advanced but little; but previously to the close of the 16th century, it had, in a great measure, attained to the form and standard which it now exhibits. During the reigns of Mary and Elizabeth, many additional French, and some Italian and Spanish words were introduced. Still, however, of about 38,000 words, which, excluding the preterites and participles of verbs, the English language is supposed to comprise, about 23,000 are of Anglo-Saxon origin; and the remainder Latin, Greek, French, &c., in different but uncertain proportions.

It is foreign to our subject to enter into any details as to the works that have been written in English. Suffice it to say, that there is no department of literature, philosophy, or science, in which English writers have not attained to high, and in not a few instances, to unrivalled excellence. For a lengthened period, our philosophical and political literature has had much more of a practical than of a theoretical or speculative character; and the taste for metaphysical inquiry has almost entirely disappeared. Within the last few years the great object has been to diffuse literature, and to secure the suffrages of a wide, rather than of a select circle of readers. The influence of this change on the character of our literature, and the taste of the public, cannot yet be fairly appreciated; perhaps the former will gain in clearness and lose in depth; and it is not impossible that a lower standard may be formed of philosophical and literary eminence.

Condition of the People.—We have already made some statements illustrative of the improved condition of the great bulk of the people in the present times, as compared with their condition at more remote periods (*anté*, p. 457.). Speaking generally, all classes are now incomparably better fed, better lodged, and better clothed, than at any former epoch in our history. The increase in the consumption of butchers' meat since 1770 has been more than double as compared with the increase of the population; and the increase in the consumption of

tea, sugar, coffee, &c., since the same period, has been quite unprecedented. In fact, the poorest individuals are now in the daily enjoyment of many descriptions of luxuries that were, no further back than the 17th century, unattainable even by the richest lords. Tea and sugar are now become necessities of life; every cottage is well furnished with glass windows; and maids of all work are now quite as well and neatly dressed as the duchesses that figured at the court of Queen Anne.

It is not, however, to be denied, that, notwithstanding this signal increase of prosperity, considerable distress exists among certain classes—especially among the hand-loom weavers and the agricultural labourers in a few districts. The depressed condition of the former is no doubt owing to the extensive introduction of power-looms, and the facility with which their business may be learned; and that of the latter to the abuse of the poor laws, and the too great multiplication of cottages. But, provided nothing occur to check our progress in manufactures, the hand-loom weavers will gradually be absorbed into other businesses, and their employment and distress will cease to be heard of; and the judicious administration of the poor laws will, at no distant period, get rid of whatever distress may exist in certain agricultural districts. The continued importation of crowds of immigrants from Ireland is an evil less easily dealt with, and which certainly has a very injurious influence over the pop. of England. But this may also be expected to diminish; so that, provided tranquillity, good order, and that perfect security essential to all great undertakings, be maintained at home, the fair presumption is, that the prosperity of the country will go on increasing for a very long period, and that England will indefinitely maintain the proud distinction of being the richest, most industrious, and happy of European nations.

HISTORICAL SKETCH.—After all the discussions which have taken place respecting the history and character of those native tribes which occupied Britain at the period when the Romans first reached its shores, thus much only appears to have been determined with any degree of probability, that they belonged partly to that great family of the human race called the Celtic, and partly to another great family called the Gothic. To the former belonged the Cymry, or inhabitants of Wales, and of the Western, and, perhaps, also, the Northern counties: to the latter, or Goths, belonged the Belgæ, who, having emigrated from the Continent, occupied the eastern, lower, and most fertile portion of the country.

The visit of Julius Cæsar to Britain occurred 55 years before Christ. From that time it remained unmolested by the Romans for nearly 90 years. In A. D. 43, Aulus Plautius, despatched by the emperor Claudius, began its conquest, which, in the space of about 40 years, was completed, with the exception of the northern part of Scotland, into which the Romans scarcely penetrated.

The Romans introduced, to a great extent, their arts and civilisation into this remote province. Thirty-three large towns, and many military stations, were connected together by magnificent roads, constructed by the labour of the Roman soldiers and provincials. It is probable that, between these several centres of civilisation, much of the country remained in that state of forest in which the Romans had found it. Still the population of Roman Britain must have been large, and its progress

in refinement considerable, for two centuries after the conquest. After that time, the declining power of Rome yielded to the fierce attacks of the northern tribes of the island, and Britain became, to a certain extent, independent of the empire, but only to suffer the more from these fierce assailants.

Of the history of the long period which elapsed between the retirement of the Roman armies from our island, and its conquest by the Saxons, we possess no memorials sufficiently authentic to form a connected narrative. It appears probable that the hereditary chiefs of the ancient British tribes, who had lost their authority during the period of colonial government, resumed it to a certain extent; that in the larger towns, the clerical order, together with a council of magistrates and citizens, exercised almost republican authority. The exact æra of separation from the empire of Rome cannot be fixed; it seems to have been effected A. D. 409, when the letters of the emperor Honorius commanded the cities of Britain to "provide for their own defence." About 40 years later, we find no distinct trace of municipal government left; the country under the government of a number of petty chieftains or kings, and overrun even to the extreme south by the incursions of the Caledonian tribes. At this period (A. D. 449), Hengist and Horsa, Saxon leaders, ranging the coast of the British Channel with three of their piratical vessels, were invited by Gwrtheyrn (Vortigern), a British prince of Kent, to serve against these northern invaders. Five thousand auxiliaries soon arrived; quarrels arose between the Britons and their guests; and (A. D. 457) the latter conquered Kent for themselves. Such are the outlines of the ancient story recorded by Gildas. In our critical times some have contended, that the names of the leaders (both signifying a horse) prove that those personages are themselves as fabulous as the well-known tale with which they are connected, of the marriage and dowry of the beautiful Rowena, the defeat of the Saxons, their return, and the treacherous seizure of Vortigern; all of which are mentioned only by later British writers.

The conquest of the greater part of Britain by the Saxons, Jutes, and Angles, occupied a space of about 130 years, from the landing of Hengist. Five British states, Strath-Clyde, Cumbria, North and South Wales, and Cornwall, maintained their existence for a somewhat longer time. Three Saxon kingdoms (Sussex, Wessex, Essex), one Jutish (Kent), four Anglian (Bernicia, Deira, East Anglia, Mercia), were formed in this period.

The Anglo-Saxons were a people divided into various castes. The kings, or ealderns, reigned by a sort of hereditary right, without any strict adherence to the laws of succession, but all claimed descent from the original race of Odin. The nobility, "carls," "earlcundnen," or "thane-born," were a class apart, like those of continental countries at the present day. The third class was that of the "ceorls," or ignoble; placed in a state of dependence on the nobility, yet freemen according to the law. Their rank, as compared with that of the nobles, was estimated by the different value of their compurgatory oaths, in giving evidence, and of their lives and persons, according to the "weregild," or legal compensation for blood; namely, one sixth. Every freeman was presumptively attached to some "lord," and designated as his "man." A class of these "earls," possessed of landed property, yet not "lords," seems to have occupied, like the equites

of the Romans, a sort of intermediate rank between the patricians and plebeians, under the various titles of *sithcundmen*, lesser thanes, &c. They seem to have had the privilege, denied to the *eorls*, of choosing their own lords. The *eorls*, on the other hand, were "bonde," attached to the glebe; and might be the subjects of gift or bequest along with it, not as slaves, but as appurtenant to the property. They took no part in the political government of the realm. Lastly, the theowes, or serfs, were slaves in the full import of the word.

The territorial division of England, under the Anglo-Saxons, into counties, hundreds, and tythings, is of very great antiquity, and formed the basis of their civil institutions. The earl, the hundredre, and the tything-man, presided respectively over these divisions. Each of these officers held a court of justice, which was attended by the landed proprietors. and by the well-known custom of "frank-pledge," the superior or noble was rendered responsible for the acts of his inferior or man; and the vicinage, collectively, for those of its members. The *witena-gemote*, or assembly of the wise men, seems to have been, in its original nature, rather a high court of justice, for the redress of complaints by or against the great men of the realm, than a legislative assembly. The earls, aldermen, and higher prelates, attended it; and it is probable, though uncertain, that the burghs sent deputies to it. Together with the king, it constituted the sovereign power of the empire; the Saxon kings usually promulgated their laws, as enacted by themselves, with the advice of their "witan;" and the succession to the crown was fixed by their determination. The conversion of the Anglo-Saxons to Christianity was commenced by Augustine and his companions, missionaries despatched by Gregory VII. in the beginning of the seventh century, and proceeded with great rapidity to completion. Although the religion of Christ had been introduced for five centuries at least into the country among the Britons, it had sunk so completely into decay in the revolution which followed the fall of the Roman empire, that from the reconversion of the island under its Saxon masters, we date our episcopal succession, and the foundation of our religious establishments.

The first appearance of supremacy among the numerous chieftains of the Anglo-Saxons occurs in the instance of Ella, king of Sussex, who having, in consequence of a great victory, obtained a temporary authority over the Britons, assumed the title of Bretwalda (ruler of the Britons), about A. D. 491. During the long period of the Saxon conquest, several independent states were founded, of which the principal and best known are Wessex, Sussex, Kent, Essex, Deira, East Anglia, Northumberland; and hence has arisen the well-known term of heptarchy; which, however, is substantially erroneous, inasmuch as at no particular point of time did these seven states exist independently of each other. Several princes, who by connection or conquest obtained a superior power to the rest, assumed in succession the title of Bretwalda, which eventually (A. D. 830) was held by Egbert, king of Wessex, commonly regarded as the first king of England.

The accession of Egbert to this dignity was cotemporary with the first invasion of the Danes. For a century and a half from that time, their invasions were continually repeated. All substantial progress in civilisation was effectually arrested by this terrible evil. The Danes were always at

hand: the intervals between their incursions, instead of being employed by the Anglo-Saxon princes and people in forming powerful combinations for defence, were spent in civil wars; and the weaker party habitually called upon this powerful foreign enemy for support. The reign of the great Alfred, the most brilliant in the Saxon annals, took place towards the middle of this age (871—901). Under his successors (Aethelstan and Edmund) the Saxon sway was extended, both by the repulse of the Danes, and by the subjugation of the Britons of Cumbria and Devonshire. But the Danes again succeeded in overrunning almost the whole of England; and became, in fact, not only the chieftains, but the progenitors of a large proportion of the population of the country N. of the Humber, and of the coast between that river and the Wash (the ancient Danelage). At length, under Sweyne and Canute (A. D. 1017), the Danes became masters of the kingdom, which, however, they only held for 24 years, or till 1041, when the crown devolved on an Anglo-Saxon prince, Edward, surnamed the Confessor. Six powerful earls, Danes and Englishmen, divided the country between them, under his authority, which, during the greater part of his reign, was little more than nominal. At his death, Harold, one of these chieftains, disregarding both the claims of Edward's natural successors, and those of William duke of Normandy, his kinsman, to whom he had bequeathed the crown, seized it by force. William, having determined to vindicate his pretensions by force of arms, invaded England, with a powerful army; and having defeated and killed Harold in the decisive battle of Hastings, on the 14th of October, 1066, succeeded to the throne.

The Norman conquest is the great era to which reference is ordinarily made as the beginning of a new order of things in English history. The immediate change, however, consisted chiefly in the division of the lands of the kingdom into 60,000 knights' fees or estates, among the followers of the conqueror, as feudal lords. Feudality existed among the Saxons as well as the Normans. But the tie which connected the inferior with the superior was more one of personal service, and less strictly territorial in its nature; nor were the peculiar incidents of military tenure, as understood in France and Germany, known among the Anglo-Saxons. Soon after the Conquest, the greater part of the territory of England became in fact, as well as by the gift of the sovereign, the property of the Norman knights. But a large proportion still undoubtedly remained in the hands of Saxon and Danish thanes, who either kept possession of the lands in defiance or evasion of the royal grants, or by composition with the Normans to whom they had been assigned. The class immediately under the nobles,—the freemen or *eorls* of the Anglo-Saxon period (if the *villani*, *bordarii*, and *cotarii* of Domesday Book be rightly considered as representing that class),—appears to have comprised the great bulk of the population: the *servi*, or slaves, mentioned in that record, amount only to about an eighth part of the former class. Eighty-two boroughs are named; and, allowing for those parts of England of which the survey is not preserved, the number was probably about 100. These boroughs appear to have been small, ill-fortified places, inhabited by a population partly governed by municipal customs, and partly under the protection of the king, or of some neighbouring noble or prelate, from whom, in after times, they

generally purchased their franchises. The population of England, at the end of the reign of William the Conqueror, has been estimated at about 2,000,000; and considering that the whole northern part lay almost waste, and that many towns, manors, &c. are mentioned as having lost half their inhabitants since the time of Edward the Confessor, through the calamities attending the invasion, it has been supposed that the pop. under that prince fell little short of 3,000,000; though we incline to think that this is considerably beyond the mark. It may, however, be inferred from other facts, that England, in that early time, was almost wholly reclaimed and cultivated, since nearly all the villages and hamlets with which its surface is so thickly strewn seem to derive their origin from the Saxon age.

From the Norman conquest to the accession of Edward I. (1066 to 1272), the principal circumstances which fix the attention of the reader of British history are—the disputes between the Norman and Plantagenet kings and their barons, together with the development of the feudal system; the quarrel between the sovereigns and the church; and the foreign relations of England, arising out of the French provinces held by its kings as feudal lords. As, according to the principles of the feudal law, every superior lord had a court, consisting of all those who held land immediately of him, so the king's tenants in chief formed the highest court or common council of the realm. It consisted, consequently, not only of the greater barons, but of such inferior ones as were under no superior lord, but held directly of the king. But the former naturally acquired a preponderating share in it. Backed by the people, they contended with their sovereign for the rights which were finally established by Magna Charta, in 1215. The greater part of this celebrated instrument is directed against the abuses of the king's power as feudal lord: but it established the two great principles, that no one should undergo the consequences of a criminal act, unless by the judgment of his peers, from which, through a variety of changes, adapted to the necessities of particular times, we derive our modern trial by jury; and that no "scutage" (originally a pecuniary contribution assessed in lieu of military service) should be levied, except by consent of the great council of the realm. This provision, framed on behalf of the king's tenants in chief only, has become the basis of the popular right of taxation by representatives. Continued disputes respecting the extent of these privileges, and the pride of the nobility, led to the barons' war in the reign of Henry III., in which Simon de Montfort, Earl of Leicester, for a time governed the kingdom, and convened, as already stated, the first meeting of the great council, or "parliament," to which representatives of the commons distinctly appear to have been summoned (1265); though it is probable that they attended previously.

The two great points on which the clergy and the crown were at issue, from the reign of William Rufus to that of Henry III., were those of investitures, and of the jurisdiction over ecclesiastics. The first, in point of fact, involved the question, whether the temporalities annexed to the higher offices of the church (bishops and abbots) should be in the gift of the crown or the pope; the second, whether clergymen, in criminal proceedings, should be subject to the royal courts or their own. Stephen conceded the point of investiture; but Henry II. strongly

resisted the demands of the church, and, by the Constitutions of Clarendon (1164), abrogated many privileges which it had previously enjoyed, under pretence of restoring ancient laws. But the opposition and martyrdom of Becket turned the scale against the royal authority. Henry was forced to recede from his demands. The quarrel of investitures was again renewed in the reign of John; and that prince, pressed by the difficulties of his position, not only yielded the point, but owned the feudal superiority of the see of Rome. But the power of that church seemed suddenly to decay, after attaining the full recognition of her rights: in the long reign of Henry III. the jurisdiction of the royal courts was silently extended over ecclesiastics, and the prize of so protracted a struggle was partially yielded with little resistance.

William I. and his immediate successors possessed no continental dominions except Normandy, for which they owed fealty to the crown of France. But the house of Plantagenet, to which Henry II. belonged, were masters of the provinces of Anjou, Touraine, and Maine; to which that king added Guienne and Poitou by marriage, and Brittany by conquest; so that above a third part of France was under the immediate jurisdiction and sovereignty of the kings of England. Henry was succeeded by his eldest son, Richard, surnamed, for his bravery, *Cœur de Lion*. After greatly distinguishing himself, and adding to the glory of the English arms by his exploits in Palestine, he was arrested and imprisoned at Vienna, on his way home, and did not recover his freedom till he had agreed to pay an enormous ransom. He soon after died from the effects of a wound he received in an attack on a castle near Limoges.

Richard having no issue, was succeeded, in 1199, by his brother John, surnamed *Lackland*, whose reign is one of the most inglorious in the English annals. During its continuance, Philip Augustus, king of France, an able and politic prince, re-united to the French crown almost all those possessions in France that had been under the feudal sovereignty of the kings of England. But this loss was in some measure counterbalanced by the conquest of Ireland, commenced in 1172, by the Norman chieftains of Henry II. The subjugation of that island was not, however, completely accomplished till about 4 centuries after.

But the reign of John was chiefly remarkable for the concession of the *Great Charter* (*Magna Charta*), signed at Runnymede in 1215. In the following reign, under Henry III., the Commons, as already stated, were expressly summoned as constituent mems. of parliament. The foundations of the constitution were in this way laid; and means prepared for that gradual reduction of the realm under a more regular form of government, which was in great measure effected during the long reign of Edward I. (1272 to 1307), one of the ablest and most successful princes who ever sat on the throne of England. Under him, the great council of the realm assumed a form resembling that of the modern parliament, by the separation of the greater barons, from whom our modern peerage is derived, from the great body of the tenants in chief; the former being personally summoned to parliament, the latter ceasing to be summoned at all, and being present only through their representatives. These, however, continued for a lengthened period to yield a reluctant attendance, and seldom interfered in public affairs, except to vote or refuse the supplies demanded by the

sovereign. The commons and lords appear to have sat in separate bodies, at least occasionally, as early as this reign. The power of the great barons, at the expense of the lesser, was materially increased in consequence of the statute termed "*de donis*," which tended to create perpetuities in feudal estates; while, on the other hand, the statute "*quia emptores*," prevented the owners from increasing the number of their vassals by subinfeudation. The combined operation of the two tended to throw the land more extensively into large demesnes, and to diminish the number of the small feudal chieftains, retainers of the higher nobles. With the church Edward was generally at peace, though in his reign considerable steps were made towards the repression of its temporal usurpations, by the subordination of the ecclesiastical to the royal tribunals, and by laws of mortmain. In its foreign relations, the reign of Edward was eminently glorious, unjustifiable as many of his acts must be esteemed. He subdued Wales; interfered with dignity in the affairs of the Continent; and, taking part in the disputes respecting the succession to the throne of Scotland, nearly subjugated that country, on the borders of which he died, while engaged in the active prosecution of hostilities against it.

His son Edward II. lost, in a few unfortunate campaigns, the footing which his father had gained in Scotland; the crown of which was triumphantly worn by Robert Bruce, the conqueror of Bannockburn (1312). The rest of Edward's reign was occupied by a lengthened struggle in support of his favourites against the barons and his queen. In the end, he was de-throned, in 1327, by the prelates and nobles, who assumed the power of a parliament, and perished miserably in Berkeley Castle, shortly after his son Edward III. had been raised to the throne, at the age of fourteen.

The reign of this great prince is chiefly celebrated on account of his wars in France, which he conducted with so much valour and brilliant though only temporary success. The right which he asserted to the crown of France was derived through his mother Isabella, who stood nearest in the line of succession, but was herself excluded by the Salic law from its inheritance. It was maintained in favour of the claim of Edward, that a title derived through a female, though herself incapable of reigning, is valid. The nation, as in the wars of Edward I. against Scotland, was carried away by the excitement of foreign conquest, and for a long time aided its sovereign with subsidies, tallages, and loans, prodigally lavished in support of his pretensions. These wars lasted, with few interruptions, from 1337 to 1374: but, notwithstanding the great victories of Cressy (1346) and Poitiers (1364), the capture of a king of France, and the desolation of the greater part of that kingdom, Edward retained at their termination only Bordeaux, Bayonne, Calais, and an insignificant district of Gascony.

It was during these wars, and in the court of Edward, that the spirit of chivalry attained its highest point of exaltation. Although this characteristic of that brilliant æra was but of a temporary nature in itself (for the knights of Edward's court left no successors), yet it had very important results in modelling and refining the taste and character of the higher orders. Meanwhile the mass of the people was undergoing still more important change, under the influence of different causes. The wars with France, for the first time since the battle of

Hastings, thoroughly awakened the spirit or English nationality. The distinction between Norman and Saxon was thenceforth merged in the character of Englishman. The language rose contemporaneously with the nation; for though the change of speech from Saxon to English was a very slow process (extending, at least, from the reign of Henry II. to that of Edward III.), the written dialect may be said to have passed at once from barbarism to a high degree of perfection in the poems of Chaucer, whose career began in this reign; a point from which it receded, rather than advanced, for a century afterwards. The royal prerogative declined during the latter part of this reign, owing chiefly to the necessities of the king, whose great expenditure rendered him dependent on his parliaments, which, for the first time, were now directed by statute to be summoned annually. The lowest class, on the other hand, greatly rose in importance.

The great pestilence that raged in England in 1349, is supposed to have cut off a half, or more, of the inhabitants. The services of those that survived having, in consequence, become more valuable, they demanded and received higher wages. This rise was, however, regarded as a grievous hardship: and the king, with the advice of "his prelates, nobles, and learned men," issued an edict, by which all labourers were, under severe penalties, ordered to work at their old occupation for the same wages that they received before the pestilence! But "the servants, having no regard to the said ordinance, but to their ease and singular covetise," refused to serve unless for higher wages than it allowed. In consequence of this resistance, the famous statute of the 21st Edward III. c. 1, commonly called the statute of labourers, was passed. It enacts, that every able-bodied person under 60 years of age, not having sufficient to live on, being required, shall be bound to serve him that doth require him, or else shall be committed to gaol till he finds surety to serve. If a servant or workman depart from service before the time agreed on, he shall be imprisoned; and if any artificer take more wages than were wont to be paid, he shall be committed to gaol. But the increase of wages having originated in natural causes, could not be checked by such enactments. Their inefficacy did not, however, lead to the adoption of a policy more consistent with justice or common sense. On the contrary, fresh efforts were made to give effect to the statute of labourers; and to prevent its being defeated by the peasantry taking refuge in towns, or emigrating to a distant part of the country, it was enacted by the 34th Edward III., that if any labourer or servant flee to any town, the chief officer shall deliver him up; and if they depart for another country, they shall be burned in the forehead with the letter F! The injustice done to the labourers by these oppressive statutes was the more glaring, as Edward, to obtain funds to prosecute his schemes of conquest in France, had had recourse to the disgraceful expedient of enfeebling the standard of the coin. Not only, therefore, did the regulations as to wages, so far at least as they were effectual, deprive the common people of that increased payment to which they were entitled from the diminution of their numbers, but they also hindered them from being compensated for the fraud practised on the coin. It was attempted, indeed, to obviate the effects of the diminution of the latter by fixing the prices of most articles; but this was only to bolster up one absurdity by another, and it is not possible that such limitations could have any material influence.

Notwithstanding the degradation and ignorance of the mass of the people, the oppressions to which they were subjected made them at length rise *en masse* against their oppressors. So long indeed as Edward III. lived, the public tranquillity was preserved, and the villeins and labourers submitted to the injustice of which they were the victims. But the increase of towns and manufactures, during the lengthened reign of this monarch, having materially increased the number of free labourers, a new spirit began to actuate the peasantry, who, contrasting their servile condition with the condition of the citizens, became sensible of their inferiority, and more alive to the oppressions they suffered. An attempt to enforce the provisions of the statute of labourers, in the reign of Richard II., was the ground work of the famous rebellion headed by Wat Tyler. The demands made by the peasantry show the grievances under which they laboured. They required the abolition of slavery, freedom of commerce in market-towns without tolls or imposts, and a fixed rent on lands, instead of the services due by villenage. The rebellion, after having attained to a formidable magnitude, was suppressed with much bloodshed. But though re-established, the servitude of the peasantry was relaxed, and the class of free labourers became gradually more numerous.

How far this national movement was aided by the religious excitement which began at the same time to prevail, has been much debated. About 1380, Wycliffe began his attacks upon the mendicant friars, and upon many abuses of the church as it then existed. He was supported in the royal council by Edward's third son, John of Gaunt, and by some of the principal nobility, through jealousy of the prelates: but his chief reliance for the propagation of his tenets was on the people, among whom he distributed the Scriptures in the vulgar tongue; and despatched the disciples, called his "poor priests," who appealed to their homely sense in their own idiom, and by arguments suited to their capacities. He died in 1384: his followers were soon distinguished by the title of heretics; and the increasing prevalence of their opinions was fully testified, in 1400, by the enactment of the statute "*de heretico comburendo*," the commencement of a long series of persecutions directed against them.

Richard II. was dethroned in 1399 by Henry of Bolingbroke, his cousin, and murdered shortly afterwards. The usurping monarch, Henry IV., was chiefly occupied, during his reign, with domestic troubles, which were with difficulty overcome by his great abilities; but it is remarkable for two important events in the development of the constitution, though not much noticed at the time—the fixing, by statute, of the parliamentary right of election for counties in all freeholders, afterwards restrained, under Henry VI., to those who were worth 40s. per annum;—and the recognition of the two houses as bodies possessing distinct privileges, not to be interfered with by each other.

Henry V., son of Henry IV., renewed the claims of his ancestor to the crown of France, and gained the great victory of Agincourt, in 1415, which laid most of that kingdom at his mercy. But this success was productive of no real advantage. France, indeed, was reduced to a state of great distress, but England participated largely in the mischiefs she inflicted on her neighbour. The draughts of men and money required for the reinforcement and maintenance

of the armies in France, and the licence given to all sorts of disorders at home, by the absence of the sovereign, could not fail of having a most mischievous influence. A statute of the 9th of Henry V. recites, that "whereas at the making of the act of the 14th of Edward III. (1340) there were sufficient of proper men in each county to execute every office; but that owing to pestilence and wars, there are not now (1421) a sufficiency of responsible persons to act as sheriffs, coroners, and escheators." The laurels, as Mr. Barrington has justly observed, which were gained by Henry V. are well known; but it is not so well known that he has left us, in the above statute, irrefragable proof that they were not obtained, but at the dearest price—the impoverishment and depopulation of the country.

The success of the French arms under the celebrated Joan of Arc and Count Dunois, during the minority of Henry VI., at length put a period to the attempts of the English to conquer France. Unfortunately, however, the tranquillity they enjoyed subsequently to the termination of the French wars, was but of short duration; as England soon after became the theatre of civil war.

Henry IV. was the son of John of Gaunt, third son of Edward III. The title which he set up against Richard II. was derived through his mother, great-granddaughter of Edward, Earl of Lancaster, whom a popular tradition represented as the eldest son of Henry III., and excluded from the succession on account of deformity. On the other hand, the Duke of Clarence, second son of Edward III., had also female descendants. Richard, Duke of York, through one of these, acquired a title clearly preferable to that of the descendants of Henry IV., if their apocryphal claim through the Earl of Lancaster were rejected. The partisans of the house of Lancaster assumed (it is said) the red rose for their symbol; those of York, the white. The parties attached to the rival factions were pretty equally balanced, and for nearly 40 years, with the exception of a few short intervals, one half the nation may be said to have turned its arms against the other. Richard, Duke of York, fell in the field, leaving his claims to Edward IV., who, after various changes of fortune, dethroned Henry VI. in 1461. His son, Edward V., a minor, is believed, though, perhaps, without sufficient grounds, to have been murdered in the Tower, after a reign of 13 days, by his uncle, the Duke of Gloucester, afterwards Richard III. This able but sanguinary prince lost his crown and his life in the decisive battle of Bosworth Field, gained in 1485, by Henry Tudor, Earl of Richmond. This event put a period to the civil wars; the victor uniting in his person the title of Lancaster through his mother, Margaret Beaufort, and that of York acquired through his marriage with Elizabeth, daughter of Edward IV.

The reign of Henry VII. is one of the most important in the history of the country. This politic and able prince completely destroyed the power and influence of the feudal aristocracy. From a very remote period, the great lords had been accustomed to maintain vast numbers of servants and retainers, partly for the purpose of displaying their grandeur, and partly as the means of security and of attack. The retainers generally lived on the estates of their masters, who supplied them with badges and liveries, and with provisions while in service. These persons were not only ready upon all occasions, when called upon, to support the cause of their lords,

to execute their orders, and to give evidence for them in courts of law, but, trusting to their influence to screen them from justice, they scrupled not, whenever an opportunity offered, to attack those they considered as their master's enemies! The predatory habits acquired in such a mode of life could not be easily laid aside; and when dismissed from service, or not employed by their masters, they generally supported themselves by theft and robbery. Many statutes had been passed for repressing so enormous an abuse, but without any perceptible effect; and during the civil wars the evil attained to a frightful excess. No provision being made for disbanded soldiers or retainers, it was not unusual to expose liveries for sale, and the competition for them amongst idle and disorderly persons was such that they occasionally brought considerable sums. Henry VII. determined to abate this nuisance; and his sagacity and firmness, and the circumstances under which he was placed, enabled him to succeed. Many of the principal nobles had perished in the struggles terminated by the battle of Bosworth; and their power had been impaired by repeated confiscations, and by the extraordinary expenses they had had to sustain. They were, therefore, but ill-fitted to defend their privileges against so able and powerful a prince as Henry, who perceived and made use of his advantage. The laws against giving badges and liveries, and employing retainers, were renewed and enforced with a rigour that none could expect to elude. At the same time, too, that the barons were compelled to lay aside their feudal pomp, and to dismiss their vassals, the improved and more luxurious habits that began to be diffused throughout the nation disposed them to receive money payments, instead of personal services, from their tenants and dependants; and the lower ranks of people being thus, as it were, abandoned by their feudal superiors, were obliged, instead of trusting to them for support and protection, to resort to some species of industry, and to respect those laws they could no longer trample upon with impunity. The change that was thus effected was of the greatest importance, and had the most decisive and beneficial influence on all ranks and orders. Had the practice of maintaining crowds of retainers continued, order and tranquillity could never have been established.

The power of the great lords was undermined by another law, which, though less felt at the time, has been hardly less important perhaps in its consequences than any other passed in the reign of Henry VII. This was the legitimization of the practice, introduced in the reign of Edward IV., of breaking entails by a fine and recovery. "By means of this law," says Hume, "joined to the beginning luxury and refinement of the age, the great fortunes of the barons were gradually dissipated, and the property of the commons increased in England. It is probable that Henry foresaw and intended this consequence; because the constant scheme of his policy consisted in depressing the great, and exalting the churchmen, lawyers, and men of mean families, who were more dependent on himself." But, however this may be, the depression of the higher classes having taken place before the increasing influence of the Commons, formed a sufficient counterpoise to the power of the crown. Henry VII. was long previously to his death the most powerful of the English monarchs; and left to his son, Henry VIII., a power which was but feebly, if at all, controlled by the popular branch of the legislature.

The great event for which that king's reign is memorable, prepared by many causes, was immediately brought about by his passions. Unable to procure from the see of Rome a consent to his divorce from his wife, Catherine of Aragon, Henry involved the kingdom in a rupture with the pope, and assumed the title of "Head of the Church." During a century of occasional persecution, the Lollards, or sectaries of Wycliffe, had continued to exist, probably in considerable numbers. Thus the Reformation, when first it broke out in Germany and Switzerland, found in England ready adherents among the lower classes; while the more learned part of the clergy, connected by various ties with the continental reformers, readily embraced it; and finally, the quarrel of the king with Rome drew over the timid and subservient, while the powerful were gratified with the plunder of abbeys and other ecclesiastical establishments. Not that Henry himself embraced the peculiar doctrines of the Reformation; on the contrary, during great part of his reign, belief in them was occasionally punished as a crime: but by assuming the headship of the church, and rejecting all spiritual domination, he made ready the way for the transition of the nation from Popery to Protestantism. At the commencement of his reign Henry was popular; but his passions were violent, and being little restrained in their indulgence, he degenerated into an impetuous, sanguinary, worthless tyrant.

His only son, Edward VI., succeeded in 1547, at the age of 9 years. Being educated in the care of divines strongly attached to Protestantism, the Reformation, in his reign, tended towards the extreme side; and had it been prolonged, it is probable that the Church of England would have approximated much more, both in doctrine and discipline, to that established at a later period by Calvin and his disciples, than it eventually did. He died, however, in 1553; and after an unsuccessful attempt to place Lady Jane Grey, heiress to the house of Suffolk, on the throne, the Princess Mary, eldest daughter of Henry VIII., and a bigoted Catholic, was proclaimed without opposition. She immediately restored the Roman Catholic religion, and her reign was distinguished by a fierce persecution of Protestants, of whom more than 200 suffered at the stake. She married Philip II., king of Spain, but happily died without issue, in 1558. During her reign, in 1547, Calais, the last possession of the English in France, was taken by the Duke of Guise.

On the death of Mary, her half sister, the Princess Elizabeth, daughter of Henry VIII. by the unfortunate Anne Boleyn, succeeded to the throne. Attached, originally, to the doctrines of Protestantism, this able princess was, nevertheless, disinclined towards the more violent reformers, who had possessed so much influence in the reign of her brother Edward; and, resuming the headship of the church, she succeeded in creating an establishment, dependent rather on the state for support than exercising a control over it. The Roman Catholics, on their part, did not find it necessary to secede from the national church until about 1570; from which period they formed a sect apart. The early part of Elizabeth's reign was prosperous, notwithstanding some discontent on the part of the lower classes. In fact, besides the heats occasioned by the religious changes, the government of that century had social difficulties of a serious nature to struggle with. The suppression of monasteries deprived a num-

ber of mendicants, and of the poorest classes, of their ordinary dependence. The decay of the feudal system rendered the great lords less desirous than heretofore of multiplying their tenantry, and more anxious to enrich themselves; and from this, among other causes, inclosures multiplied, and much arable land was thrown into pasture, producing complaints of poverty and depopulation. But by far the most important source of change, though at the time the least observed, was the extraordinary diminution of the value of money, occasioned by the discovery of the mines of America. This was followed by a rapid rise of prices; and though wages ultimately rose, their rise was comparatively slow, and much distress accompanied the transition. This great crisis produced numerous enactments for the relief of the poor, which ended in the well-known statute of the 43d of Elizabeth (1602).

The disputes between Elizabeth and the court of Rome grew daily more inveterate, and led to some of the most glorious, and one of the most melancholy, events in our history—the war with Spain and defeat of the Spanish armada in 1588; and the execution of Mary Queen of Scotland, next in succession to the throne. Being a Catholic, the cause of Mary, who having sought an asylum in England, had been imprisoned by Elizabeth, was embraced by most of the Romish Catholics of the country, and produced various unsuccessful plots and conspiracies; but this, though it explains, and in part palliates, never can justify the execution of Mary, which will always remain a dark blot on the character of Elizabeth and her advisers. During this reign, England was joined in alliance, first with the Protestants of France, afterwards, and more closely, with those of the Low Countries; and when Henry IV. ascended the throne of the former country, the combination against the power of Spain and Rome had been completely and successfully organised. Ireland was, also, reduced to a state of greater submission than at any previous period. The taste for naval enterprise was fully awakened, and the commerce and naval power of the country grew rapidly into importance. The last years of the long reign of this illustrious princess, were darkened by the intrigues of the court, the rebellion of her favourite Essex, and her unavailing sorrow for his death.

James VI. of Scotland, the son of the unfortunate Mary, being next in succession to the crown, ascended the English throne on the decease of Elizabeth, without opposition. His peaceful, but inglorious reign of 24 years, appears to have been a period of considerable national prosperity; and in it were laid the foundations of that colonial empire in the new world that subsequently attained to so vast a magnitude. But through this whole reign, the struggle was preparing between the rising power of parliament (which in the latter years of Elizabeth had already begun to assume some degree of independence) and that of the crown. The Puritans were the most zealous and steady supporters, at this period, of the authority of parliament. This sect, or rather class (for dissent was not yet recognised by law), originated in the reign of Elizabeth; being composed, in great measure, of the disciples of the more zealous divines of Edward VI.'s reign, and approximating in opinion to the Protestants of Holland and Switzerland. Episcopal government, and the ceremonies of the church, were particularly opposed by them. They continued to increase throughout the reign of James, espe-

cially in the larger towns; and in some parts, as the eastern counties, they also became numerous among the country population.

Charles I., who succeeded his father in March, 1625, ascended the throne under the complicated disadvantages of a union with a Roman Catholic princess; the dominion of an unpopular favourite, the Duke of Buckingham; and an exchequer much disordered by the prodigalities of his predecessor. To these adverse circumstances have to be added a want of sincerity and directness of purpose. But his great defect, and the grand source of the disasters he entailed on himself and the country, consisted in his arbitrary principles of government. He could not brook the growing power and influence of parliament; and was infuriated enough to suppose that a nation so rich, populous, and enlightened as England now was, and which had long possessed a representative assembly, would submit to be governed in the same way as in the reigns of Henry VIII. and Elizabeth. An ill-conducted war with France added to his difficulties. Three parliaments were summoned and dissolved during the first four years of his reign: after which he governed for 11 years (1630 to 1640) without a parliament. During this lengthened period, the discontent of the popular party was continually increasing; especially in consequence of the efforts of the higher clergy, under Archbishop Laud, to suppress the preaching of Puritan ministers, and the spread of their opinions. Devotion to the views of this party involved the king, in 1638, in a war with his Scotch subjects, on whom he had endeavoured to impose episcopacy. The difficulties that grew out of this quarrel compelled Charles, in 1640, to summon that parliament, afterwards so famous in English history by the name of the Long Parliament. The Presbyterians, having gained an ascendancy in this body, forced Charles to retract the unconstitutional acts of his former government; expelled the bishops from the House of Lords; and impeached and procured the execution of the Earl of Strafford, his ablest minister. At length the breach became irreconcilable, and both parties prepared for war. This eventful struggle commenced in 1642. It was waged for some time with doubtful advantage on either side, till Cromwell and Fairfax, leaders of the Independent party, obtained the command. With the assistance of the Scotch, they defeated the royal armies at Marston Moor (1644) and Naseby (1645). Charles soon afterwards fell into the hands of the army, and after a variety of intrigues and negotiations between that body, the parliament, and the king, he was condemned and executed by warrant of judges nominated by the parliament, on the 30th Jan. 1649. A republican government was next formed, styled the Commonwealth of England, which ended in the protectorate of Cromwell (1651). That able and successful usurper died in 1658; and a short period of turbulence and intrigues was closed by the restoration of Charles II., son of the executed monarch, in May, 1660.

The restoration was effected amidst the universal joy of the people; and the first movements of national feeling set strongly in favour of monarchy and the church. Several of the regicides were punished with death; and the ministers of the Presbyterian persuasion who refused to comply with the Act of Uniformity, were universally ejected from their benefices. The test and corporation acts, long considered as the bulwarks of the church, were also enacted in this reign. But after a few years had elapsed, it was evident that the sudden impulse of loy-

alty which had accompanied the restoration was not congenial with the habitual feelings of the country. Since the accession of Charles I. every thing had been changed: those fundamental notions of rights and duties, both on the part of the sovereign and the people, which now constitute what are termed the principles of the constitution, grew and ripened in this reign into a consistent code, which was ratified at the Revolution. The private life of the king, his vices, and, still more, his follies, and his mean and mercenary dependence on France, were among the causes of his unpopularity. Sanguinary wars with the Dutch served only to exercise the warlike and naval spirit of England, without producing any direct benefit or acquisition. It was about the year 1673, that the houses of Lords and Commons came, for the first time in English history, into a state of permanent collision and opposition; the first containing a majority attached to the court, the latter being governed by its opponents. In 1679, for the first time, we find the names of whig and tory used to designate the two great parties which then divided the kingdom, and which have ever since found successors in name, if not in spirit. The violent conduct of the commons, in the matter of the Popish plot, and their interference with the succession, by entertaining measures for the exclusion of the Duke of York, the king's brother, on account of his religion, produced at last a re-action in favour of the crown. Lord Russell and Algernon Sydney were the victims of this re-action, being executed for participation in an alleged plot; and the king, by proceeding against the corporation of the city of London for the alleged abuse of its franchise, brought all bodies similarly circumstanced throughout the kingdom to a state of submission. The charters were surrendered, and new ones granted on a more oligarchical model. Charles II. died during these temporary successes, in 1685.

He was succeeded by his brother, James II., an avowed Papist, and strongly attached to his religion, to which it was his continual endeavour to obtain proselytes. This circumstance, even more than his steps towards the assumption of absolute power, roused against him a spirit of almost universal discontent. An unsuccessful rebellion, headed by the Duke of Monmouth, a natural son of the late king (who perished on the scaffold), served for a while to strengthen his authority; but the extreme severity with which those who had engaged in it were punished, greatly increased his unpopularity. Having dissolved, in the first year of his reign, that parliament which had proved so favourable to the views of his predecessor, he obtained from the judges an acknowledgment of his right to dispense with acts of parliament, which, in effect, amounted to a recognition of arbitrary power. But happily the servile, time-serving opinions of the judges were heartily repudiated by the nation at large. His other proceedings were of a still more violent and despotical character, till at last he succeeded in disgusting and alienating his entire Protestant subjects. Some of the principal persons in the country retired to Holland, where they found a secure asylum from William, Prince of Orange, son-in-law of James. Had the latter succeeded in establishing arbitrary power in England, his subservency to Louis XIV., then in the zenith of his power, would have been of the most serious consequence to Holland; and to avert this danger, and strengthen the Protestant party, William resolved on the invasion of England. No project was ever more completely successful. James, deserted by his

subjects, and by the army on which he had mainly depended, fled to France. The Convention Parliament (so called from its assembling, of necessity, without the royal summons) declared that James had *abdicated* the crown, and raised our great deliverer, and his consort Mary, to the throne.

A solemn seal was set on the proceedings of the Revolution by the Bill of Rights (see *ante*, p. 776.), which recited and ratified the constitutional liberties of the country, and the Act of Settlement, which excluded James and the greater part of his family from the succession, and fixed it, eventually, in the Protestant line of Hanover. Such was the end of that fifty years struggle which commenced with the meeting of the Long Parliament in 1640. That the popular party advanced on some occasions unjustifiable pretensions, and that their conduct was sometimes subversive of the principles by which they pretended to be actuated, is most true. But after every allowance is made for their faults, follies, and errors, they are still entitled to the warmest gratitude and respect, not merely of Englishmen, but of the whole human race. They successfully vindicated the supremacy of the nation, and the sacred right of resistance to unconstitutional power. Their example has had a powerful influence in all civilised countries, and the form of polity that they established has been introduced into the United States, France, and various other important states. Its influence in England has been beneficial beyond all that could have been reasonably anticipated; and we are mainly indebted for by far the larger part of our superior comforts and wealth, and for the distinguished place we occupy among the nations of the earth, to the triumph of those free principles of government that were consolidated by the Revolution. From this period, English domestic history assumes a new aspect: the conflict of parties succeeds to that of principles. It is true that, for some time after the Revolution, speculative opinions respecting the royal prerogative continued to vary; and the adherence of a considerable body to the cause of the exiled family, although generally passive, placed the state in constant danger: but the fundamental doctrines of the inviolability of the sovereign, the responsibility of ministers, and the supremacy of parliament, were never afterwards practically contested. Force was abandoned; and government, maintained in ordinary times by influence, was controlled in crises of importance by public opinion.

In the reign of William III., England was involved, in a more serious manner than before, in the politics of the Continent, by becoming a party to the general coalition provoked by the ambition of Louis XIV.; and the feelings of the English people, excited by that prince's persecution of his Protestant subjects, coincided with the continental interests of the king, and made the war be vigorously prosecuted. Louis, on the other hand, gave support and countenance to the exiled family. The peace of Ryswick (1697) put a stop for a short period to these hostilities.

In order to provide for his military expenditure, William III. was forced to have recourse to the system of loans; and by so doing he engaged, to a great extent, the mercantile interest of the country in the support of the revolutionary establishment. That interest, though long powerful in England, may be said to have now come prominently forward, for the first time, as a distinct and powerful element in the state. Its increase during the 17th century, relatively to that of the

other classes, may be partly judged of by the fact, that London, which, in all probability, possessed about 250,000 inhabitants at the end of the reign of Elizabeth, had more than half a million in that of William; while there is reason to believe that the number of inhabitants of the whole country (almost five millions and a half in the latter reign) had undergone but a slight augmentation. The Bank of England was founded in 1694.

Hostilities recommenced shortly after the accession of Anne, the surviving daughter of James II., in 1702, and continued until 1713, with a vast accession of glory to the British arms, directed by the Duke of Marlborough. The peace of Utrecht, by which they were concluded, was brought about by the return of the tory party to power. England obtained by it little except some extension of territory in North America, and Minorca and Gibraltar in Europe. The union with Scotland (1706) was the great domestic event of the reign.

The accession of George I., Elector of Hanover, to the throne, according to the limitations contained in the Act of Settlement (1715), again threw power into the hands of the whigs, or party of the Revolution; and the suppression of a Scotch rebellion strengthened his authority. The Septennial Act, passed in the same year, extended the duration of parliament to seven years, at which term it has since remained fixed. Their power being confirmed by this enactment, the whigs maintained the ascendancy to the end of the reign; and the tranquillity of the country was undisturbed, except by the excitement produced by the famous South Sea scheme (1721), and the violent though temporary mercantile distress which followed. The peace of Western Europe was guaranteed by the alliance of the new line of English sovereigns with France; first under the regency, and afterwards under the peaceful administration of Cardinal Fleury: a short war between Spain and Great Britain, in 1727, alone interrupted it.

In that year George I. died, and his son, George II., ascended the throne. This event made no change in the politics of the government, the new king being equally with his father attached to Sir Robert Walpole, the most powerful minister the country has ever known, and also one of the ablest. For twelve years longer he continued to maintain peace; but public clamour, excited by his political enemies, drove him, in 1739, into hostilities with Spain. This war was wholly of a commercial character, and had its origin in the desire of the British merchants to participate in the trade with those vast American provinces, which the policy of Spain kept closed against foreign commercial enterprise. It proved the ruin of Walpole, who was driven from power, in 1742, by a combination of seceding whigs, tories, and Jacobites. About the same time the interests of the sovereign, as elector of Hanover, involved the nation in war with France as well as Spain. In 1745, Charles Edward, grandson of the expelled James II., landed in Scotland, and was immediately joined by the greater number of the Highland clans. At the outset he met with some extraordinary successes, and advanced at the head of a body of Highlanders as far south as Derby. But being joined by but few Englishmen, and having received no support from France, he was obliged to retreat to Scotland, where the battle of Culloden terminated his ill-starred enterprise, and the last civil war that has taken place in Great Britain. The measures that were adopted, in consequence of this outbreak, for abolishing clanship in the Highlands, and putting an end to

hereditary jurisdictions in Scotland, were of great advantage to that part of the kingdom.

In 1748, this desultory war was closed by the peace of Aix la Chapelle. The combinations in which England had engaged on the Continent had been in general unsuccessful: nor were the terms of the peace particularly favourable to her interests. But she may be said to have attained in it, what she has never since lost, a decided maritime supremacy over all the other powers of Europe. She entered it as a competitor, and closed it as mistress of the sea. Thenceforward she has fought to preserve, rather than extend, her naval dominion.

At this period France was peculiarly anxious to recover her lost maritime power, in consequence of that desire for extended colonial conquest which then swayed her councils, and seems, indeed, to have been the most active principle of European politics towards the middle of last century. Disputes in the E. Indies, and in N. America, together with the continental quarrels of Prussia and Austria, brought about the great contest which commenced in 1756, commonly called the Seven Years' War. Fortunately for England, the management of her affairs soon afterwards fell into the hands of one of those extraordinary men whose influence over their age, from their power of inspiring and directing enthusiasm, is far greater than the highest talents, aided by the most powerful connections, but destitute of this peculiar faculty, have ever acquired. Under the guidance of Pitt (Lord Chatham), her arms triumphed in every quarter of the globe. George II. died in the middle of this war (1760), and was succeeded by George III. This prince, ill-educated, obstinate, and strongly imbued with anti-popular prejudices, withdrew his confidence from the ministry of his grandfather. Pitt, unable any longer to carry his measures, retired from the cabinet. A new ministry succeeded; and a glorious war was terminated by an inglorious peace, which, however, secured to England the possession of Canada, and some other inferior acquisitions.

The foreign dominions for which the seven years' war had been undertaken had now acquired an enormous extension, and were increasing rapidly in population and importance. Founded partly by commercial adventurers, partly by religious and political refugees, the colonies of England on the main-land of America, exclusive of Canada, part of Louisiana, and Nova Scotia, acquired from the French, were divided into 13 provinces or states, and had 2½ millions of inhabs. In the West Indies, England possessed Jamaica, then the most fertile and best cultivated of the W. Indian islands, and a number of smaller colonies. In Hindostan, Lord Clive had laid the foundation of our empire, by the acquisition of the important prov. of Bengal in 1757. Such was the extent of the realms, to the government of which George III. succeeded.

The internal history of England, during the reigns of George I. and II., evinces a gradual and steady increase of national prosperity, without rapid change. Little of the violent political and social emotions which had agitated the preceding age, and were again to agitate the next, was then felt by the community. The Jacobite party were gradually out, and was, in fact, nearly extinct in England before the Scottish outbreak of 1745. The laws against dissenters, which still remained on the statute-book, were so modified by usage, that little political distinction remained in practice between them and members of the church. This period has been regarded by some

writers, though probably on no sufficient grounds, as being, on the whole, the most favourable on record as respects the economical condition of the lower classes. Its beneficial influence, in this respect, was probably owing in part to the extraordinary circumstance of a long and steady continuance of productive years:—in 50 years, from 1715 to 1765, only five deficient harvests are said to have occurred; and the price of wheat was generally little more than half what it had been in the middle of the 17th century. The population of the country increased only at a moderate rate, or from 5,300,000 in 1720, to 6,400,000 in 1760; and the labouring classes consequently reaped the full benefit of this prosperity in the shape of high wages. The poor-laws, as managed at that time, certainly contributed to prevent a more rapid augmentation. Moral and orderly habits, on the whole, characterised the period: the violence of earlier times had disappeared; and the peculiar vices attending on great wealth and manufacturing industry had scarcely, as yet, begun to prevail.

A novel order of things began with the accession of George III. New moral and social impulses, arising at the same time with an extraordinary spread of wealth and industry, materially altered, in a few years, the character of the community. The disputes respecting the expulsion of the demagogue Wilkes from parliament, though unimportant in themselves, were the precursors of great events: they, for the first time (at least since the commonwealth), brought into action a democratic party in the state, hostile to the old aristocratic legislature. This party spread most widely and rapidly in the trans-Atlantic dominions of Great Britain. Exasperated by attempts, on the part of the mother country, to impose on them a system of taxation, and incited by the sympathy of a considerable party in England, the thirteen provinces of N. America revolted in 1776, and openly proclaimed their independence. Notwithstanding a gallant resistance, they would probably have been subdued, had not France, Spain, and Holland, espoused their quarrel. England was again involved in war with the chief continental nations, and maintained, even against that formidable combination, her maritime supremacy. But she was forced to relinquish her dominion over her revolted colonies, which the peace of 1783 raised to the dignity of an independent federal republic. In India, the arms of Great Britain continued to make a sure and gradual progress.

The close of the American war was followed by ministerial changes of unusual importance. A coalition was formed between Lord North, the unpopular minister, who had conducted the war, and Charles James Fox, who had been its most violent opponent, which embraced most of those great family interests that had, for a series of years, predominated in parliament. The king disliked, however, the coalition ministry; and an attempt to invade his prerogative, by a bill which threatened to transfer the government of India, in some measure, to parliament, afforded a pretext for its dismissal. William Pitt, younger son of the Earl of Chatham, was then called to the direction of affairs, at the early age of 24. He had to contend at the outset with a hostile majority in the H. of C., but the country, in which the coalition was exceedingly unpopular, was decidedly in his favour; and this and the declared support of the court enabled him to dissolve parliament, and to secure a great majority in the new H. of C. Pitt now became the most powerful minister who had swayed the

cabinet since Walpole. He called to his assistance new interests, and a new school of politicians; the members of the old oligarchy either came gradually into his views, or continued in permanent opposition. The country continued in the enjoyment of peace, and in a state of great prosperity, during the first 10 years of his administration. But, in 1793, it was involved in war with France, then in the crisis of a tremendous revolution.

Between 1750 and 1770, the great system of canals, which now intersects the whole of England, was commenced, and carried a considerable way towards completion. In 1767, the first great step was made in the manufacture of cotton by the invention of Hargreave's spinning jenny. Watt's first patent for improvements in the steam-engine was taken out in 1769; which is also the date of Arkwright's patent. These great steps in practical industry, taking place about the same time, may be regarded at once as causes and effects of the sudden spread of commercial activity. At the accession of George III., the exports of England amounted to about 15,000,000*l.*; at the breaking out of the revolutionary war, to 25,000,000*l.* During the same period, the national debt had more than doubled, chiefly in consequence of the heavy expense of the American war.

The events of the three and twenty years, between the commencement of the revolutionary war and its final conclusion in 1815, are far too varied and manifold to be more than alluded to in this brief summary. It was divided into two periods by the peace of Amiens (1800 to 1803). In the first of these, the British navy obtained the undisputed sovereignty of the seas; and most of the remaining colonies of France and Holland fell into our hands. But our military operations on the Continent, and the combinations which we formed, in conjunction with the great European powers, in opposition to the French, were almost uniformly unfortunate. Pitt, suffering from the ill success of his measures, and determined not to make overtures to France, retired from office: his place was supplied by a ministry which was broken up by the renewal of hostilities, in 1803, and he returned once more to power. The last great act of his first ministry was the union with Ireland; a measure long contemplated, but hastened by the unfortunate insurrection that broke out in that country in 1798. The union abolished the separate legislature of Ireland; and introduced 100 new members for Ireland into the Imperial H. of C., and the representative peers of Ireland into the H. of Lords.

The renewed war was but little successful at the outset, except that the fleets of Spain and France were totally destroyed by Nelson, at Trafalgar. Pitt died in 1806, after the last of the great continental confederacies had been dissolved by the battle of Austerlitz. But, shortly afterwards, affairs took a favourable turn. Napoleon, whose ambition was as boundless as his genius was transcendent, having prevailed on the Bourbon princes of Spain to abdicate the crown, resolved to place his brother Joseph on the Spanish throne. But in doing this, he provoked a resistance that could hardly have been anticipated. Though the abdicated princes were the merest imbeciles, and their government a tissue of abuses, the Spaniards took arms in defence of their rights, and of the independence of the nation thus wantonly violated. The English fanned the flame that had thus been excited; and threw supplies of money and ammunition and powerful armies into Spain. At

first these had but little success; but no sooner had their command been entrusted to the Duke (then General Wellesley) of Wellington, than the whole aspect of affairs was changed. Possessing in an almost unprecedented degree all those qualities that go to form a consummate commander, the duke successively baffled and defeated all the French generals that were opposed to him; and finally expelled the French from the Peninsula.

Meanwhile the colossal power of Napoleon, which had so long triumphed over every combination formed for its overthrow, was irretrievably broken by the frosts and snows of Russia. The invasion of France by the allies in 1814, was followed by Napoleon's abdication; and his short reign after his return from Elba was terminated by the battle of Waterloo, which raised the glory of the English arms and of the English general to the highest pinnacle.

The treaty of Vienna restored, in as far as the altered circumstances of the world would permit, Europe to its state previously to the breaking out of the French Revolution. Except the important advantage of being secured against the danger of attack by a too formidable neighbour, England gained little by the war. She restored Java, and most of the foreign colonial possessions that had fallen into her hands during its progress, retaining only Malta, the protectorate of the Ionian Islands, the Cape of Good Hope, Demerara, Trinidad, and some other places in the West Indies. In India, the conquest of Mysore in 1799, and successful wars with the Maharattas, left her mistress of the whole peninsula of Hindostan, either in direct sovereignty, or as protector of the native princes.

The sacrifices made by the British nation during this protracted struggle were on the most gigantic scale. During its latter years the public revenue amounted to nearly 60,000,000*l.* a year, and nearly 500,000 men were employed in the national service by sea and land: and in addition to the sums raised by taxation, above 600,000,000*l.* were added to the national debt during the course of the contest. Still, however, the whole period, from 1803 to 1815, was one of great and rapidly increasing national prosperity. But the truth is, as we have elsewhere endeavoured to show, that this prosperity is in part to be ascribed to that very increase of our burdens which the war occasioned: and the rest is to be mainly accounted for by the influence of that wonderful

career of discovery and improvement in machinery and manufactures, which, having begun previously to the war, continued to gain new strength throughout the whole contest.

The reign of George III., the longest in our annals, ended in 1820. For several years before his death, he had laboured under mental alienation, the royal authority being exercised by his son, with the title of prince regent. During the 10 years of the reign of George IV., perhaps the most selfish and sensual of our monarchs, the peace of Europe, in as far as Great Britain was concerned, was interrupted only by the short hostilities of 1827 against the Turks, in behalf of the insurgent Greeks. At home, the country was agitated by the unsuccessful effort made by the king to procure a divorce from his wife, Caroline of Brunswick, and by a continued struggle between the two great whig and tory parties, taking the terms in their widest acceptation. But the progress of the country—the vast increase of manufactures and commerce, and consequently of the town population, since the commencement of the French war, in 1793,—had greatly strengthened the whig, or popular party. Civil disabilities of all kinds were loudly objected to; the abuses incident to the nomination, or, as it was called, rotten borough system, were denounced; and a demand for a remodelling of the elective system and of the H. of C. was raised, which, being supported by the great bulk of the town pop., and being, also, in itself just and reasonable, could not be long resisted. In 1828, the Test Act, which, though obsolete in fact, still imposed nominal disabilities on Protestant dissenters, was repealed; and in 1829, the barriers which had so long excluded Rom. Catholics from the legislature were removed. These changes, by increasing the popular influence, paved the way for that great change in the constitution of the H. of C. which will long distinguish the reign of William IV. An outline of the Reform Act, and an estimate of the alterations which it introduced into the character of the legislature, are given under the head "Constitution." The emancipation of slaves throughout the British dominions, and the introduction of the new system for the administration of the Poor-laws, are the only other measures of importance in this reign, which terminated on the 20th of June, 1837; when the Princess Victoria, daughter of the Duke of Kent, and grand-daughter of George III., succeeded to the crown.

TABLE, showing the Commencement, Length, and Termination of the Reigns of the various Kings and Queens of England, since the Conquest, with the Date of their respective Birth, and their Ages.

ENKHUYSEN, or **ENKHUIZEN**, a sea-port town of Holland, prov. N. Holland, cap. cant., on a small peninsula in the Zuider-Zee, 27 m. N.E. Amsterdam. Pop. 7,000. It is fortified on the land side, and has a harbour formerly much frequented by trading vessels, but which is now nearly useless, from having been filled up with sand. The town contains several churches, a fine town-hall, and a large cannon-foundry; and, by means of a canal, it still commands a considerable trade, particularly in salt-fish. During the 16th and 17th centuries, the herring fisheries employed many of the inhabitants, whose number at that time amounted to 12,000. Enkhuyzen was founded in 1500; in 1514 it was all but destroyed by an inundation. (*Gautier, &c.*)

ENNIS, an inland town and parl. bor. of Ireland, co. Clare, of which it is the cap.; prov. Munster, on the Fergus, which is here crossed by three bridges, 20 m. N.W. Limerick. Pop., in 1821, 6,701; in 1831, 7,711; but the new parl. bor., which includes an area of 469 acres, had in 1831 a pop. of 9,727. Catholics are to Protestants in the proportion of about 5 to 1. It is meanly and irregularly built, and most part of the houses in the suburbs are mere cabins. In fact, of 1,890 houses in the bor. no fewer than 826 are thatched: the streets are only partially paved and lighted. The public buildings are the parish church, an extensive R. Cath. chapel, used as the cathedral for the diocese of Killaloe, 2 convents, meeting-houses for Independents and Methodists, a school on the foundation of Erasmus Smith, a Catholic college, a national school, the county court-house, gaol, infirmary, fever hospital, a house of industry, and a barrack. The constabulary and the revenue police have stations here. Races are held annually in the neighbourhood. Under the charter of James I. of 1612, the corporation consists of a provost and 12 free burgesses. This body returned 2 mems. for the bor. to the Irish H. of C. down to the Union; and it subsequently returned 1 mem. to the Imp. H. of C. till the Reform Act, when the limits of the bor. were enlarged, as already stated, and the 104 freholders admitted to the franchise. Registered electors, in 1838-39, 298. Since this change in the mode of election, the corporation has been virtually extinct. The assizes for the co. are held here; as are general sessions in Jan., April, and Oct., petty sessions on Fridays, and a manor court in the suburb of Clonroad occasionally for pleas to the amount of 10*l*. The co. prison, built on the radiating plan, contains 73 cells, and 12 other prison rooms. The average number of prisoners, in 1837, was 143; the number of convictions 160, none of which were capital. There are no manufactures, but there is a distillery near the town, and a considerable trade in agricultural produce, most part of which is conveyed down the river by lighters to Clare, 2 m. distant, where the river becomes navigable, and is thence shipped for England and other parts. The value of the exports in 1836 amounted to 16,517*l*. Markets are held on Tuesdays and Saturdays, and fairs on 9th April, 9th May, 1st Aug., 3d Sept., 11th Oct., and 3d Dec. Post-office revenue in 1830, 826*l*.; in 1836, 1,032*l*. Branches of the Agricultural, Provincial, and National banks were opened in 1834-35-36. (*Boundary Report; Railway Rep.; Statist. Survey.*)

ENNISCORTHY, a thriving inland town of Ireland, co. Wexford, prov. Leinster, on the Slaney, 13 m. N.N.W. Wexford. Pop., in 1821, 3,557; in 1831, 5,955. It is romantically situated on the declivities of steep hills on each side the river, that is here crossed by a bridge: it is navigable by large barges, to facilitate the loading and unloading of which extensive quays have been constructed. It is well built. The public buildings are the parish church, R. Cath. chapel, convent, meeting-houses for Quakers and Methodists, a large school, almshouses, a fever hospital and dispensary, a market-house, and a court-house: the ancient castle is still standing. The corporation, under a charter of James I., in 1611, consists of a portreeve, 12 burgesses, and a commonalty: it sent 2 mems. to the Irish H. of C. till the Union, when it was disfranchised. General sessions are held at Easter and Michaelmas, and petty sessions on Thursdays. The town is a constabulary station. There is here an earthenware manufactory, tan-yards, breweries, a rope-walk, flour-mills, and a distillery. Duty was paid in 1836 on 73,896 bushels of malt, and 14,777 gallons of whisky. A brisk trade is kept up with Wexford by the river. Markets on Thursdays and Saturdays; fairs on 20th Jan., 21st Feb., 21st March, 25th April, 10th May, 7th June, 5th July, 26th Aug., 19th Sept., 10th Oct., 15th Nov., and 21st Dec. Post-office revenue in 1830, 839*l*.; in 1836, 1,066*l*. Branches of the Agricultural and National banks were opened in 1835.

Enniscorthy owes its origin to the castle, still in good preservation, built here by Raymond le Gros, who married a sister of Strongbow. In 1649 it was taken by Cromwell. On the 28th of May, 1798, it fell, after a sanguinary conflict, into the hands of the rebels. The

latter afterwards established their head-quarters on Vinegar Hill, which commands the town. Here they were attacked, and driven from their position with great loss by the royal forces under Lord Lake on the 21st of June, 1798. (*Stat. Surv.; Railway Rep.; Flooden's Ireland*, ii. 456-479, 8vo. ed.)

ENNISKILLEN, an island town and parl. bor. of Ireland, co. Fermanagh, of which it is the cap., prov. Ulster, beautifully situated on an island on the river or strait connecting the two principal divisions of Lough Erne, 25 m. N.N.W. Dublin. Pop. in 1831, 6,116; but the limits of the parl. bor., as fixed by the Boundary Act, extend beyond the island, embracing in all an area of 156 acres, and a pop., in 1831, of 6,796. It has suburbs on its E. and W. sides, on the mainland, with which it communicates by 2 handsome bridges: it consists principally of a main street, and is pretty well built. "It has increased much of late years, and is still enlarging rapidly, and improving. There is an excellent market, and corn in considerable quantities is sold here. House-rent is exceedingly high, much more so even than in Dublin, particularly in the lower class of houses in the main street; some of which, that in ordinary situations in other towns, would not bring more than 4*l*. or 5*l*., are here let at from 11*l*. to 12*l*. or guineas, a year." (*Boundary Report.*) Under a charter of James I. in 1613, the corporation consists of a provost, 14 burgesses, and a commonalty. It sent 2 mems. to the Irish H. of C., and since the Union has sent 1 mem. to the Imperial H. of C. Registered electors in 1838-39, 242. A bor. court is held on Thursday for the recovery of small sums. The co. assizes are held here, as are the general and petty sessions. The public buildings are the parish church, a R. Cath. chapel, meeting-houses for Presbyterians and Methodists, an infirmary, with a dispensary, a linen hall, barracks, and the co. court-house and prison. The prison, on the radiating plan, has 36 single cells, and 10 other rooms for prisoners, their average number in 1837 being 111; the convictions in the same year were 265, of which 2 were capital. Leather is manufactured to a small extent, and there are 2 distilleries and a brewery: duty was paid in 1836 on 33,268 gall. of whisky, and 4,214 bush. of malt grain. The trade consists in timber, coal, and slate, brought by water from Belleek, having been previously carried there from Ballyshannon by land. Markets are held on Tuesdays and Thursdays, fairs on the 10th of every month, except March, May, and Aug. Post-office revenue, in 1830, 898*l*.; in 1836, 1,697*l*. A branch of the provincial bank was opened in 1831, and branches of the Agricultural and Ulster banks in 1836. Three newspapers are published in the town.

Mr. Inglis speaks in the most favourable terms of the beauty of the country round Enniskillen, and of the town itself. "I found it one of the most respectable towns I had seen in Ireland; and its population by far the most respectable-looking that I had anywhere yet seen. It abounds in respectable shops; and I never saw shops better filled than they were on the market day. I understand that many of the tradespeople are wealthy, and that the retail trade is brisk and profitable. The town stands almost wholly on the estate of Lord Enniskillen." (*Inglis's Ireland*, ii. 152.) The corporation revenue, derived principally from tolls, amounts to about 600*l*. a year.

From its position, the possession of Enniskillen has always been of importance in Irish contests. It distinguished itself during the war of 1690, by its attachment to the liberal side, and by its resisting and defeating a superior force sent to reduce it by James II. Part of the brave defenders of Enniskillen were subsequently formed into a regiment of cavalry, which still retains the name of the Enniskillen dragoons.

ENNS, or **ENS**, a town of Upper Austria, circ. Traun, on the Enns, near its junction with the Danube, 10 m. S. E. Linz. Pop. 3,418. The town, which is placed upon a steep hill, is well built, and contains a lofty tower erected by the Emperor Maximilian. The expense of building the old walls of Enns was defrayed by a part of the ransom of Richard I. of England. Enns possesses some linen, steel, and hardware manufactories, and breweries. It is supposed to stand upon or near the site of the an. *Leuiscum*, where a persecution of the Christians took place under Galerius in 304. Many Roman antiquities have been found in its vicinity.

ENOS (an. *Enos*), a marit. town of Turkey in Europe, sanjlic of Gallipoli, at the extremity of a long, low, narrow tongue of land forming the S. boundary of the Gulf of Enos, 26 m. N.W. Gallipoli, lat. 40° 41' N., long. 26° 58' 44" E. Pop. 7,000. It is situated near the mouth of the Maritza, it is, in fact, the sea-port of Adrianople, and is very advantageously situated for commerce; but "owing to the blind and stupid indifference of the Turks, a sand-bank, which increases every year, has been allowed to form at the entrance to the port. The consequence is, that the town stands in pools and swamps of water, which not only produce

pestilential fevers that extend to Adrianople, but are the greatest impediments to trade. Formerly, large vessels used to enter the port; but now even the small craft from Smyrna are obliged to unload outside the bank." (*Kapell's Journey across the Balkans*, i. 253.) The *Maritima* is navigable up to Adrianople in winter and spring for vessels of considerable burden, but in summer the sea craft only ascend as far as Demotica. (See ADRIANOPLE.)

ENTRE DOURO E MINHO, a prov. of Portugal, which see.

EPERIES, a fortified town of Upper Hungary, co. Saros, of which it is the cap., on the Iarcsa, an affluent of the Theiss, and near the Carpathians, 140 m. N.E. Pesth; lat. 48° 58' 45" N., long. 21° 19' 49" E. Pop. with its suburbs, 7,656. It is one of the best built towns in this part of Hungary, and contains 4 Catholic churches, a Lutheran church, chapter-house, synagogue, co. and town halls; a Catholic gymnasium and high school, Lutheran college, episcopal library, and a place of resort for the religious termed "Calvary." It is the residence of a bishop of the United Greek church, and the seat of the board of government for Hungary on this side the Theiss. Its inhab. manufacture linen fabrics, for which this town is noted, woollen and hempen cloths, earthenware, and beer; it has a considerable trade in wine, corn, and cattle. Eperies is surrounded with gardens, and a great deal of flax is raised in its vicinity. The town is ill supplied with water for drinking; near it are some warm chalybeate springs used as baths; and at no great distance is the royal salt mine of Soóvár. (*Oester. Nat. Encycl.*; *Berghaus*.)

EPERNAY (an. *Aque Perennes*), a town of France, dép. Marne, cap. arrond., near the Marne, which is here crossed by a handsome stone bridge of 7 arches, 20 m. W.N.W. Chalons. Pop. (1836) 5,444. It was formerly a place of some strength, but its walls and ditch are now fallen into a state of decay. Though irregular, it is neat and well built. In one of its open spaces is a handsome new church, of the Doric order. Epernay has a theatre, a communal college, and a public library, containing 10,000 vols.; and is the seat of a sub-prefecture and of tribunals of primary jurisdiction and commerce. But the grand distinction of Epernay consists in its being the principal entrepôt for the wines of Champagne, the best of which are produced in its immediate vicinity. Its celebrated wine is excavated in the chalky strata on which the town is built. They are admirably fitted for the storage and improvement of the wine, are of vast extent, and as solid as if they were supported by arches. The wines are classed *par terroirs*, that is, *par crus*, or growths. Few travellers pass through Epernay without visiting these vaults. This, however, is not always free from danger, especially with newly bottled wine, in the months of June and August, when the vine is in blossom, and when the grape begins to ripen. At such periods the bottles frequently explode with great violence; and fatal accidents have in consequence happened to workmen and visitors, who have neglected to use the precaution of covering themselves with iron masks provided for the purpose.

Epernay has sustained several sieges, especially that in which it was taken by Henry IV. in 1592. Previously to that period it had been burnt by Francis I., to prevent its falling into the hands of Charles V. (*Hugo*, art. *Marne*; *Dict. Géograph. &c.*; *Official Tables*, 1837.)

EPHEBUS, an ancient and now ruined city of Asia Minor, called by Pliny the light of Asia—*lumen Asiae* (*Hist. Nat. lib. v.* § 20.), and famous alike in sacred and profane history, on the S. side of the Cayster, near its embouchure on the W. coast of Ionia, and near the modern village of Aialuck, 34 m. S.S.E. Smyrna. The epoch of its foundation is very remote, being ascribed by some to the Amazons; but it subsequently received a colony of Ionian Greeks under Androclus, the son of Codrus; and thenceforth occupied a distinguished place among the twelve confederated Ionian cities of Asia Minor. From the remotest period, Ephesus was celebrated for the temple of Diana, hence called the Ephesian goddess, in its immediate vicinity; and on being besieged by Cressus, the inhab. made an offering of their city to Diana, uniting it to her temple by a rope 7 stadia (7-8ths m.) in length. (*Herod. lib. i.* § 26.) Subsequently to this period the original city was gradually abandoned, and a new one grew up round the temple; but its situation was again changed, especially by the interference of Lysimachus, who is said to have compelled a portion of the inhab. to resort to a new town he had built on higher ground. Ephesus, Miletus, and the other Ionian cities, were early distinguished by their commerce, and became among the greatest emporiums of the ancient world. The wealth they had thus accumulated enabled the Ionians to erect at their joint expense (*factum a tota Asia*, *Plin. lib. xxxvi.* § 21.) a noble temple in honour of Diana, in which was placed her image in ivory, said to have been sent down from heaven by Jupiter, but which

was really the work of an artist named Canitia. (*Plin. lib. xix.* § 4.) This sacred edifice, accounted one of the finest structures of its time, escaped that destruction in which all the other Greek temples of Asia Minor were involved through the impotent fury of Xerxes, after his expulsion from Greece. But it soon after fell a sacrifice to the insane rage for notoriety of an obscure individual of the name of Herostratus, who, to perpetuate his memory, set fire to the temple! (*Val. Max. lib. viii.* § 14.) This event is said to have occurred on the night in which Alexander the Great was born. (*Cicero de Nat. Deorum*, lib. ii. § 27.) At a subsequent period, Alexander offered to rebuild the temple, provided he were allowed to inscribe his name on the front; but this was declined by the Ephesians, who, principally at their own cost, but partly, also, by the voluntary contributions of others, raised a new temple to the goddess far transcending its predecessor, and such as entitled it to be ranked among the seven wonders of the world. To lessen the risk of injury from earthquakes, it was built on the margin of a marsh, its foundations costing an immense expense. It was 425 ft. in length, 220 do. in breadth, and adorned by 127 columns of the Ionic order, each 60 ft. in height. (*Plin. Hist. Nat. lib. xxxvi.* § 14.) The altar was the work of Praxiteles; the famous sculptor Scopas also contributed to its embellishment. The fact, which, among other *chef-d'œuvre* of art, could boast of a noble picture of Alexander the Great, by Apelles, a native of the city. An extensive sanctuary was attached to the temple; but this privilege was annulled by Tiberius, on account of the abuses to which it led.

The worship of Diana was intrusted to the care of a number of priests (*Estiatores* and *Esenes*), and a select band of virgin priestesses; and to prevent the chance of any breach of that chastity so dear to the goddess, the former were emasculated. (*Strabo*, lib. xiv. p. 541.) The great festival in honour of Diana was annually celebrated at Ephesus, under the presidency of *Aniarchs*, or deputies sent by the different Ionian cities, which was resorted to not only by crowds of visitors from all parts of Ionia, but also from all parts of Greece and Magna Grecia, or S. Italy. Games were then celebrated with extraordinary magnificence; and the city was crowded with the votaries of pleasure and traffic, as well as of religion.

Owing to the gradual filling up of the harbour by the deposits brought down by the Cayster river, the commerce of the city was laid under considerable difficulties; but every one knows that, though it had undergone many vicissitudes, it had lost nothing of its ancient fame and celebrity when it was visited by St. Paul. Although, however, the cry then was, "Great is Diana of the Ephesians!" (*Acts*, xix. 28. 34.) her worship was doomed speedily to decline. St. Paul resided here for 3 years; and founded a church that became, as it were, the metropolis of Asia. (*Acts*, xx. 31.) Among his other enormities, Nero is said to have despoiled the temple of Diana of several of its sacred offerings, and of a large amount of treasure. But it recovered, in some degree, from this attack; and continued to attract some portion of its ancient veneration, till it was finally burned by the Goths in the reign of Gallienus. Besides Apelles, his great rival Parrhasius, Heraclitus the philosopher, Hipponax the poet, Artemidorus the geographer, &c. were natives of Ephesus; but its inhab. were distinguished more by their voluptuousness, refinement, and traffic, than by their taste for learning or philosophy. They are also said to have been addicted to sorcery, and such like arts. What were called the *Ephesian letters*, appear to have been magical symbols inscribed on the crown, girdle, and feet of the statue of Diana, in the great temple; and it was believed that whoever pronounced them, had forthwith all that he desired! (*Gibbon*, cap. 10.; *Dictionnaire de Trevoux*, art. *Ephèse*.)

The walls, which may be still traced, embrace, according to Pococke, a circuit of about 4 m. Besides its temple, Ephesus had many noble buildings, among which may still be traced the ruins of a circus, a theatre, gymnasium, &c. but the ravages of earthquakes and other convulsions of nature, have completed the ruin of this once famous city; and her ancient magnificence is indicated by the extent, rather than the preservation of, her remains. The ancient aqueduct, of which a portion still exists, is ascribed to the Greek emperors. Her "candlestick has been removed out of his place." (*Rev. ii.* 5.) In 1764, when Ephesus was visited by Dr. Chandler, "its population consisted of a few Greek peasants, living in extreme wretchedness, dependence, and insensibility; the representatives of an illustrious people, and inhabiting the wreck of their greatness; some the substructure of the glorious edifices which they raised; some beneath the vaults of the stadium, once the crowded scene of their diversions; and some in the

* The Grand Council of Ionia endeavoured to disappoint the incendiary, by passing a decree that his name should not be mentioned. (*Asi. Res. Nat. Attic. lib. ii. sec. 6.*) But it was divulged by the historian Theopompus. (*Val. Max. ubi supra.*)

abrupt precipice, in the sepulchres which received their ashes. * * * Such are the present citizens of Ephesus, and such is the condition to which that renowned city has been gradually reduced. It was a ruinous place when the Emperor Justinian filled Constantinople with its statues, and raised the church of St. Sophia on its columns. Since then it has been almost quite exhausted. Its streets are obscured, and overgrown. A herd of goats was driven to it for shelter from the sun at noon; and a noisy flight of crows from the quarries seemed to insult its silence. We heard the partridge call in the area of the theatre and of the stadium. The glorious pomp of its heathen worship is no longer remembered; and Christianity, which was there nursed by apostles and fostered by general councils, until it increased to fulness of stature, barely lingers on in an existence hardly visible." (*Tour in Asia Minor*, p. 150. 4to ed.; see also the *Antiquities of Ionia by the Dilettante Society*, where plates and measurements are given of the principal extant ruins; *Townscourt*, li. 513—523; *Ancient Universal History*, vii. 416. 8vo. ed.; *Cramer's Asia Minor*, i. 363, &c.)

EPINAL, a town of France, dép. Vosges, of which it is the cap., on both banks of the Moselle, 36 m. S.S.E. Nancy, 65 m. N.W.E. Paris, and 293 m. E.S.E. Paris; lat. 48° 10' 58" N., long. 6° 27' 12" E. Pop. (1835) 8,742. It was formerly fortified with ramparts, and defended by a castle; but of these, only the ruins of the latter now remain. It is tolerably well built, and though ill paved, is clean; it has quays and fine promenades along the river. The principal public buildings are the barracks, hotel of the prefecture, 2 hospitals, the church, theatre, public library with 17,000 vols., and a museum of paintings and antiquities. Epinal is the seat of a tribunal of primary jurisdiction, a chamber of manufactures, and a communal college. It has a society of emulation, schools of linear design and music, and a gratuitous course of midwifery; manufactures of embroidery and lace, linens, stockings, pottery, paper, and oil; and some trade in corn, cattle, iron, denials, and other timber. It is said to have been founded in the 10th century; in 1466, it came into the possession of John, Duke of Lorraine, who granted it many privileges; in 1670 it was taken by the French. (*Hugo*, art. *Vosges*; *Dick*, *Geog.* &c.)

ERIEKIL See ERIKALEA.

ERFURT, a fortified town in a nearly isolated portion of the Prussian dominion, prov. Saxony, formerly a free imperial city, and now the cap. of a reg. and circ. of same name, on the Gera, a tributary of the Unstrutt, about midway between Gotha and Weimar; lat. 50° 58' 45" N., long. 11° 2' 26" E. Pop. (1838) 24,308. Berghaus says that it is "tolerably well built, and has broad streets, and large squares;" whereas the *Encyc. des Gens de Monde* says, that it is very irregularly laid out, and has no street or square worthy of notice, except the market-place, with a small obelisk, erected in honour of one of the last electors of Mayence, and the *Gradenplatz*, leading to the cathedral. This building, originally a fine Gothic structure, has been seriously injured by the hostile attacks to which the town has been exposed; but considerable sums have recently been expended on its repair: in its tower is a bell 164 in. thick, 10 ft. high, about 32 ft. in circumference, and weighing 275 cwt. There are 14 other churches: an Ursuline convent, to which a girl's school is attached: the Augustine convent, in which Luther passed several years of his life, is now converted into an orphan asylum; but the apartment of the Reformers is preserved as nearly as possible in its original condition, and contains his Bible, portrait, and other relics. The town has another orphan asylum, with institutions for the blind; a deaf and dumb; a school for poor children, and a house of correction. Its university, founded in 1392, and suppressed in 1616, has been replaced by gymnasia for Catholics and Protestants: it has, besides, a teachers' seminary, an academy of sciences, with a library; and a botanic garden with a library of 40,000 vols., which formerly belonged to the university. There are also schools for drawing, mathematics, architecture, commerce, and midwifery; several scientific and literary associations, and cabinets of natural history, medals, other objects of the arts, &c. The Pharmacopœia Institute was abolished in 1828. Erfurt is a fortress of the second class, and important from its position on the high road between Frankfurt and Leipzig. In addition to its outer ramparts and ditches, it is defended by the fort of Petersberg, built on a hill in its interior, and that of Cyriakenberg without its walls, on a height about 800 ft. in elevation. It has a garrison of 4,000 men. In the time of Charlemagne, Erfurt was one of the chief commercial cities of Germany, and so late as the end of the 16th century, it is said to have had as many as 58,000 inhab. The business of shoemaking is extensively carried on, and it has manufactures of woollen and cotton cloth, silk ribbons and other fabrics, vermicelli, pearl-barley, liqueurs, vinegar, and leather; some breweries, &c. It is the seat of a local

government for its reg. and circle, a board of taxation council and tribunal for the town and circle, but not of a judicial court for its distr. or reg. It first formed part of the Prussian dom. in 1803; from 1807 to 1813 it was occupied by the French, and in 1808 a memorable interview took place in it between Napoleon and Alexander, Emperor of Russia. It was restored to Prussia in 1814. (*Berghaus*, *Allg. Länder, &c.*; *Murray's Hand Book*.)

ERIE (LAKE), one of the five great lakes of N. America, between Canada and the U. States, included in the middle portion of the basin of the St. Lawrence. It lies between lat. 41° 22' and 49° 52' N., and long. 75° and 85° W., having N. the fertile peninsula of Upper Canada, and S. and E. the states of Ohio, Pennsylvania, and New York. Its shape is elliptical; length S.W. to N.E. about 265 m.; breadth varying from 10 m. to about 63 m. in its centre. Its area is estimated in the *American Cyclopædia* at 12,000, but by Darby at only 8,030 sq. m. It receives near its W. extremity the superabundant waters of the lakes St. Clair, Huron, and the upper lakes by the Detroit river, its own surplus waters being conveyed to Lake Ontario by means of the Niagara, celebrated for its stupendous waterfall. Its mean height above the level of the ocean is estimated at 565 ft., being about 52 ft. below that of Lakes Michigan and Huron, and 322 ft. above that of Ontario. Its depth, which is less than that of any of the other great lakes of the St. Lawrence Basin, is no where more than 270 ft. and in most parts is considerably under 200 ft. It is also said to be gradually becoming shallower; and in proof of this it is stated in a late Buffalo journal, that Long Point had in 3 years gained 3 m. on the water, and that the land is also rapidly gaining along its S. shore. Its bottom appears to be composed of an alluvial deposit of sand and mud, resting on secondary schistose sandstone. (*Darby*.) Its N. shore is rocky and dangerous; the opposite one has also long bluffs of rock; and, except at either extremity, none of its shores-harbours affords a safe and steady entrance of 7 ft. water (*Darby*). In addition to other impediments to navigation, a current, not perceptible in the other great lakes of the St. Lawrence system, sets constantly W., and N.W. or S.W. winds continually prevail; besides which, in consequence of its shallowness, a part of Lake Erie is frozen over every winter, and traffic on it is obstructed by ice for some weeks in the spring after the navigation of the other lakes is open and unimpeded. Towards the W. extremity, there are several groups of small islands, and one—Cunningham Island, belonging to the U. States—has an excellent harbour called Put-in-Bay, with 12 ft. water. On the N. shore, several promontories stretch into the lake, the principal of which are the N. and S. Forelands and Point Land guard. Except the Detroit, Lake Erie receives few rivers of any consequence, and all, without exception, have bars at their mouths. The Ouse or Welland, which unites with its E. extremity, is its principal affluent, and has been taken advantage of for the construction of the Welland canal, of which it forms a part, connecting the Lakes Erie and Ontario, and avoiding the Falls of Niagara. (*See CANADA*.) The Erie canal, 363 m. in length, runs from the town of Buffalo to the Hudson river; the Ohio canal, 334 m. in length, extends from Cleveland at the mouth of the Cuyahoga to the Scioto, a little S. of Columbus. The former of these canals places Lake Erie in communication with the Atlantic; the latter connects it with the Gulf of Florida. (For further particulars respecting these important canals, see CLEVELAND, UNITED STATES, NEW YORK, and OHIO.) Buffalo, Dunkirk, Ashtabula, Erie, Cleveland, Sandusky, Portland, and Detroit are the principal towns on Lake Erie, within the territories of the U. States, and Port Toledo, and Sherrills, are in those belonging to Great Britain. We subjoin an extract from a number of the *Buffalo Commercial Advertiser*, for 1838, which sets the extraordinary increase of navigation on this lake in the most striking point of view:—

"There are now building at different ports on Lake Erie, 17 steam boats, averaging each 350 tons. These boats will all be ready for business at the opening of navigation or soon after. According to a table which we published a short time since, the registered tonnage on this lake was 24,045. To this add the increase from new steam-boats, 5,560, and we shall have a total tonnage next season of 29,605 tons. The number of new sloops, schooners, and other sailing vessels which will be ready by the opening of navigation, we have no means of ascertaining. We have perhaps underrated the number of steam-boats. On referring to the files of the *Buffalo Gazette* for 1818, we find that the whole tonnage of Lake Erie, including American and Canadian, was only 980 tons. The great increase that has taken place within a few years, while the whole country bordering the lakes is yet in its infancy, is very gratifying, and affords the surest guarantee of future prosperity and greatness." (*Stevenson's Civil Engineering of N. America*, pp. 50—

52.; *Darby's View of the U. States*, pp. 206-216. 448.; *Encycl. Americana*.

ERIVAN, or IRWAN, a town of Asiatic Russia, being the cap. of Russian Armenia, on the Zengid, an affluent of the Araxes, 34 m. N.N.E. Mount Ararat, and 106 m. S. by W. Teflis. Pop. (1834) 11,284, mostly Armenians. It contains about 2,000 houses, interspersed with numerous gardens, and ruins of various dates, the whole fortified, and protected by a citadel placed on a steep rock, more than 500 ft. in height, overhanging the river. This fortress, which is about 2,000 yds. in circuit, is encompassed by a double rampart of earth flanked with towers; it contains the ancient palace of the khans, now the residence of the governor; a fine mosque, a cannon foundry, barracks, &c. The houses in the town are mostly mean, and irregularly built. Erivan has, however, a large and handsome *caravan-serai*, with 780 shops, besides 4 Armenian churches, one Russo-Greek. It also contains an Armenian convent, 3 mosques, some aqueducts of a curious construction, and a good stone bridge of several arches, across the river. An old tower, described by Chardin, has since been pulled down, and its materials used for building. The town has some manufactures of cotton stuffs, leather, and earthenware. It is a station for caravans from Teflis, Erzeroum, &c., and has a considerable trade with Russia and Turkey. The epoch of the foundation of Erivan is unknown. It was taken by the Persians from the Turks in 1635. The latter retook it in 1724; but it was again taken by the Persians, under Nadir Shah, in 1745. The Russians were repulsed in an attempt to take it in 1808; but they succeeded in 1827, and were confirmed in its possession by the treaty with Persia of the following year. (*Kinncir's Pers. Emp.*, &c.; *Encyc. des Gens du Monde*.)

ERLANGEN, a town of Bavaria, circ. Central Franconia, on the Regnitz, 23 m. S. Bamberg. Pop. 8,600. It is walled and divided into the old and new towns: the latter, which is one of the best-built towns of Germany, was founded by Christian Ernest, Margrave of Bayreuth, in 1686; it contains the celebrated Protestant university, the only one in the kingdom, established 1743, and usually attended by 250 students. This institution occupies the ancient palace of the Margraves of Bayreuth, and has connected with it schools of theology, moral philosophy, midwifery, medicine, and the fine arts, a polytechnic school, a gymnasium, general and lying-in hospitals, cabinets of natural history, &c., a botanic garden, and a library of 100,000 vols. The palace gardens are very handsomely laid out, and adorned with statues. Woollen goods, stockings, hats, leather and leathern articles, gloves, &c. are made in the town; which has also a large plaster-manufacture, and a brewery, besides some trade in cattle. Most of the pop. are Protestants. Many French refugees settled in Erlangen after the revocation of the edict of Nantes, and in 1666 the first learned society in Germany was established in it. (*Berghaus, Allg. Land- u. Volcksk. v. N. u. S. v. M.*, i. 115; *Murray's Handbook for S. Germany*.)

ERLAU (Hung. *Eger*, Slav. *Jager*), a fortified town of Hungary, co. Heves, of which it is the cap., on both sides the Erlau, an affluent of the Theiss, 6 m. N.E. Pesth. Pop. 18,247, most of whom are Catholics. It has 2 suburbs; is entered by 6 gates; and contains a cathedral and 6 other churches, an archbishop's palace, lyceum, with a library and observatory, an archiepiscopal seminary, gymnasium, Catholic high school, conventual hospital, asylum for infirm clergymen, and various other public institutions, a co. hall, &c. The neighbourhood of Erlau is very fertile and highly cultivated; it produces from 180,000 to 200,000 cimers of fine red wines annually, and the best tobacco in Hungary. The culture of these articles, together with manufactures of woollen and linen fabrics, leather and leathern goods, combs, &c., employ most of the inhab., and supply the principal kinds of merchandise found in the markets of Erlau. (*Ortner's Nat. Encyc.*; *Berghaus*, &c.)

ERNE (LOUGH), a celebrated lake of Ireland, co. Fermanagh, which it divides into two nearly equal portions. It consists of two principal lakes, the Upper and Lower, connected by a broad winding channel. It contains in all an area of about 40,000 acres; and stretches N.W. and S.E. 30 or 35 m. The lower lake is the largest, and both it and the upper lake are full of islands, some of them large and thickly inhabited, many of them well wooded, and the whole so disposed and accompanied by such a diversity of coast, as to form a vast number of rich and interesting prospects. Enniskillen stands on an island in the channel between the upper and lower lakes; and on another island is the magnificent seat of the Marquis of Ely. The lake is elevated about 140 ft. above the level of the sea. It receives the Erne and several other rivers; and discharges itself at its N.W. extremity by a rapid current of about 9 m., which, after falling over many ledges of obstructing rocks, precipitates itself down a grand cataract into the sea at Ballyshannon. It has been proposed to

ERZEROU.

open a navigable channel from the sea to the lake by means of a canal, which would certainly be of material service. (*Stat. Account of Brit. Empire*, i. 327. 3d edit.)

ERZEROU or ERZ-RUM (Arab. *Arzen-el-Roum*), an important city of Turkish Armenia, cap. of an extensive pachalik of the same name, and residence of a seraskier-pacha; in a plain at the foot of the Tcheleli mountains, near the source of the N. arm of the Euphrates, from 6,000 to 7,000 ft. above the level of the sea, 134 m. S.E. Trebizond, 144 m. N.E. by E. Diarbekr, and 156 m. W.N.W. M. Ararat; lat. 39° 53' 30" N.; lon. 41° 46' 15" E. Its pop. has been variously estimated at different periods; but previously to the ravages of the plague some years ago, it perhaps amounted to near 100,000, and at the time of the Russian invasion in 1829 it is supposed to have been about 70,000 or 80,000. But having been abandoned by most Armenian families, previously to its being again delivered up to the Turks, it had not, in 1858, according to Mr. Grant, above 15,000 inhab. (*Geog. Journal*, v. 201.) Probably, however, this estimate was below the mark, and the pop. has since increased.

Only the citadel, which occupies a low eminence within the city, is now fortified. A trench and two walls once surrounded it; but the inner wall only is now entire. It is solidly built of stone, and does not suffer in comparison with Turkish fortresses in general. Besides the bazaars, the principal mosque, and many private dwelling-houses, it formerly enclosed the palace of the pacha; but that extensive building was demolished by the Russians. (*Missionary Researches in Armenia*, p. 63, 64.) According to Mr. Kinneir (*Asia Minor*, p. 365.) the citadel is 3 or 4 m. in circ. Capt. Wilbraham entered it by a strong and massive gateway, flanked by two mutilated though still beautiful minarets. Most of the Turkish inhab. reside within the citadel. The streets of the city, which may be regarded as a suburb attached to the citadel, are narrow, crooked, filthy, and infested with troops of hungry dogs. The houses are mostly constructed of mud, wood, or sun-dried bricks, being, in general, only one story high. A green sward has grown over the terraces of dirt, by which, instead of roofs, they are all covered, and gives them, when viewed from an eminence above, almost as much the aspect of a meadow as of a city. The environs are singularly destitute of trees, the dried feces of the cattle being the only fuel. Water is good and abundant, but wine, according to Tournefort, is execrable. (*Lettres du Levant*, ii. 259. 4th ed.) Erzeroum has 2 Armenian churches, a Greek church, and about 40 mosques, the largest of which will accommodate 2,000 people. It has an extensive custom-house, and 30 khans or inns, many of which are large and solidly constructed. Its bazaars are poor and small, though its markets appear to be well supplied with provisions; and a great many oxen are killed weekly. The city is well situated for trade, on the high road between Asia Minor, Georgia, and N. Persia; and it was once the thoroughfare for most part of the over-land commerce between Europe and the East, which survived the discovery of the passage round the Cape of Good Hope. Recently its commerce has been diminished from a variety of causes; but mainly from the emigration of its Christian inhab., who were its mechanics and traders, to the adjacent possessions of Russia. The manufacture of copper utensils, which once formed the principal branch of industry, is now almost abandoned; but it still continues to have some trade in furs, galls, &c. The amount of goods that passes through Erzeroum, *in transitu*, is very considerable; and Capt. Wilbraham, who visited the city in 1837, says that it had materially increased since the establishment of steam-boats on the Black Sea. From the E., the shawls of Cashmere and Persia, silk, cotton, tobacco, rice, indigo, madder, rhubarb, and a variety of drugs are sent to Erzeroum; and from the W., broad-chests, chintzes, shawls, and cutlery. Little, however, is seen of any of these goods, except at the custom-house and in the khans: so much is this the case, that, according to Tournefort, a person might die for want of a few grains of rhubarb at the very moment that there are bales of it in the town. (*Ubi supra*, p. 302.) The limited extent and meanness of the bazaars evince the small importance of the retail trade.

This city is a principal halting-station for caravans of pilgrims from Tehran and elsewhere, to Mecca. Of its 80,000 inhab. previously to 1829, it was estimated that 23,000 were Armenians, and the rest principally Turks, with about 250 Greeks. The city had no Jewish inhab. Of the Armenians, about 4,000 belonged to the Rom. Cath., and 19,000 to the Armenian church. The diocese of the Armenian bishop includes the whole pachalik of Erzeroum, which since the late war has been much extended, and now comprises the former pachalik of Kara. There was in 1829 an Armenian grammar school in the city, with 6 or 7 teachers, and from 500 to 600 scholars; besides a seminary for the instruction of the Armenian clergy; and a comparatively large proportion of the pop. were then reported to possess the rudiments of education.

Owing to the elevation of the place, the winters are long and severe. In the neighbourhood, however, cattle, sheep, horses, &c., of superior kinds, are reared in great numbers; and in the adjacent plain, corn of a very excellent quality is grown, which forms one of the principal articles of export.

Erseroum was founded about 415, by a Byzantine general of Theodosius II., after whom it was named *Theodosiopolis*. It derives its present name from the an *Arse* or *Arden*, a small city which stood not far to the E., but which having been destroyed by the Seljûkiâns, the surviving inhab. transferred their residence and the commerce and name of their city to the present site. (*Missionary Researches in Armenia*, 68.) This was anciently the strongest of the Armenian possessions of the Lower Empire; and it is at present considered the bulwark of those belonging to Turkey.

ESCURIAL, or ESCORIAL, a celebrated palace, convent, church, and mausoleum of the sovereigns of Spain, Old Castle, prov. Segovia, 25 m. N.W. Madrid. Its name, according to Casiri, is of Arabic origin, signifying a place full of rocks; though others derive it from a Spanish word implying the scoria, or scum of melted metal, some iron mines having been formerly wrought in the locality. Its situation certainly bears out the former etymology. It has a most gloomy site, surrounded by the bare crags of the Sierra Guadarrama. The view from it, though extensive, is not pleasing; and the facility of procuring stone for its construction would seem to have been the only inducement to the choice of its site. It was commenced in 1563 by Philip II., and finished in 22 years, under the superintendence of two architects. It is one of the largest and most magnificent edifices in Europe, though far from being externally the most elegant. It is dedicated to St. Lawrence; "and as this saint is said to have been broiled alive on a gridiron, in the 3d century, the founder chose to have the building on the plan of that culinary instrument, the bars of which form several courts, while the handle contains the royal apartments." (*Twiss*, p. 59.) The handle is about 450 Spanish ft. in length; the principal front of the main portion of the building is 657 ft. (740 Span.), broad; the sides 494 ft. (580 Span.). In depth; and the general height of the edifice is about 60 ft.; a square tower, about 200 ft. in height, flanking each angle. It is wholly built of a grey stone, called Beroquiza, resembling a kind of granite, though not so hard. The Doric order prevails in its architecture. The most striking part of the Escorial is the church in its centre. It is built with a cupola and two towers after the manner of St. Peter's at Rome; its dome is 330 ft. high. Mr. Inglis, who visited it in 1830, observes that its interior exceeded in richness and magnificence any thing that he had previously imagined. "It is quite impossible," he says, "to enter into minute descriptions of all that composes this magnificence: the riches of Spain, and her ancient colonies, are exhausted in the materials; marbles, porphyries, jaspers, of infinite variety, and of the most extraordinary beauty—gold, silver, and precious stones; and the splendid effect of the whole is less lessened on a nearer inspection; there is no deception, no glitter,—all is real. The whole of the altar-piece in the *Capilla Mayor*, upwards of 90 ft. high and 50 broad, is one mass of jasper, porphyry, marble, and bronze, gilded; the 14 pillars that adorn it, each 18 ft. high, are of deep red and green jasper, and the intervals are of porphyry and marble of the most exquisite polish, and the greatest variety of colour." (*Inglis*, l. 255.) The celebrated crucifix of Benvenuto Cellini, formerly in the possession of the Medici family, is, or was, in this church. The ceiling is covered with the admirable frescos of L. Giordano, comprising a consecutive history of the Christian religion and other subjects, and which are considered to be excelled only by the works of M. Angelo. The sacristy, for its decorations, equals in beauty any part of the Escorial; and contains some of the choicest works of the most illustrious painters. Of the 42 pictures that adorn the sacristy, it may be said, what can rarely be said of any collection, that "there is not one that is not a chef-d'œuvre." There are three of Raphael, including the celebrated *La Perla*, and the *Madonna della Pesca*, 3 of Leonardo da Vinci, 6 of Titian, and many of Tintoretto, Guido, Paul Veronese, &c. The reliquary of the convent, contains, of course, an abundance of relics. The library of printed books contains about 24,000 vols., many of which are very scarce. The manuscript library, more valuable than the former, comprises about 4000 MSS., in Arabic, Latin, Greek, Hebrew, &c., including several of the 9th and 10th centuries. This library suffered greatly from a fire in 1661. The royal mausoleum beneath the church is a most magnificent sepulchre. It is of a circular form; the walls of jasper and black marble; and in rows, one over another, are ranged the coffins of the sovereigns of Spain. Here are the urns of 8 kings and 8 queens, on opposite sides of the mausoleum; the former including the emperor Charles V. and his son Philip II.; numerous other

royal personages are buried in a chapel in the Escorial, called the Pantheon of the Infantas. The palace adjoining the monastery would any where else be considered a splendid edifice, but here it is comparatively little worthy of notice, from its inferiority to the rest of the Escorial. The total expense of raising this immense pile of building is said to have amounted to 6,000,000 piastres. The French carried away a great quantity of gold, silver, gems, and other valuables from the Escorial, but on the whole, the treated the edifice with greater forbearance than might have been anticipated. When Mr. Inglis visited it in 1830 there were about 100 resident monks of St. Jerome living, not as ascetics, but in a state of luxurious indulgence. The revenues of the monastery formerly amounted to 12,000*l.* a year. A straggling village of 2000 inhab., called Escorial, or San Lorenzo, adjoins this wonder of Spain. (For an elaborate and excellent account of the curiosities of the Escorial, see *Twiss's Travels in Spain*, 98—138; *Inglis's Spain* in 1830, 252—281; *Milano's Swisbârne*; *Townsend*, li. 119—122, &c.)

ESKI-SAGRA (an. *Ereca*), a town of Turkey in Europe, prov. Roumelia, on a tributary of the Tundja, near the S. foot of the Balkhans, on the high road from Constantinople, and Adrianople, to Widin, 68 m. N.W. Adrianople, and 76 m. S.E. Shumla. Pop. 20,000. It is finely situated on the declivity of some well cultivated hills; but is very indifferently built, with narrow dirty streets: it is surrounded by a rampart of earth, has eight mosques, with manufactures of carpets and coarse cloth, leather, &c. There are numerous orchards in its vicinity, and, at a short distance, are some well-frequented warm mineral baths. (*Dict. Géog.*; *Mitchell's Journey from Moscow to Constantinople*, 142.)

ESNEH (the *Latopolis* of the Greeks), a town of the Thebaid or Upper Egypt, on the W. bank of the Nile; 24 m. S. Thebes: lat. 25° 17' 38" N., long. 32° 29' 56" E. The valley of the Nile is here about 4 m. in width; it is, however, too much elevated to be covered by the inundation; and the canals by which it had been irrigated having been allowed to fill up, it had become in a great degree barren. But Mehemet Ali has succeeded in reopening these canals, so that the ancient fertility of the district has been in part recovered, and it has become the seat of extensive cotton plantations. The town seated on a mound of debris, 30 ft. in height, is the principal commercial place in Upper Egypt. It is the entrepot for the Sennar caravan; while the Ababde camel breeders of the desert bring their camels, and the Berbers from Nubia their commodities, to sell in its markets. It has also some manufactures, particularly of *maglay* or cotton shawls, much worn in the country, and pottery. It is the seat of a Coptic bishop, and numbers among its inhab. from 300 to 400 Christian families, who have two churches, and a third further up the country. There is a Coptic monastery to the S. of the town. (*Bitter's Africa*, iii. § 25; *Jouett's Christian Researches*.)

In the centre of the town is a famous temple, built of sandstone, and of colossal magnitude. Having been made a magazine for the warehousing of the cotton of the surrounding district, it had formerly escaped the destruction that has lately overwhelmed some of the finest Egyptian monuments. The walls of this temple are covered (*crépi*) with the mud of the Nile; and it is so encumbered with mud walls, sand, silt, and cotton, that it is difficult to form a correct idea of its form and vast size. It has a zodiac somewhat resembling that at Denderah; and from the mode of interpreting the figures on it, this temple was long supposed to be the most ancient in Egypt; but so far from this being the case, it is, according to Champollion, *le plus moderne de ceux qui existent encore en Egypte; car les bas-reliefs qui le décorent, et les hiéroglyphes surmontés, sont d'un style tellement grossier et tourmenté, qu'on y aperçoit, au premier coup d'œil, le point extrême de la décadence de l'art.* (*Lettres*, 199.) This conclusion is established by the hieroglyphic inscriptions, which show that the oldest part of the temple, a small portion of the pronaos or portico, was built by Ptolemy Kipphaues; but that the portico was principally constructed by the Emperor Claudius; and that the other parts of the structure belong to a still later era, or to that of various Roman emperors, from Claudius to Septimius Severus and Geta. It appears, however, notwithstanding the comparative lateness of the temple, that Esneh had been a place of much importance under the Pharaohs, fragments of edifices having been discovered bearing hieroglyphical inscriptions that refer to their era. Champollion supposes that these ancient edifices had been destroyed during the Persian invasion.

Immediately opposite to Esneh, on the opposite side of the river, at what was called *Contra Lato*, was a small temple; but this interesting relic no longer exists. It was demolished about a fortnight before Champollion visited the place, and its stones carried off to repair the quay at Esneh. Truly, whatever Mehemet Ali may be in other respects, he is a very Turk in so far as respects his treatment of monuments. (*Lettres*, 107.)

ESSECK, or **ESSEGG**, (Slav. *Ostiek*; an. *Mursia*, or *Murau*), one of the most strongly fortified towns in the Austrian empire, the cap. of Slavonia, and seat of the government of that prov., on the Drave, 13 m. from its confluence with the Danube, 63 m. W. N. W. Peterwardein, and 124 m. S. by W. Buda; lat. $46^{\circ} 34' 13''$ N., long. $18^{\circ} 42' 5''$ E. Pop., including its suburbs, 11,077, principally of German descent. The modern fortress was erected upon the site of a previous one, by the Emperor Leopold I., between 1719 and 1719; it is not extensive, but is well constructed, contains an arsenal and barracks capable of accommodating 300,000 men, and is strengthened by a *défilé de pont* on the opposite side of the river: the houses and other buildings within it are generally lofty and massive. It is surrounded by a broad glacis, and communicates on the N. W., by a long avenue, with the *Ober-Parus*, or upper town; on its E. side is the *Unter-Parus*, or lower town, on the site of the an. *Mursia*, and on the W. the *Mietzke*, or new town, in which suburb most of the trade is conducted. Esseck has a fine military parade, and contains five Catholic churches, a united Greek church, four chapels, a town council house, county hall, engineers' college (*Ingenieurshaus*), military school, Catholic gymnasium, high and other schools, and various other public establishments. In the arsenal, numerous banners and other trophies taken at different times from the Turks, are exhibited. The Drave, and the swampy country on the side opposite to the town, crossed by a long wooden bridge, it has manufactures of silk stuffs and twist; but the chief commercial importance of Esseck is derived from its large and well-frequented fairs for corn, horses, cattle, hides, &c., held four times a year.

Mursia was founded by Hadrian, anno 126, and became the Roman cap. of Lower Pannonia; it was erected into a bishopric by Constantine (*Oesterr. Nat. Encycl.*; *Berghaus, Allg. Ländcr, &c.* iv. 935).

ESSEN, a town of Rhenish Prussia, distr. Düsseldorf, circ. Dülberg, on the Berne, 18 m. N. E. Düsseldorf, and 42 m. S. E. Cleve. Pop. 5,784. It is walled, and has 2 Catholic and 2 Lutheran churches, a Capuchin convent, a gymnasium, hospital, workhouse, and orphan asylum. It is the seat of a municipal court of justice, and the mining board for the towns of Essen and Werden; as it was formerly of the diets of the Rhenish princes, and other distinguished assemblies. The inhab. of this industrious and thriving town are employed in a great many different manufactures, including those of woollen and linen goods, leather, vitriol, arms, cast-iron and steel articles, gas apparatus, and steam-engines, as well as in dyeing woollen stuffs, and coal mines in the vicinity. (*Berghaus, Allg. Ländcr, &c.* iv. 676.; *Von Zedlitz der Preuss. Staat.*)

ESSEQUIBO. See GUIANA.

ESSEX, a marit. co. of England, having E. and S. the German Ocean and the Thames, N. the co. of Suffolk and Cambridge, and W. Herts and Middlesex. Area, 981,120 acres, of which about 900,000 are arable, meadow, and pasture. Surface generally flat, but in parts undulating. Soil mostly loam, and extremely fertile; but in the N. W. part of the co. there is some chalk land; the low grounds along the Thames and the sea are in parts marish and very rich. In parts of the coast the land is indented by arms of the sea, forming a series of islets and peninsulas: some salt marshes along the shore are protected from inundation by embankments. The low grounds are subject to fever and ague, but otherwise the co. is sufficiently healthy. Tillage husbandry in an advanced state. Wheat and barley are the principal corn crops; the ground is in most parts unsuitable for turnips, and fallowing is very extensively practised: beans, however, are frequently substituted for fallows on the heavy loams; and this practice is gaining ground. Potatoes are extensively cultivated. The quality of Essex wheat is very superior. The suckling of calves for the London markets, and the grazing and dairy business, are both carried on to a considerable extent. The district of Epping is celebrated for its butter, which is probably superior to that of any other part of England. The total stock of sheep is estimated at between 800,000 and 550,000 head, and the annual produce of wool at between 8,000 and 9,000 packs. Estates of all sizes, from 51. to 30,000l. a year. Many small and moderate sized farms occupied by their owners. Some of the hired farms in this co. are amongst the largest of any devoted to tillage in the empire. Leases when granted are usually for 7 and 14 years; but they are not so common now as formerly. Average rent of land, in 1810, 18s. 5d. an acre. Minerals, with the exception of the lime and chalk quarries at Purfleet, unimportant. Manufactures, principally of basins and other woollen stuffs, were formerly carried on at Colchester, Coggeshall, and other places, but they have now nearly disappeared. Principal rivers, Roding, Crouch, Chelmer, Blackwater, Colne, which intersect the co., exclusive of the Thames, Lea, and Stour, which bound it on the S. W. and N. Oysters are raised in large quantities in the Essex rivers, especially the Crouch and Black-

water. Principal towns, Colchester, Chelmsford, Maldon, and Harwich. Essex contains 14 hundreds, 5 half hund., a royal liberty, and 406 parishes. It sends 10 mems. to the H. of C., viz. 4 for the co., and 2 each for the bors. of Colchester, Harwich, and Maldon. Registered electors for the co., in 1838-39, 11,466, being 5,889 for the N. and 5,577 for the S. division. In 1861 Essex had 57,192 inhab. houses, 65,819 families, and 317,507 inhab., of whom 159,015 were males, and 158,492 females. Sum paid to the relief of the poor, in 1838-39, 161,019l. Annual value of real property, in 1815, 1,584,108l. Profits of trade and professions in do. 603,986l.

ESSLING, a village of Lower Austria, on the left bank of the Danube, about 7 m. below Vienna, opposite the island of Lobau. This and the contiguous village of Aspern were the scene of a tremendous engagement of two days' duration (21st and 22d May, 1809), between the grand French army under Napoleon, and the Austrians, under the Archduke Charles. (See ASPERN.)

ESSLINGEN, a town of Württemberg, circle Neckar, cap. of a distr., on the Neckar, in a fertile plain, 6 m. S. E. S. Stuttgart. Pop. 6,500. It is walled, and is ill built; it has 5 suburbs, and 5 churches, one of which, a Gothic edifice built in 1440, has a tower 230 ft. high; a handsome town-hall, a court of justice, a richly endowed hospital, with a high school, teachers' seminary, &c. The Neckar here divides into 2 arms, and is crossed by 3 bridges; on the island which it encloses, one of the suburbs is placed. An old castle above the town commands a fine view of the surrounding country. There are manufactures of woollen cloth and other stuffs, cotton and woollen yarn, lacquered tin ware, and glue; there are also some breweries, and a factory for bleaching. Vineyards, orchards, and kitchen gardens are numerous in the vicinity. Esslingen is a very ancient town, and previously to 1803 ranked as one of the free cities of the German empire. (*Berghaus, Allg. Ländcr, &c.* iv. 266.)

ESTAMPES, a town of France, dep. Seine-et-Oise, cap. arrond. in a fertile valley on the banks of the small river, 23 m. S. Versailles. Pop. (1836) 7,399. It is well built, and consists, together with its suburbs, of one street, extending for 2 m. along the road between Paris and Orléans. It has 4 par. churches, an hospital, a theatre, and a tower, the only remains of an ancient castle. It is the seat of a sub-prefecture, a tribunal of primary jurisdiction, and a communal college; has straw-hat, soap, leather, and woollen manufactures, many flour mills, and a large trade in corn. In middle-Latin times this town was called *Stempis*, anno 604, Thierry II. defeated his uncle Clotaire near it in a sanguinary battle. (*Hugo, art. Scinc-et-Oise.*)

ESTE (an. *Alcate*), a town of Austrian Italy, deleg. Padua, cap. of a distr. at the foot of the Euganean Hills, on the Restara canal, 15 m. S. W. Padua, and 42 m. S. E. by Verona. Pop. 6,300. (*Berghaus.*) It is well built, has a fine market-place, several handsome edifices, numerous churches an hospital, and a large barrack; with manufactures of silk-twist, hats, &c.; but it is chiefly known from its having given its name the illustrious family Este allied with the Guelfs, different branches of which, now fill the thrones of Great Britain, Brunswick, and Modena. (*Encycl. des Gens du Monde.*)

ESTELIA, a city of Spain, prov. Navarre, 25 m. S. W. Pampeluna, on the Ega, a little below its confluence with the Amescua. Pop. 6,000. It is situated in a pleasant valley, surrounded by hills clothed with vines and olives, and producing wheat, barley, oats, maize, and other grain, with hemp, flax, &c. Streets ill-paved and dirty. It has 8 churches, 7 convents, and an hospital. In former times it had a castle that was deemed impregnable, and was the head quarters of the military force of the k. of Navarre. There were formerly 4 bridges over the river; but one of them was swept away in 1801. In its centre is a handsome promenade, planted with elms, limes, and poplars. It has manufactures of woollen cloths and cassimères, with oil presses and brandy distilleries. A fair is held here from the 11th to the 30th of November. At a short distance from the town is the university of Larche, which has the same privileges as those of Salamanca and Valladolid. (*Milano, IV. 92; v. 88; iv. 373.*)

ESTÉPA (an. *Atapa*), a town of Spain, prov. Seville, cap. of a dep., on a hill surrounded by plains, planted with olive trees, 16 m. W. Osuna, and 50 m. W. city of Seville. Pop. 10,370. It is regularly built, and the houses are in tolerable condition. It has 2 churches, 3 convents, an hospital, a public granary, and a palace of the marquises of the same name. *Atapa* was a place of importance in the time of the Romans, and was burnt by it when besieged by Scipio's general.

ESTEPONA, a seaport town of Spain, prov. Granada, on the Mediterranean, 24 m. N. E. Gibraltar. Pop. 9,000. It is tolerably well built; has a church, an hospital, a public granary, and a castle. The chief support of the place is its coasting trade; it exports raisins, figs, sweet potatoes, oranges, lemons, and wine; for which it receives wheat and other grain. In this way it employs

100 vessels. (*Milano*.) It has also a productive fishery of Sardines.

ESTERHAZY (Hung. *Esterhazy*), a village of Lower Hungary, co. Oedenburg, near the S. E. extremity of the Neusiedl lake, 14 m. S. E. Oedenburg, and 38 m. S. by W. Presburg. It is celebrated for a magnificent, but now unoccupied, palace, belonging to Prince Esterhazy, built in 1700, in the florid Italian style. It comprises 162 different apartments, and is surrounded by a gallery adorned with numerous vases, statues, &c. "Its marble halls, brilliant with gold and painting, are still fresh as when first built. The chamber of Maria Theresa is unchanged since the great queen reposed there; the whole interior is in such a state that it might be rendered habitable to-morrow." It formerly contained fine collections of paintings, engravings, Chinese porcelain, a library, &c.; but most of these have been removed. It has attached to it an observatory, riding school, stabling for 100, and an opera-house, in which the incident occurred which opened to the musical composer Haydn his subsequent career of celebrity. The palace is surrounded by a noble park, and has an orangery, numerous fountains, fish-ponds, a pleanstray, &c.; but the gardens are overgrown with weeds; and the numberless pleasure-houses with which the grounds are crowded are fast falling into decay, the family having, for the most part, abandoned this noble seat for the more agreeable residence which adjoins the lake, i. e. like Esterhazy in the Italian style, of large dimensions, and well fitted for a princely residence. It was rebuilt in 1805, and is situated 24 m. N. W. Esterhazy. The grand ball-room is a noble apartment. The present prince has been installed Lord Lieutenant of the county of Oedenburg, an office hereditary in his family, with more than regal magnificence. Its park and gardens are much admired; and the botanical collections in the large hot-houses of the latter are surpassed by few in Europe; they comprise no less than 70,000 exotics, and are particularly rich in Australian species. The Leopoldine temple in the park has a statue of the Princess of Lichtenstein, by Canova.

The estates of Prince Esterhazy are said to equal the kingdom of Wirtemberg in size; and contain 130 villages, 40 towns, and 34 castles! But the annual revenue from such vast possessions is said not to exceed 150,000*l.* per annum, though it is capable of considerable increase. "The encumbrances at the present time are greater than with most other Hungarian magnates, few of whom are indebted to a less amount than half their incomes" (*Page, Hungary, and Transylvania*, i. 45.). The family of Esterhazy professes to trace its descent from Attila. It is divided into three branches, of which that of Frakno or Forchtenstein had granted it by the Emperor of Austria, in 1087, the title of Princes of the Empire, with the privileges of coining money, conferring nobility, and exercising judicial power throughout its own domains. The strong castle of Forchtenstein, accordingly, serves as a prison for Prince Esterhazy's peasantry, and as a place of deposit for the equipments of his troops, and the treasure of his family, including the famous Esterhazy jewels, &c. The present head of this noble family has been for several years ambassador from Austria to the court of Great Britain, and is highly esteemed by all who have the honour of his acquaintance. (*Oesterr. Nat. Encycl.*; *Page, Hungary and Transylvania*, &c.)

ESTHONIA, or REVEL, a marit. gov. of Russia in Europe, in the N. W. part of which it is situated, forming one of the Baltic provs. It lies between lat. 56° 20' and 59° 30' N. and long. 23° 20' and 29° 20' E., having E. the gov. of Petersburg, S. the lake Pelpus and the gov. of Ilkga, W. the Baltic, and N. the gulph of Finland. Area, inclusive of the islands belonging to it, about 6,870 sq. m. Pop. 230,000. (*Schmitzer*.) Surface generally flat, but diversified in parts with undulating hills; it contains many small lakes and streams, but has no navigable river: its shores are bold and rocky, climate rigorous, the winters are long, and fogs and violent winds are common throughout the year. Soil in great part sandy, and rather infertile: the cultivable lands are supposed to be to the unproductive, forests, &c., as 1 to 3. Agriculture is the chief employment of the pop., and more corn is produced than is sufficient for home consumption: it is principally rye, barley, and oats; but wheat and buckwheat, besides flax, hemp, hops, and tobacco, are also raised. Most part of the corn not required for food, is set aside for the purpose of distillation. Different species of pulse are extensively cultivated, and form a large proportion of the nourishment of the peasantry. Fruit trees are neglected; but certain wild fruits are very abundant. Fir, &c. are the most common forest trees; but the oak, elm, and beech, &c. are met with. A good many head of live stock are reared, and some are driven into this prov. from distant ones, to be fattened for the Petersburg markets. The oxen and horses of Esthonia are very indifferent, as well as the sheep, goats, &c., though active endeavours have been made to improve the breed of the latter. Poultry is

abundant. The bear, wolf, badger, fox, &c. inhabit the forests, and there are a few elk. The lakes do not contain many fish; but the fisheries on the coasts are of importance to the inhabs. A few mineral products are obtained, but they are of no great consequence. Nearly all the manufactures are domestic, the peasantry weave their own coarse woollens, and some very tolerable linen stuffs. In the islands the building of boats is a principal employment; distilleries are common in every part of the country, the free use of stills being one of the most important of their ancient privileges that the Esthonians preserve. The chief exports are corn, spirits, salt-fish, and hides; amongst the chief imports are herrings and salt. Revel (which see) is the centre of the trade of the government. The prov. is under the political superintendence of the governor-general of Ilkga; but has its own provincial council, judicial court, &c. Nearly all the inhabs. are Lutherans; only about 1 in 148 of the pop. is educated. The upper classes, both in the towns and the country, are mostly of German or Danish descent. The Esthonians are of the Finnish stock, and having been in a state of slavery till a recent period, have, it is alleged, contracted most of the vices incident to such a state. This country was sold by the Danes to the Teutonic knights in 1347, conquered by Sweden in 1501, and finally annexed to Russia by Peter the Great in 1710. (*Schmitzer*, *La Russie*; *Dict. Géogr.*)

ESTREMADURA, an extensive prov. of Spain, lying between 37° 51' and 40° 38' N. lat., and 4° 50' and 7° 24' W. long. It has Salamanca, and part of Avila, on the N.; Toledo, La Mancha, and part of Cordova, on the E.; Seville, on the S.; and Alentejo and Beira, in Portugal, on the W. Its length, from N. to S., is 188 m.; and mean breadth, from W. to E., about 80 m. Area, about 14,750 sq. m. Mifano estimated the pop. in 1896 at 607,690, which gives 45 to the sq. m.; but there can be no doubt that it was formerly much more populous. It consists of immense plains, except towards the N. by the Sierras de Gredos, de Bejar, and de Gata; and, on the S., by those of Constantina, a continuation of the Sierra Morena. Another branch of the latter chain runs along the boundary N. from the confines of Seville and Cordova to the river Guadiana, from which a branch of the mountains of Guadalupe again extends as far as the Tagus. These two rivers, each of which is here joined by several affluents, cross the prov. from E. to W., and an extension of the Castilian or Toledo mountains, under the names of the Sierras de Guadalupe, San Benito, and San Pedro, lying in the same direction, divide it into two nearly equal parts, the N. (*Estremadura Alta*) being in the basin of the Tagus, and the S. (*Estremadura Baja*) in that of the Guadiana. The summers are hot; there is then but little rain; the nights, however, are cool, and the dew, which is abundant, is sufficient to moisten the ground. Although the high mountains are covered with snow at the end of November, the winter is not severe. In summer, the heat often brings on epidemic fevers, particularly with strangers. The soil is very fertile, and might be rendered highly productive by a proper use of the water of the many rivers that intersect it. Mifano says it might be made to support a third part of the pop. of Spain; but a combination of causes, at the head of which are to be placed bad government and bad institutions, have extinguished all industry. Agriculture is wholly neglected; and the noble plains, that might yield abundance of all sorts of products, are devoted to pasturage only. It is stated that about 4 millions of Merino sheep come every year from other parts to winter in the plains, according to the ancient institution of the *Mesta* (see SPAIN), besides those that belong to the country, and immense herds of swine. The produce of corn, wine, oil, hemp, and flax is insufficient for the consumption; but there is an abundance of chestnuts, from which the population of this naturally fine country derive a considerable part of its scanty subsistence. The plains of Placentia, the vicinities of Coria, and La Serena, and the territory between Badajoz and Llerena, are the best peopled and most productive, and show what the rest might be under any thing like a good system of husbandry. Immense plains are found all over the prov. covered with various species of buckthorn, myrtle, marjoram, and other medicinal and odoriferous plants, which are good for nothing unless it be to feed great numbers of bees. Here and there woods of noble evergreen oaks are met with, whose acorns feed the herds of swine whose flesh is so highly esteemed throughout Spain. It has mines of lead, copper, silver, and iron, but they are all, or mostly all, neglected. (*Milano*.)

The manufactures of Estremadura are hardly worth notice. Hats are made at Badajoz and Zafrá, and there are a good many tanneries in the latter place and at El Cesar de Cáceres.

A country that produces little, and manufactures less, cannot have much commerce; the chief article of export is the flesh of its hogs, its trade in cattle and sheep with Madrid and Andalusia being of slight consideration. The state of the roads, and the want of internal navigation,

would, in fact, be all but insuperable obstacles to traffic. There is not a single road in even tolerable repair; and in bad weather, most of them are impassable. The inns, like the roads, are as bad as possible: they abound in filth and vermin, and are deficient in every thing else.

The prov. is governed by a captain-general, with various subaltern military governors; its ecclesiastical jurisdiction is divided into 3 bishoprics, those of Badajoz, Plasencia, and Coria.

The people, according to *Milano*, are, perhaps, the most taciturn and grave of any in Spain; and, from living in a country having little intercourse with any other, uneducated, and subjected to the most vicious laws and regulations, it is not surprising that they should be sunk in indolence. But it is said that, when excited by hope, or any other stimulus, they are persevering and indefatigable. They are robust and vigorous, frank, honourable, and honest; slow to receive an impression, but firm in following it up.

Cortez, the conqueror of Mexico, the two Pizarros, the Almagros, and other adventurers, were natives of Estremadura. It is anciently formed part of the kingdom of Leon. (*Milano*; *Bouville*; *Géogr. Physique de l'Espagne*, p. 134. et seq.; *Dict. Géographique*.)

ESTREMADURA, a prov. of Portugal, which see.

ENTREMEZ, a town of Portugal, prov. Alentejo, partly in a plain, and partly on the slope of a hill, and in a well cultivated country, 22 m. W. Elvas, 26 m. N.E. Evora. Pop. 5,270. It is ill built, but has a large open square in the centre, and is strongly fortified with an ancient castle on a commanding eminence, an arsenal, and quarters for a regiment of cavalry. There are also 4 parish churches, 5 convents, an hospital with a church attached, and a house of charity. Though Evora is the nominal capital of the prov., the authorities have lately been removed thither, on account of the protection afforded by the fortress of Elvas. (*Penny Mag.* vi. 316.) It has manufactures of Delfware, especially of water coolers, and has some trade in hardware. (*Milano*; *Link's Travels in Portugal*, p. 144.; *Dict. Géogr.*)

ETIENNE (ST.), a celebrated manufacturing town of France, dep. Loire, cap. arrond., on the torrent of the Furens, an affluent of the Loire, 20 m. S.E. Monthrion, and 31 m. S.W. Lyons. Pop. (1856) 41,534. It is generally well built; streets wide and straight; houses good, though blackened with the smoke of its numerous coal fires. It has no public edifice worthy much notice; it contains 4 churches, one of which dates from the 6th century; a town-hall, court of justice, theatre, public library, cabinet of natural history, and several benevolent institutions. A handsome fountain in the form of an obelisk ornaments the principal square. A railroad 36½ m. in length runs from Lyons to St. Etienne, and there communicates with another, 64 m. in length, from St. Etienne to Andrieux and Roanne. The manufactures are very various; they include those of arms, (in a royal manufactory originally established in 1585, besides some private establishments,) hardware, cutlery, nails, files, and other tools, numerous kinds of steel articles, &c. These manufactures, if they do not owe their origin, are, no doubt, mainly indebted for their rapid extension to the supplies of coal and iron-stone found in the vicinity. The waters of the Furens, which are said to be particularly well adapted for the tempering of steel, supply a great many factories. Exclusive of hardware, silk fabrics are largely manufactured; and lace, embroidered muslins, *taillés*, cotton yarn, eau-de-Cologne, and lamp black are produced. There are, besides, some bleaching and dyeing establishments, with tanneries, and glass and paper factories. The silk, and especially the silk-riband manufacturers, who comprise a large proportion of the whole, have of late years, for the most part, removed from the town of St. Etienne into the adjacent country, where their fabrics are uninjured by the smoky atmosphere, and the weavers live cheaper and better, by avoiding the octrois, or town duties. St. Etienne, with its adjacent district, is estimated to contain 60,000 inhab., of whom about a half are believed to be connected with the riband or silk haberdashery trade. The quantity of silk consumed annually in the riband manufacture is estimated at about 400,000 kilogr., principally of the superior qualities. The whole produce of the distr. was, in 1835, estimated at 350,000 ells a day, or about 130,000,000 yards a year, of an average value of about 33,000,000 fr. Nearly 60 artists are employed by the riband manufacturers in drawing patterns, and 3-4ths of the produce are exported. The price of labour at St. Etienne is in general less than at Lyons, and said to be about equal to 3-4ths of that at Coventry; but it is very difficult to institute any comparison between them, except by comparing the cost of the work performed in each. The wages of the riband weaver vary from 1s. to 3s. 6d. a day; but the average may be about 1s. 8d. This average is less than that earned in most of the other trades at St. Etienne; the reason assigned being that the riband weavers, not residing in the town itself, mostly divide their time between the manufacture and agricul-

ture. The proprietors of 18,000 single hand-loom in the mountainous distr. round St. Etienne, St. Chamond, &c. are, in reality, little farmers. Few cottages are without one or more looms, at which the inmates work when not employed in the business of the small farm. This arrangement, which gives the peasantry a double resource, is, however, unfavourable to the manufacture; and it will, most likely, in the end, share the fate of the Irish linen manufacture. Its improvement is an object of much greater solicitude to the *subalterns*, or small master weavers, also a tolerably numerous class, who possess from 2 to 5, and sometimes 10 or 12 looms each, and devote themselves entirely to the manufacture. Mr. Villermé's observations go to show that the condition of the weavers of St. Etienne is, upon the whole, much better than that of those of Lyons. There is, at St. Etienne, an establishment called a *Condition*, in which silks are submitted to a temp. of from 72° to 77° Fah., to test their quality, and bring them into a certain state of dryness. The average quantity of silk sent to this establishment annually is estimated at 3,370 bales, or 558,000 lbs.; that sold without passing through the *Condition* amounts to about 1,780 bales, or 267,000 lbs. per annum. The latter consist chiefly of foreign silks, which supply the factories of St. Etienne in the proportion of nearly 1 to 2 of French silk.

Some authors have supposed that this town occupies the site of the ancient *Furanum*, built by the Romans anno 65 B.C.: but this is very doubtful; and no annals of St. Etienne go farther back than the 10th century. In 1441, the town consisted of only 200 indifferent houses, which Charles VII., a few years afterwards, suffered the inhabitants to surround with a wall to protect them against the incursions of the English. A few vestiges of this wall still exist; but it did not prevent St. Etienne from suffering greatly in the religious wars of the 16th century. The plague destroyed 7,000 of its inhab. in 1585, and 8,000 in 1628-29. Since the peace of 1815, it has increased rapidly both in pop. and wealth. (*Villermé*; *Encyc. des Gens du Monde*; *Bouving's 2d Rep.*, pp. 40—47.)

ETNA (Sicily, Ital. *Mongibello*), a mountain and volcano of Sicily, by far the most celebrated in both respects, either in ancient or modern times, rising from the E. shore of the island, prov. Catania, between the river Alcantara on the N. and the Giaretta on the S., the crater being in lat. 37° 40' 31" N., long. 15° E. It is entirely distinct from, and independent of, any other mountain range. Its base is about 87 m. in circ., but its lavas have extended over a much larger space. It consists of a congeries of mountains rising one above another. Not only is it the highest mountain of Sicily, but it is also one of the highest in Europe, being, according to Sir J. F. Herschel, with which Captain Smyth's measurement almost exactly coincides, 10,872 ft. above the level of the sea. Its largest diameter runs from E. to W. The ascent is very various on its different sides; that from Catania being about 24 m., from Linguagrossa 18, and from Randazzo scarcely 12. The extent of the base gives so easy an inclination to the sides, in most places, as greatly to facilitate the ascent; but at the same time it diminishes the grandeur of its aspect at first sight, and its commanding elevation is scarcely perceived, until the traveller has got nearly half way up, and begins to look down on the rest of Sicily, while the summit still seems as far from him as at first; then, indeed, the mountain assumes an appearance so noble, majestic, and imposing, that, associated with the considerations of its cause and effects, it excites the most intense interest, mixed with a degree of awe that elevates the mind, and inspires sublime feelings. (*Smyth's Memoir*, p. 146.)

The multitude of minor cones distributed over its flanks, and which are most abundant in the woody region, is, according to Mr. Lyell, "a grand and original feature in the physiognomy of Etna. These, although they appear but trifling irregularities, when viewed from a distance as subordinate parts of an imposing and colossal mountain, would, nevertheless, be deemed hills of considerable altitude in almost any other region. There are about 80 of these secondary volcanoes, of considerable dimensions; 52 on the W. and N., and 27 on the E. side of Etna. One of the largest, called Monte Minardo, near Bronte, is upwards of 700 ft. in height; and a double hill near Nicolosi, called Munti Rossi, formed in 1669, is 450 ft. high, and the base 2 m. in circ.; yet it ranks only as a cone of the second magnitude amongst those produced by the lateral eruptions of Etna. On looking down from the lower borders of the desert region, these volcanoes present us with one of the most beautiful and characteristic scenes in Europe. They afford every variety of height and size, and are arranged in beautiful and picturesque groups. However uniform they may appear when seen from the sea or the plains below, nothing can be more diversified than their shape when we look from above into their craters, one side of which is generally broken down. There are, indeed, few objects

in nature more picturesque than a wooded volcanic crater. The cones situated in the higher parts of the forest zone are chiefly clothed with lofty pines; while those at a lower elevation are adorned with chestnuts, oak, beech, and holm." (*Principles of Geology*, ii. 112. 3d ed.)

The mountain is, in general, of a symmetrical form, but is broken on its E. side by a deep and extraordinary valley, called the *Val del Bove*, which, commencing near the summit of the mountain, descends into the woody region, and is thence continued by other and smaller valleys to the confines of the fertile region. The *Val del Bove* is 4 or 5 m. across, and is surrounded by nearly vertical precipices from 1,000 to 5,000 ft. in height. This gigantic chasm has been repeatedly traversed by torrents of lava; and in 1755 it was swept by a tremendous inundation caused by the melting of the snows near the summit of the mountain. It has a singularly dreary and blasted appearance.

The structure of Etna is chiefly of the tertiary period antecedent to the present epoch; it consists partly of volcanic, partly of sedimentary rocks; but to what extent is not known, they being so much covered by modern lavas, interstratified with layers of tufa and breccia: around its base is a line of hills formed of bluish marl, and clays enclosing marine shells and yellowish sand, from 800 to 1,000 ft. above the level of the sea; about Paterno, and elsewhere, there are capped with basalt, tufa, and volcanic conglomerates.

The mineral products of Etna are chrysolite, zeolite, scapolite, copper, mercury, alum, nitre, vitriol, specular iron, amianth, pozzolana, and a fine potter's earth: there are many hot, chalybeate, and sulphurous mineral springs; but no rivers, except what are subterraneous, descend from this region, owing to the rapid absorption of the soil. (See SICILY.)

The mountain is naturally divided into 3 regions or zones, viz. the Fertile (*La Regione culta* or *Piemontina*), the Woody (*Venerata* or *Sylvata*), and the Desert (*La Regione Deserta* or *Scoperta*); to which might be added the Fiery region (*Regione di Fuoco*), consisting of the central cone and crater. These regions differ widely from each other in their products and general character. The lower, or fertile, zone varies greatly in width, being 11 m. broad above Catania, but no more than 1½ m. on the N. side. It is composed almost entirely of lava, which, in the course of ages, has been decomposed and converted into a very fertile soil. It is comparatively well cultivated and peopled. All travellers speak in the highest terms of the beauty and fertility of this region. "No language," says Mr. Hughes, "can do justice to the scenery and luxuriant fertility of this tract; whose bosom, heated by subterranean fires, and situated in the most favourable climate, teems with every flower, and plant, and tree, that can delight the eye, and every species of fruit that can gratify the palate; fields covered with golden grain, or the purple vine, villages, and convents embosomed in groves of chestnuts, and oriental plains, mossy fountains, and transparent streams; exhausted craters covered with a canopy of foliage, and numberless other beauties, invite the tourist to those charming scenes. Here, also, the sportsman will meet with every species of game that he can desire; and the botanist or mineralogist find inexhaustible sources of amusement." (*Travels*, i. 113. 8vo. ed.) But here, as in most parts of Italy and Sicily, there is a painful contrast between the richness and beauty of the country, and the appearance and condition of the inhab. The latter are avaricious, slovenly, and dirty: this is a consequence, as Captain Smyth states, of the ashes and dust that pervade the air, soil their persons, and injure their eyes; and of the want of water, which is absorbed, as soon as it falls, by the porous soil. These circumstances, combined with the constant danger of eruptions, would seem, after all, to render this Sicilian paradise any thing but a desirable residence.

The woody region is 6 or 7 m. in width, and reaches to about 6,400 ft. perpendicular height; it begins and terminates abruptly; in the lower parts the trees are principally oak and chestnut; in the middle they are almost entirely oaks, some of them attaining to an immense size; in the upper part the oaks decrease in size, and are intermixed with pines (*Pinus laeda*); as we ascend the mountain the oaks nearly disappear, the firs become stunted, and at length all vegetation ceases, and we enter on the desert. The ground in the greater part of the woody region is covered with aromatic plants and fern. Tillage soon ceases: there are no corn fields, but here and there a few vineyards, and very rich pasture land on which numerous flocks of sheep are fed. In this region, near Carpinetto, stands the celebrated chestnut tree, *Castagno di cento cavalli*, so called from its being supposed capable of sheltering 100 horses under its boughs. It consists of five great arms, which, however, are all united in a single stem a little below the surface. The estimates of the size of this enormous tree vary considerably, probably from their not being taken in the

same way. Swinburne makes it 196 ft. and Smyth 193 ft. in circ. close above ground. A house of ample dimensions for the accommodation of travellers has been constructed in the interior of the tree. Several other large chestnut trees grow in the vicinity, the principal of which is 57 ft. round. The products of the woody zone are chiefly tar, honey, cantharides, and charcoal; and its inhab. are herdsmen and charcoal burners.

It has been already seen that the minor volcanic cones around principally in this region. Caverns are numerous; and one of them, the *Grotto del Capri*, or grotto of the goats, from its affording shelter to these animals, was formerly resorted to by travellers, as a resting place in their ascent. In the vicinity are deep reservoirs of snow, whence Catania and other cities derive their supplies of that article, which is there really a necessary of life: being packed in straw, it is carried to a great distance on mules and asses. (*Hughes*, i. 117.) Wild boars, wolves, badgers, wild goats, deer, martens, and all kinds of game, eagles, vultures, falcons, &c., belong to this region.

The desert region, or zone, is a dismal tract, full of gloomy and rocky hollows and immense chasms, formed of black lava, scoria, ashes, and volcanic sand; covered, for the greater part of the year, with snow and ice, which are always to be found in the hollows. "In this lofty region the air is chill and piercing; every sign of life and vegetation ceases; not an insect crawls over the cold surface of the ground, not a lichen adheres to the grey masses of the lava; not even the eagle's wing soars so high, to disturb the awful solitude of a nature: here only the thunder and the tempest, or the still more tremendous explosions of the volcano, are heard." (*Hughes*, i. 113.) In the midst of this gloomy region the principal cone, forming the summit of the mountain, rises to the height of about 11,000 ft.: it is very precipitous, and as it consists of loose scoriae, and ashes, which frequently yield under foot, the ascent is extremely laborious. At the foot of the cone is a house, with rooms and stabling, erected in 1811, at the expense of the British officers then in Sicily, for the accommodation of travellers, to whom it is a very great convenience. The cone at its base is from 7 to 8 m. in circumference; but at its summit its circ. is reduced to about 4 m. It consists of a horizontal plain, with a vast central crater, or *barathron*, 2½ m. round, agreeing in this respect with the dimensions assigned to it by Pliny: "*Crater ejus pauci ambitu stadia xx.*" (*Nat. Hist.*, lib. iii. § 8.) The view from the summit is superb beyond description. Sicily is spread out like a carpet at the spectator's feet, who traces every river through all its windings from its source to the sea. The strait that separates Italy and Sicily, the Calabrian shores, and the Lipari Islands, are distinguishing features in this magnificent panorama, which it is said sometimes extends to Vesuvius on the one hand, and Malta on the other. The wonderful extent of view, and the unequalled sublimity of the scene, is owing partly to the great altitude of the mountain, partly to the highly interesting nature of the objects, but more than all to Etna being "alone in its glory," and having no other mountain in its vicinity to detract from its grandeur, or to interrupt the immensity of the prospect.

The enjoyment of the spectacle of sunrise is the grand object of travellers who ascend to the summit of the mountain. Brydson has described it in terms not unworthy of the glorious scene, though doubts have been entertained whether he really saw what he depicted, or trusted to the reports of others. It is probably the grandest of all the spectacles that it is possible to behold. Not the least interesting portion of this extraordinary prospect is the distinct image of the mountain itself, seen at the extremity of the shadow that it projects across the island. (*Brydson*, *Letter x.*; *Hughes*, i. 120.)

The crater, when Captain Smyth visited the mountain, was of an oval form, directed from N.E. to S.W., its conjugate diameter being about 493 yards; but its size and form are perpetually varying, from the accumulation and falling in of volcanic matter: its interior is encrusted with extensive effluences of ammoniac sulphur, and vitriolic salts, to the depth of 100 yards on the E., but less on the W. side; those of an orange colour are the most common. Its bottom is flat, and tolerably hard; near its centre are two mounds of scoriae, and ashes, surrounded by several fissures, "whence," says Captain Smyth, "at intervals issue volumes of thick smoke, with a rumbling noise, and hissing sound. There is also a light thin vapour occasionally oozing from the bottom and sides of the huge amphitheatre in every direction. I endeavoured," he adds, "to look into the principal chasm; but the rapid ejection of the cinders, and the strong sulphurous vapours that exuded, prevented me from attaining my object." (*Memoir*, p. 151.) Mr. Hughes, however, has supplied a more minute account of the principal apricum, or funnel; it has three stages of descent: the

first, which extended only a few hundred yards, terminated in a shelf or ridge of cinders; the second, more precipitous than the first, extended to a similar shelf; the third being the perpendicular and unfathomable abyss. Between the two principal spiracles are several smaller conical mounds constantly smoking. The ground here is so hot round the crater that visitors are obliged constantly to shift their places, and yet even here, in the interior of the crater, snow is seen in immense ridges, "disputing, as it were, the pre-eminence of fire, in the very centre of its dominions."

Before eruptions local earthquakes are felt, hollow intonations heard, irregular clouds of smoke burst forth, and, *feritelli*, or volcanic lightnings, are seen darting from the top of the mountain: the agitations increase, till at length, either from the great crater, or from some other part of the mountain, a terrific discharge of red-hot stones, flasks of fire, ashes, sand, or other substances, accompanied with vast volumes of smoke, suddenly takes place with tremendous violence.

— *Horviciæ juxta tonat Etna ruinae,
Interdumque stridit ætherei nubium,
Turbinis fumantem piceo et candente favilla,
Atollitque globos flammaram, et ædema lanibit:
Interdum scopulis volucribus visceris membris
Erigit eructans, liquefactaque saxa sub arce
Cum genitulis glomerat, fundoque exarsat imo.*

Æneid. lib. iii. lin. 571.

Some of the matters thrown up during an eruption are occasionally projected to an immense distance. They not unfrequently rise to the height of 5,000 or 6,000 ft. above the summit; stones of 13 oz. weight have fallen 15 m. from the crater; and in the great eruption of 1693 a stone 50 cubic ft. in size was "projected with such prodigious force that it fell a mile from the crater! Ashes have sometimes fallen in Malta, about 130 m. distant! These eruptions are generally followed & accompanied by the outbreak of a torrent of lava. If this current of liquid fire be stopped by inequalities of ground, a portion cools, and the rest topples over it; sometimes it overwhelms whole cities, villages, and tracts of country: the torrent of lava that partly destroyed Catania in 1699, was stopped by the city walls, 60 feet in height; but the burning fluid accumulated till it rose to the top of the rampart, and then fell over it in a fiery cascade. This mass was so enormous that it was eight years in cooling!

Generally, however, it soon congeals, and when mixed with scoria, cracks, decomposes, and forms an extremely fertile soil. Sometimes inundations of boiling water occur, through the melting of the snow in the upper regions by contact with the lava; and the strange phenomenon has also occurred of a body of snow and ice being covered with a layer of ashes, and then with a current of burning lava, and so preserved for an indefinite period. (*Jagell. ii. 133.*) About one eruption in three takes place from the principal crater, and these are generally the least dangerous, the lava being mostly retained in the immense hollows of the upper region.

Though Homer has made Sicily the scene of some of the most interesting adventures in the travels of Ulysses, and has described the island and the strait of Scylla and Charybdis, he does not so much as allude to Etna. It has thence been inferred that the mountain had not then been an active volcano; for it can hardly be supposed, had it been such, that so careful an observer would have failed to notice it, and to avail himself of the means which it afforded of embellishing his verses by a topic so well suited to the dignity of epic poetry. No doubt it is very difficult to reconcile the silence of Homer, with the fact of the mountain being at the time eruptive, though it would be rash thence to conclude positively that it was not; it had, then, perhaps, been long quiescent, and its eruption forgotten. Pindar is the oldest extant author (about 500 years a.c.) who takes any notice of the eruptions of Etna; and his account is peculiarly interesting, inasmuch as it appears from his representing its summit as supporting the heavens, and being covered with perpetual snows and frost, that it must then have been about as high as at present. According to the ancient poets, Jupiter, after the overthrow of the giants, buried the hundred-headed Typhoeus under this mountain; and its earthquakes and eruptions were said to be occasioned by the struggles of the monster. The passage in which Pindar alludes to Etna has been rendered by West as follows:—

Now under sulph'rous Cumæ's sea-bound coast,
And vast Sicily lies his shaggy breast;
By snowy Etna, nurse of endless frost,
The pillar'd prop of heav'n, for ever press'd:
Forth from whose silences cavern issuing fire,
Pure liquid fountains of tempestuous fire,
And well in ruddy mists the noon-day skies,
While wrapt in smoke the eddying flames aspire;
On gleaming through the night with hideous roar,
Far o'er the redning main huge rocky fragments pour.
First Etychian Ode, second. 5.

Thucydides mentions three eruptions of Mount Etna, but he leaves the date of the first uncertain; the second

occurred 4 or 5 years previously to the period when Pindar wrote the above ode. Since then, there have been a great many eruptions, both in antiquity and in modern times. One of the most tremendous occurred in 1669, when the hill of Monti Rossi was formed; but the most extraordinary phenomenon in this eruption, was the opening of a fissure about 8 feet wide, and of unknown depth, which stretched from the plain of S. Lio to within a mile of the summit of the mountain, a distance of 13 m.; it emitted an intensely vivid light. Five other parallel fissures also opened, and gave out tremendous noises. The lava that burst forth on this occasion, overwhelmed 14 towns and villages, filled up the port of Ulysses, and as already stated, partly destroyed Catania. About 27,000 persons are supposed to have lost their lives in this convulsion. The last great eruption occurred in 1832, when the town of Bronte narrowly escaped being overwhelmed by a current of lava. (Besides the authorities already referred to, a host of works have been written on Etna; one of the best is *Ferrara, Storia Generale dell' Etna*, 8vo., Catania, 1793.)

ETON, a town and par. of England, co. Bucks, hund. Stoke, on the N. bank of the Thames, immediately opposite to Windsor, with which it is connected by a neat iron bridge, 23 m. S.S.E. Aylesbury, and 21 m. W. London. Pop. (1831) 2,475. It consists principally of a single street, well paved and lighted, and which of late years has been much improved, many of the houses having been rebuilt. The establishment to which Eton owes all its importance is its college, founded by Henry VI. in 1440. That monarch, by whom it was liberally endowed, intended it principally for the education of "poor and indigent boys," destined for the church. By his second charter, dated Oct. 21. 1441, the foundation consisted of a provost, 10 priests or fellows, 4 clerks, 6 choristers, a master, 25 scholars, and 25 alms or beads men; but about 1443, the date of the college statutes, he increased the number of scholars from 25 to 70, added an usher, clerk, and two choristers, and raised the number of beadsmen to 13. Various changes were made in the succeeding reigns, and the establishment suffered considerable spoliation, especially from Edward IV.; but it was particularly excepted in the Act of Parliament for the dissolution of colleges and chantries in the reign of Henry VIII. The foundation at present consists of a provost, appointed by the crown; 7 fellows, one of whom acts as vice-provost; 2 chaplains, called conductors; 2 lay-clerks, 10 choristers, 2 masters (each of whom has 4 assistant masters), and 70 scholars, who since the reign of George III. have been called "king's scholars." Besides the latter, the different masters have a number of stipendiary pupils, not on the foundation; but who receive instruction in the college. These are called *oppidans*, and generally consist of members of families, superior in rank or wealth to those of the king's scholars. Their number is variable, but at an average may be estimated at about 350. Under a recent head master, the number of boys at Eton, of both classes, at one time exceeded 600. The buildings of the college surround 2 quadrangles: the ante-chapel, or school-yard, is enclosed by the chapel, schools, dormitories of the scholars, and masters' chambers; and has in its centre a bronze statue of the royal founder of the college. The inner or lesser quadrangle is bounded by the cloisters, containing the residences of the fellows, the library, hall, and various offices. Between the two are the provost's lodge, &c., appertaining to which is an ancient tower and a gateway in the centre, connecting the two courts. The chapel, on the S. side the outer court, is a handsome Gothic edifice, 175 ft. in length, including the ante-chapel, and in its style and ornaments greatly resembles the chapel of King's College, Cambridge. The par. church of Eton having fallen to decay, the inhabitants attend public worship in the college chapel, the provost having archidiaconal jurisdiction in the par.; but there is also a chapel of ease in the town, at which one of the conducts officiates. The college library contains a large and valuable collection of books, surpassing drawings from the antique, medals, &c.; it is a fine apartment, and fitted up in a superior style. The dining hall for the scholars on the foundation is spacious, but little ornamented; it contains, however, two large ancient pieces of tapestry. The upper school, on the W. side of the outer court, was designed by Sir C. Wren, and is supported by an arcade with double columns of the Doric order. The school-room is spacious and of fine proportions, but fitted up in a plain manner. The school-room of the lower school is of considerable length, but not of a proportional height, with a range of ancient oak arches on either side, and the seats of the scholars behind them. It is beneath a part of the principal dormitory, called the *long chamber*. To the E. of the cloisters are the college gardens; to the N. the playing fields, and adjacent to the latter the shooting fields, in which cricket matches, &c. are played.

The scholars on the foundation are lodged and boarded by the establishment. They are eligible from the ages of 8 to 15, and are elected separately by the individuals of a body composed of the provosts of Eton and King's College, Cambridge, the vice-provost and master of Eton, and 2 posers (M.A.'s) of King's College. This body meets on the last Monday in July of every year, when usually 24 boys are nominated to fill up vacancies as they may occur in Eton Lower School, and 12 of the head boys in the same establishment are nominated in a similar manner to King's College, Cambridge, according to the statutes of the founder. Those who go to King's are after 3 years, entitled to fellowships. Eton College also sends 2 scholars to Merton College, Oxford, where they are called *Portionists*, or, by corruption, *postmasters*. Failing an appointment to either university, Eton collegians are superannuated at 18 or 19, and for scholars so superannuated there are a few exhibitions, and some other means of slightly augmenting their income in the gift of the college. By statute, the education of King's scholars should be gratuitous; but some innovation has taken place on this head, and the average annual expense to the parents of such (including travelling expenses, &c.) is estimated at 60*l*.

The *opfidians* board either in the houses of the lower master or assistants, or at a somewhat lower charge in the boarding houses attached to the school; some few, chiefly of noble birth, in private lodgings, under the care of private tutors. The total expenses of a boy educated as an *opfidian* may perhaps average from 150*l*. to 200*l*. a year. Without the boundaries of the college, the *opfidians* are comparatively little under the control of the college functionaries; but within its walls they are in no respect distinguished from the King's scholars, and mix with them in the same classes. The entire school is divided into Upper and Lower. The latter comprises, together with the junior classes, the 3d and 4th forms, each consisting of 3 subdivisions, or removes. Each of these is under the control of a separate assistant master; and as boys of various ages come to Eton, they are placed at the bottom of whatever remove in the lower school they may seem fit for by their previous acquirements and age, passing into the superior ones according to their proficiency. The upper school consists of the 5th and 6th forms, and is under the immediate control of the head master. The number of boys in the 6th form is limited to 22; and of those the 10 highest are styled monitors, and act in some measure as assistants to the masters. The head of the whole school, who arrives at his post by seniority, is called the "captain."

The course of instruction at Eton is almost wholly classical. The only entire works read are those of Homer, Virgil, and Horace, but extracts from those of numerous others are occasionally made use of. The well-known Eton Latin and Greek Grammars, committed to memory, form the basis of grammatical instruction. In the Upper School the boys are engaged in writing Latin and Greek themes and verses, for the best of which rewards are given; and a play of some Greek author is usually in the course of reading. Mathematics form a part, but a very small one, of the school discipline; and though there are masters in French, writing, arithmetic, &c., such studies are wholly unconnected with the general business of the school, and only attended at extra hours. All the boys attend chapel twice on Sundays, and once on saints' days and holidays; and, in addition, the collegers attend prayers every evening, after which they are confined to their several dormitories. The system of *jaggings*, by which the boys of the Lower School are *fags*, or servants, to those of the Upper, out of school hours prevails; but its supposed severity and degradation have been much exaggerated.

A triennial ceremony peculiar to this school is the *Montem*. This takes place on Whit-Tuesday, and consists of a procession of the boys in a kind of military order, with flags and music, and headed by their "captain," to a small tumulus about 1½ m. distant on the Bath road, which has acquired the name of Salt-hill from the circumstance that the scholars upon this occasion collect what is called "salt," being contributions in money exacted from all the spectators, and even casual travellers on the road. The sum collected at such times has been known to exceed 1,000*l*., the expenses of the breakfast and dinner for the school, the music, fancy dresses, fees, &c., are first deducted out of it; and the entire surplus, which generally amounts to several hundred pounds, becomes the property of the "captain" of the school.

Eton College has in its gift nearly 40 ecclesiastical preferments, besides several presentations, &c. The provost, though a rector he derives no emolument from the par., has very extensive powers within it; for, by an act passed in 25 Henry VI., no inhabitant is allowed to take a lodger without his permission, under

penalty of 10*l*., which fine may also be levied upon the individual engaging lodgings without such permission. In 1489 a charter was granted to Eton for a market on Wednesdays, with considerable privileges, but this has been long discontinued. There were formerly also two fairs, but only one is now kept up—that on Ash Wednesday for horses and cattle. (*Cartie's Endowed Grammar-schools*, pp. 48—53; *Journ. of Education*, vol. viii.; *Statist. of the British Empire*, ii. 445—448.)

EU, an inland town of France, dép. Seine Inférieure, cap. cant., on the Bresle, about 2 m. from its mouth in the British Channel, 16 m. N.E. Dieppe, and 43 m. N.N.W. Rouen. Pop. (1856) 3,490. It is generally well built, and has a fine square; it has several churches, one of which, a fine Gothic edifice, is remarkable for a subterraneous chapel, a college, and an hospital. In its neighbourhood, in a noble park surrounded by gardens, is the magnificent *Château Royal d'Eu*, belonging to Louis Philippe; it contains the finest collection of historical portraits in France. (*Hugo*.) There are several Roman remains in and about Eu. This town is the seat of a tribunal of commerce, has a manufacture of soap, serge, &c., and is an *entrepôt* for the corn of the Somme, and has some trade in hemp, flax, timber, and linens, exported at Treport at the mouth of the river. A large forest, which takes its name from the town, extends to the E. and S. Eu was burnt by Louis XI. in 1445, to prevent its falling into the hands of the English, who meditated a descent into Normandy; it is said never to have recovered its original prosperity. (*Hugo*, art. *Seine Inférieure*.)

EUPATORIA, or KOSLOFF, a sea-port town of Russia in Europe, W. coast of the Crimea, lat. 45° 9' N. long. 33° 0' 20" E. Pop. nearly 8,000. It has a considerable trade; exporting salt, wheat, barley, hides, lambskins, &c. The houses, with the exception of a very small number built in the European style, are altogether of Asiatic architecture. The roadstead is a sandy circular bay, and affords no shelter with the winds at S. and E. (*Hagermeister on the Black Sea*, p. 66. *Eng. trans.*)

EUPHIN, a town of Rhénish Prussia, immediately within its N.W. border, cap. circle of same name; on the Weege or Veedee, a tributary of the Meuse, 7 m. S. by W. Aix-la-Chapelle. Pop. (1838) 11,678. It is principally inhabited by the descendants of French Protestants who took refuge here subsequently to the revocation of the edict of Nantes; and is one of the principal manufacturing towns in the Prussian dom., having some very extensive broad cloth and kerseymere factories, with others of nitric acid, chicory, &c. It is the seat of a council for the circle, and of a court of primary jurisdiction; and has a superior citizens' school. (*Cannabich, Erbkhaus*.)

EUPHRATES and TIGRIS, two famous rivers of Turkey in Asia, which, rising in Armenia, flow generally parallel to each other in a S.E. direction, and finally unite in lat. 31° 0' 20" N. and long. 47° 40' E., in the *Shat-ul-Arab*, or "River of Arabia," which discharges itself into the bottom of the Persian Gulf.

The *Euphrates* (Gr. *Εὐφράτης*), so called from *εὐφραίνω*, to exhilarate or make glad, because its waters, like those of the Nile, fertilise the adjacent lands; is the most considerable river of W. Asia, and its basin, exclusive of that of the Tigris, is supposed to comprise about 109,000 sq. geog. m. After watering on either side the territories belonging to Turkey as far S. as near lat. 36°, it forms, from that point to about lat. 33° 30', the boundary between them and the newly acquired Asiatic dominions of the pacha of Egypt; it next divides Turkey from Arabia, and lastly, from its union with the Tigris to its mouth in the Persian Gulf, about lat. 30° and long. 48° 20', it separates Arabia and Persia.

It is singular that the ancients should have had no correct information respecting the sources either of the Euphrates or the Tigris; and there is the greatest obscurity and discrepancy in the statements they have put forth respecting them. The popular opinion seems to have been that their sources were identical (*Lucan*, lib. iii. v. 257.); and though this notion was rejected by Strabo, Mela, Pliny, &c., none of them appears to have had any precise information on the subject. (*See Cellarii Notit. Orbis Antiquæ*, ii. 378.)

Both rivers have their sources in the table-land of Armenia. The Euphrates rises in the pachalic of Erzeroum, and is formed by the junction of two great arms—the Frat and the Morad. The former, which is also the most N., has its principal sources about 20 m. N.E. from Erzeroum, in the Tchehidir mountains, near the sources of the Araxes; the Morad has its sources on the N. declivity of the Arghidagh mountains, 45 m. N.E. from the nearest point of Lake Van. Both these rivers pursue a W. course, inclining to the S. till they unite near Kebban, in about the 30th deg. of lat. and 39° 25' E. long. The united stream thence flows S.W. to Samlat (*Samosata*) in lat. 37° 31', long. 38° 23', having received on the right the Kara-su, and forced a

passage for itself through the main range of Taurus, and formed a double cataract 15 m. above Samlat. From the latter point the river pursues a nearly S. course to Rafik, about 50 m. E. from Aleppo, its course being thence almost uniformly S.E. At its source the Fral, or N. arm of the Euphrates, is only 90 m. from the Black Sea, but a very mountainous country intervenes between them. During its S. course, the Euphrates approaches within 122 m. of the Mediterranean, and as the intervening country is for the most part level or undulating, it would, perhaps, present no very serious obstacles to the formation of canals or carriage roads. From Hillah (*Babylon*) to its mouth it flows through a perfectly level country, which was formerly intersected by numerous canals. At Bir, 107 m. N.E. Antioch, the Euphrates is 628 ft. above the level of the Mediterranean (*Ainsworth*, p. 109.), the rate of inclination from which being estimated to average only about 6½ inches a mile. The total length of the river, measured from the sources of the Morad, is estimated at about 1,800 m. (*Geogr. Journal*, iii. 243.). its breadth at Malatia is 100 yds., and at Bir 120 yds.; At Ul Der (an. *Thapacuc*) (*Kinnir's Memoir on the Persian Empire*, p. 9) the Euphrates is 800 yds. wide; at Hillah its bed is contracted to about 200 yds.; but below the latter it frequently spreads out to a considerable breadth, and the *Sbat-ul-Arab* ranks amongst the noblest rivers of the Asiatic continent. The Euphrates is navigable to the cataract above Samlat; at Hillah it has seldom less than 18 ft. water, even in the lowest season, and a vessel drawing 15 ft. water may ascend to Korna, where it is joined by the Tigris. The principal tributary of the Euphrates is the Tigris, which, indeed, is but little inferior to itself; its next greatest tributaries are the Karu-su, Khabûr (an. *Chaboras*), and Kerah, which joins the *Sbat-ul-Arab*.

The banks of the Euphrates were in antiquity the seat of many noble cities. The small mean town of Hillah occupies a minute portion of the site of the once mighty Babylon, "the glory of kingdoms, the beauty of the Chaldees' excellency." Hit (an. *Is* or *Acoppia*), Anna (an. *Anetho*), Kerkislaya (*Cercetium*), and Bir, are amongst the other towns on its banks; but Bussorah or Barras, on the *Sbat-ul-Arab*, is at present the only large city on the Euphrates.

The Tigris is throughout its whole course comprised within the Turkish dom. It rises in the parhalic of Diarbekr, from numerous sources on the S. side of the Taurus chain, by which it is separated from the Morad, in about lat. 38° 40' N., and at an elevation of about 5,060 ft. above the level of the sea. (*Ainsworth*, p. 110.) Its course, to its union with the Euphrates, with very little deviation, S.E. It runs at first through a mountainous country, with great rapidity; at Mosul it is no more than 353 ft. above the level of the Persian Gulph; from Bagdad it flows, with a moderate current, through a nearly level plain. Its distance from the Euphrates varies from 18 to 95 m.; the two rivers enclose the province in antiquity called, from that circumstance, Mesopotamia. The entire length of the Tigris is estimated at 1,146 m. At Mosul it is 100 yds. wide; between Bagdad and Korna its average breadth is 200 yards. It brings down great quantities of mud, which it deposits in shoals and islands in the lower part of its course; and between Mosul and Bagdad it passes over several ledges of rock, which form rapids of more or less difficulty. It is neither so deep nor so suitable for navigation as the Euphrates. It is, however, navigable for vessels drawing 4 ft. water as far as the ruins of Opis near the mouth of the Adhym (*Lynch*, in *Geogr. Journ.*); and in Dec., 1836, it was ascended considerably above Bagdad by Col. Chesney's steamer "Euphrates." Its principal affluents are the Khabûr, the Great and Little Zab (an. *Zabatus* and *Zabus Minor*), the Adhym (an. *Phycus*?), the Dila (an. *Delos* or *Arbo*). In antiquity its banks were studded with cities of the first rank, as Nineveh, Seleucia, Ctesiphon, Opis, &c. Bagdad may be considered as the modern representative of Seleucia and Ctesiphon, as Mosul is that of Nineveh, opposite the site of which it is placed. Diarbekr is the only other important town on its banks.

The Tigris derives its name from the rapidity of its course, the term Tigris signifying "an arrow" in the language of the Medes and Armenians. So late as the age of Alexander the Great, the Tigris did not unite with the Euphrates, and each river preserved a separate course to the sea. But they not long after became united; and have since found their way to the sea in a collective stream. The ground in the lower part of their course being soft and alluvial, and their waters being also diverted into new channels by means of canals, the courses of both rivers must necessarily have differed materially at different periods. (*Brewster's Geogr. of Herodotus*, i. 265.)

The Euphrates and Tigris run through chalky formations of a very friable nature, easily disintegrated by the action of the elements. Both rivers have their regular inundations, rising twice a year—first, in Dec., in con-

sequence of the autumnal rains; and next, from March till June, owing to the melting of the mountain snows. (*Rich*, p. 54.) They bring down immense quantities of alluvium; and the extent of land covered by their deposits is supposed to exceed 32,000 sq. m.! The ancient writers have not failed to notice this resemblance between the Euphrates and the Nile. Cicero says,—*Mesopotamiam fertilis efficit Euphrates, in quam quotiens quasi sacros agros iuvabit.* (*De Nat. Deorum*, lib. ii.) And Lucan—

—Sparus in agros
Fertile Euphrates, Phœnix vice sanguis unda.
Lib. iii. v. 259.

Mr. Ainsworth found the maximum of sediment mechanically suspended in the waters of the Euphrates, in Dec. and Jan. 1836 (in which months most mud is brought down), to be equal to 1-80th part of the bulk of the fluid. A good deal of this mud is deposited in the marshes of Lemlîm (an. *Paludes Babylonie*), a swampy tract, about 40 m. long by as many broad, commencing 50 m. S.W. of Babylon, and which has existed from the remotest period to the present day. The quantity of mud brought down by the Tigris was found, in Jan. 1837, to be equivalent to 1-100th part of the suspending fluid; but as it is not dispersed in marshes, more is carried down by this than by the Euphrates to the mouth of the Sbat-ul-Arab. The rapidity of the Upper Tigris frequently causes it to break down its banks; Mr. Rich says that when at its height it has a current of near seven knots an hour. In the alluvial plain, however, it averages only ¼ m. an hour throughout, and in many places it is less than 1 m. The Euphrates above Samlat is, perhaps, as rapid as the Tigris; and at Hillah, where its bed is narrowed, its rate is from 3 to 4 m. an hour; but in the low plain this rate is diminished to about 1 or 1½ m.

Lower Mesopotamia, or Babylonia, was, as already stated, anciently intersected by canals in every direction, for the purposes both of navigation and irrigation. Many connected the Tigris with the Euphrates; those which still exist are especially numerous near Bagdad, where the rivers approach within 25 m. of each other; and some, as the *Nahr Malcha*, might be easily repaired. (*Rich's Babylon*, §c. p. 57.) In fact, the Euphrates steamer passed from the Euphrates to the Tigris by the Isa canal, which leaves the former a few miles above Feluga, and enters the latter a short way below Bagdad. The Sbat-el-Hile, which connects the two rivers, is also navigable in spring by large boats. The most celebrated of the ancient canals, that of *Pallacopa*, cut by the earliest Assyrian monarch, partly through solid rock, extended for a very considerable distance parallel to the Euphrates on its S.W. side. Niebuhr supposed it had commenced at Hit. It may still be traced, almost continuously, from a little below Babylon to its probable mouth in the Persian Gulph (*Khore Abdallah*). Remains of aqueducts and towns, and various other ruins, abound in this region; and the ancient Median wall which ran from Maccæraeta on the Euphrates, to near the site of Opis on the Tigris, is still clearly traced. (*See Messrs. Ross and Lynch*, in *Geogr. Journ.* vol. ix.)

The steam navigation of the Euphrates is of considerable importance; and Colonel Chesney has proved that it may be navigated, as high as Bir, by steamers drawing 4 ft. water. Certainly however, we have no idea that it ever can be made available as an ordinary channel of communication between Europe and India; and are, indeed, surprised that any such notion should ever have been entertained; but its navigation would confer the greatest advantages on the vast and fertile countries through which it flows, should they be ever emancipated from the barbarism under which they have so long groined.

EURE, a dep. of France, in the N. part of the kindg., being one of the five comprised in the ancient prov. of Normandy; between lat. 49° 39' and 49° 29' N., and long. 0° 15' and 10° 45' E.; having N. the estuary of the Seine and the dep. Seine Inférieure, E. the deps. Oise and Seine-et-Oise, S. and S.W. Eure-et-Loir and Orne, and W. Calvados. Length E. to W. 65 m., breadth varying from 25 to 52 m. Area 842,127 hectares. Pop. (1836) 424,769. Surface nearly flat. There are few ranges of low hills, principally in the N., none of them reaching an elevation of more than 330 ft. These ranges divide the dep. into several distinct plateaux, presenting a great variety of aspect. It is well watered; the Seine flows through its E. portion, and along its N.E. border. The Eure, whence it derives its name, rises in Orne, and after running at first E. and then N. falls into the Seine 6 m. N. Louviers. The Iton, Rille, and Charentonne are the other principal streams. Climate mild, but damp and variable; W. winds are the most prevalent. Soil chiefly calcareous, or marly; but on the banks of the Seine it is sandy, and rather sterile. Iron ore is abundant, and there are numerous mines. According to the official tables, the arable lands comprised, in 1834, 358,863 hectares; pastures, 23,310 h.; orchards, 34,732 h.; and forests, 11,045 h. Property is less sub-

divided in this than in most other depts. : still, however, of 181,517 properties, subject to the *contribution foncière*, in 1835, no fewer than 89,449 were assessed at less than 5 fr., and 33,524 at between 5 and 10 fr.; but at the same time, 1,332 properties were assessed at from 300 to 500 fr., 838 at from 500 to 1,000, and 502 at 1,000 fr. and upwards, being very much above the average proportion of large estates in the kingdom. Previously to the Revolution the estates were much larger, but most of them have since been repeatedly subdivided by the operation of the law of equal succession. (See FRANCE.) Farms vary in size from 30 to 150 hectares. Agriculture, though more improved than in many other parts of France, is still very backward. The farm-buildings and cottages of the peasantry are in many instances of the very worst description, being frequently ill situated, built of wood, thatched with stubble, and surrounded by dunghills and filth. The fences are not well kept; but, notwithstanding these drawbacks, the country has, on the whole, a considerable resemblance to England. Wheat, oats, maizé, and rye are the principal kinds of grain cultivated. The total produce of corn in 1835 was estimated at 3,526,112 hectolitres. In some parts flax is grown; in others, hemp, pulse, wood, &c. Little wine is made, but apples and pears are very plentiful, and cider and perry are the ordinary drink of the pop. The stock of sheep is estimated at about 435,000 head, producing annually about 420,000 kilograms of wool. The mining and manufacturing establishments of this dep. rank amongst the most extensive and important in France. The various works for smelting and working iron, copper, and other metals employed in 1834 about 30,000 hands: the copper and zinc works at Nemilly are very extensive. The cotton and woollen manufactures are also important. The broad cloths of Louviers are justly celebrated in foreign countries as well as in France, and in addition chem, cottons, flannels, druggists, balze, velvets, glass, paper, and leather are largely manufactured. This is one of the very few depts. of which the pop. has been latterly decreasing. It is divided into five arronds., and sends 7 mems. to the ch. of dep. No. of electors (1838-9), 3,621. Chief towns, Evreux, the cap., Louviers, and Bernay. Total public revenue (1831), 13,830,221 fr. The women of this dep., as in other parts of Normandy, are good-looking and tidy; they wear dresses of remarkably bright colours, and lofty pyramidal caps, called *bonnets cauchous*, ornamented with a great quantity of lace. Eure contains some Celtic, and many Roman antiquities; but those of the middle ages were mostly destroyed during the Revolution. (Hugo, art. *Eure*, *Encycl. des Grands du Monde*, &c.)

EURE-ET-LOIR, a dep. of France, in the N. part of the kingdom, between lat. 47° 57' and 48° 37' N. and long. 0° 44' and 1° 59' E., having N. the dep. Eure, E. those of Seine-et-Oise and Loiret, S. the last named and Loiret-et-Cher, and W. Sarthe and Orne. Length N. to S. 60 m., greatest breadth about 55 m.; area 548,304 hectares. Pop. (1836) 285,058. There are only a few scattered heights in this dep., nearly the whole of which consists of an undulating plain. Principal rivers, the Eure towards the N., and the Loir in the S. Small lakes are numerous. Climate temperate and healthy. As much as 310,000 hectares of the surface consists of rich alluvial soil, and this dep. contains a greater extent of cultivable and less waste land than any other in the kingdom. In 1835, of 140,901 properties subject to the *contribution foncière*, 46,025 were assessed at less than 5 fr., and 37,597 at from 5 to 10 fr.; the number of considerable estates is, however, above the average of the depts. This is especially a corn-growing dep., and in 1835 produced altogether 4,331,910 hectol. of grain, principally wheat and oats. Good flax and hemp, pulse, turnips, onions, melons, wood, &c. are grown, but few potatoes. In some cantons the vine is cultivated, and in ordinary years about 200,000 hectolitres of inferior wine are made, as well as about the same quantity of cider. In 1830, 48,245 hectares of the surface consisted of pasture land, and the dep. contained 86,000 oxen and 700,000 sheep; the latter furnishing about 1,000,000 kilog. a year of wool. There are some iron mines, but they are little wrought. Manufactures of no great importance; the chief are those of ironware, earthenware, paper, cotton and woollen fabrics, beet-root sugar, and leather. This dep. is divided into 4 arronds., and sends 4 mems. to the ch. of dep. No. of electors (1838-9) 2,410. Chief towns, Chartres the cap., Chateaudun, Dreux, and Nogent-le-Rotrou. Total public rev. (1831) 9,263,627 fr. (*Encycl. des Grands du Monde*; *French Official Tables*.)

EUROPE*. This, with the exception of Australia, is the least of all the great divisions of the globe, being only about a fifth part of the size of Asia or America, and a third part of that of Africa. But, though thus inferior in point of

size, Europe is immeasurably superior to the other continents in the enterprise, intelligence, and civilisation of her inhabitants, and perhaps also in her physical advantages. *Africe victoris omnium gentium populi, longaque terrarum pulcherrima.* (Plin. Hist. Nat. lib. iii. § 1.) Europe is mostly situated within the temperate zone, and no part of her surface approaches within many degrees of the intertropical regions. The climate is, therefore, rather inclined to cold; but it is comparatively temperate, and is neither so cold in winter nor so hot in summer as the countries in the corresponding latitudes of Asia and America; so that while comfortable lodging and warm clothing are indispensable, the exertions of the inhabitants are not impeded by the too great intensity of cold on the one hand, or of heat on the other. The surface, too, of the country is infinitely varied and picturesque; and it has the advantage of being more intersected than any other continent by great arms of the sea, supplying facilities to internal and foreign commerce, that are all but wholly denied to Asia, Africa, and Australia, and not enjoyed in an equal degree even by America. The soil of Europe seems also to be of the quality best suited to stimulate and reward the efforts of the husbandman; for though it be nowhere so fertile as to produce crops without laborious diligence, and, consequently, does not foster indolence or a want of attention, it never fails liberally to reward the efforts of the industrious and skilful cultivator. Hence it is that this continent has every thing that seems best fitted to call forth and develop human genius and resources. But the advanced civilisation and superior influence of Europe in the affairs of the world seems, after all, to be owing in no small degree to the superior capacity of her inhabitants, as evinced in their superior enterprise, invention, perseverance, and power of combination. In all these respects they seem to be decidedly in advance of the most improved Asiatic nations; while the difference between them and the most improved native nations of Africa, America, and Australia, appears almost as great as the difference between man and the least advanced of the lower animals. Europe is the only part of the world in which civilisation and the arts have, generally speaking, been uniformly progressive. Important discoveries have been made, at remote periods, in China, India, and other Asiatic countries, but these would seem to have been the result of accident only, and, at all events, have had comparatively little influence: it is here only that they have been appreciated, improved, and perfected, and made instrumental in the production of further discoveries. It is characteristic of the European that he is never satisfied with what he has achieved; he is always pressing forward with unabated ardour in the career of industry and invention; and is as anxious to advance himself at this moment as his semi-barbarous ancestors 3,000 or 4,000 years ago. How much of this distinctive character and superiority of the European is to be ascribed to different and favourable circumstances, and how much to difference of race, is an inquiry foreign to our subject and incompatible with our limits. Most probably a good deal is ascribable to both causes; but, at all events, his superiority is alike great and obvious. It would seem, too, that he is destined to extend his dominion over every other part of the world, with the exception, perhaps, of the bulk of the African continent. The European is already master of by far the largest

* For a concise account of the various derivations of the word Europe, see *Paedagogiæ Lexicon*, voce Europe.

portion of America; he has also laid the foundations of settlements in Australia that will, no doubt, at no very distant period, spread over every part of that remote and barbarous continent; and some of the oldest, most extensive, and richest countries of Asia are already in his power; and the fair presumption seems to be that he will in the end extend his conquests over every part of that great continent! Hence the prodigious preponderance of Europe in a moral and political point of view! It is to the world at large what Rome was to Italy, or Athens to Greece—the favoured land *unde humanitas, doctrina, religio, fruges, jura, leges ortæ atque in omnes terras distributæ pulantur*.

Situation and Limits of Europe.—Europe forms the N.W. portion of the old or E. continent, having Asia on its E. and partly on its S. border; Africa, parted from it by the Mediterranean Sea, on the S.; the Atlantic Ocean, separating it from America, on the W.; and the Arctic Ocean on the N. Its limits are extremely well defined upon the S. and W., but in other directions doubts exist as to what is or is not Europe. The early Greek geographers, indeed, been aware that for more than 1,500 in. it was joined to Asia, the probability is that no name would have been imposed to distinguish it from that division of the world; but the first observers on the shores of Greece and Asia Minor, having adopted terms to designate the countries N. and S. of the narrow seas in that quarter, the subsequent discoverers applied the same as generic appellations to all the lands which gradually became known to them. Believing themselves to be permanently separated by the sea, the European naturally included in his Europe, and the Asiatic in his Asia, the discoveries made by each along the N. and S. shores of the Euxine; till, in their progress, they met on the banks of the Phasis, which thence became the first arbitrarily assumed line of demarcation. (*Herodotus* *Mel.* 37, 38.) Even in the time of Herodotus, however, this division was growing uncertain (*Mel.* 45.), and a line, formed by the Cimærian Bosphorus, the Palus Mæotis, and the Tanais (Strait of Yenikalic, Sea of Azoph; and Don) was superseding it. This line was subsequently adopted universally as the E. limit of Europe. (*Strabo*, li. 127. *Pliny*, lib. 1. *Placidius*, lib. 5. c. v. 9. *Pomponius Mela*, l. 2.) Little more was known of this region during the middle ages; and when the arms of Russia laid it open to observation, the winding course of the Don, with which the ancients were but vaguely acquainted, betrayed the geographers of the last century in their anxiety to accommodate their systems with those of the Greeks, into an inextricable labyrinth of contradictions and absurdities. At length the academy of St. Petersburg having, with great judgment, fixed the Oural Mountains as the N. E. limit of Europe, and which continue the line of demarcation, upon their meridian, by the river Jalk or Oural, as far S. as the commencement of the great salt plateau N. of the Caspian: thence the boundary was an imaginary line running S.W. to Zarcsin, where the Wolga approaches nearest to the Don; crossing the former river at that point, and then following the old limit, along the bank of the Catta, to the Sea of Azoph. (*Acta Acad. Pet.* 1778, p. 6.; *Pallas' Observations on Mountains*, p. 28.) But the latter part of this boundary has two obvious defects: it is not sufficiently marked by natural features, and it divides the sources of three great rivers, the Oural, Wolga, and Don, leaving a part of each in Europe and a part in Asia. Malte-Brun (*Abrégé de Géographie*, p. 174.) proposes to follow the Oural to its mouth, and then to take the Caspian for his E. border, as far as the outlet of the Kuma; thence, to follow that river and the Manych across the Caucasian plain to the junction of the latter with the Don, the lower course of which he also leaves in possession of its old destination. He considers this line as preferable to that which would follow the Terek and Kuban, because its depression is somewhat greater; but this line is hardly less arbitrary than that of the Russian academicians, and, like theirs, it is not marked by any grand natural feature. It is, indeed, not a little extraordinary, that neither looked to the gigantic chain of the Caucasus for a boundary: but it is evident that it forms one that is in all respects unexceptionable. It divides, as if by a wall (*Strabo*, lib. xi. p. 342.), the Isthmus between the Euxine and Caspian seas, stretching between Anapæ on the former and Cape Absharon on the latter, forming a well-defined and inextinguishable barrier between Europe and Asia. It would not, in fact, be more absurd to extend the boundaries of France to the Ebro, or of Spain to the Garonne, losing sight of the Pyrenees, than it is to fix the limits of Asia and Europe either to the S or N. of Caucasus. Nature has obviously intended that that great chain should be the limit between the two continents, and by adopting it

all difficulties as to their boundaries vanish. The S.E. and E. frontiers of Europe are then marked by the shores of the Egean Sea, the Hellespont, the Propontis, or Sea of Marmara, the Bosphorus of Thrace, the Euxine, round to the Caucasus, and the ridge of that mountain system to the Caspian, thence along the shore of that sea to the Oural (from its mouth to its source) and the Oural Mountains, which, being continued to the Frozen Ocean and even further, in the high lands of Nova Zembla, complete the outline in this direction. Still it is evident that Europe is so connected with Asia, being in fact nothing but a peninsular prolongation of the larger mass of land, that no division can be quite satisfactory on physical principles; and, were it not for the vast difference in the races by which they are inhabited, we might perhaps be disposed to agree with Herodotus, who objects to giving different names to what is substantially one and the same continent. (*Melpom.* p. 45.)

It might appear that Nature had marked the limits of Europe too strongly towards the N. to admit of any doubt regarding them; but Iceland having been discovered and colonised long before the voyage of Columbus, was considered as belonging to Europe; though, as it lies much nearer to the American coast, or rather to that mass of land beginning with Greenland, which appears to be divided from the American main by Baffin's Bay and Barrow's Strait, it is properly an American island. On the other hand, Spitzbergen has been sometimes considered as belonging to America, though lying on the meridian (the 20th), which passes through the very heart of Europe; and Nova Zembla has been, in like manner, included in Asia, notwithstanding the comparatively wide sea of Kara flows between it and that continent, while it is parted from Europe merely by a strait, which is moreover broken by an island (Valgatz) of some size. According to the principle, then, which considers as belonging to a continent those islands which lie nearest to it, Nova Zembla and Spitzbergen should be included in Europe, and Iceland in America; and the same arrangement, perhaps, requires that the Azores, though very distant, should also be included in Europe. According to this distribution, Europe and its islands extend from the rock of Cufonia, S. of Crete, in lat. 34° 49' N., to Little Table Island, the most N. of the Spitzbergen group, in 80° 48' 21' N.; and from Flores, the most W. of the Azores, in long. 31° W., to Jelania Noss or Cape Desiré, the most E. point of Nova Zembla, in 77° E. The continental portion lies in much narrower limits. Its extremity in the N. is the point of the W. of Gibraltar, in 36° N., and Nordkyn in Pinnark, 71° N. In long. the European continent extends from Cape Da Rocca, near Lisbon, 9° 30' W., to the mouth of the Kara River, 66° E. (*Admiralty Charts*; *Great Russian Map*, 1800; *Parry's Fourth Voyage*, p. 42.; *Arrowsmith's Atlas*, pl. 3., &c.) Its extreme length, E.N.E. to W.S.W., from the Ouralian Mountains near Orsk in Russia to Cape St. Vincent in Portugal, is nearly 3,400 m.; its greatest breadth, N. to S., from the North Cape to Cape Matagorda in Circars, is 2,450 m. Its area, pop., subdivisions, &c., will be stated hereafter.

Physical Geography. General Aspect.—Europe, as already stated, is distinguished from all the other continents of the globe by the great irregularities of its shape; and surface, and by the great number of its inland seas, gulphs, harbours, peninsulas, promontories, and headlands. This circumstance tends not only to influence very materially the climate and natural products of this continent, but to promote commerce and navigation.

Sea.—The great indentations in the boundaries of Europe, especially on its N.W. and S. sides, being its most important natural feature, the seas on which these indentations depend, deserve the first place in our description. These, however, are by no means so extensive as is commonly supposed. The Mediterranean, the noblest of all inland seas, for example, is sometimes reckoned among the strictly European seas; but it would be quite as correct to describe it as belonging to Africa or Asia as to Europe. It is obviously common to them all; and cannot justly be said to belong to one more than another. This also is nearly the case with the Black Sea and the Caspian; though, as they are mostly surrounded by countries belonging to Asia, they must be considered as belonging rather to that continent than to Europe. The great arm of the Mediterranean called the Adriatic, and the Sea of Azoph, being almost wholly encircled by European countries, are most properly said to be European seas. The Baltic, however, is the real Mediterranean of Europe; and has, including its gulphs and bays, an immense extent of coast. The Luydensee and the White Sea are also nearly landlocked by European countries, and consequently add to the number of European seas.

Bays and Gulphs.—The chief of these are the Gulph or Sea of Kara in N. Russia, the Bays of Archangel and Onega, belonging to the White Sea; the Gulphs of Bothnia, Finland, and Riga, belonging to the Baltic; the Bay of Biscay, forming a part of the Atlantic; the Gulph

of Lyons, in the S. of France; to those of Genoa, Naples, Taranto, Venice (head of the Adriatic), and Trieste, in Italy; of Arta, Lepanto, Egina, Volo, and Saloniki, in Greece.

Peninsulas, Capes, &c.—Having so irregular an outline, Europe necessarily presents numerous peninsulas and headlands. In the S. the principal peninsulas are, Spain, with Portugal; Italy, with its sub-peninsulas of Calabria and Otranto; Turkey, with Greece, which includes the sub-peninsulas of the Morea and Salonica, and the Crimea. In the N. of Europe, the great Scandinavian peninsula, and those of Lapland and Jutland, are the principal; and in the W. are the much less considerable ones of Brittany and Cotentin in France, and that including the counties of Devon and Cornwall in England. The principal capes or headlands, proceeding from N. to S., are—Cape Gelania, in Nova Zembla; the North Cape and the Naze, in Norway; Cape Skagen, in Denmark; Cape Wrath, in Scotland; the Land's End, in England; Cape Clear, in Ireland; Capes La Hogue and Finisterre, in France; Roca, St. Vincent, and the rock of Gibraltar, in Spain and Portugal; Spartivento and Leuca, in Italy; Passaro, in Sicily; and Matapan and Colonna, in Greece. (*Malte-Brun, L'Europe*, pp. 444—451; *Balbi, Abrégé de Géogr.* pp. 81—84.)

Islands.—The principal, forming part of Europe (Iceland being excluded) are—Great Britain and Ireland, with their dependent groups in the Atlantic and North Sea; Sicily, Sardinia, Corsica, Candia, the Cyclades and Sporades, the Ionian Islands, Dalmatian Archipelago, Malta, Kibla, Majorca, Minorca, Ivica, the Capari Isles, &c., in the Mediterranean and its cognate seas; Zealand, Funen, Laland, Bornholm, Oland, Gotland, Oesel Dagge, and the Aland Archipelago, in the Baltic; the Loffoden and other islands, on the coast of Norway; Spitzbergen and Nova Zembla, in the Arctic Ocean; Jersey, Guernsey, Alderney, &c., in the British Channel; Ushant, Belleisle, and a few others, on the W. coast of France; and perhaps the Azores in the Atlantic, and Lampedusa, Linosa, &c., in the Mediterranean.

Mountains.—The European mountains are divided by Bruguière, in his *Orographie de l'Europe*, into seven distinct systems—the Hesperic, Alpine, Sardo-Corsican, Tauric, Sarmatian, British and Hibernian, and Scandinavian. The Ouralian and Caucasian chains are omitted in this enumeration, being bounding ridges between Europe and Asia, and consequently belonging as much to the latter as to the former. We have already, however, briefly noticed Caucasus (see ante, p. 176.); and both it and the Oural are fully described in separate articles. The Alps compose the great central table-land of Europe, over a sixth part of which their ramifications are estimated to extend. (*Malte-Brun, Europe*, p. 454.) The summits of the Alpine system yield in elevation only to those of the Caucasus; Mont Blanc, in Savoy, the culminating point is 15,732 ft. in height. (*Bruguière*.) The Alps divide into 9 principal branches, which spread over Switzerland, France, Germany, the Austrian empire, Turkey, Greece, and Italy: the Apennines, the Pyrenean, Balkan, &c. all belong to, or are intimately connected with, this system. The next in order is the Hesperic or Pyrenean system, which extends throughout Spain, Portugal, and a part of France. Its ranges, for the most part, run E. to W., through the Iberian peninsula: its culminating point is the *Cerro de Mulhacen* in the *Sierra Nevada*, 11,660 ft. high. (*Bruguière*; *Malte-Brun*.) The Sardo-Corsican system is confined, as its name implies, to the islands of Sardinia and Corsica: its highest summit appears to be that of Monte Rotondo, in Corsica, 9,068 ft. above the level of the sea. The Tauric system is comprised within the Crimea: its greatest elevation is 5,052 ft. The British and Irish system has but few summits of any considerable height: the principal are,—in England, in Wales, Snowdon, 3,555 ft., and Cader-Idris, 3,550 ft.; in Scotland, Ben Nevis (Inverness-shire), 4,370 ft., and Ben Macduh and Cairn-toul (Aberdeenshire), 4,327 and 4,245; and in Ireland, Carran Tual (co. Kerry), 3,410 ft. in height. The Scandinavian system is spread over Norway, Sweden, Lapland, and Finland: its principal chains run mostly N. and S.: its highest point, the *Sneehetta*, is 8,130 ft. in elevation. The Sarmatian system consists of a few scattered hill chains in Russia, Poland, and the N.E. part of Prussia: its greatest elevation in the plateau of Valdai does not, however, reach more than 1,118 ft. above the level of the sea. (*Bruguière, L'Orographie de l'Europe*.)

Plains and Valleys.—The whole of Lower Europe, —by which may be understood the entire extent of country from the Ouralian mountains and Astrakhan W. to the longitudes of Paris and London; including the greater part of Russia in Europe and Poland, Prussia Proper, the N. of Germany, Holland, Belgium, the N. of France, and the E. part of England, consists of an immense plain, interspersed only here and there with a few detached hill ranges of no great magnitude. This plain is very little elevated above the level of the sea; and we have elsewhere shown (see Baltic), that

it may be certainly concluded that at a comparatively recent period in the history of our planet, it formed part of the bed of a vast ocean, of which the Baltic is now the only considerable remaining portion. The innumerable shallow lakes in the N. of Germany, and between the Baltic and the White Sea, are smaller remnants of this great ocean; and independently of this, the morasses, abounding in marine plants, and the sands of N. Germany and Prussia, are incontestable evidences of the former submersion of the land. The more inland and easterly parts of this plain, which seem to have first emerged from the sea, particularly in the Russian governments of Kiev, Poltava, Kharkov, Kourak, Orel, Kalouga, Toula, Tambow, Voroneje, &c., are covered with a rich vegetable soil, varying from 3 to 5 ft. in depth: this highly fertile region, whose vast capabilities are as yet but little known, has been estimated to comprise an extent of surface equal to that of France and Austria united! Next to this great plain, rank those watered by the Lower Danube (Wallachia and Bulgaria), the Middle Danube (the Great and Less Hungarian plains), and the Upper Danube (the plain of Bavaria); the plain watered by the Lower Rhine, that of Lombardy, and the Bohemian Basin. The valleys of Europe generally are but insignificant, compared with those of Asia; but those of the Rhine, Upper Rhone, and Drave, deserve notice, as well for their extent as their picturesque beauty. Those of Norway and Scotland are commonly long and narrow, and their bottoms are often occupied by lakes, having the appearance of rivers.

Europe has no desert at all similar to those of the other great divisions of the globe. There are, however, some very extensive heaths or wastes. The principal are the *steppes* of Ryn, between the Volga and Oural, and of the Volga, between that river and the Don; the *pustas* of Hungary, the wilds of Sweden, Norway, and Lapland, the sterile districts of Stade, Hanover, Luneburg, and Zell, in the kingdom of Hannover, and of Pomerania, Brandenburg, &c. in Prussia. The greater portion of the dense Landes and Gironde, in France, are covered with unproductive heaths, as is also a considerable part of the Terra di Bari in Italy.

Rivers.—The great watershed of Europe, or the ridge dividing the waters which flow into the Mediterranean, or Black Sea, from those which flow into the Baltic and North Sea, runs through the continent in the general direction of N.E. and S.W. The courses of the principal rivers are, therefore, for the most part, S.E. or N.W.: of the six largest, the Volga, Danube, Dnieper, Don, Rbinc, and Dwina, the four first flow in the former, and the two last in the latter direction. The chief rivers of Europe may be classed according to the seas into which they discharge themselves. The Volga (with the Kama) and the Oural, fall into the Caspian; the Don, Dnieper, Dniester, and Danube, into the Black Sea, and Sea of Azoff; the Petchora, Dvina into the Arctic Ocean; and the Neva, the Neva, Duna, Niemen, Vistula, and Oder (Russia, Poland, and Prussia), into the Baltic and its gulphs; the Elbe, Weser, Rhine, Meuse, Scheldt (N. Germany), into the North Sea; the Loire, Garonne, Dour, Tagus, and Guadalquivir, into the Atlantic; and the Ebro, Rhone, and Po, into the Mediterranean and its gulphs. Nearly all the great rivers are in the E. and N.E. parts of the Continent. Western Europe has but few rivers that have a course of more than 500 or 600 m. Still, however, this part of the Continent is extremely well watered; and some of the shortest rivers, as the Thames and Shannon, afford the greatest facilities to internal navigation and commerce. If the length of the Danube be represented by 100 parts, the length of the other principal rivers will be, Volga 130, Dnieper 72, Don 69, Elbe 49, Elbe 42, Vistula 41, Loire 37, Tagus 32, Rhone 38, Po 21, Tiber 10, and Thames 9, of these parts.

Lakes.—Are situated chiefly in Russia, Finland, Sweden, Switzerland, Italy, Hungary, Austria, Prussia, Scotland, Ireland, and Greece. Among the principal are the following:—

	Sq. M.		Sq. M.
Lake Ladoga (Russia)	6,380	Lake of Geneva (Switzerland)	240
Onga (do.)	4,980	Constance (do.)	300
Wener (Sweden)	2,135	Garda (Italy)	180
Wetter (do.)	840	Maggiore (do.)	150
Melan (do.)	700		
Sima (Finland)	1,650	Balaton (Hungary)	140
Enara (Lapland)	685		

Lagunes are numerous along the S. coasts of the Baltic, and some parts of the Mediterranean and Adriatic shores; and Holland is full of dykes and pools. The coasts of Norway and a part of Sweden abound with inlets of the sea, which often stretch a long distance inland; these, however, do not consist of stagnant waters. There are some extensive swamps in Europe.

as that occupying nearly all the basin of the Priëpec in Poland, those along the courses of the Danube and the Theiss in Hungary, and at the mouths of the Danube, Po, and other rivers. Many of minor extent are to be found in the great plain of the continent, in the E. part of England, Touraine in France, Italy (in particular the Pontine marshes), Sicily, Western Greece, and on the shores of the Black Sea. (*Moltre-Brun, Rabit, &c.*)

Climate.—The whole of Europe, with the exception of parts of Lapland, Sweden, Norway, and N. Russia, being situated within the temperate zone, it suffers but little from the extremes either of cold or heat. Its average temperature is higher than those parts of Asia or America, situated within the same latitudes. This circumstance is probably owing to various causes—as the fact of its general elevation being less than that of Central Asia; its being surrounded by seas, the waters of which are warmer than those of the oceans which surround the other continents; the agency of the gulph-stream in the Atlantic, which not only brings towards Europe a continual warm current from the torrid zone, but prevents the ice of the Arctic Ocean reaching its shores; and the powerful influence of civilisation and culture exhibited in the drainage of marshes, &c. But within the limits of Europe, there are vast differences of climate, and independent of the changes consequent on difference of latitude, the temperature is subject so much in proportion as we proceed eastward, that the inhabitants of Turkey, in lat. 42°, often experience a degree of cold unknown in the N. of England in lat. 54°. The hottest part of Europe is its S.W. extremity: in Portugal the heat is often very oppressive. The S. of Europe, shut off from the cold N. and E. winds by the great Alpine range, has generally a salubrious climate, and occasionally suffers from the influence of the *sirocco*. Humidity is the chief characteristic of the atmosphere in the W. of Europe, as frigidity is of that in the E. With respect to the duration of the different seasons of the year, Europe may be divided into 3 zones. Southward of lat. 45° the winter is mostly confined to rainy weather from Oct. or Nov. to Jan. or Feb.; snow rarely falls, and vegetation is scarcely impeded: the spring lasts from the latter months till April or May; and the summer, during which the temperature often rises to 107° (Fahr.), and autumn, the remainder of the year. Between lat. 45° and 55° the winter is the longest season, lasting generally from Nov. to March or April: the spring continues from the latter month till June; the summer, the heats of which frequently rise to 92° Fahr., lasts till Sept.; the autumn is the shortest season of all. North of lat. 55° the seasons are for the most part confined to two—winter and summer. In the more northern parts of this zone, the snow lies on the ground, and the rivers are frozen for more than 6 months of the year. Beyond the Arctic circle, mercury freezes in the thermometer in Sept.; and the desolation of winter is broken only by two or three months of intense heat, during which the sun is perpetually above the horizon. The absence of this luminary for the rest of the year is compensated for by the magnificent phenomenon of the *aurore borealis*, which shines in these regions with the utmost brilliancy. (See *Moltre-Brun, Guey, de l'Europe*, pp. 455–461.; *Rabit, Abregé, &c.*, p. 94.)

The following table is taken from Humboldt (*Annals of Philos.*, xi. 188): the first division shows the temperature of the year, and of the various seasons in places having the same latitude; the second shows the different distribution of heat through the various seasons in places having the same mean annual temperature.

Places.	I.	Lat.	Mean Temperature.

Geology.—According to the map in Lyell's *Principles of Geology* (l. 205.), the following parts of Europe consist chiefly of primitive or transition formations: the Ouralian mountains; Lapland; nearly all Sweden, Finland, and Norway; most part of Scotland; the W. part of Wales; about the half of Ireland; the N.W. coasts, and those of Devon and Cornwall in England; Brittany, the W. of Normandy, and a great portion of the centre and

N.E. parts of France; the high ranges of the Alps; Corsica; most of Sardinia; the shore of Tuscany, Calabria Ultra, and the N.E. parts of Sicily; Bohemia; Carinthia; Styria; parts of Hungary and Transylvania; the E. half of Turkey and Greece; and the central chain of the Caucasus. Those parts principally occupied by secondary formations are: the lowlands of Scotland; the central half of Ireland; the N.E., central, and most of the S. coasts of England; most part of France, and W. Germany; the loftiest summits of the Pyrenees; the country on either side of the central chain of the Alps; central, and S. Italy; the N. of Sicily; Latvia; Dalmatia; the V. half of Turkey and Greece; and the E. parts of Transylvania; some considerable tracts on the Volga and Kama; and the N. declivity of the Caucasus. The rest of Europe, comprising nearly the whole of Russia, Poland, and the Prussian dominions; a large extent of country on both sides of the Gulph of Bothnia; all Denmark, N.W. Germany, and Holland; a great part of Belgium; the E. and many of the W. coasts of England; the basins of Paris, and of the Rhone, Loire, and Garonne in France; the N. part of Switzerland; the plains of Lombardy, Hungary, Wallachia, and Bulgaria; most of Apulia; and the S. and W. parts of Sicily; is composed chiefly of tertiary, alluvial or diluvial formations; and has been obviously submerged at no very remote geological period (*Lg. comp.*, pp. 405, 406). Among the chief primary rocks of the great table-land of Europe, are granite, gneiss, and schist. In the alpine ranges W. of St. Gothard, calcareous rocks abound, often intermixed with clay-slate and mica-slate; E. of St. Gothard the central chain is accompanied by lofty calcareous ranges, full of caverns. Metalic ores reside, abundantly in Germany, Transylvania, the N.W. parts of Italy, &c. Coal exists extensively in the British islands, Sweden, France, Germany, Bohemia, &c.; chalk is a formation almost peculiar to Europe, extending throughout a great part of England, the N. of France, and parts of Poland, Russia, Sweden, Ireland, and Spain. Tertiary beds, containing a great number of fossil have been discovered in various parts of Europe; the most noted of these are the London and Paris basins. The volcanic region of Europe (Iceland being excepted) appears to be principally included within the limits of Italy and its islands. There are three active volcanoes, *Ætna*, *Vesuvius*, and *Stromboli*; but of these, only one, *Vesuvius*, is situated on the continent. There are, however, obvious traces of former volcanic activity in France, Greece, and some other countries; and a considerable part of central Italy is geologically composed chiefly of volcanic products. Mineral springs in great variety abound in Europe.

The reader is referred, for more copious details with respect to European geology, to our articles on the different countries which it comprises.

Natural Products. Minerals.—If nature have denied to Europe the precious metals in any very great quantity, their absence has been fully counterbalanced by the presence of iron, coal, salt, copper, tin, lead, and mercury, in greater abundance, perhaps, than in any other region of similar extent. Iron and salt are pretty universally diffused; coal, the most important of all the minerals, is most plentiful in W. Europe, and especially in Great Britain. Copper abounds chiefly in the N. and W.; in Sweden, and the extreme W. counties of England; and the tin mines of Cornwall are not only the most productive, but probably also the most ancient in the world, since it is nearly certain that they were wrought in the time of the Phenicians. Lead is most plentiful in Spain and England: the quicksilver mines of Idria in the Austrian empire are extremely rich. Gold, silver, and platinum, are found: the chief supply in Transylvania, Hungary, and Russia; the second in various parts of central and W. Europe; and the last has been recently discovered in the Caucasian and Ourallag mountains. Zinc, cobalt, arsenic, and nearly all the other metals with which we are acquainted, are found within the limits of Europe, with almost every variety of precious stones. North Italy yields the finest statuary marble, and the south part of the same country and Sicily supply immense quantities of sulphur, vitriol, sal-ammoniac, and various other volcanic products. Nitre is found in great quantities in Hungary. Beside these products, Europe furnishes the finest granite and building stone of various kinds, serpentine, slate, porcelain clay, rock crystal, alabaster, amianthus, and most of the minerals that are in the highest degree useful to man. (*See*, *Tableau Minéralogique en Abrégé de Gégér*, &c. p. 95.)

Veg-table Products.—The *Flora* of the extreme south-

ern parts of Europe has a great analogy with that of the contiguous parts of Africa. In Sicily, the date, palm, sugar-cane, and cotton plant (*Gossypium herbaceum*), several euphorbias, rare in this continent, the prickly pear, American aloe (*Agave americana*), and castor oil plant (*Ricinus africanus*), flourish. The same plants are met with in the S. parts of Spain and Portugal, in which peninsula many common to the Azores, and others, originally natives of America, grow freely without culture. In Greece, Turkey, and the S. of Russia, a large intermixture of Asiatic plants is found. The orange and lemon grow to perfection in the sheltered valleys of W. Europe, as far N. as 45° 30'; the olive ceases at about 44°; but the vine affords excellent wine in the W. as high as 48°, and its fruit comes to tolerable perfection in the open air for several degrees beyond that point in France and England. Where the vine, however, begins to fall, apple and pear trees begin to flourish, and cider occupies an important place as a beverage in the region in which wine has ceased, and beer is not in general use. The mulberry, platichio, pomegranates, melons, &c., abound in the S.; peaches preserve their full flavour in the open air to lat. 50°, and the figs a little farther N. are cultivated to about 45°, but it requires a peculiar soil and climate; maize has nearly the same range. The limits of the culture of the common cerealia, or bread corns, are not very well defined, as the necessities of man oblige him to raise corn under the most unfavourable circumstances. Generally, however, the parallel of 57° or 58° may be regarded as the N. limit of the cultivation of wheat in Europe; though in some favoured spots of Finland it is raised as far N. as 60° or 61°. The hardier grains, as rye, oats, and barley, are cultivated in some sheltered situations on the coast of Norway as high as the lat. of 69° 30'; but farther E. in Russia their cultivation has not been found practicable beyond 67° or 68°. The introduction of potatoes, which are now widely diffused over almost all parts of Europe, promises to be of peculiar advantage to the N. regions, as they are said to be extremely prolific in parts where corn will hardly ripen. (*Encyc. Britannica*, art. *Europe*.) In ancient times, nearly the whole surface of Europe was covered with dense forests; these, however, have in a great measure disappeared in the better cultivated and more populous countries. Germany, Poland, Russia, Sweden, Norway, and some parts of the Austrian empire, are at present almost the only parts of Europe which contain forests of any very great extent. The natural orders of *Amrtales* and *Coniferae*, comprise the greatest number of the noblest trees in the woods of Northern and Central Europe. In these regions, the oak (*Quercus prinus* and *sessiflora*) is the lord of the forest, and often attains to an enormous size. It disappears about lat. 60°; the ash does the same at 62°; the beech and lime are seldom found farther N. than 63°, or firs and pines beyond 70°. The tree that grows in the highest lat. is the dwarf birch (*Betula alba*); and the last plant met with towards the pole in Europe, is considered to be the "red snow" (*Palmella nivalis*), a cryptogamic species. The vegetable products of the N. of Europe are, however, by no means confined exclusively to that region. On the Alps, the Pyrenees, and other elevated mountain ranges in Central and S. Europe, similar products are met with at the different degrees of elevation, the temperature of which corresponds with that which the various plants require; and on the declivity of Etna, at different heights, the flora of the torrid zone, and that of the Arctic circle, are both met with. But a marked difference from that of the rest of Europe takes place in the vegetation S. of about lat. 44°. The mountains there are covered with chestnut woods; evergreens take the place of oaks, and the maritime and stone pines of other *coniferae*; the plane tree, flowering ash, carob, laurels, lentisks, oleanders, cistus, and a host of drying, medicinal, and aromatic plants, abound, and the surface of the earth is almost continually covered with a carpet of brilliant and odorous flowers. (*Baldi*; *Malte-Brun*; *Dict. Géogr.*)

The superficial extent of Europe may be estimated at about 3,650,000 sq. m. If we draw a curved line from a point in the Ouralian mountains, about the lat. of 60° or 61°, to the W. coast of Norway, in the lat. of 69°, passing through the Lake Onega, and a little to the N. of the Gulf of Bothnia, this line will mark the extreme limits of cultivation, and will cut off a space equal to about 550,000 sq. m., or about 1-7th part of the entire surface of Europe. The culture of rye, oats, and barley, is confined to the region S. of this line, and includes more than 5-6ths of Europe; but in the N. parts of this zone only a very small proportion of the land will bear corn. The region adapted to the cultivation of wheat comprises about 4-7ths of Europe, and includes all the densely peopled parts. The region of the vine extends over 3-7ths of Europe. (*Encyc. Brit.*, art. *Europe*.)

Animals.—The numbers of the higher classes of

animated beings are less numerous and varied in Europe than in either Asia or Africa. Some of those species known to the ancients as inhabiting this continent, as the *urus* and *uroch*, or bison, have become extinct, or nearly so; and the great increase of population and cultivation, the clearing of forests, &c., which have been going on from an early period, have greatly checked the increase, and diminished the numbers of those which at present exist. According to Cuvier, the total number of the species of *mammalia* inhabiting this portion of the earth, is only 180, and of this number only 88 are peculiar to Europe. The most formidable wild animals are the white bear, confined to the Arctic circle; the brown bear, which was once common in England (though long since extirpated), and is so still in the Alps, Pyrenees, and other remote mountainous and wooded regions; the wolf, still inhabiting many parts of Europe, and the wild boar. The largest animals, exclusive of whales, the walrus, &c., which inhabit the northern seas, are the elk and rein-deer, the latter of which is of the most essential service to the inhabitants of the north: these kinds of deer give place, in Central Europe, to the red-deer and roebuck; and the latter again, in the Alpine and Pyrenean mountains, and Iberia. The other principal wild animals are, the lynx, met with chiefly in the S.; the wild cat, fox, marten, otter, beaver, polecat, glutton, porcupine, hedgehog, various kinds of weasels, squirrels, hares, rabbits, rats, mice, &c.

The domestic animals deserve more notice. The black cattle of Europe have attained to the highest perfection: their size is in general dependent on the goodness of the pasture. The sheep, so universally diffused, is believed by some to have originated from the *monodon*, or *monaxon*, a wild animal now confined to the mountainous districts of Sardinia, and a few other Mediterranean islands. According to other writers, it was originally introduced from Asia by way of Africa; but certain ancient authorities bear testimony to the existence at one period of an indigenous breed of sheep in Great Britain. The chief races of sheep at present existing are the Spanish *merino*, Cretan, Wallachian, and English. The merinos are the most celebrated for their wool; but, taken altogether, the various English breeds are the most valuable, since the whole of the products they furnish bear a high character for excellence. The domestic goat was believed by Cuvier to have been derived from the *Capra agagrus*, a wild species inhabiting the Alps and Illyria: the domestic hog is evidently the descendant of the European wild boar. The European horse has been supposed by some naturalists to be of Tartar origin; but no satisfactory reasons have been assigned for this opinion, which, is, most probably, entirely unfounded. The English heavy horses are unrivalled for draught, and the race-horses for speed and bottom: the latter, and the hunters, have been crossed with Arab horses, the first of which was imported so late as the reign of James I. The ass degenerates in the colder parts of Europe, but in the S. it is a fine animal, and greatly valued for the breeding of mules, the sure-footedness and hardness of which render them highly valuable. Dogs are more numerous in Europe than any where else; and by frequent crossings, very numerous varieties have been produced. The domestic cat appears to be the lineal descendant of the wild species. The birds are much more various than the quadrupeds of Europe: as many as 400 different species have been enumerated; more of them, however, are birds of passage than in other continents. Four species of vultures inhabit the Alpine ranges, but are seldom seen in higher latitudes; in the rocky and mountainous parts of the N., their places are supplied by enormous eagles, falcons, large owls, and other birds of prey. Most of the birds in the Arctical regions are aquatic; and in the S. there is a great intermixture of the birds of Africa and Asia, as the Balaeric crane, pelican, flamingo, &c. The common sorts of game are generally diffused throughout Europe; but the red grouse is confined to Scotland, and is said to be the only species peculiar to Great Britain. Bustards abound in some parts of Turkey and Greece. In general, the European birds cannot boast of very brilliant plumage, but they excel all others in melody. *Apellides* are not numerous, and few are either large or numerous. In the Mediterranean a very delicate species of turtle (*Testudo caretta*) is found; and in some of the Austrian lakes, the *Proculus anguinus*, a singular link between reptiles and fishes. Of the latter-named class of animals, the principal are the herring, cod, whiting, mackerel, haddock, mullet, anchovy, and tunny, in the ocean and seas; and the salmon, pike, trout, carp, perch, &c., in fresh waters. The anchovy and tunny are almost confined to the Mediterranean, where their capture forms a valuable branch of industry. *Crustacea* are particularly numerous in the N., and *mollusca* in the S.; the latter are especially abundant and various in the Gulf of Taranto, anciently so famous for the *murice*, affording the Tyrian dye. In

the same part of Europe, scorpions and tarantulas are sometimes troublesome; mosquitoes infest the S.; and Europe generally is considered by naturalists as the grand region of butterflies. The European *amnicolæ* include the medicinal leech, so plentiful in the pools of Germany and Poland. Radiated animals, *zoophytes*, &c., are particularly abundant on the S. coasts, where some of them, as *actinias*, are used for food, and where the coral fisheries employ many hands. (*Murray's Encycl. of Geography*; *Malte-Brun*; *Baillet*, 98—100.; *Dict. Géographique*.)

Races of Men.—To trace and define the original races of mankind, and to describe their generic and specific characters as we do those of the lower animals, is every where most difficult in consequence of the nice shades of distinction which prevail among some of those that approach nearest each other. But this difficulty is, perhaps, greatest of all in Europe, where, from the superior enterprise of the people, intermixture of blood, through conquest and emigration, has taken place to a greater extent than in any other part of the world. The great mass of the people of Europe belongs to the race which Blumenbach, and after him Cuvier, have called the *Caucasian*, under the idea not only that its type is best exhibited in the inhabitants of the Caucasian range, but that this was its original seat, and that the race thence spread itself throughout Europe! But this last supposition is wholly without foundation. The inhabitants of the Caucasus have been, in all ages, unenterprising semi-barbarians, who have never emigrated beyond their own bounds; nor, through the medium of language, can a trace of them be discovered in any part of Europe. Even language, our best guide elsewhere, often fails us wholly in this part of the world. Thus, through the greater part of the southern portion of Europe, the foundation of all the modern languages is Latin, originally the language of an inconsiderable nation of central Italy; but spread by conquest, and the destruction, or absorption of the local idioms, to its present wide extent. In the same manner we have the German language extending from the northern confines of France and Italy, through the central part of Europe, comprising its whole north-west portion as far as the North Cape, and including Iceland and the greater portion of the British islands, to say nothing of the modern diffusion of the same language in America, and elsewhere.

The farther we go back in history, the greater number of distinct families of the European race will be discovered, and consequently the greater number of languages will be found to exist. In Italy, and its islands, where but one language is now spoken, there were in ancient times, but after the people had made considerable advances in civilisation, six distinct native tongues, which had each a written character and a literature, besides foreign dialects; and Strabo enumerates, in all, not less than forty Italian nations, each of which, in all probability, had its own peculiar language, or at least dialect. In France, where there are now but two spoken languages, Cæsar describes three as existing in the independent part, exclusive of one, at least, in the Roman province, while Strabo enumerates no fewer than 70 different nations as inhabiting it. Within the Alps the same author gives us the names of at least 30 tribes; and in the Spanish peninsula, where there is now but two languages, he enumerates 22 nations. In perusing such statements, we rather fancy ourselves reading of American, Malay, or Hindoo nations, and tribes, than of the people of Europe. The ancients were incurious both in regard to language and physical form, except their own; but com-

paring the few facts known to us, with the present condition of nations in a rude state of society, the probability is that 2,000 years ago the inhabitants of Europe, like the people now referred to, had a great diversity of languages, and might be distinguished by much difference of physical form, which in the intermixture of families can be no longer satisfactorily traced. Even in the early period alluded to, and, indeed, in a far earlier one, the intermixture of families and languages must have already made considerable progress. The Greeks had settled in Italy and its islands. The inhabitants of Gaul had colonised a considerable portion of northern Italy. The Italians, in their turn, had settled and colonised in the south of France; and the Germans, by whole tribes, had formed settlements in Gaul and Britain.

It does not seem likely, however, notwithstanding the extinction of some languages and the substitution of others, that any conquered European nation was ever exterminated; and it seems probable, that the greatest change that took place through conquest, was in those cases in which the conquerors being more numerous than the conquered, a mixed race was the result, bearing a nearer resemblance to the first than to the last. Of this the Saxon conquest of our own country, or, at all events, the German conquest of a portion of it, which preceded the arrival of the Romans, affords the most striking example. In the great revolutions now referred to, the near approach in physical forms of the European families, and their approximation, moreover, in manners and customs, would make amalgamation a matter of little difficulty,—very different, in short, from what would have been the case had there existed a wide discrepancy, as we see in the case of the Turks and Greeks, and still more strikingly in the case of the African and European races in the New World.

The European race is distinguished from the African, Mongolian, Semitic, Tartar, Hindoo, Indo-Chinese, Chinese, Malayan, and American, by traits so obvious and distinct as not to be mistaken. The skin is white, and the colouring matter of the *rete mucosum* so small in amount, that in the cheeks, and some other parts of the body where the skin is thinnest, it can be seen through, and hence blushing, or, rather, visible blushing, is peculiar to the European. The hair varies in colour in different individuals, and, for the most part, is of a soft texture and undulating; the eyes also vary in colour from a light blue, or light grey, up to a dark blue or dark brown. These three characters of the skin, the hair, and the eyes, are peculiar to the European, and never to be found in any other race of mankind. Variety, at least in complexion, if not in features also, is the peculiar physical characteristic of the European race, as distinguished from the other inhabitants of the globe considered by classes. The intellectual powers, as they have been developed in this race in all periods of their history, from their first emanation from the woods down to the highest point of the civilisation of Greece and Rome, or of modern Europe, exhibit a singular superiority over the other races. They display a higher degree of energy, intrepidity, enterprise, and invention, than any other. They are the only race that has as yet exhibited, in the highest degree, the peculiar prerogative of mankind, that of always continuing to accumulate knowledge, and who, notwithstanding many oscillations in their history, still continue to advance. Other races have continued stationary, or retrograded: but, as

previously stated, it is a distinctive trait of the European race to have constantly moved onwards, and gained in civilisation in periods when it appeared to be retrograding: for even in the dark ages, when the fine arts, and science, and polite literature were nearly lost, the foundations were being laid of a far better constitution of society and of government. The very mixture of races certainly conduced to our intellectual advancement, and, most probably, contributed, as it is known to do with the lower animals, to our physical improvement. It is in vain, therefore, that naturalists class the Semitic, Tartar, and Hindoo races, along with Europeans, merely because the form of their skulls, and the shape of their faces, do not materially differ. There are other, and quite as important characteristics, that show them to be essentially different.

Another characteristic of the European race is the greater size of the hand, the greater rigidity of the muscular fibre throughout, and, collectively, the superiority of muscular strength, and greater capacity of perseverance in physical labour, which distinguish it above all the other races.

In attempting the following classification, we shall take it for granted, that emigration and conquest have not so completely altered the physical form of the different families of men now inhabiting Europe, but that they are still, in some considerable degree, to be distinguished by the form which belonged to each in its original locality:

1. Beginning from the south-west, the first family which occurs is the Spanish or Iberian, including the whole inhabitants of the Peninsula, the Portuguese and Basques, as well as the true Spaniards. Notwithstanding the double admixture in this case of Semitic blood, and of Italian and Gothic, this family is sufficiently distinguished by colour, features, and intellectual character, from its neighbours across the Pyrenées, and those farther up the Mediterranean. They have displayed the peculiar characteristics of the European race in their resistance to and final conquest of the Arabs, in their conquest and settlement of South America, in their progress in the fine arts, and in the production of such a genius as Cervantes.

2. The next race is the Italian: its ancient type has been well preserved, notwithstanding much admixture of Greek and German blood: this is to be found in the numerous, and obviously faithful representations of its men and women of the classical ages, which exist in the statues of the Vatican and Capitol; and which do not appear to differ in any material respect from the well-formed and handsome peasantry of Italy in the present day. We may refer, as examples of the highest order of the Italian form, to the statues of Augustus and of Napoleon, which, by the way, so much resemble each other, that the likeness can hardly escape the most inattentive observer. Of the distinguished men produced by this family it is almost needless to speak; suffice it to mention the names of Cæsar and Cicero, of Dante, Raphael, Columbus, and Napoleon.

3. Proceeding eastward, we come to the Greek family. This comprises the inhabitants of the Grecian continent and islands, including the Illyrians, Albanians, Thessalians, &c. The *ideal* type of these is to be found in the Apollo, the Venus de Medici, and other fine remains of antiquity; and the reality in the statues of great men in the museums of Italy, and in the modern

Greeks. Notwithstanding a subjugation of nearly 4 centuries, the Greeks have mixed very little with their conquerors; and have preserved their language and physical form wonderfully distinct, and are now, as of old, remarkable for personal beauty. It would be idle to speak of the genius of the family which produced Homer and Demosthenes, Themistocles and Epaminondas; which routed and expelled from Europe the hordes of Asia, carried its conquests to the Indus, diffused arts and civilisation over western Europe, and is the parent of all rational literature and sound science.

4. The next family, proceeding eastward, is the Turkish or Tartar, the only oriental race that ever succeeded in forming by conquest a great permanent establishment in Europe. Though with a considerable mixture of Semitic and European blood, they still closely resemble their brethren who inhabit Transoxiana. Invariably dark eyes, and dark hair of a coarse texture, with a squatter form and an intellectual listlessness, distinguish them from all the genuine European families. The empire they have founded in Europe, is tottering to its downfall; and but for the jealousies of the European powers, it would long since have been annihilated.

5. Turning again to the W., we find N. of Spain, and N.W., of the Mediterranean, the Celtic family, inhabiting France, Belgium, a part of Switzerland, and a part of the British islands. Physically and intellectually, the general character of this people (allowance being made for the influence of civilisation) is probably, in most essential particulars, the same as that of the Gauls, of Cæsar, and of the Caledonians, and Silures of Tacitus. They are distinguished from the German race by darker complexions, a far greater prevalence of brown hair and dark eyes; and intellectually by superior vivacity, as exemplified in the French and Irish; but at the same time, perhaps, by less constancy and assiduity. The statues of Voltaire, and the portraits of Francis I. and Sully, may be taken as examples of this family in modern times; while the dying gladiator, now commonly considered a Gaul, may be held as representing it in antiquity. Language affords no test in regard to this family; for we know nothing of the ancient dialects of France, while the modern language is formed on that of the Roman conquerors, with the exception of about two millions of people inhabiting Brittany, who still speak a tongue which is, in reality, the same as the Welsh. The Welsh, again, is as remote from the Erse of Scotland or the Irish of Ireland, as the languages of any two American, Oceanic, or Indian tribes, a hundred miles apart from each other; while the Celtic dialects of Scotland and Ireland are, in fact, nearly identical. It must, indeed, be admitted, that there are great, if not insuperable, difficulties, even in a physical point of view, in classing all the nations now enumerated under one head; the Welsh and Scotch Highlanders being short in stature, and the French not tall, while the Irish are remarkable for their stature.

6. We come next to the German family, at present the most powerful and possessing the greatest influence of any in Europe, though two thousand years ago it was almost unknown. This family is characterised by the great prevalence of blue eyes, yellow or flaxen hair, and a very fair skin. It embraces the Swedes, Norwegians, Danes, Dutch, all the inhabitants of Germany, with the exception of a few Bohemians, and the great bulk of the Scotch

and English. Along the banks of the Rhine, and in Britain, there has been much admixture of Celtic, and probably also, of Italian blood; and it is only in the northern parts of Europe, as in Sweden and Denmark, that the peculiar characteristics of the German race are still found pure and unmixed. Generally speaking, however, the German family, in its native seat, is less intermixed with foreign blood than any other European family. Its own country has never been conquered; while the Germans have been the most extensive and permanent of all conquerors, as is shown by their conquests of France, England, Italy, and Spain, and by the still more extensive conquests they are now achieving across the Atlantic, and in Australia. The German family has probably exhibited greater enterprise, perseverance, and even invention, than any other family, as evinced by its discoveries in arts and sciences, its military enterprises, and its political institutions. For the last two thousand years, and probably even before it was known to the rest of the world, it has gone on steadily advancing in civilisation, and in the accumulation of knowledge. The portraits of Luther, Milton, and Newton, are favourable representations of this family, and those of Gustavus Adolphus and Charles XII. exhibit its ruder and more vulgar form.

We may here observe, that there are really no grounds whatever for the common and favourite hypothesis of the German or Gothic family having emigrated at some remote period from Asia. This is a purely gratuitous and, apparently, most unfounded supposition. There is not, in fact, so much as the shadow of any kind of evidence to prove that the Germans described by Tacitus were not the original occupants of the country they then occupied; and the fair presumption is, that such was really the case. At all events, if they ever inhabited any part of Asia, their emigration must have been of the most effectual description, as not a trace of any cognate people is now to be found in that continent.

7. The next great family is the Slavonic, embracing the Russians, Poles, Lithuanians, and a portion of the Bohemians, the Wends, Dalmatians, Croatsians, Slavonians, Bosnians, Servians, and Bulgarians. Swarthy complexions, as compared with the German family, dark brown hair, with a light reddish beard, a round face, high cheek bones, and eyes somewhat Mongolian, characterise this family, which, as yet, though greatly superior in energy, enterprise, and power of combination, to any Asiatic people, has made no very remarkable progress in civilisation. Peter the Great is, perhaps, the most remarkable man that this family has produced, and his portrait is a favourable specimen of it.

8. The Finnish is another family, comprising chiefly the Finns and Laplanders, with some smaller nations, the whole extending from the Gulph of Finland to the Ouralian mountains. This family is short in stature, of a strong and robust make, with a flat face, high cheek bones, light brown hair, and a thin beard. It is said to be of oriental origin, but apparently with no good foundation. The Finns have made little progress in civilisation, and many of them are to this day in the nomadic state. The whole number of this family is not estimated at above three millions.

9. Hungary, Transylvania, Wallachia, Moldavia, and Bessarabia, are inhabited by a variety of races not very easily classified. The ancient inhabitants were the Pannonians and Dacians, whose robust and manly forms are well represented in the statues of their kings and warriors, many of which are still to be found among the

ancient remains which exist in Rome, and other cities of Italy. The genuine Hungarians of the present day are tall and handsome, with dark complexions, and brown or black hair. They are said to be descended from the Magyars, who are themselves represented as emigrants from central Asia; but if the ancestors of the Hungarians really emigrated from any country E. of the Wolga, it is certain that there is now nothing oriental in their descendants either in mind or body.

10. The N. E. portion of Europe is inhabited by a portion of the Mongolian race, either in a nomadic, or other rude state, such as the Samoyedes, the Soiyanes, Permiens, Wotjaks, Kalmuks, and Kirghises. The Jews, a portion of the Semitic family, are found dispersed throughout all Europe, but are most numerous in some of the rudest parts of it, as Poland and Russia. It is probable, indeed, that their numbers at present far exceed what they ever amounted to before their conquest and dispersion, and when they were an independent nation. The dark complexion, black eyes, and black hair, with aquiline nose, show generally to what extent the purity of the original race has been preserved. Still as we find not unfrequently among them, especially when living among the German family, fair hair and blue eyes, which no Asiatic ever possessed, it admits of little question that a considerable intermixture of blood has taken place.

Population. — The progress of population in Europe in modern times has been vastly greater than in any other quarter of the world, except those parts of America and Australia that are occupied by Europeans. This increase has been at once a consequence and a cause of the increase of industry; and it has, accordingly, been greatest in those countries in which industry has been most developed, — in Great Britain, Germany, Russia, and France; and nearly stationary where industry has been stationary, as in the Peninsula and Turkey. In some countries, however, there has been a considerable increase of population without any corresponding increase of industry. Ireland is a case in point: the almost unprecedented increase of population that took place in it between 1784 and 1830 having been wholly, or almost wholly, a consequence of the endless division and subdivision of the land — that is, of the operation of that principle to which the poverty and barbarism of the country, as well as its dense population, are mainly to be ascribed. (*See IRELAND.*) We are also disposed to believe that the division of the land in Prussia, resulting from the innovations introduced by Stein, has had a considerable influence over the extraordinary increase of population in that kingdom (*see PRUSSIA*); and there can be no doubt that the operation of the law of equal succession has contributed to bring about the same result in France. (*See FRANCE.*) But, however it may have been brought about, it does not appear that the increase of population has been any where accompanied by a deterioration in the condition of the inhab. On the contrary, it has been in most countries signally improved. In Great Britain, France, Germany, Russia, &c., the great bulk of the inhab. are now better fed, better clothed, and better lodged than at any former period. The rate of mortality has been also very materially diminished; so that there has been almost every where not only a great increase of comfort and enjoyment, but also of health and longevity. It may be further observed, that the extensive intercourse that now prevails among different coun-

tries has almost wholly nullified the influence of those scarcities in particular countries that used now and then to sweep off a large proportion of their inhab. Scarcities are never general; and it is always found, that when the crops are deficient in one quarter they are unusually productive in quarters having a different soil and climate. And commerce, by setting the surplus of one country against the deficiency of another, produces, as it were, perpetual plenty; and exempts civilised nations from those vicissitudes in respect to the supply of food that are so destructive in rude societies.

Government.—Very various forms of government may be found in Europe; speaking generally, they may all be distributed into the three great classes of *absolute* and *limited* monarchies, and *republics*. It is necessary, however, to observe, that by the first, or absolute monarchies, is not meant governments where the sovereign is really absolute, or may act as his judgment or caprice may dictate. There is no such government in any part of Europe, not even in Turkey. All that is here meant by an absolute monarchy, is a government where the legislative and executive functions are administered by the sovereign, without his being subject to the control of any legally constituted or recognised public body. But every country in Europe has laws and institutions which the sovereign must respect; and public opinion has every

where vast influence: the most absolute of the European monarchs are aware of its power, and all of them are exceedingly chary about adopting any line of conduct that they suppose would be likely to be disapproved by any considerable proportion of their subjects. The checks on the power of the sovereign in the different limited monarchies to be found in Europe, are extremely different both in kind and degree. They mostly, however, consist of organised bodies that share, to a greater or less extent, in the legislative authority. In some countries, as in the United Kingdom, one of the bodies that shares in the legislative authority is elected for a specified period by a pretty widely diffused system of suffrage, and has, consequently, very great influence. The distribution of power in republics is, as every one knows, quite as various as in monarchies.

Political Division.—Europe is divided at present (1839) into 59 independent states, which, with their area, pop., &c., are mostly specified in the following table. At the head of these states are Great Britain, Russia, France, Austria, and Prussia, called, *par excellence*, the five great powers. The states of the second rank are Spain, Sweden, and Turkey; those of the third, Holland, Belgium, Portugal, Naples, Bavaria, Sardinia, Denmark, Saxony, Württemberg, Hanover, and the Swiss Confederation; and the remainder belong to the fourth class.

States, and their Designation.	Area in sq. m. English.	Population. (Latest returns.)	Pop. to the sq. m.	Capitals.	States, and their Designation.	Area in sq. m. English.	Population. (Latest returns.)	Pop. to the sq. m.	Capitals.

Bavaria (kingdom)	29,637	(1837) 4,615,469	145.2	Munich	Parma (duchy) -	2,968	(1833) 465,475	203.7	Parma	
Hanover (kingdom)	14,734	(1838) 1,706,280	122.5	Hanover	Modena (duchy) -	2,998	—	403,000	138.7	Modena
					Lucas (duchy) -	413	(1836) 136,000	325	Lucas	
					San Marino (republic)	22	—	7,600	24.7	San Marino
					Swiss Confederation (republics)	14,950	(1836) 2,125,480	142.1	—	
					Great Britain (kingdom)	17,500	—	26,000,000	51.1	Athens
					Ionian Islands (repub.)	999	—	208,100	208.5	Corfu
					Crauw (republic)	488	(1837) 131,462	269.4	Crauw	
					Andorre	200	—	7,000	35	Andorre
					Total	5,684,941	239,677,909	63.1		

By the foregoing table it is obvious that Russia is the state comprising the greatest actual amount both of extent and pop.; though, as to density of pop., in proportion to the sq. m., it ranks last but one. The independent state, with the actual amount of pop., is the principality of Lichtenstein, pop. 5,980; that which has the least extent of surface, the republic of San Marino; that with the greatest density of pop. of any, is the free city of Frankfort on the Mayn, one of the minor German states, pop. to sq. m. 1,499; that with the least density of pop. is the kingdom of Sweden and Norway. The pop. to the sq. m. in Spain may be considered as nearly representing that of Europe at large.

Religion.—In the *Weimar Almanac* for 1836, the pop. of Europe is estimated at 228 millions*, distributed as follows amongst the different religious creeds:—

Christians	{ Roman Catholics - 121,743,000
	{ Protestants - 62,340,000
	{ Greek Church - 43,300,000
Mohammedans	- 8,050,000
Jews	- 1,762,000
Other faiths	- 815,000
Total	- 228,000,000

Hence it appears that more than 19-20ths of

* The discrepancy between this and the number given above is occasioned by our having extended the limits of Europe, so as to make it include the governments of Atrachian, Örenburg, the Caucasus, &c., which the *Weimar Almanac* includes in Asia.

the whole pop. are Christians. In an enlarged point of view, the Roman Catholic faith prevails chiefly in the S., Protestantism in the N., and the Greek church in the E. Mohammedanism is confined to Turkey and the extreme S. part of Russia. The Jews are scattered over the whole of Europe, but are especially numerous in Poland. The nomadic Kalmuck tribes in the S. provs. of Russia profess Buddhism or Lamism, Sabeism, or the worship of the celestial bodies, &c., prevails amongst some Caucasian tribes; the wandering Gypsy races have a religion peculiar to themselves; and Fetichism, including various kinds of idolatrous worship, still exists amongst some of the Finnic and Ostiak tribes of Lapland, Sweden, N. Russia, &c. (*Balti*, 103, &c.)

Languages.—The principal at present spoken in Europe may be classed as follows:—

1. GRECO-LATIN FAMILY:
 - a. Modern Greek.
 - b. Italian, Spanish, Portuguese, French, Moldavian, and Wallachian.
2. CELTIC FAMILY:
 - a. Gaelic of Scotland, Erse or Irish Gaelic.

- b. Welsh, Armorican (Brittany). Cornish (allied to the two latter dialects) extinct.
3. **TEUTONIC FAMILY:**—
 a. High German, Low German, (Dutch, &c.) Swedish, Danish and Norwegian, Icelandic.
 b. English and Lowland Scotch, very mixed, especially the former, but founded on the old Anglo-Saxon or other Teutonic dialects.
4. **SLAVONIC FAMILY:**
 Russian, Polish, Bohemian, Servian, Sorab or Wendish, two dialects spoken in E. Saxony, Croatian, Bosnian, Bulgarian, &c.
5. **ONIALIAN FAMILY:**
 a. Finnish, Lappish, Estonian, Carelian.
 b. Magyar or Hungarian.
 c. Turkish (?)
6. **PECULIAR LANGUAGES:**
 a. Basque, spoken in Pyrenean districts of Spain and France—quite unlike any other European tongue.
 b. Albanian, belonging to neither the Slavonian nor Greek family, but intermixed with both.
 c. Lithuanian, Lettish, Livonian, Samogitian, quite peculiar, though containing many Slavonic words.

Civilisation.—Though the least civilised state of Europe is certainly more advanced in all that respects mental cultivation and improvement in the arts, than the most improved native state founded in any other part of the world, there is a wide difference in the degrees of civilisation that obtain among the different European communities. The Italian republics were the first to emerge through the barbarism that involved Europe after the Roman empire had fallen a prey to the attacks of the Germans and other Northern invaders. It was in them that commerce, arts, and literature again rose to such excellence as to rival or excel their state in the most brilliant periods in the annals of Greece and Rome. The invention of printing in the 15th century gave to the moderns a power of diffusing, increasing, and perpetuating information of which the ancients were wholly destitute, and which has contributed incomparably more than any thing else to accelerate the progress of civilisation. It is, perhaps, not going too far to say, that we are indebted to the invention of printing for the Reformation—that great event which restored to mankind the right of thinking and judging for themselves on matters of religious belief; and broke to pieces the shackles which churchmen and bigots had forged to enchain and weigh down the energies of the human mind. But though the invention of printing and the Reformation have every where had a powerful influence, it has been much greater in some countries than in others. Only a very short time elapsed after books began to be multiplied, till governments, beginning to be sensible of the importance of this new power, endeavoured to make it subservient to their views, by enacting laws for its regulation, and preventing any work from being published without a licence, or till it had been revised by a censor: and it was not till Holland had emancipated herself from the blind and brutal despotism of old Spain, and the Stuarts had been expelled from England, that the press began to be really free; and that periodical literature, and especially newspapers, began to acquire some portion of the vast importance to which they have since attained. But the jealousy of the doctrines broached by the early Reformers was still greater than that of the freedom of the press. They attacked principles that had been long regarded as sacred, and which, in fact, had been looked upon by most persons as part and parcel of the Christian faith. In addition to this religious feeling, most princes believed that the government derived a strong support from the church; and that, were its foundations unsettled, the whole frame-work of society would, most likely, be shaken to pieces, and their

power and authority might fall to the ground. We need not, therefore, be surprised that almost all the great sovereigns of Europe, as the kings of France and Spain, the emperor of Austria, &c., were determined enemies of the Reformation. In England, the unbridled licentiousness of Henry VIII. luckily effected a separation from the church of Rome, which otherwise it might have been impossible, or, at all events, very difficult to bring about: and in France, the extinction of the line of Valois by the death of Henry III. in 1589, and the elevation of Henry IV. to the throne, secured to the country the advantages of a toleration that could not be reiterated, even by the revocation of the edict of Nantes. But in the Peninsula, Austria, and Italy, the efforts of the enemies of the Reformation prevailed. Philip II., though he failed in his attempt to extirpate the principles of civil and religious liberty in the Low Countries, completely succeeded in Spain and Portugal; where he not only consigned every adherent of the new doctrines to the stake, and established the formidable tribunal of the Inquisition, but also suppressed the free institutions that had previously existed in Aragon and other Spanish kingdoms. The result has been such as might have been anticipated: Spain, deprived of those means of instruction and improvement that she once possessed, and which have been enjoyed by other countries, has not merely been outstripped by her rivals in the career of wealth and improvement, but has positively retrograded; and is infinitely less industrious and civilised at this moment than in the reign of Charles V. She has been, in fact, a prey to every species of misgovernment; and affords a striking and impressive example of the incalculable injury that an enfeebling and degrading superstition and an irresponsible government may entail upon a people. In no other country has the freedom of the press and of religious opinion been so completely rooted out as in Spain; and none, consequently, has fallen into such a deplorable state of weakness and decrepitude. In general, it may be affirmed of the different countries of Europe, that their civilisation is proportioned to the amount of freedom they have practically enjoyed. Other things have, no doubt, had a material influence in advancing and retarding their progress; but it has, notwithstanding, mainly depended on the freedom of the press and of opinion.

Of the secondary causes that have influenced the progress and diffusion of civilisation, commerce has undoubtedly been by far the most powerful. An extensive commerce is only another name for an extensive intercourse with foreigners; and it is impossible that this should take place without partially, at least, obliterating local and national prejudices, and expanding the mind. Commerce is also a powerful means of promoting industry and invention. An agricultural people having little communication with their neighbours, may be either stationary or but slowly progressive; but such cannot be the case with a commercial people. They necessarily become acquainted with all the arts and inventions of those with whom they carry on trade, and with the endless variety of their peculiar products and modes of enjoyment. The motives which excite, and the means of rewarding superior industry and ingenuity, are thus prodigiously augmented. The home producers exert themselves to increase their supplies of disposable articles, that they may exchange them for those of other countries and

climates. And the merchant, finding a ready demand for such articles, is stimulated to import a greater variety, to find out cheaper markets, and thus constantly to supply new incentives to the vanity and ambition, and consequently to the industry, of his customers. Every power of the mind and body is thus called into action; and the passion for foreign commodities—a passion which some shallow moralists have ignorantly censured—becomes one of the most efficient causes of industry, wealth, and civilisation.

Commerce, and the manufactures to which it gives rise, and by which again it is indefinitely extended, are always most advantageously carried on in great towns; which, consequently, are uniformly most numerous in commercial countries. These great towns are the grand sources of civilisation. The competition that takes place in them, the excitement that is constantly kept up, the collision of so many minds brought into immediate contact, and all endeavouring to outstrip each other in their respective departments, develops all the resources of the human mind, and renders a great city a perpetually radiating focus of intelligence and invention.

At no former period in the history of the world has commerce been nearly so extensive as at present; and it is all but certain that it will continue to increase, with the increase of intelligence, population, and wealth, all over the world. But the tendency of an extensive commercial intercourse among different nations is to diffuse the advantages of civilisation equally amongst them all; and the fair presumption seems to be, that the differences that now exist in the social condition of the people of the various European states, except in so far as they may depend on differences of soil or climate, or such like natural causes, will gradually decrease, and, perhaps, in the long run, nearly disappear.

EUSTATIUS (ST.), one of the Caribbee or W. India islands in the group called the Leeward islands, belonging to the Dutch, in lat. $17^{\circ} 30' N.$, long. $69^{\circ} 40' W.$, between St. Christopher's and Saba, about 6 m. N.W. the former, and 15 m. S.E. the latter island. Area, 180 sq. m. Pop. 13,700, including slaves. (*Weimar Almanac*.) This island is evidently an extinct volcano; it rises out of the ocean in a pyramidal form, and has a depression in its centre, apparently its ancient crater, which now furnishes a plentiful cover for numerous wild animals. The coast is almost wholly inaccessible, except on the S.W., where the town of St. Eustatius has been built. Climate generally healthy; but terrific hurricanes and earthquakes are frequent. The island suffers also the great drawback of a deficiency of spring water. Soil very fertile, and the industry of the Dutch has brought almost every portion of it into culture. Tobacco, which is the principal product, is raised on the sides of the pyramid to its very summit. Sugar, cotton, indigo, coffee, maize, yams, potatoes, &c., are also grown; and hogs, kids, rabbits, and all kinds of poultry, being reared in much greater numbers than required for the use of the pop., the isl. furnishes them to others. But we have no accurate information respecting the amount or value of the annual produce, or of the export or import trade. Formerly it used to be the seat of an extensive contraband traffic with the adjacent islands and the continent of S. America. This island was taken possession of by the Dutch, early in the 17th century; it has, since then, several times changed hands between them, the French, and the English; it was finally given up to Holland in 1814. (*Dict. Géog.; Canabich, &c.*)

EUXINE. See BLACK SEA.

EVESHAM, a pari. bor. and market town of England, co. Worcester, hund. Blakenhorst, in the fertile vale of Evesham on the Avon, 13 m. S.E. Worcester, and 14 m. N. by E. Cheltenham. The bor. extends over 3 parishes, comprising in all an area of 2,150 aera. Pop. in 1831, 8,991. The limits of the bor. were not affected by the Boundary Act. It is situated on both sides the river, the communication between its two divisions being kept up by a bridge of 7 arches. This is a very ancient town, a monastery having been founded here anno 700. It

was a mitred abbey, and at the dissolution its revenues amounted to 1182*l.* a year. Few vestiges of the building now remain, with the exception of a magnificent tower, now used as a belfry, built not long before the dissolution. This tower is a square, 22 ft. by 22, and 117 ft. in height: it is reckoned the finest extant specimen of the pointed ecclesiastical style of the 16th century. The town consists principally of a main street in the line of the bridge, and of another nearly at right angles to it. "The appearance of the town is that of a flourishing and improving place. Many houses have been recently rebuilt, and several new ones added." (*Boundary Report*.) It is paved and lighted under the provisions of a local act, which also provides for the watching of the town, and the care of the bridge. There are 3 churches, with chapels for Baptists, Wesleyans, Unitarians, and Quakers. It has a well endowed free grammar school, Archdeacon Deacle's charity school, with national, infant, and Sunday schools, an apprentice fund, and sundry benefactions to the poor. The stocking manufacture is carried on to some extent; parchment is also made; but gardening is the principal business of the inhabs. Evesham claims to be a bor. by prescription; it sent 2 mems. to the parl. holden in the 21st of Edward I., but it was not again represented till the early part of the reign of James I., who gave a charter to the bor. Since then it has continued to send 2 mems. to the H. of C. Previously to the Reform Act, the right of voting was in the mayor, aldermen, capital, and other burgesses, members of the corporation. Registered electors in 1838-39, 359. The corporation revenue amounts to near 440*l.* a year, mostly derived from bor. rates, tolls, and dues. "The mayor and 4 senior aldermen of the old corporation were justices of the peace, and had power to hold sessions of oyer and terminer, and to try and punish all crimes other than high treason. So late as 1740, a woman was burned here for petty treason."

Near Evesham was fought, on the 4th of August, 1265, the battle between Edward, Prince of Wales, afterwards Edward I., and the confederated barons under Simon de Montfort, earl of Leicester: the latter were totally defeated, and their leader and his eldest son killed. (*Yndal's Evesham, passim; Boundary Reports, &c.*)

EVREUX (an. *Mriditolanum*, and subsequently *Eboracra*), a town of France, dépt. Eure, of which it is the cap., on the Iton, an affluent of the Seine, 28 m. S. Rouen, and 51 m. W.N.W. Paris; lat. $49^{\circ} 55' 30'' N.$, long. $10^{\circ} 9' 19'' E.$ Pop. (1836) 7,852. It is generally well built; but the streets are rather narrow, and its houses have an antiquated appearance; it is surrounded by fine promenades, and is well supplied with water. The chief public building is the cathedral, one of the most ancient and curious in France; it is in the figure of a cross, its centre surmounted by an octagonal dome and pyramid, the summit of which is 285*ft.* above the ground, 16 pillars on either side raise the nave and choir from the lateral part of the building; the left entrance, which is flanked by 2 octagonal towers, is greatly admired. The other principal structures are the church of St. Saurin, probably as ancient as the cathedral; the great clock-tower, built in 1417; the town-hall, hôtel de préfecture, Episcopal palace, prison, theatre, and public library, with 10,000 vols. Evreux is the seat of a court of assize, of tribunals of primary jurisdiction and commerce, of a bishopric, which had its origin as early as the 3d century, a chamber of manufactures, a departmental college, and a primary normal school. It has a fine botanic garden, societies of agriculture, science, and arts, and of medicine; and various courses of lectures. Its situation on one of the principal roads in France greatly facilitates its trade, and affords ready outlets for its manufactures of woollen and cotton cloths, leather, tickings, satinettes, &c. Evreux has suffered many vicissitudes. It was frequently in possession of the English; and has been repeatedly sacked by them and by the French. It was assigned by Richelieu to the duc de Bouillon in exchange for the principality of Sedan. (*Hugo, art. Evre; Guide du Voyageur.*)

EXETER, a city, co. of Devon, sea-port, and pari. bor. of England, co. Devon, hund. Wonford on the Exe, 9 m. N.W. from its embouchure in the English Channel, 157 m. W. S.W. London; lat. $50^{\circ} 43' N.$, long. $3^{\circ} 32' 30'' W.$ Area of city and co. 4,056 aera. Pop. of do. in 1821, 23,479; in 1831, 28,242. It is built on the acclivity and summit of a hill rising from the E. bank of the river, amidst a remarkably broken and irregular, but fertile district. The 2 principal lines of street (each nearly 2 m. in length) cross at right angles near the centre of the city; numerous smaller ones intersect these and each other in various directions: these are for the most part narrow, with many ancient houses. The principal street, leading in a direction from E. to W., is broad, and has lofty modern houses, and handsome shops; it is connected with an ancient suburb on the opposite side of the river by a fine bridge of 3 arches, built in 1776. Bedford Circus, the terraces of Northworthy and Southernhay (forming part of the city), and the suburbs, espe-

cially those of Heavitree and St. Leonard's on the E. and S., amongst also of elegant modern residences: in these directions, terraces of a similar character, and detached villas, are fast increasing; the beauty of the immediate neighbourhood, the contiguity of several favourite watering places, and the excellent markets, inducing the residence of many wealthy and respectable families. The city is well paved, lighted by gas, and supplied with water by a company with a capital of 30,000*l.*: under an act passed in 1831, between 60,000*l.* and 70,000*l.* have been expended in the general improvement of the city; and upwards of 64,000*l.* in the erection of two splendid market-places. Exeter is the seat of a bishopric, founded in 1549. The cathedral, begun in 1280, is one of the finest in the kingdom: it is in the pointed style of different periods, with 2 massive Norman towers. The W. front has a façade, with numerous statues of saints and kings in niches adorned with a profusion of tracery: over it is a magnificent painted window; a corresponding one at the E. end, and those of the aisles and transepts also display great diversity and beauty. The interior is very striking, from its exquisite proportions and simple grandeur; a richly ornamented screen parts the nave from the choir, and is surmounted by a very large organ; St. Mary's chapel, the chapter-house, several bishop's residences, and several ancient monuments are also worthy of special notice. There is a valuable ancient library, in which, amongst other muniments, is the *Exeter Domesday Book*, published by the Record Commissioners in a supplementary vol. to the great *Domesday*. The cathedral suffered much during the last civil war, but has been carefully renovated. The bishop's palace (of the reign of Edward IV.) adjoins it on the S.E. The other buildings in the close are modern, obstructing the view of the cathedral on the W. and S.; on the other sides is an open area, planted with trees. At an average of the three years ending with 1831, the revenue of the see of Exeter amounted to 2,713*l.* a year. The total average revenue of the dean and chapter, during the 7 years ending with 1834, amounted to 9,838*l.* a year. There are 24 other churches and Episcopal chapels in the city and suburbs; the only one requiring notice is the modern church of St. Sidwell, in the pointed style, which, with its spire, forms a conspicuous ornament on the N. side of the city. It has also a Catholic and several dissenting chapels, and a synagogue. The principal schools, and hospitals, are, the Devon and Exeter hospital, established in 1743, and accommodating above 200 patients; a deaf and dumb institution for poor children of any of the 4 W. counties, who are maintained, educated, and taught various trades; a lunatic asylum, a blind asylum, an eye infirmary, city dispensary, and several sets of endowed almshouses; a female penitentiary, humane society, and numerous others. There is a free grammar-school, founded in 1633, with a revenue of about 800*l.* a year, and 6 exhibitions of 26*l.* each, 1 of 32*l.*, 3 of 25*l.*, and 6 of 8*l.* a year each to either university; a bluecoat school, founded in 1661, for 32 boys and girls, and 80 day scholars; St. Mary Arches school, founded in 1686, and now educating 53 boys on Bell's plan, of whom 30 are partly clothed; the Episcopal charity school, established 1709, and now clothing and instructing 180 boys and 130 girls; the ladies' school, for 40 girls; the national or Bell's school, for 562 boys and 360 girls; an infant school; a dissenting charity school, for 56 children; and many large Sunday schools. The Devon and Exeter scientific and literary institution (supported by shares and annual subscription) has a valuable library and museum; there is also an atheneum; public subscription rooms, for balls, concerts, &c.; public baths; a good theatre, usually open in winter, and during the county assizes; and an ancient gildhall, near the centre of the High Street. Annual races take place in August, on Haldon Hill, 6 m. S.W. of the city. On the site of the ancient Norman castle (of which the remains of the ancient gateway are still preserved) is a modern county sessions-house, where the assizes, &c. are held; and in the large area before it, the election of members for S. Devon, and other public meetings, take place. It is surrounded amphitheatrically by the old ramparts, the slopes of which are planted with trees. N. of the ramparts is a fine public avenue, near which are the county gaol and bridewell, and also those of the city: all of them are well-built modern structures; near the former are large cavalry barracks, and on the S. side of the city still more extensive ones for artillery. The principal market is on Friday for corn, cattle, woollen goods, and general provisions; a smaller one on Tuesday for the last named, of which there is also a considerable daily supply, especially on Saturday, a great cattle market on the 2d Friday in each month; and annual fairs the 2d Wednesday in February, May, and July, and the 2d Wednesday in December, chiefly for cattle. At Alphington, about 1 m. from the city, a large horse fair is held yearly in October. Woollen goods formed the ancient staple of Exeter, and during last century it exported large quantities to the peninsula, and various parts of the Mediterranean; but this trade has wholly ceased. The cotton

and shawl manufacture, introduced more recently, has also been given up; and though the weekly meetings of the woollen manufacturers of Devon are still held at Exeter, the work executed there is limited to serges. There are several large breweries and iron-foundries in the city; and tan-yards and paper-mills, employing many hands, in the immediate neighbourhood. Its chief business originates in it being the provincial capital, where the public business of the co. is transacted, as well as the daily concerns of the populous and fertile districts immediately round it. It is also a great thoroughfare; and many daily coaches, vans, and waggoners start in various directions from the city: some of the inns are on a first-rate scale. It has 3 joint-stock banks, a savings' and 3 private banks, and 5 weekly newspapers. The custom-house, quays, bonding and other warehouses connected with the shipping trade, are at the S.W. end of the city; where the river, confined by a weir, forms a floating haven connected with a ship canal excavated in 1673, and originally 3 m. long; this has recently been deepened, and extended 2 m. lower, so that vessels of 300 tons now ascend to the city: a large floating basin has also been formed, in addition to the haven, and is the proposed terminus of the Bristol and Exeter railway, now in progress. These improvements have raised the city's corporation upwards of 100,000*l.*; hitherto, however, there has been no proportional increase of trade, and the heavy port dues are much complained of. The sea entrance to the harbour has a shifting bar, and is narrow and intricate, but it is well buoyed, and within the narrow neck of land, between it and the English Channel, is a spacious and safe anchorage called the Bight. There belonged to the port on the 1st of Jan. 1836, 192 ships of the burden of 15,169 tons.

Exeter is a corporation by prescription. Its earliest charter was granted by Henry II.; its last in the reign of George III. The city is now divided into 6 wards, and is governed by a recorder, mayor, 12 aldermen, and 36 councillors. The annual revenue of the corporation amounts to about 12,000*l.*, derived partly from lands and houses, but chiefly from market, town, and canal dues. Its debt (upwards of two thirds of which was incurred on the canal) amounts to above 150,000*l.* The charities in the city are divided into "church" and "general charities," and are governed by two distinct bodies of trustees, selected from lists submitted to the Lord Chancellor. Exeter has returned 2 members to the H. of C. since 1286; the right of election, previously to the Reform Act, being in freeholders and in freemen by heirship, servitude, and presentation. The Boundary Act extended the limits of the parli. bor., so as to embrace the suburbs of Heavitree and St. Thomas, and some other districts, having a pop. of 5,367, and making the total pop. of the parli. bor. in 1831, 33,552. Registered electors in 1838-39, 3,433. The limits of the municipal bor. now coincide with those of the parli. bor. The courts of justice, or quarter sessions for the city, have jurisdiction, under the powers given by the Municipal Reform Act; they are held 4 times a year; the recorder presides, and barristers plead in them. There are 4 courts of civil jurisdiction, the provost's court having jurisdiction to any amount. A court of requests, for debts under 40*l.*, established in 13th George III., is held once a fortnight, and much resorted to. The general sessions and assizes for Devonshire are also held here. The city poor are under a corporation established in the reign of William III. The rates average upwards of 8,000*l.* a year, and the amount raised by assessment under the Improvements Act, in 1838-39, exceeded 7,000*l.* The annual value of rateable property, in 1838, was estimated at 133,448*l.*

Exeter is the *Ica Damnorum* of the Roman period, and is first mentioned in the second century: numerous coins and other relics of that people have been discovered. During the Saxon period it was for some time the capital of Wessex, and was noted for the number of its religious establishments. It has undergone several sieges. Archbishop Baldwin, Sir T. Bodley, founder of the Bodleian Library, Lord Chancellor King, Lord Gifford, Sir V. Gibbs, were natives of Exeter: it gives the titles of Marquis and Earl to the Cecil family. (*Parli. Reports and Private Information*) EXUMA, one of the Bahamas, which see.

EYE, a bor. town, and par. of England, co. Suffolk, rape Pevensey, hund. Hartismere, in a low fertile tract, intersected by several streams, about 2 m. from the main line of road from London to Norwich, 75 m. N.E. London. Area, 2,370 acres. Pop. (1831) 2,313. "It is of some importance to the neighbourhood as a market town, but has no pretensions to be considered as a place of trade. The white-washed houses, thatched roofs, and unpaved streets, give it the appearance of a large handsome agricultural village." (*Boundary Report*.) The church is a spacious cruciform structure, with a noble tower in the later Gothic style; there are also 2 dissenting chapels; an almshouse for 4 poor women; a free grammar-school (with 3 exhib. to the university of

Cambridge), at present educating 20 boys; a national school, supported by subscription; a house of industry, adjoining which is a handsome modern guildhall. Market, Tuesday for corn; Saturday for general provisions. The inhab. are chiefly employed in agriculture; formerly, hand-made lace employed a majority of the females, but since the introduction of machinery for the purpose, this has declined. It claims to be a bor. by prescription; the earliest charter was granted in the reign of John, and subsequently 3 others were conferred. It returned 3 mems. to the H. of C. from the earliest period down to the passing of the Reform Act, by which it was deprived of one mem. The right of voting was formerly in the burgesses, bailiffs, and commonalty. The Boundary Act extended the limits of the parl. bor. so as to include 10 additional parishes, comprising an area of 15,150 acres; and a pop., in 1831, of 7,015.* Registered electors in 1839-40, 328. According to the Municipal Act, the limits of the bor. for municipal purposes are restricted to about 150 acres; and it is governed by 4 aldermen and 12 councillors. Corporation revenue about 400*l.* a year, chiefly derived from rents.

EYEMOUTH, a market town, and the only sea-port in Berwickshire, Scotland, on the German Ocean, at the mouth of the small river Eye, 7 m. N. Berwick-upon-Tweed, and 42 E. by S. Edinburgh. Pop. 1831, 1,106; the parish is confined almost solely to the burgh, only 75 persons residing in its landward portion. The town has generally a thriving and respectable appearance, but the only public building worth notice is the parish church. It carries on some fishery business; but lately it has greatly fallen off. A successful attempt has lately (1832) been made to make Eyemouth a weekly grain market. In 1832, grain to the amount of 20,000*l.* was sold in it; and the market has increased since. This result is owing to the excellence of the harbour, and the cheapness of the port charges. The harbour of Eyemouth lies at the corner of a bay, into which ships may work in and out at all times of the tide, or lie at anchor, secure from all winds, except from the N. or N.E. Spacious granaries have been erected, in connection with the corn trade, on the quay; and a large building, once used as barracks for soldiers, has also been employed as a granary. A branch of the Commercial Bank of Scotland has been introduced. The vessels, of all descriptions, which arrived and sailed in 1833, were 201; in 1834, 198. Owing to its near vicinity to England, being the first harbour on the Scotch side, Eyemouth was long famous for smuggling; but illicit traffic has long disappeared.

Eyemouth is a place of considerable antiquity; but the most important fact in its history is, that the Duke of Somerset, in his expedition against Scotland in 1547, caused a fort to be erected on a bold promontory to the N. of the town, the remains of which can still be traced. The great Duke of Marlborough, though not otherwise connected with this place, was created Baron Eyemouth by William III.; but the title being limited to heirs male, is now extinct. (*Nicdaph's Border Hist.*, p. 560; *New Statist. Account of Scotland*, § Berwick, pp. 318-336.)

F.

FABBRIO, a city of central Italy, Papal States, deleg. Macerata, at the E. foot of the Apennines, 30 m. W.S.W. Ancona. Pop. 8,500. It has a cathedral and numerous convents. Felt cloth of good quality, for printers, distillers, paper-makers, &c., is produced here; and it is celebrated for its paper and parchment; it has been supposed, indeed, that this was one of the first places at which paper from linen rags was manufactured. Glue, and some other articles, are also produced. It has 3 annual fairs, and markets twice a week. (*Rampoldi's Bowring's Report*.)

FAENZA (an. *Faventina*), a town of central Italy, Papal States, deleg. Ravenna, on the Emilian Way, at the junction of the canal of Zanelli with the Lamone, 9 m. N.W. Forlì, and 30 m. S.E. Bologna. Pop. (1832) 18,500. It is surrounded with walls, and defended by a citadel. It has 4 well-built streets leading to a square in its centre, in which are the cathedral, town-hall, new theatre, and many handsome private residences (*palazzi*), with a fine marble fountain in the middle. The rest of the town consists of miserable courts and lanes. There are 26 churches, 15 convents, 2 schools of painting, a lyceum, hospital, and 2 orphan asylums. The manufacture of a kind of porcelain which has derived its name (*faience*) from this town, still continues to be carried on, but to a much less extent than formerly. There are some factories for silk fabrics and twist, paper-mills, &c. Its trade, which is said to be tolerably active, is facili-

tated by the canal, which leads to the Po-di-Primaro. Faenza was sacked by the Goths in the sixth century; nearly ruined by the Emperor Frederick II.; and annexed to the papedom by Julius II. in 1509. It was the residence of Torricelli, the inventor of the barometer. (*Rampoldi's Dict. Geog.*)

FALAISE, a town of France, dép. Calvados, cap. arrond., on the Anté, 21 m. S.S.E. Caen. Pop. (1836) 9,396. It is built on the declivity of a hill, the summit of which is crowned by its castle, now in part a ruin, but anciently the residence of the dukes of Normandy, and the birthplace of William the Conqueror. The town was formerly pretty well fortified, and is still surrounded with walls. It is clean and well built; has 3 long streets, 4 squares adorned with modern fountains, 3 churches, 2 hospitals, a theatre, and a public library with 4,000 vols. Falaise has a tribunal of original jurisdiction, and a communal college. Its manufactures consist of lace, tulles, cotton fabrics, &c. Its suburb of Gubray is celebrated for a large fair held in it each year, from the 10th to the 25th August, which Hugo says "is for the N.W. of France what the fair of Beaucaille is for the S." The value of the commodities disposed of at this fair has been estimated at 160,000,000 fr. (600,000*l.*) (*Hugo, art. Calvados; Guide du Voyageur, &c.*)

FALKIRK, a market town, parl. bor., and par. of Scotland, co. Stirling, on an eminence, 3 m. S.S.W. Frith of Forth, at Grangemouth, at the S.W. extremity of the fertile tract of land called "the Carae of Falkirk," 22 m. W. by N. Edinburgh, and 10 m. S. by E. Stirling. Pop. of Falkirk proper, 5,600, but including the suburbs of Grahamston and Bainsford, about 7,000. Pop. of the town and parish, in 1831, 8,988; in 1831, 12,743. Inhabited houses 1,646, averaging 7.74 persons to a house. There are two other villages within less than a mile each of the town, namely, Camelon on the W., and Lauriston on the E. The Carron Iron-Works (see CARRON) are within ½ m. of Bainsford, and a village called Carron Shore, about ¼ m. more distant in the same direction. Grangemouth, situated at the junction of the Forth and Clyde canal with the river Carron, about ½ m. from the Forth, forms the port of Falkirk. The canal in question runs past the N. extremity of Bainsford, and is joined by the Union canal from Edinburgh, at Lock 16., within less than a m. of Falkirk. (See GRANGEMOUTH.) The Edinburgh and Glasgow railway, which is expected to be opened in 1842, passes within 500 yards of the borough.

Falkirk consists of one well-built street, about ½ m. in length, with various cross lanes, and of Grahamston and Bainsford, which stretch in a continuous line 1 m. to the N. The only public buildings are the parish church, built in 1811, with a steeple 130 ft. in height; the town-house, and chapels belonging to the Relief, the Associate Synod (2), and the Baptists. There are no fewer than 32 schools (in 1840), male and female, in the parish, of which 22 belong to the town. The aggregate average number of scholars in the town is about 900; in the whole parish, 1,400; in other words, about a ninth part of the whole pop. are being instructed. The English parochial school is regarded by good judges as a fitting model for Scotland. There is, also, a flourishing school of arts, in which courses of lectures on different branches of science are delivered every winter. Average annual number of tickets sold, 250. A legal assessment for the poor obtains in Falkirk: the average number of permanent and occasional poor united, was 400 for three years previously to 1837. Average annual assessment for their support during the same time, 469*l.* 8*s.* 4*d.*, in addition to 62*l.* 1*s.* 3*d.*, the average annual collections at church-doors. (*Report by General Assembly on Poor in Scotland*, 1839.)

Falkirk can hardly be said to possess any manufactures. There are a printing press, 4 tanneries, which employ about 50 hands, several breweries, of which only one employs so many as 20 men, 2 small manufactories of pyroligneous acid, 25 muslin weavers who work for Glasgow manufacturers, and 16 who do customer work, or weave linen or cloth from yarn spun by families in the district. But the neighbourhood of the town teems with manufactures and other sources of employment. In addition to the Carron Works, there is the Falkirk Foundry, at the N. extremity of Bainsford, in which about 500 persons, young and old, are engaged. There are 2 distilleries, one at Camelon and the other at Bonnybridge; and various extensive collieries (for example, the Duke of Hamilton's at Redding), which not only supply the district, but furnish, to a considerable extent, the Edinburgh market. There are 3 saw-mills, several flour-mills, and a small ship-building yard at Lock 16., the point where the two canals unite. Camelon is principally occupied by nailers, their number varying from 240 to 260. The wages of a first-rate hand are about 1*s.* per week. There are 4 branch banks in the town. Bainsford is almost exclusively inhabited by the workmen belonging to the Carron Works and to the Falkirk Foundry.

* This is the statement of the Boundary Report, but it is only approximate.

But Falkirk is celebrated chiefly for its *trysts*, which are the greatest fairs or markets for cattle of any in Scotland. There are three *trysts* annually, beginning respectively on the 2d Tuesday of Aug., Sept., and Oct.; the last being by far the largest. They continue at least two days each time, and sometimes for nearly a week. The cattle are chiefly from the Highlands, and sold for feeding in the S. of Scotland, or in England. In the *tryst* for 1838, there were present 60,000 head of sheep, 50,000 do. black cattle, 2,700 horses, chiefly Highland ponies, and, it is said, 40,000 men, though this we take to be a gross exaggeration. As this *tryst*, generally speaking, is equal to those of Aug. and Sept. united, if we double the numbers just given, we will have a pretty correct idea of the extent and importance of the Falkirk *trysts*. (*Edinburgh Chronicle* of 18th Oct., 1838.) The entire value of the stock annually disposed of at these *trysts* cannot be much, if at all, under 1,000,000. These *trysts* were established upwards of 300 years ago.

This town is of considerable antiquity. The old church, on the site of which the new one was built in 1811, was founded by Malcolm Caennore in 1087. In the valley between Falkirk and the Carron, a battle was fought by the Scotch, under Sir William Wallace, against the English, under Edward I., in which the latter prevailed; and Sir John Graham and Sir John Stewart fell. The tomb of Graham, which the gratitude of his countrymen has thrice renewed, is to be seen in the church-yard of Falkirk. On a moor, within a m. of the town on the S.W., Charles Stuart, the Pretender, in 1746, gained a victory over the royal army, under General Hawley. Camelon was once a Roman station; and near this the famous Roman wall began, commonly called "Graham's Dyke," which was erected anno 140, in the reign of the Emperor Antoninus Pius, and which extended across the island from the Carron to the Clyde. Falkirk was a burgh of barony till the year 1836, when it obtained a constitution from parliament, and is now governed by a provost, three magistrates, a treasurer, and seven councillors. It returns a mem. to the H. of C., in union with the burghs of Linlithgow, Lanark, Hamilton, and Airdrie, and in 1839-40 had 387 registered voters. (*Nimmo's Hist. of Strirling-shire*, edit. 1817; *Chalmers's Caledonia*, i. 117, 118, &c.; *Boundary Reports*; *Private Information*.)

FALKLAND, an ancient bor. of regality of Scotland, co. Fife, at the N. base of the East Lomond Hill, 21 m. N. by W. Edinburgh. The hill in question so far overshadows it, that the rays of the sun cannot reach it for about 10 weeks in the middle of winter. Pop., in 1831, 1,142. The town consists of a single street, with some cross lanes; the houses being in many cases thatched, and of an antique primitive description. Though it has 13 fairs for cattle, sheep, &c. annually, yet it is a place of comparatively little traffic; but weaving in connection with the Dunfermline manufacturers gives employment to a considerable number of the inhabitants. Falkland is remarkable only for its having been a royal residence, and for the many historical recollections connected with it. The palace, which was originally a stronghold, belonging to the Macduffs, thence of Fife, was attached to the crown in 1424, on the forfeiture of that ancient house, and became a hunting seat of the Scottish monarchs. It stood on the E. of the town; and the present, which is but a fragment of the original building, was erected by James V. This monarch died here in 1542. It was a favourite residence of his grandson, James VI. The last sovereign who visited it was Charles II. in 1660. It was afterwards allowed to fall into decay; but what remained of it has recently been renovated and fitted up, so that it now forms the residence of O. T. Bruce, Esq., heritable keeper of the palace. In 1715, after the battle of Sheriff-Muir, the famous Rob Roy M'Gregor seized on and garriaged the palace with a party of the M'Gregors, and successfully laid the burgh and country in the vicinity under contribution. Falkland was erected into a royal burgh by James II. in 1468; but it is one of four royal burghs in Scotland (*viz.* Elie, Earlsferry, Newburgh, and Falkland), that were excused, on their own application, from sending representatives to parliament, owing to their poverty, or inability to afford the necessary expense of an election, and of supporting their members when elected. They still, however, enjoy all the other privileges of royal burghs. "Falkland Wood," the royal park, has long disappeared. Falkland gives the title of Viscount to the noble family of Carey, Lord Hunsdon. (*Borough's Beauties of Scot. & Fife*; *Sir R. Sibbald's Hist. of Fife*; *Chambers's Gaz. of Scot.*; *Pennant's Tour in Scot.*)

FALKLAND ISLANDS (*F. Malouines*, Spau. *Malvinas*), a S. Atlantic belonging to Great Britain, consisting of about 90, or according to some authorities as many as 200, large and small islands, between lat. 51° and 53° 45' S., and long. 57° 30' and 61° 46' W., about 1,000 m. S.S.W. from the strait of the La Plata, 240 m. N.E. Tierra del Fuego, and about 7,000 m.

distant from London, the voyage occupying from eight to nine weeks. Only two of these islands are of any considerable size,—the E. and W. Falklands. The greatest length of the former, N.E. to S.W., is nearly 180 m.; greatest breadth, about 80 m. The latter is about 100 m. in length, by 50 m. in its greatest breadth, in the same directions. Their united area is estimated at 13,000 sq. m. Between the two main islands is Falkland Sound, whence the whole archipelago has derived its name; this channel is from 7 to 12 m. in breadth, and navigable for ships of any class; many of the smaller islands are situated in it. Next to E. and W. Falkland, the principal islands are, the Great Swan Island on the W., Saunders, Keppel, and Peble islands on the N., and the Jason Isles at the N.W. extremity of the group. A small English garrison is stationed at Port Louis, at the head of Berkeley Sound, towards the N.E. extremity of E. Falkland; and the islands are further occupied by a few Buenos Ayrean gauchos, Indians brought from the S. American continent, and Europeans; and frequented by numerous American, English, and French whalers and sealers; but most of them are uninhabited, and the population of the others is variable and uncertain.

The shores of these islands are for the most part low, except on the W. side of the group, where there are many high precipitous cliffs and ridges of rocky hills about 1,000 ft. in elevation. The average height of the W. is greater than that of the E. island; though the highest hills seem to be in the latter, where they rise to about 1,700 ft. above the sea. All the Falklands are of a very irregular shape, and much indented with bays and inlets. Excellent harbours, easy of access, affording good shelter, with the very best holding ground, abound among them, and, with due care, offer ample protection from the frequent gales. (*Fitzroy*, p. 245.) The sea around the Falklands is mostly deep; but in general much deeper near the S. and W. shores than on those of the N. The climate is variable, but not so much so as that of England, and it is said to be quite as healthy. The thermometer at Port Louis rarely rises in summer above 70° Fah., or sinks in winter below 30°; snow seldom remains on the ground more than 48 hours, except on the mountain tops, and it never freezes so hard as to produce ice capable of sustaining any weight. Excess of wind is the principal evil: a region more subject to its violence, both in summer and winter, it would be difficult to mention. The winds generally freshen as the sun rises, and die away with sunset; the nights are in general calm, and as beautifully clear and starlight as in tropical countries. The prevalent winds are westerly; E. winds are not frequent; gales and squalls come principally from the S. Rain falls more frequently than in England; but the showers are lighter, and the evaporation is quicker. Thunder-storms are unusual. Falkland is the island that has been the most explored. Its more elevated parts are composed of a compact quartz rock. In the lower country, clay-slate and sandstone are intermixed, and are often covered by excellent clay fit for making bricks and earthenware. In many places very solid peat in layers, varying in depth from 2 to 10 feet, has been discovered; and this valuable resource appears to be plentiful throughout the whole of the Archipelago, where it may for ages supply the deficiency of timber. The soil consists principally of a black mould, from 6 in. to 2 ft. in depth; in many places, and especially near the foot of the hill ranges, there are extensive bogs. Fresh water is good and plentiful; there are plenty of ponds and small lakes, but no rivulets worthy of note. Copper and iron have been discovered.

The aspect of these islands is unprepossessing; but it is said that the barrenness is only apparent; that most of the land is abundantly fertile, and covered with a coarse, long, and brown, but sweet grass; while, in the interior, there are numerous sheltered valleys, feeding large herds of wild cattle. In various parts along the seashore, a tall sedgy grass called *fussock*, growing to 6, or sometimes nearly 10 ft. in height, is plentiful; of this the cattle are very fond, and it is also well adapted for thatching buildings, and for the manufacture of mats and baskets. Timber of all kinds is wanting; and though the contrary has been affirmed, we believe that there is but little chance of its succeeding where the attempt made to plant it. Generally, both the soil and climate are unsuitable for corn, though it has been raised in some sheltered spots near Port Louis, where potatoes, onions, turnips, carrots, and other vegetables have also been raised.

Should these islands ever become the seat of a considerable colony, its wealth will probably be derived chiefly from breeding and rearing live stock. For this the country is well adapted. The French, and afterwards the Spanish colonists, turned loose upon E. Falkland a number of black cattle, horses, pigs, and rabbits, and goats and pigs have been landed upon the smaller islands at different periods. These animals have multiplied exceedingly; and though they have been killed indiscriminately by the crews of vessels, as well as by

settlers (who sometimes kill a wild cow merely to get the tongue), there are still many thousand head of all kinds. The wild bulls and horses are very fierce, and apt to attack individuals, who are never secure unless they be well armed, or protected by well-trained dogs. All the wild cattle are very large and fat. The horses are lightly built, and average about 14 hands 2 in. in height. The only formidable wild land animal is the warrah, or wolf-fox. This is as large as an English mastiff, and very fierce; according to Captain Flinders, however, it appears to be only a variety of the Patagonian fox. Sea-elephants and seals (both fur and hair seals) abound on the shores in great numbers, and whales are frequent around the coasts. Birds and fish are amazingly numerous.

Amerigo Vespucci has been commonly reputed the discoverer of these islands, but it is most probable that he never saw them. They were in reality discovered by Davis in 1592; Hawkins sailed along their N. shores in 1594; and Strong, in 1590, anchored between the two large islands in the channel, which is called Falkland Sound. In 1600, the Jason and Sebald islands were discovered by the Dutch. The Falklands were visited during the first half of the 18th century by many French vessels; and in 1763 they were taken possession of by France, who established a colony at Port Louis on the E. island, from which, however, they were in 1765-67 expelled by the Spaniards. About the same period the English settled at Port Egmont, Saunders' Island, though in 1770 they also were obliged to evacuate the Falklands by the Spaniards. A war with the latter was nearly the consequence of this proceeding; but in 1771 Spain gave up the sovereignty of the islands to Great Britain. Not having been colonised by us, in 1820 the republic of Buenos Ayres assumed a right to the Falklands, and a colony from that country settled at Port Louis, which increased rapidly, until, owing to a dispute with the Americans, the settlement was destroyed by the latter in 1831. In 1833 the British flag was again hoisted both at Port Louis and Port Egmont, and a British officer has since been continually resident at the former station, which, however, now comprises only a ruined fort, state house, and a few other houses, gardens, &c., and about 45 settlers (Oct. 1839).

The possession of the Falkland Islands undoubtedly offers us some advantages. They are situated in a part of the world where we have no other colony intermediate between England and Australia and New Zealand; their harbours are good and easy of approach, and they go far to command the passage round Cape Horn. They are capable of affording a plentiful supply of live stock and good water to ships touching at them. But it seems idle to suppose that they should ever become an intrinsically valuable colony. (See *Pittroy's Voyage of the Adventure and Beagle*, li. 227-281.; *MacKinnon's Falk. Islands*; *Whittington's Falk. Islands*; *Weddell's Voyage*, &c.)

FALMOUTH, a parl. bor. and sea-port town of England, co. Cornwall, S. W. division, hund. Kerrier, on the W. side of Falmouth harbour, about 2 m. from Penryn, and 15 m. N. E. of the Lizard Point, lat. 50° 40' N., long. 5° 2' 45" W. Area of old bor. 40 acres; pop. of do. in 1831, 4,761; but the old bor. did not include much more than half the town, which extends about 1 m. along the sea, partly in the par. of Falmouth and partly in that of Budock; in both of which "extensive streets have been built, containing houses of a description superior to those within the old bor." (*Boundary Report*.) It is, speaking generally, well built; is lighted with gas; its entire pop., in 1831, might be about 7,500. It has a church, dedicated to Charles the Martyr, with chapels belonging to the Baptists, Wesleyans, Bryanites, Friends, Unitarians, and Rom. Cath.; a Jews' synagogue, a market-house, town hall, a gaol, built in 1831, good public rooms, a fine hall, belonging to the Cornwall Polytechnic Society, a custom house, a good quay, and numerous schools and charitable institutions. It is lighted with gas, and has with its environs a cheerful and picturesque appearance. The inlet of the sea, called Falmouth Harbour, is one of the finest asylums for shipping in England. Its entrance, between St. Anthony's Head on the E. and Pendennis Castle on the W., is about 1 m. in width, and it thence stretches inland about 54 m. Falmouth is situated on a creek on its W. and St. Mawes on its E. side, immediately within St. Anthony's Head. It has deep water, and excellent anchorage ground for the largest ships; they may also anchor without the harbour, having it in their power to retreat into it should the wind come to blow from the S., which gives a great facility to ships getting to sea. Ships of large burden unload at the quay at Falmouth. Near the middle of the entrance to the harbour is a large rock covered at high water; but a beacon has been erected upon it to point it out: the usual entrance is between this rock and St. Anthony's Head, on which is a lighthouse. The harbour is defended by Pendennis Castle on its W., and that of St. Mawes on its E. side. The former is constructed on a rock more than

300 ft. above the sea. They were built by Henry VIII.; but have since been much improved and strengthened. "The advantage of being the principal station for the packets to the W. Indies, N. and S. America, Spain, Portugal, the S. of Europe, &c., has clearly contributed to the increase of the town. Villas, also, have been built in various parts of the par. of Falmouth, by persons who have retired from the service, or who are still employed in it." (*Boundary Report*.) The mail-packets for the Mediterranean, to Spain, the W. Indies, and S. America, have been despatched from Falmouth for about a century and a half; but the establishment of steam packets has nearly superseded the employment of sailing-packets; though, as the steam-packets from London generally call here on their outward and inward voyages to receive and put on shore passengers, and get supplies of coal, the town has not been much injured by the change. Its exports are copper, tin, tin-plates, woollen goods, pitch, and other fish, &c.; a considerable coasting trade is carried on between Falmouth and London, Plymouth, Jersey, Bristol, &c. In 1836 Falmouth had 86 registered vessels of the aggregate burden of 6,732 tons. Market-day, Thursday, for provisions generally.

Previously to the late Municipal Reform Act, the bor. was limited to the old town, which comprises only about half the modern town; but its limits were then extended so as to embrace the whole town and some adjacent territory, with Pendennis Castle. For parliamentary purposes, the Reform Act added Falmouth to the bor. of Penryn, which see.

It is governed by a mayor, 4 aldermen, and 12 councillors. Corporation revenue about 285*l.* a year. In the early part of the 17th century, Falmouth consisted only of a few fishermen's huts: it owes its subsequent rise to the patronage of the Killigrew family, and the establishment of the packets; which last is a consequence of the excellence of its harbour, and its situation so near the Land's End. (*Boundary and Municipal Reports*.)

FALSTER, one of the Danish Islands in the Baltic, separated by narrow straits from Zealand on the N., on the S. by the B. E., and inland on the W. Length, N. to S. 27 m.; breadth very variable. Area, 180 sq. miles. Pop. 19,400. (*Müller*.) The surface is almost entirely flat, but it is considerably elevated above the sea, and is comparatively healthy. It is well watered, though it has no stream deserving notice. Its S. portion, a projecting tongue of land, is mostly occupied by the lagoon of Böttöe. It is the pleasantest of all the Danish islands; is richly wooded, fertile, and well cultivated, and produces so much fruit that it is called the Orchard of Denmark. More corn is grown than is required for home consumption; and flax, hemp, hops, &c. are cultivated. Cattle, hogs, and poultry are plentiful; bee-hives are numerous, honey and wax being important articles of produce. Turf, chalk, and building stone are found. Some vessels are built, but the few manufactures of the island are wholly domestic. Nykiøbing, on its W. side, is the principal town; it has a cathedral, an ancient castle, and 1,400 inhab. (*Dict. Géog.*; *Bremner's Denmark and Norway*, &c.)

FAMAGUSTA, a sea-port town of Cyprus, in what is now a bleak and barren district on the E. shore of the island, a little S. from the mouth of the Pedæa, and 40 m. E. Nicosia, lat. 35° 7' 40" N., long. 33° 59' E. It was formerly well fortified; and its works, which are now dismantled, cover a circ. of about 2 m., and consist of a rampart and bastions, defended on the land side by a broad ditch hewn out of the rock. The entrance to the harbour, which appears not to be more than from 80 to 100 yards across, is defended on one side by a bastion, and on the other by a ruined tower. The port once admitted vessels of a considerable draught of water; but since its conquest by the Turks, and all rubbish have been suffered to accumulate to such an extent, that none but small craft now enter it in safety. The town, which is poor and in ruins, has numerous deserted and choked up streets and decayed churches; indeed, for the number of the latter, Kinnelr says it might be compared to Old Genoa, though not on so superb a scale. In its centre are the remains of the Venetian palace, near the cathedral of St. Sophia, a respectable Gothic building, in ruins, and in part converted into a mosque. Only a few Turkish families are found in Famagusta, most of its inhab. being Greeks. During the Venetian régime, it was one of the most populous, commercial, and richest towns in the Levant. Its ruin was completed by an earthquake in 1735. About 5 m. N. E. are the ruins of Constantinia, occupying the site of the ancient Salamis, now called Haki, or Old Famagusta. These ruins consist of the foundation of the ancient walls, about 3 or 4 m. in circuit; with cisterns, broken columns, the foundations of buildings, &c., which lie scattered along the sea-shore, and near the mouth of the Pedæa.

Guy of Lusignan was here crowned king of Cyprus, by order of Richard I., in 1191. It remained in the possession of his family till 1460, and then successively belonged to the house of Savoy, and the Venetians. Se-

lim II. took it after a long and memorable siege, in 1571, when its gallant governor Bregadino met with the treacherous and inhuman treatment already noticed. (See CYPRUS, and *Klunze's Asia Minor*, &c.)

FANO (an. *Fannum Fortunae*), from a temple dedicated to the goddess Fortune), a sea-port town of central Italy, Papal States, delta of the Fiume, on the Adriatic, at the mouth of the Metauro, and on the Emilia Way, 7 m. S.E. Pesaro, and 29 m. N.W. by W. Ancona. lat. 43° 51' 10" N., long. 13° 1' 20" E. Pop. 8,000. It presents a lofty bastioned wall towards the sea; and has a large square ornamented with a fountain and a bronze figure emblematic of the town; a cathedral in an enriched style of architecture, which, like some of its other churches, contains paintings by Domenichino, &c.; many convents, a college of Jesuits, public school, public library, and a theatre, said to be one of the most elegant in Italy. On the road to Fossombrone is a triumphal arch, erected in honour of the Emperor Augustus, besides some other remains of antiquity. Fano has some fabrics of silk stuffs and twist, and some trade in corn, oil, &c.; but its harbour admits only small vessels. It received a colony under Augustus: in its vicinity the Romans gained an important victory over Asdrubal, anno 207 a.c. It had some extensive suburbs destroyed by the Turks in 1487. (*Rampoldi's Dict. Géog.*)

FAREHAM, a market-town and par. of England, co. Hants. Portsdown div.; hund. of Fareham. The town is situated on a creek at the N.W. extremity of Portsmouth Harbour, 4 m. N.N.W. Gosport, and 64 m. S.E. London. Area of par. 6,402. Pop. (1831) 4,402. The town consists principally of one broad street; and has a church and 2 dissenting chapels. During the summer months, it is resorted to for sea-bathing, and has every accommodation for the convenience of visitors. It has manufactures of sackings, and ropes for shipping, which are sent to Portsmouth, and vessels of large burden are built. Market, Wednesday. The government is vested in a bailiff, 2 constables, and 2 ale-conners.

FARINGDON (GREAT), a town and par. of England, co. Berks, partly in hund. Faringdon, partly in that of Shrivvenham, at the base of Faringdon Hill, in the vale of the White Horse, about 2 m. from the Isle, and 14 m. W. by N. London. Area of par., 5,910 acres. Pop. (1831) 3,038. It is a very neat town, paved, lighted, and amply supplied with water from the noted spring of Portwell. The church is an interesting structure; its E. end is of great antiquity; the remainder is in the Gothic style of different periods: its spire was destroyed during the last civil war. There is also a chapel of ease at Coxwell, in the par., and a dissenting chapel in the town; a national school for 200 children, and an infant school. Market, Tuesday, a large one for corn; fairs, February 13, Whit-Tuesday, October 23, for horses, fat cattle, and pigs. *Manx* fairs are also held the Tuesday before and after Old Michaelmas. The chief trade of the town is in bacon, several thousand pigs being annually killed by its butchers. Its position at the junction of 2 main lines of road also occasions a good deal of business and activity. The line of the Great Western Railway passes within 3 m. of the town.

FAIRNHAM, a town and par. of England, co. Surrey, hund. Farnham; 38 m. S.W. London. Area of par., 10,510 acres. Pop. of ditto (1831), 5,858. The town, situated near the Wey, on the main line of road from London to Southampton, consists of 2 principal streets, with a market-place at their intersection, and some smaller streets. It is paved, lighted, and well supplied with water, from springs in the neighbouring hills, conveyed by pipes to a large reservoir in the town. The church, a spacious building in the later Gothic style, was formerly a chapel belonging to Waverley Abbey, in the vicinity. There are also 2 dissenting chapels; almshouses for 8 poor people, founded in 1619, and endowed with lands now producing 80*l.* a year; a free grammar-school, with an endowment producing 30*l.* a year, and a national school supported by subscription. Market, Thursday; it was formerly one of the largest corn markets in the kingdom, and is still a considerable one. Fairs, Holy Thursday, June 24, and November 13, for horses, cattle, sheep, and pigs. The town was anciently noted for its cloth manufacture, but this is quite extinct. It is now celebrated principally for its hops, those produced in the vicinity being of a very superior quality. On the Wey are several large flour mills, whose produce is mostly sent to the metropolis by the Basingstoke canal, which passes within 4 m. of the town; and the line of the Southampton railway is about 5 m. N. from it. Farnham, which was a bor. by prescription, returned 2 mems. to the H. of C. from 4 Edward II. to 38 Henry VI., subsequent to which the privilege has not been exercised: it received two charters from the bishop of Winchester, but virtually lost the distinction of being a bor. from about 1750, or earlier. Petty sessions for the div. are held in Farnham, and there is also a court for recovery of debts under 40*l.*, which sits every third week. Farnham Castle,

FAROE ISLANDS.

on a hill N. of the town, is a residence of the bishops of Winchester, and contains a good library and some valuable paintings: it is surrounded by an extensive park, in which is an avenue nearly 1 m. in length, commanding a fine prospect, and much resorted to as a public promenade. It stands on the site of a castle built during the reign of king Stephen, by his brother Henry of Blois, and was built subsequently to the Restoration. Some interesting remains also exist in the vicinity of the abbey of Waverley, founded in 1128, for Cistercian monks, and subsisting till the general dissolution under Henry VIII., when its annual revenue was estimated at 17*l.* 8*s.* 3*d.* There is a handsome modern mansion contiguous to the site, amidst fine park scenery.

FARO, a sea-port city of Portugal, on the S. coast of the prov. of Algarve, cap. comarca of same name; on the Valfermosa, near its mouth, 45 m. E.S.E. Lagos, and 20 m. W.S.W. Tavira; lat. 36° 59' 34" N., long. 12° 31' 18" E. Pop. 6,440. (*Milano*, 1826.) It is surrounded with walls, said to have been constructed by the Moors; and is well built, the streets being wide, and the houses good, and, to appearance, mostly new. It has a cathedral, four convents, a house of charity, seminary, military hospital, custom-house, and arsenal. It is the seat of a *corregidor* for the comarca, a military governor, of a bishopric, transferred thither from Silves in 1580; and of town and district judicial courts. The harbour is shallow and inconvenient; but it has a good roadstead, formed by three islands, opposite the mouth of the river. It exports figs, raisins, almonds, dates, and other dried fruits, oranges, lemons, wines, cork (the produce of its territory), carriages, baskets, and anchovies. Many of the inhabitants are fishermen. This town received its first pop. from the city of Osonova, which stood not far distant, destroyed by the Moors on their entrance into the country. It was raised to the rank of a city by John III. in the 16th century. (*Milano, Dictionario*, iv. 128.; *Baldi, Portugal*, i. 221.)

FAROE, FEROE, or FEROE ISLANDS, a group of 22 isl. belonging to Denmark, in the Northern Ocean, between lat. 61° 15' and 62° 21' N., and long. 6° and 8° W., about 185 m. N.W. the Zetland Isles, and 320 m. S.E. Iceland. The principal island, Stromoe, in the centre, is 27 m. long by about 7 broad; the other chief islands are Osteroe, Vaagoe, Boroe, Sandoe, and Suderoe. Total area, 95 sq. Pop. about 7,000. Only 17 islands of the group are inhabited. The shores are every where bold and precipitous; and though there are numerous harbours, most of them are beset with rocks, or exposed to the violence of the winds and waves, so that they afford safe anchorage only in the summer. The whole surface of the land is a succession of hills, the highest of which, Skelling in Stromoe, is 2,240 ft. in elevation. (*Landt*.) There are no valleys of any extent, neither are there any streams but such as are generally fordable throughout the year; small fresh-water lakes exist in several of the islands, the largest of which, in Vaagoe, is about 2 m. in circ. Climate very variable; but, notwithstanding the height of the lat., it is said to be milder and more equable throughout the year than in the S. provs. of Denmark, the snow seldom lying for more than eight days at a time. Rain and fogs are very prevalent, and the islands suffer greatly from the violence of the winds and storms. Principal rocks, granitic trap, felspar, clay-slate, &c.; basalt in columns is frequent, peat and coal are abundant, and traces of iron, copper, and some other metals, besides opal, chalcodendrite, scollite, &c. are found. Soil very thin, being no more than 4 ft. in depth even at the bottoms of the valleys, and, to render it productive, it must generally be manured pretty highly; the proportion of cultivated to uncultivated land is only about 1 to 60. Some barley is grown, but neither oats nor rye will come to much perfection; and what corn is grown has to be dried under cover by means of fires. Most of the supply of corn is therefore brought from Denmark. Turnips and potatoes succeed pretty well, and are important articles of food. As might be expected, agriculture is very backward, and is principally carried on by the spade. Hay is one of the few vegetable productions; the chief timber of any description. The chief wealth of the inhab. is in their flocks of sheep, of which a peasant often possesses from 200 to 300 head; next to their flesh, they are chiefly valuable for their wool and fat; the ewes are never milked. The wool, which is coarse, is principally used in the domestic manufacture of hose and cloth. The cows are small, and no care is taken to improve the breed; every peasant is the owner of at least one. The horses are small, and used only for burdens, the steepness of the country not admitting of their being employed for draught. Hogs are rarely kept. As great numbers of sea-fowl, valuable alike for their flesh and their feathers, build round the coast, fowling is an important pursuit. It is also an extremely hazardous one, and requires great nerve and dexterity. The rocks are in many parts so precipitous that the fowlers have to be let down from the summit by a rope 100 or 200 fathoms

in length. In the most inaccessible places the fowls are frequently so tame that they may be taken by the hand; but elsewhere they are taken by a net thrown over them by the fowler. Sealing, whaling, and fishing also employ a good many hands in the season. Manufactures almost wholly domestic; the chief are those of coarse woollen fabrics, woven by a loom of the rudest kind, and knit woollen stockings. Hats, combs, furniture, and other articles of prime necessity are made, and good boats built in many places; dyeing, fulling, tanning, &c., are also conducted in the country. Principal exports,—hose, tallow, fish, train oil, feathers, skins, and butter: imports,—corn, pulse, bread, malt, spirits, colonial produce, iron, lead, gunpowder, lime, bricks, timber, tar, glass, linen cloth, shoes, books, &c. About 100,000 pairs of hose are exported annually. Barley bread, dried meat, fish, soup of oatmeal, fat, and water, milk, and turnips, compose the chief articles of food. The people are of Scandinavian origin, and speak a dialect similar to old Danish.

These islands have a civil governor, called *amtman*, a judge or *landrogt*, and a provost with superior authority in religious matters. The country is divided into 7 parishes, and 39 congregations. The only town is Thorshavn, at the S.E. end of Ströme, which is defended by a fort, and has about 1,600 inhab. The land partly belongs to the inhab., and partly to the crown; the public revenue, derived from the royal domains, quit rents, taxes on flocks, fisheries, &c., is paid mostly in kind. There are no schools, except one in Thorshavn; but most of the pop. possess the rudiments of education. The Faroe Isles are supposed to have been discovered by the Norwegians in the 9th century; since the union of Norway with Denmark, in the 14th century, they have belonged to the latter country. (*Land's Færoe Islands*, &c.)

FARS, or FARSISTAN, a prov. of Persia, which, by the change of the *s* into *p*, has in European languages, given its name to the whole country in the S. part of which it is situated, between lat. 27° 40' and 32° N., and long. 49° 30' and 55° E., having N. the prov. Irak, E. that of Kerman, S. Laristan and the Persian Gulf, and W. the latter sea and Khuristan: length, N. to S., nearly 300 m.; breadth, 200 m. Area, perhaps about 55,000 sq. m. Pop. uncertain. A mountain chain, which is a continuation of Mount Zagros, extends, from N.W. to S.E., through this prov., dividing it into the hot and cold regions (*Germsacer* and *Sihrud*); the former of which, the smaller division, extends with a variable breadth inland along the whole coast; while the latter comprises most of the N., E., and mountainous parts of the prov. The mountain ranges in some places rise to from 2,500 to 3,000 ft. above the sea; they are interspersed with numerous plains from 15 to 100 m. in length, though seldom more than from 8 to 10 m. in breadth. These plains are in general fertile, sufficiently well watered, and afford abundance of pasture and wood; some of them are tolerably well cultivated, but they are, for the most part, and particularly to the N. and W., destitute of inhabitants. In the E. part of the prov. the plains are of greater extent, the soil is more sandy, and water is less plentiful. The central mountain chain divides the rivers into those which flow into the Persian Gulf, and those discharging themselves into Lake Bakteghan. The principal of the former is the Tab (an. *Arosia*), and of the latter the Bendermeer, or rather Bunder-meer (an. the *Cyrrus* or *Araxes*).

Besides the Lake Bakteghan, which is 70 m. in circ., there are several other lakes, the chief of which is in the neighbourhood of Shiraz. These, as well as some of the rivers, are salt, the soil of Fars being strongly impregnated with that mineral; and the bed of the lake Bakteghan affords in summer, when it is nearly dry, great quantities of fine salt. The climate of the hot region is unhealthy; fevers, ophthalmia, and other diseases are prevalent; famine for want of rain is not uncommon, and the people are poor, and live wretchedly in mud huts. In the cold region, on the contrary, the climate is temperate and healthy, and agriculture is not so bad a state as in some other parts of Persia. Fars, though less highly favoured than some other parts of Fars, is that best cultivated; and great quantities of the finest tobacco are raised there. A great deal of corn, and especially rice, dates, raisins, and various other fine fruits; opium, saffron, hemp, cotton, &c., are among the chief agricultural products; silk is produced; the *cactus* feeding the cochineal is plentiful; and great numbers of roses are cultivated for the manufacture of attar. The wine is of a rather superior quality, and the soil of Shiraz has attained, perhaps, more celebrity than it deserves. Many cattle and sheep are reared; the horses, asses, and camels are good; fish, game, and other wild animals, are abundant. There are said to be mines of lead and iron, and quarries of marble and alabaster; borax is obtained, and there are some very productive springs of naphtha. The inhab. are, generally speaking, among the most civilised and industrious in Persia. They manufacture fine wool-

len, silk, and cotton stuffs, camel skins, &c., for exportation. The trade is principally with Hindostan. Chief towns, Shiraz, the cap., Bushire, Firozabad, Darab-jerd, Kazeroun, Bender-rijg, &c. In this prov. are also the ruins of Persepolis, Pasarga, and Shapokor. Fars was the ancient patrimony and kingdom of Cyrus the Great, previously to his foundation of the Persian empire. (*Kénneir, Mod. Trav. ; Dict. Géographique.*)

FAVERSHAM, a bor., par., and sea-port town of England, co. Kent, lathe of Scray, hmd. Faversham, 45 m. S.E. by S. Lond. Area of par. 2,370 acres. Pop. (1831) 4,429. The town, situated near a branch of the Swale, and within 4 m. of the main road from London to Dover, consists chiefly of two irregular streets, crossing at right angles, with a market-place and town-hall at the point of intersection. A suburb called Brent Town consists of cottages built within a recent period; and Ospringe Street, on the above line of road, is another suburb, that will probably be long united to the town. The village of Preston is also quite contiguous. Faversham is paved and lighted. The church, a spacious structure, with a fine tower and spire, was rebuilt in 1758, on the site of a structure of the reign of Edward II. There are also two dissenting chapels; a free grammar school, Kazeroun, founded by Elizabeth, in 1580, and 2 other schools, one for 12 boys, the other for a like number of girls; almshouses for 13 poor people; a theatre, and assembly rooms. Market, Wednesday and Saturday; fair, Feb. 25, Aug. 12. There are gunpowder-mills in the vicinity belonging to private individuals, but the government mills have been discontinued. At present the oyster fishery forms the most important staple of the place, and is conducted by a privileged company, admission to which is obtained by birth, or apprenticeship to a member; but the claimant must be a married man. There belonged to the port, in 1836, 225 vessels, of the burden of 8,270 tons, besides a great number of half-decked craft and open boats. Since the Municipal Reform Act it is governed by 4 aldermen and 12 councillors. Average annual corporation revenue, 1,000*l*. The limits of the old borough (which did not comprise the entire town) have been extended so as to include that, and the whole of Ospringe Street. There is a court of requests or debts under 40*l*, and a union workhouse has recently been built in the parish.

FAYAL, one of the Azores, which see.

FAYOUM*, a famous valley and prov. of Central Egypt, anciently the nome of Arsinoë. At about 15 m. W.S.W. Benisonef: there is a depression in the Libyan or most westerly of the two chains, which accompany the Nile out of Nubia. From this gorge—about 6 m. in length—the hills diverge, making a circular bend to the W. and N., and enclose the valley of Faioum; which is of an oval figure, and forms a low table-land, gradually sloping towards the N. and S.; the N. depression occupied by the *Birket-el-Kerdin* (the lake Moeris of the ancients), and the S. depression by lake Garah. Thus, unlike other basins, the valley of Faioum has its greatest depressions, not in the middle, but at the sides; its central portion forming a low, slightly convex plateau, extending towards the W. Upon this culminating line runs an arm of the great canal of Egypt, the *Bahr Isief* (given out at the narrow pass mentioned above), which at a short distance from *Medinet-el-Faioum*, the capital of the province, spreads out into various small branches, and gives a fertility to the valley which, though comparatively great, has been much overrated by some travellers. Faioum is about 40 m. in length from S. to W., and 30 m. in breadth from N. to S.

Towns, villages, and canals.—At the entrance of the ravine, which affords the only communication between this isolated province and the Nile, stand the village of *Illahoun*, on the N.E. bank of the canal, and the town of *Hawarah-el-Kebir*, on its S.W. bank, connected by a bridge of three arches, and provided with a number of reservoirs to regulate the masses of water during the inundation. Near Illahoun is a dilapidated pyramid 60 ft. high, with a base of 197 ft. square, consisting of calcareous stone, that supports a pile of unbaked bricks. At the other extremity of the gorge, where the valley finally opens, the *Hawarah-el-Saghir*, and the two ancient branches of the *Bahr Isief* diverge in opposite directions. The waters of the main canal are turned into these branches by means of bridge-dykes, built upon foundations above the ordinary level of the stream, so that at high Nile the current continues its course through the arches; but these canals are so encumbered with mud that their waters never reach the lake except during the inundation. Between El Saghar and Medinet-el-Faioum are strewn the remains of the celebrated Labyrinth, consisting of first, a brick pyramid, 122 yds. square and 197 ft. high; under

* *Filom*, "the sea," (*Quatrecentième, Recherches*, vol. 1, pp. 391, 416.) probably called from its island sea, the *Meris*, the *Filom* of Shampollion. Thus the name *Faioum*, or *Fayoum*, now given by the Arabs, is but a slight modification of the ancient Egyptian appellation. (*Égypte Illustrée*, art. *Égypte*.)

which the French discovered a subterranean passage, a sarcophagus, and a salt spring; secondly, the remains of a temple to the E. of the pyramid, presenting the fragments of huge columns of granite, with several sepulchral excavations. A large mass of ruins are buried in earth and rubbish, and have never been explored; the whole forming an oblong parallelogram 994 ft. in length, with nearly as great a breadth. Among another series of ruins, to the N. of Medinet, and occupying an area of about 24 m., Belzoni found two immense stone pedestals, to which the name of "Pharaoh's feet" have been given; various granite statues, some wrought iron, and a quantity of half melted glass. At some distance from these stands a 'syenite obelisk with a circular top, and though 43 ft. high, is covered with a profusion of sculptures. A portion of these remains are believed to have belonged to the Labyrinth, but most of them to the ancient city of Arsinoë, now replaced by *Medinet-el-Fayoum*. This capital is divided by a branch of the *Bahr-el-Wady* into two parts, connected by five bridges, and much of it is built of the remains of the ancient city. In 1824 Medinet contained 5,000 inhab., partly Copts and partly Moslems. It is the residence of the provincial governor. Some 10 m. distant to the E. stands the point of Birket-el-Kerûn accord very nearly with the ancient Bacchis or Banchis. 18 m. W.N.W. of the village of *Nazleh*, and 3 m. from the lake, stands a temple, known as *Kasr-Kerûn*, 94 ft. long, and 63 ft. high, with 14 chambers, having on either side a long passage whose end wall is divided into 3 narrow cells. (*Wilkinson's Topog. of Thebes*, pp. 382, 383.) Jomard penetrated one of these avenues, and, finding it skillfully adapted for the conveyance of the voice, inferred that it was designed for the utterance of oracles. This temple is manifestly of Roman origin, and is a smaller one 130 paces to the S.E. of it. We pass over the less noticeable villages of Fayoum, of which there are altogether not quite 70. (*Encycl. Britannica*, art. Egypt; *Ritter's Africa*, vol. iii. p. 35—50, French edition; *Lezronne's Nouv. Annales des Voyages*, vi. pp. 123—154.; *Belzoni's Researches*, &c. ii. 145, &c.)

Lake Mœris.—According to the statement of Herodotus, confirmed by that of other historians, this lake occupied in his time a large proportion of the valley, having a circumference of 460 m. (3,600 stadia), and a maximum depth of 160 ft. The basin was filled by the waters of the Nile conducted to it by canals, for it had no springs. The statement as to the size of the lake in antiquity is not inconsistent with its present contracted dimensions: the supply of water has been gradually lessened by the raising of the bed of the Nile, and by the filling up of the lakes and canals, so that very little reaches it at present, even during the inundation; not enough to countervail the copious evaporation which in this hot climate is continually going on. Hence, last century, the lake was 50 m. long and 10 m. broad (*Pococke's Travels*, i. 62.), whereas it is now only 30 m. long and 6 m. broad in the middle or widest part. Herodotus states that the Lake Mœris was artificially excavated by order of the king whose name it bears; but by this he no doubt referred to the excavation of the canals by which the lake was filled, and perhaps also to some excavations made in the lake itself. He says that for six months the waters flowed from the Nile to the lake, and that during the other six months they flowed from the lake to the river; but the level of the lake must always have been too low for the waters to have returned to the Nile; while that of the canals does so to this day. (*Herod. lib. ii. § 149.*; *Encycl. Brit.*, art. Egypt; *Wilkinson's Topog. Thebes*, p. 351.)

The Labyrinth.—This extraordinary structure is said by Herodotus, by whom it was visited, to have surpassed all the works of the Greeks, including the temples of Ephesus and of Samos, and to have been superior even to the pyramid. (*Lib. ii. § 148.*) It was divided into 12 courts, corresponding to the 12 nomes, or provinces into which Egypt was then distributed, and is said to have contained 8,000 apartments, 1,500 above, and as many below ground. Herodotus visited those above ground, and speaks of them from his own observation; but he was refused admittance to the others, and informed that they were used as sepulchres for the sacred crocodiles, and the kings who had constructed the edifice. (*Ubi suprâ.*) The different chambers were connected by an infinite number of winding passages, an artfully contrived as to give the structure its name. The ceilings, walls, and pillars were of the whitest marble, all adorned with sculptures. In fact, one's belief is almost staggered by the accounts of this extraordinary edifice; and nothing less than the authority of the venerable father of history could have made us believe in the existence of such a structure. For farther information as to this extraordinary edifice, see the notes to Larcher's *Herodotus*, tom. ii. 494—506., 2d ed. There can be little question that the ruins strewn about near Medinet, and between it and El Se-gair, are those of the Labyrinth, though the position of *Kasr-Kerûn* was assigned to it by early European travellers.

FELIPE (SAN).

Fayoum is chiefly inhabited by two branches of the Samnaton tribe of Arabs from the W. states of Barbary, who were able at the end of the last century to supply 2,970 soldiers. (*Girard, "sur les Habits de l'Égypte," Jour. de l'Égypte*, tome iii. p. 350.) Near the capital large quantities of roses are cultivated, which are converted into rose water of a highly esteemed quality. The land capable of cultivation in Fayoum has been estimated at 450 sq. m., of which scarcely the half is at present tilled.

FECAÏP, a sea-port town of France, dep. Seine Inférieure, cap. cant., between two ranges of hills, at the mouth of a small river of the same name, 48 m. N.W. Rouen; lat. 49° 45' 24" N., long. 0° 28' 34" E. Pop. (1836) 8,350. It consists of little more than a main street, not well built, but upwards of 2 m. in length from the church to the port. Its church, a handsome edifice, is the sole remaining part of a celebrated abbey, founded by Richard I., duke of Normandy, in 988, and destroyed during the revolution. Fecamp has an exchange, hospital, chamber of commerce, and a gratuitous school of navigation. Its port, though small, is one of the best on the Channel; and latterly it has been very greatly improved by the construction of an inner port, with a fine quay, a spacious light-house, &c. It is 2 m. from the steers: the *Grand Road*, lying opposite to Gricequebœuf, about 2 m. off shore, with 13 fathoms, and a good clay bottom, mixed with sand; the *Little Road* lies off the W. side of the harbour, and has from 10 to 7 fathoms. It manufactures cotton yarn, linen fabrics, seamen's shoes, hardware, rapeseed-oil, candles, and soda; and has sugar refineries, tanneries, and building-docks. It also fits out vessels for the cod, mackerel, and herring fisheries, and is an *entrepôt* for colonial produce, salt, brandy, &c. The ale of this town is celebrated for its purity, and men for their healthy appearance, and women for their beauty. (*Hugo*, art. *Seine Inférieure*; *Purdy's English Channel*, &c.)

FELEGYHAZA, a town of Hungary, between the Danube and Tholcs, cap. distr. of Little Cumania, on the road between Pesth and Temeswar, 65 m. S.E. the former. Pop. 15,000. It has a Roman Catholic church, and gymnasium; and a court of justice, in which the archives of the distr. are preserved. Some Roman antiquities have been discovered in its neighbourhood. The country round produces corn, &c. It has two large cattle markets are held in the town. (*Oesterr. Nat. Encycl.*)

FELIPE-SAN, formerly **JATIVA**, or **XATIVA**, (an. *Satabia*), a town of Spain, Valencia, cap. prov. of same name, on the declivity of a hill, near the confluence of the Montesa and Albayda, 44 m. S. by W. Valencia, and 195 m. S.E. Madrid. Pop. about 12,000. It is well built, and well supplied with public fountains, and fine public walks. It has a cathedral, 3 par. churches, 10 convents, an hospital, and an asylum for widows. The ancient city stood on the summit of the hill, near the foot of which the modern town is built. It had a strong fortress; and having been a Roman station, contained some Roman edifices, as well as others erected by the Moors, all of which are now in ruins. Ingila, speaking of the latter, says, "The magnificence and extent of the Moorish remains struck me with astonishment, even after having seen the Alhambra. These crown the hill that rises immediately behind the city; this hill is twice the height of that upon which the Alhambra stands, and the remains at San Felipe are also greatly more extensive. They are not, indeed, like the Alhambra, in preservation, nor do they present the terraces, and arches, and columns, that at once point out its Moorish origin; but they are seen covering the summit of a mountain ridge, 1,000 or 1,300 ft. high, and presenting in fine relief, against the sky, an irregular line of not less than 2 miles in extent of massive and imposing ruins." (*Spain*, in 1830, ii. 248.) In 1706, during the war of the succession, Xativa, after it had held out a long time against the French, was taken and burned; it was rebuilt on its present site by Philip V., who gave it his own name. The Moorish style, however, which prevailed in the former city, seems to characterise the edifices and manners of the present one. "Passing along the streets, I observed many signs of Moorish days, more than either in Seville or Granada: in a court yard which I entered, mistaking it for that of the poets, I noticed that the walls were arabesque; and looking in at the doors of the shops and houses, I scarcely saw a single person seated upon a chair, or even upon a stool; every one was squatted upon a mat." (*Ingila, ubi suprâ.*) San Felipe has no manufactures; all its inhabitants are said to find employment and subsistence from its contiguous *huerta*, or irrigated valley. (*Ingila's Spain*, vol. ii.; *Swinhurne, Mod. Trav.*, vol. xviii.; *Diaz, &c.*)

FELIPE (SAN), a town of the repub. of Venezuela, Colombia, dep. Venezuela, on the Yagui, not far from the Gulf of Triste, and 136 m. W. by S. Caracas. Pop. 7,000. It is regularly laid out with wide and straight streets, and has a good parish church. Cacao, cotton,

indigo, coffee, &c., grow abundantly in its neighbourhood, and are the chief articles of export. Its climate is, however, oppressive, damp, and unhealthy. (*Dict. Geogr.*)

FELTRE (an. *Feltia*), a town of Austrian Italy, deleg. Belluno, on a hill at the foot of the Alps, and near the junction of the Colmeda with the Plave, 16 m. S.W. Belluno. Pop. 5,600. It is partially fortified, and is tolerably well built; streets broad and well paved. It has a handsome market-place, a cathedral, many other churches, an Episcopal gymnasium, a seminary of theology and philosophy, an hospital, and an orphan asylum. It has silk twist, and some wax-bleaching factories; and trades in silk, wine, oil, &c., the produce of the adjacent territory. (*Rampoldi; Ost. Nat. Encyc.*)

FERNAGH, an inland co. of Ireland, prov. Ulster, having S. Cavan, E. and N. Monaghan, Tyrone, and Donegal, and W. Leitrim. Area, 471,348 imp. acres; of which 101,502 are unimproved bog and mountain, and 48,797 water, principally consisting of Lough Erne. This, which properly consists of two lakes, joined by a deep and winding channel, is a noble sheet of water. It stretches the whole length of the co., which it divides into two nearly equal portions. *See* **ERNE** (LOUGH). Surface varied, and in general better wooded than most Irish cos. Farms of all sizes; but the great majority very small. In the N. part of this co., agriculture is in pretty forward state; but elsewhere, it is very backward: a good many cattle are bred on the high grounds. Mr. Inglis says that he found the occupiers of land in this co. in a better condition than in most other parts of Ireland. Oats, barley, wheat, flax, and potatoes are the principal crops. Average rent of land, 12s. 3d. an acre. Iron ore is found in different places. Manufactures unimportant. Fernagh contains 8 baronies, and 18 parishes, and sends 3 mems. to the Imperial parliament, viz. 2 for the co., and 1 for the bor. of Enniskillen, which is the principal. In 1831, Fernagh had 25,781 inhab. houses, 28,152 families, and 149,763 persons, of whom 73,117 were males, and 76,646 females.

FERMO (an. *Ferrina*, *Faccenna*), a city of central Italy, Papal States, cap. deleg. of same name, on a hill, about 3 m. from the Adriatic, and 32 m. S.S.E. Ancona; lat. 43° 10' N., long. 13° 43' E. Pop. 19,000, chiefly in the suburbs. It is surrounded by a wall, of little importance as a means of defence; and has a cathedral, 10 other churches, 15 convents, a palace, built by Jerome Bonaparte, a university founded in 1850, and 2 fine collections of statuary and paintings. The harbour on the Adriatic, called *Porto di Fermo*, is small, and frequented only by a few trading vessels. The exports consist chiefly of corn, silk, and woollen cloth: it has an annual fair, lasting from August 18. to Sept. 5. Fermo is the sea, of the delegate, of an archbishopric, and of a court of primary jurisdiction, with appeal to a superior tribunal at Macerata. It was founded by the Sabines, before Rome existed; and colonised by the Romans towards the beginning of the first Punic war, and has been plundered by Alaric, Attila, and other barbarian chiefs; it, however, continued during a blockade of 11 years to hold out against Alaric, and was only obliged, through famine, to yield to his successor, Antharius. Since the 8th century it has, with few intermissions, belonged to the see of Rome. Lactantius and Galeazzo Sforza were both natives of Fermo. (*Rampoldi; Dict. Geogr., &c.*)

FERMOY, an inland town of Ireland, co. Cork, prov. Munster, on the Blackwater, 118 m. S.W. Dublin. Pop. in 1831, 6,976; the Cath. being to the Protest. in the proportion of about 8 to 1. The town which, till 1791, when Mr. Anderson commenced his improvements, was but a station for carriers, consists of a square, and several well-built streets on each side the river, which is here crossed by a fine bridge: its rapid improvement is owing to its having been made a military *dépot* during the last war with France. It has a par. church and a R. Cath. chapel, both spacious and elegant buildings, a convent, a Methodist meeting-house, several large schools, and a court-house; a workhouse, which was formerly barracks for 8,000 men, cavalry, infantry, &c. Races are held annually in the neighbourhood. There are here extensive flour-mills; and a considerable trade in flour and agricultural produce, mostly sent to Youghal, whence coal and other produce is received in return. There are also 2 paper-mills, and a brewery; duty was paid in 1836 on 22,056 bushels of malt, and the town is the centre of a considerable retail trade. Markets on Saturdays; fairs on 21st June, 20th August, and 7th November. General sessions are held in January; petty sessions every Monday. Post-office revenue in 1830, 3224; in 1836, 1,1667. Branches of the Agricultural and National banks were opened in 1835. (*Stat. Surv.; Railway Report.*)

FERNANDEZ. *See* **JUAN FERNANDEZ**.

FERNANDEZ-DE-APURE (SAN), a town of the repub. Venezuela, Columbia, dep. Orinoco, on the Apure, near its junction with the Portuguesa, 164 m. E. by N. Varinas. Pop. 6,000. ?

FERNANDO-PO, an island in the Bight of Biafra, 20 m. from the African coast, about 40 m. in length by

30 m. in breadth, now abandoned, but formerly occupied by Great Britain, it having been selected as a military and naval station from its supposed salubrity and from the facilities afforded by its situation for the suppression of the illicit slave trade. "It is about 130 m. in circ., and, like the adjacent part of the mainland, is exceedingly mountainous; Clarence Peak, the most elevated point, attaining the height of several thousand feet (10,700 ft.). The S. extremity is also intersected by several steep mountains, varying from 1,000 to 3,000 ft., which, with the intervening valleys, are covered with dense forests of large and valuable timber, and watered by numerous rivulets. The wet season commences at the latter end of May, and continues till the end of November: the annual quantity of rain and the temperature are much the same as at the other stations on the coast. The sea breeze is regular, but the land breeze generally deficient, being intercepted by the high range of mountains on the mainland.

Clarence Town, the principal settlement (on the N. side of the island), lies in lat. 3° 53' N., long. 7° 40' E., and is built close to the sea upon an elevated plain from 100 to 200 ft. in height, embracing two small peninsulas, Point William and Point Adelaide, with a semicircular space extending about a mile in length, and forming a cove well adapted for shipping. All the ground in the immediate vicinity is covered with forest trees and jungle, except to the extent of about 6 sq. m., which was partially cleared on the formation of the settlement. The soil, which is generally argillaceous, resting on a bed of freestone, gives proofs of abundant fertility when cultivated. The water, both of spring and brook, is of the best quality, and there are no marshes in the vicinity, the hilly nature of the ground not admitting of their formation." At this settlement part of a company of black troops, belonging to the Royal African corps, was stationed with some civil officers of government, in 1827-28; and a number of European mechanics went out in those and the succeeding years to aid in the erection of barracks and other buildings, &c. But the climate was soon found to be quite as pernicious as that of the other settlements on this part of the African coast. Most Europeans were attacked by fever, and the instances of recovery were very rare. We are glad, therefore, to have to state, that in 1834 the detachment of troops was withdrawn, and that this post-house has ceased to be a military station. (*Tulloch's Report on the Sickness, &c. of the Troops in Western Africa*, p. 21.)

FERNÉY, a village of France, dep. Ain, 6 m. S.S.E. Gex, and 5 m. N.W. Geneva. Pop. 1,000. ? This village is indebted not merely for its celebrity, but even its existence, to its having been for a lengthened period the residence of by far the greatest *littérateur* of modern times. Voltaire purchased this estate in 1758. The seignior enjoyed an exemption from all public taxes and burdens; but it would seem that Voltaire wished to establish himself in this retreat, not so much from its enjoying the privilege now mentioned, and its agreeable situation, as from the facility which its vicinity to Geneva afforded of placing himself in a safe asylum in the event of any measures being taken to interfere with his freedom. Voltaire conferred the greatest advantages on Fernéy. Instead of a paltry village, consisting of a few miserable cottages, he constructed a neat little town. In which he established a colony of industrious artisans, principally consisting of watchmakers, from Geneva; he also rebuilt the church; drained and planted the adjoining grounds; defended his vassals in their contests with the revenue officers and the church, and did all that a rich, enlightened, and really benevolent landlord could do to promote the comfort and happiness of those around him. The *château*, to which a neat little theatre was attached, was fitted up in a style of elegant simplicity; and his hospitalities were on the most liberal scale. Voltaire resided here with little interruption for more than 20 years. During the whole of this period, Fernéy was to the literary and refined what Mecca is to the Mohammedan world; and the most distinguished personages of the time eagerly resorted to Fernéy from all parts of Europe to pay their respects to this illustrious master. Voltaire quitted Fernéy for the last time on the 6th of February, 1778. His *château* is, or was not long since, preserved nearly in the state in which he left it. He expired at Paris on the 30th May, 1778. (*See* *Condorcet, Vie de Voltaire*, 203; *Biographie Universelle*, art. *Voltaire*, &c.)

FERRARA, a famous city of Italy, N. part of the Papal States, cap. deleg. of same name, formerly an independent duchy, in a low marshy plain, on the left bank of the Volano, 5 m. S. from the Po, to which it is united by a canal, and 26 m. N.N.E. Bologna; lat. 44° 49' 56" N., long. 11° 38' 25" E. Pop. 25,000, including about 1,800 Jews. It is the most N. city belonging to the pope; is well fortified and defended on its W. side by a strong pentagonal citadel, garrisoned, conformably to the treaty of Vienna, by Austrian troops. While it was under its native princes of the house of Esté, Ferrara was

the seat of one of the most polished and refined of the Italian courts, and is said to have had from 70,000 to 100,000 inhab. But it has long been in a state of decay; its "wide and grass-grown" streets are all but deserted, and numbers of its splendid palaces are uninhabited, and without either doors or windows. In the principal square, or *Piazza Nuova*, are bronze statues of two of the dukes of Ferrara. The old ducal palace, now occupied by the legate of the pope, "stands moated and flanked with towers, in the heart of the subjugated town, like a tyrant entrenched among slaves." (*Forstyth*, p. 329.) The *Thedomo*, or cathedral, was consecrated in 1135: it is a vast but tasteless edifice. It has an immense number of other churches, mostly in a state of decay; but several of them, as well as of the palaces, have good pictures. It has, or recently had, no fewer than 32 convents. Its university, or rather college, founded in 1390, and revived by Pope Leo XII., has two faculties of law and medicine, but it is not well attended. The public library, founded so recently as 1740, has 80,000 volumes and a museum of antiquities; but its most valuable treasures are the manuscripts of the immortal works of Ariosto and Tasso, with other relics of the former. There is here, also, a botanical garden, an anatomical theatre, several charitable establishments, and one of the finest theatres in Italy. The manufactures and trade of the town are inconsiderable; and, owing to the want of drainage, it is unhealthy in summer.

The celebrity of Ferrara is almost wholly derived from its being intimately at least, if not honourably, associated with the history of some of the greatest names in the literature of Italy, or indeed of Europe. Ariosto, though born at Reggio, in Modena, resided for a lengthened period in Ferrara: here, in 1516, appeared the first edition of the *Orlando*; and here, on the 5th of June, 1533, the poet breathed his last. The house in which he lived is still kept up. He was buried in the church of the Benedictines; and it is a curious fact, that the bust on his tomb, being struck by lightning towards the middle of last century, the iron laurels that wreathed the brows of the poet were melted. Lord Byron has alluded to this circumstance as follows:—

"The lightning rent from Ariosto's bust
The iron crown of laurel's mindless leaves;
Nor was the ominous element unjust
For the true laurel wreath which glory weaves
Is of the true no bolt of thunder cleaves,
And the false banner that weared his brow;
Yet still, if fondly superstition grieves,
Know that the lightning scathed lies below
Whatever it strikes!—you deem it doubly sacred now."
Childe Harold, iv. c. 41.

In 1801, the remains and tomb of Ariosto were conveyed with great pomp to the public library; and here, also, are his manuscripts, arm-chair, and inkstand.

Tasso is another of the glories, but he is also the shame, of Ferrara. A cell in the lunatic hospital of Sta. Anna, about 9 paces by 5 or 6, and 7 ft. high, lighted by a grated window, is shown as that in which the author of the *Gerusalemme Liberata* was immured from March, 1579, to December, 1580, when he was removed to a contiguous and larger apartment. In 1584 his prison was again enlarged; but it was not till 1586 that he was set at liberty, at the intercession of the duke of Mantua. It is difficult to ascertain the real cause of this ignominious treatment of, perhaps, the greatest of the Italian poets. The apologists of the house of Esté, or rather of the duke Alphonso, by whom, though the pretended patron of Tasso, he was imprisoned, have stated that it was occasioned by his extravagances, and that in shutting him up Alphonso really consulted the safety and honour of the prisoner! (*Tiraboschi*, vii. 1267. Modena, 1792.) But, though the subject be not quite free from difficulty, there can be very little doubt that the imprisonment of Tasso is ascribable to the vindictive malignity of the duke, who took this method of avenging some unguarded expressions of the poet, provoked by the ungenerous treatment he had received. (See *Strass*, *Vita di Tasso*, p. 263.; and the *Extracts from Tasso's Letters*, p. 263.; see also the learned essay on the imprisonment of Tasso in Sir John Hobhouse's *Illustrations of Childe Harold*, pp. 5—29.)

Guarini, author of the *Pastor Fido*, the cardinal Bentivoglio, and several other distinguished persons, were, also, natives of Ferrara.

From a small town Ferrara became a walled city, A. D. 670. The family of Esté possessed it first as chief magistrates, and afterwards as hereditary sovereigns, from about 1060 to 1597; when, on the death of the last duke, and the extinction of his male line of the family, it was taken possession of by the pope. Under the French régime it was the cap. of the dep. of Basso Po.

FERROL, a sea-port town of Spain, on the N.W. coast of Galicia, prov. Betanzos, cap. of a jurisdiction of same name, and of one of the 3 naval departments of the kingdom, on the N. arm of the Bay of Betanzos, or Coruña, 11 m. N.E. the latter, and 25 m. S.W. Cape

Ortega; lat. 43° 29' 30" N., long. 8° 19' W. Pop. 12,354. (*Milano*, 1836.) The harbour of Ferrol is one of the very best in Europe in point of depth, capacity, and safety. It is approached by a strait about 8 m. in length, and in its narrowest part not quite a quarter of a m. broad; this channel, which has from 8 to 11 fathoms water, will only admit one ship at a time, and is commanded by strong forts on either side. The tides in it run so strong that it is advisable to enter or leave the harbour an hour before high or low water. The town is protected on the land side by strong fortifications; it is well laid out, the streets mostly intersecting each other at right angles; but in some parts they are less regular; the ground enclosed by the fortifications being very uneven. It has 2 hospitals, 3 large churches, a monastery, consistory, a good prison, academies of navigation and mathematics for pilots, &c., and a school for the naval education of seamen; and contains the residences of the captain and auditor-general, intendant, and superior financial officer of the department, and of the military commandant, who is also the superintendent of police in the jurisdiction, which comprises the adjacent town of La Graña. On the E. side of the town are the royal arsenal and dockyard; the former is the first and largest in Spain, and used to be furnished with all necessary stores for the construction of the navy; the dockyard amongst the finest in Europe. The basin, in which the ships are laid up, is of great extent and solid workmanship, and every ship has its separate storeroom. The naval barracks occupy a large and handsome building, and afford accommodation for 6,000 men. Six hundred galley-slaves are (or were) employed in the most laborious works of the harbour. This port being intended solely for the royal navy, general commerce and all foreign merchant ships are excluded. There are, however, some manufactures of hats, paper, leather, naval stores, hardware, &c.; and corn, wine, brandy, vinegar, pilchards, and herrings, the produce of its own fisheries, &c., are exported; and salted meat, French, English, Irish, Dutch, &c. woollen, linen, and other fabrics imported; besides *indianas* from Catalonia, and silks from Valencia. But the trade of the town is principally limited to the supply of the inhab. the navy, and the government officers. Prior to 1752, Ferrol was only a fishing hamlet, frequented by coasting vessels; but, owing to the advantages of its situation, it has since been made the chief naval station of Spain. (*Milano*, *Diccionario* *Grog*, *de España*, 3c. iv. 143, 144.; *Tufillo*; *Mod. Trav.*, &c.)

FEVERSHAM. See TAVERSHAM.

FEZ (properly *Fas*), a city of Morocco, and next to Morocco and Mequinez, the principal in that empire, cap. of the prov., as it formerly was of the independent kingdom of the same name, and residence of a *kand* or governor. It is singularly and beautifully situated in a funnel-shaped valley open only to the N. and N.E., the sloping sides of which are covered with fields, gardens, orange-groves, and orchards, 56 m. from the Atlantic, 22 m. N.E. Morocco, and 80 m. N.W. Tangier; lat. 34° 6' 39" N. long. 5° 19' 19" W. Its pop. has been very variously estimated; but, according to Count Græber of Hemso, the resident pop. may be estimated at about 88,000, of whom 65,000 are Moors and Arabs, 10,000 Berbers and cognate tribes, 9,000 Jews, and 4,000 Negroes. It consists of two separate towns, Old and New Fez, the latter standing on a height and overlooking the former. They are surrounded by decayed walls, which include a large space; and at both its E. and W. extremities are castles, in one of which the governor at present resides. The *Wad-el-Jabor* (River of Pearls), an affluent of the Sebou, winds through the valley, irrigating a large portion of its surface and turning a great number of mills, and after entering Fez, divides into two arms, which furnish water in abundance to the houses and mosques. The Old City is built on sloping ground; its streets are narrow and dark, unpaved, and in wet weather excessively dirty. The houses are lofty, flat-roofed, and built around court-yards; their different stories are surrounded with galleries supported on colonnades. Their cracked, leaking, and bulging roofs are propped up by others which stretch at different intervals across the streets. These cross-walls are perforated by arched passages, not over wide; and these being closed at night, the city becomes divided into different quarters, all communication between which is effectually cut off. The New City, called also *Medinat-al-beida*, or "the White City," founded in the 13th century, is somewhat better laid out and built than the old, and is surrounded by fine gardens; it contains several palaces, among which is that of the emperor, some public baths, and several tolerable modern houses. The imperial palace covers a considerable extent of ground; it has a great number of court-yards, some of which are only half finished, while others are half dilapidated. Its interior does not exhibit much splendour. All Bey, early in the present century, reports that the cabinet in which the sultan used to receive visitors was but a poorly

furnished room 15 ft. square, while the office of the minister was a miserable, low, damp apartment at the bottom of a small staircase, about 5 ft. long by 8 ft. wide, and without any other furniture than an old carpet! The Jews are confined to the New City, where they have a synagogue, and are obliged to keep within their own quarter at night. According to Leo Africanus, Fez is said in the 16th century to have contained as many as 700 mosques; but this would appear to be a gross exaggeration; at present the city contains only about 100. All are built on a uniform model: they consist of a courtyard surrounded with arcades, and on the S. side a covered square, in the middle of the wall bounding which there is a niche, where the *imam* places himself to direct the prayers, and on the left hand side of the latter a pulpit. The chief mosque, called *El Carubin*, was erected soon after the foundation of the city. It has a greater number of arches than the large mosque of Tangier, many gates, and upwards of 300 pillars, and in its court there are 2 handsome fountains. This mosque can boast of the singularity of having a covered place for women who may choose to participate in the public prayers—a circumstance unique in Mohammedan places of worship. It has been said to be one of the most remarkable edifices of its kind in Africa; but All Bey says, that it is upon the whole a heavy and mean structure, and far inferior to the great mosque of Cordova. Its minaret contains some clocks, globes, and astronomical instruments, brought from Europe nearly a century and a half ago,—and a library; but, from having been abandoned to dust and damp, most of the instruments and books have become useless. The most frequented mosque is that of Muley Edris, the founder of Fez: it contains the sepulchre of that prince, and the sanctity with which it is thereby invested is so great, that it affords perfect security to a criminal guilty of even high treason. Its minaret is the finest and highest in the city; it contains many European articles of mechanism. Public baths are numerous in Fez, and some of them are very good. There are also some tolerably convenient inns, though their outward appearance is not promising. The number of shops, viewed externally, would almost warrant the belief that Fez contained 4 times its actual pop.; but most of them are mere “stalls with just room enough for a sedentary Moor, who never moves; and for the packets that are heaped round him, to which he points as passengers arrive.” (*Chénier*, l. 77.) Each street is devoted to a separate trade; and it is seldom that more than one species of goods is sold in a single shop. The markets are plentifully supplied; and provisions are both good and cheap. The climate is oppressively hot in summer; in the winter the thermometer often falls to 40° Fahr., and the average height of the barometer is 27 in. The atmosphere is almost always damp and misty; and the situation is considered unhealthy (*Chénier*); the New City is, however, much less so than the Old.

During the struggle with the Moors in Spain, and especially on their expulsion from that kingdom, many Mohammedans sought an asylum at Fez, taking with them new manners, arts, and knowledge. They introduced the Spanish method of dressing and dyeing goat and sheep skins red and yellow (forming the leather then called Cordovan, but now Morocco), as well as the manufacture of milled woollen fabrics. The foregoing articles are still manufactured at Fez, and, in addition, gauzes, silks, sashes, gold and silver stuffs, jewellery, slippers, girdles, saddlery, woollen *haiks*, fine carpets, coarse linen fabrics, arms, copper goods, and earthenware. The trade with the adjacent country is brisk; and twice a year caravans go from this city across the desert to Timbuctoo.

Fez has been always considered one of the principal seats of Mohammedan learning. There are schools attached to many of the mosques: of these, seven are considered superior to the rest; and in these a mixed jargon of religion, morality, legislation, physics, metaphysics, geometry, astrology, alchemy, and medicine is taught, principally out of the Koran, and the works of Euclid, Ptolemy, and Aristotle. There are several hospitals, the largest of which is appropriated to lunatics. The military government of the city is in the hands of the *kaid*; the civil and judicial authority is exercised by a *cadi*; and a minister, entitled *al motassar*, fixes the price of provisions, and decides all points that arise on this branch of the public service.

Old Fez was founded in 793 by Edris II., a descendant of Mohammed, and continued the cap. of an indep. kingdom till 1548, when it was, together with its territory, conquered, and annexed to Morocco. After a period of decline, it again rose to prosperity on the ruins of the Moorish kingdom of Cordova; and its pop. became afterwards still further augmented, by reason of the edicts of Philip II. against the Mohammedans. It has been always held so sacred by the Arabs and others, that when the pilgrimages to Mecca were interrupted in the 10th century, the western Moslems journeyed to Fez, as the eastern did to Jerusalem; and even now none but

the faithful can enter Fez without express leave from the emperor. (*Græberg of Hemo*; *Spicchio dell' Imp. di Marocco*, pp. 47—49.; *Chénier*, *Morocco*, vol. i.; *Mod. Trav.*, vol. xxi., &c.)

FEZZAN (an. *Phaenicia Regio*, and the country of the *Garamantes*), a country of Central Africa, immediately S. of Tripoli, to which pachalic it is tributary. It is supposed to reach from about 25° to 31° den. N. lat., and from about the 12th to the 16th deg. E. long. But its boundaries are ill defined, and its area uncertain, and alike uncertain. The latter, however, has been estimated by Horneman at no more than from 70,000 to 75,000. Fezzan is, as far as we know, the largest oasis, or cultivable tract, in the Great African Desert, by which it is surrounded on all sides; having W. the country of the Tuaricks, and S. and E. that of the Tibboos. A portion of it consists of an extensive valley bounded by an irregular circle of mountains on all sides except the W., where it opens into the desert; but a great part of the mountainous region to the E., as well as of the desert to the W. and S., are nominally included in its territory. The Gil-el-Assend, or Black Haratch, mountains (an. *Mons Ater*), the White Haratch, and other ranges, intersect the country generally in the direction of N.W. to S.E. None of these ranges, however, is of any remarkable height; the first named, in the N. of Fezzan, is no more than about 1,200 or 1,500 ft. in elevation, and the hills elsewhere for the most part appear to be only from 400 to 600 ft. high. Their tops are in general barren; a few only have conical peaks. Basalt is one of the principal constituents, and especially in the Black Mountains; where, however, the lower stratum of all the hills is invariably limestone, mixed with a reddish clay. Calcareous formations, containing many shells, are generally predominant; the other chief geological rocks are porphyritic clay slate, aluminous schist, and sandstone, frequently intermixed with beds of clay. A large portion of the surface is covered with sand, beneath which, in some places, volcanic substances have been found. Salt and nitre frequently effloresce on the soil, and impregnate many of the small lakes. There is no river or rivulet throughout the country; fresh water is procured by digging to variable depths, but at most to about 8 or 10 feet under ground, when a plentiful supply is obtained. Rain is very rare, and descends only in small quantities. The heat in summer is oppressive in the highest degree, not only to foreigners but to the natives, rising sometimes to 135° Fahr.; the cold in winter is also sharper than might be expected from the latitude, the thermometer descending occasionally to below 50°, and accompanied with piercing blasts from the N.; added to which, furious tempests frequently occur, overwhelming caravans of travellers with the sands of the desert. The climate of Mourzouk and various other places is decidedly unhealthy. Only a small portion of the surface is under culture, and that only in the valleys, where sufficiently watered. Wheat is raised; but maize and barley are the grains on which the inhabitants chiefly depend for subsistence, and these are not grown in sufficient quantities for their supply. Pot herbs and garden vegetables are plentiful, particularly carrots, cucumbers, onions, and garlic; these, however, as well as most of the corn, are raised only in gardens near the towns, which are watered with great labour from brackish wells. Dates are the staple product, and the tax on the date trees is an important source of the public revenue. Figs, pomegranates, ju-jules, &c., are also grown. The rearing of domestic animals is little attended to; goats are the most numerous; and in the S. there are flocks of hairy broad-tailed sheep, of a light brown colour. Horned cattle are to be found in the most fertile districts, and there only in small numbers; beef is rarely eaten, except by the rich. Horses are few, the most laborious kinds of work being chiefly performed by asses. Camels are used for travelling and the conveyance of goods; but these animals are dear, and only kept by large merchants, and other wealthy individuals. Dates form the principal food of all domestic animals. They also compose the chief nourishment of the pop., the luxuries of life, even in the cap., being very limited; and, in fact, the necessities of life, generally speaking, are so scanty, that, to designate a rich man, the common expression is, “he eats bread and meat every day.” This state of things is, of course, mainly owing to the apathy of the inhab., many of whom do not, for months together, taste corn: when obtained, they make it into a paste called *acceda*. Bread is badly made, and baked in ovens of clay planted in holes in the earth, and heated by burning embers. Fowls, geese, ducks, &c., are scarce, in consequence of the sovereign having appropriated all he could lay his hands on for his own use. Butter is brought in goats' skins from Tripoli, and is very dear. Tobacco, mixed with *trona*, is very generally chewed by the women, as well as by the men: smoking is rather confined to the opulent, mild tobacco and pipes being dear; but all the men, though professedly Moham-

medans, drink largely of intoxicating liquors, obtained from dates. The principal wild animals met with in the country are the lion, panther, hyena, jackal, tiger cat, immense herds of buffaloes, &c.; and among birds, vultures, falcons and other rapacious species, ostriches, bustards. From the products of the animal kingdom, which supply its commerce, are derived a great part of the wealth Fezzan possesses. There are a few manufactures of agricultural implements, coarse woollen fabrics, carpets, and Morocco leather; but Horneman could not find throughout Mourzouk a single artificer skilful in any trade or work. "The smith fashions without distinction every metal into every form: the same man who forges shoes for the sultan's horses, makes rings for his princesses." Capt. Lyon, however, remarks that some work in gold and silver is executed with much skill, considering the badness of their tools; and every man is capable of acting as a carpenter or mason. The wood being that of the date tree, and the houses being built of mud, little taste or skill are displayed. Much deference is paid to the artists in leather or metals, who are called, *par excellence*, *sia*, or master, as, iron-master, leather-master, &c. The shuttle is unknown, and woollen cloths are made by the women with the hand only. The chief occupation of the people is commerce and the conveyance of goods. Fezzan derives its chief importance from its situation, which renders it a great emporium for the interior of Africa, on between N. and Central Africa. The communication of Egypt as well as Barbary with the vast countries to the E. and S. of the Niger, centres almost entirely in Mourzouk. Thither an annual caravan sets out (or did in the time of Horneman) from Cairo, reaching its destination in about 40 days. From Tripoli to Mourzouk the journey usually occupies about 25 or 27 days. Of the caravans to the S., the principal are those to Bornou, with which country Fezzan maintains a regular and extensive communication, and the cap. of which travellers reach in about 50 days. Other caravans go to Cassina, which journey occupies 60 days; and a few proceed still further S., crossing the mountains to Ashantee. "The arrival of the great caravans forms a sort of jubilee in the cities of Fezzan; and on reaching Mourzouk, they find the sovereign seated on a chair of state, outside the city, to receive them." Male and female slaves from Bornou and the adjacent S. countries, gold dust from the banks of the Niger, copper, senna from Agadez, civet, tigorskins, dyed leather, and some kinds of cotton manufactures, are the chief imports from the interior of Africa; which, together with ivory, ostrich feathers, &c., are forwarded to Barbary and Egypt to be exchanged for provisions, and the manufactures of Europe and the East. Many of the latter are re-exported to the S., including fire-arms, gunpowder, sabres, knives, glass, paper, beads, imitations of coral, toys, and European manufactures of a great variety of kinds, tobacco, snuff, &c. The articles of clothing imported from the N. are principally muslins (partly from India), striped, blue, and white calicoes, woollen cloth, and the coarse caps and shawls; and, however, the principal articles exported to the S.; the quantity of the former being estimated at 300 or 400 camel loads.

The People are very mixed; in the N. many are Arabs, in the S. they are chiefly Negroes. The Fezzaneers, who compose the mass of the pop., appear intermediate between the two, though more inclining to the latter type. Their colour is black; they are, according to most authorities, tolerably well formed; but neither sex has handsome features. They have very peculiar cast of countenance, which distinguishes them from other blacks; their cheek-bones are higher and more prominent, faces flatter, noses less depressed, and more peaked at the tip than in the negro; eyes generally small; lips protuberant, and somewhat thick; teeth good; hair inclined to be woolly, but not completely frizzled. They are said to be cheerful, and fond of dancing and music, and not prone to sudden anger, nor revengeful; but are at the same time selfish, devoid of hospitality, insincere, and wholly destitute: neither physical or mental energy or enterprise. The Arabs, in person and disposition, are much the same as elsewhere; and are greatly superior to the Fezzaneers in activity and cleanliness. In Mourzouk there are some white families, descended from the Mamelukes, whose designation they are very proud of preserving. The court, and upper classes of Fezzan dress mostly in the costume of Tripoli; the lower orders wear a large shirt of white or blue cotton, with long loose sleeves, trousers of the same, and sandals of camel's hide; and on Fridays they perhaps add a turban, and appear in yellow slippers. The women plait their hair, often mixing it with black wool; they use great quantities of oil and perfumes; and those who can afford it, load themselves profusely with armlets, anklets, and other ponderous ornaments of gold, silver, copper, iron, ivory, glass, horn, &c., together with cornellians, agates, beads, coral, &c. Both sexes have a singular custom of stuffing their nostrils

with a twisted leaf of onions or clover. The habits of all classes are said to be debauched and profligate in the extreme.

The Government is in the hands of a chief who exercises unlimited power within his own territory, where he has the title of *sultan*, though in addressing his superior, the pasha of Tripoli, he assumes only that of *shekik*. His revenues are derived from taxes on slaves, merchandise, date plantations, gardens, and other cultivated lands; from fines and requisitions, duties on foreign trade, and the crown domains, salt pools, natron lakes, &c. For every slave, great or small, he receives, on their entering his dominions, 2 Spanish dollars; and in some years the number of slaves amount to 4,000. On the sale of every slave, 1-4th of the purchase money goes to the sultan, in addition to which he receives a dollar and a half per head, which, at the rate of 4,000, gives alone 6,000 dollars annually. The tax on a camel's load of oil or butter entering the country, is 7 dollars; on a load of beads, copper, or hardware, 4 dollars; and on one of clothing, 3 dollars. All Arabs who buy dates, pay 1 dollar duty on each load; and above 3,000 loads are annually sold to them. Date-trees (with a few exceptions) are taxed at 1 dollar for every 200, and those in the vicinity of the cap. alone yield the sultan an annual profit of 10,000 dollars. The trees, which are his private property, produce about 5,000 camels' loads of dates, each worth 400 lbs. weight, and which may be estimated to fetch 18,000 dollars. He is entitled to 1-5th of all sheep or goats; every garden pays 1-10th of the corn it produces. Each town pays a certain sum which, altogether, may be averaged at 4,000 dollars. He sends out private parties for slaves; and has alone the privilege to sell horses, which he buys at a cheap rate from the Arabs, and realises a large profit from, by obtaining slaves for them in exchange. If a man die childless, the sultan inherits a great part of his property. There are various other ways in which he extracts money. The *endi*, and other state officers, the ministers of religion, &c., are supported by lands set apart for the purpose. All the servants of the sultan are maintained by the public; and he has no money to pay, except to the pasha of Tripoli. The tribute was to the amount of about 15,000 dollars a year, till a quarrel between the two sovereigns broke out some years ago; since which, it has been much less. It is paid in gold, senna, slaves, &c., and an embassy is annually sent for it by the pasha. The armed force of Fezzan may usually amount to 5,000 men; but in time of war, all who are able to bear arms are called out, and in this way a tumultuary force of from 15,000 to 20,000 men has sometimes been raised.

The cities and towns of Fezzan are said to exceed 100; but the largest has not more, perhaps, than 3,000 inhab. The principal are Mourzouk the cap., Sockna, Sebha, Hoon, Wadan, &c. Mourzouk stands in lat. 25° 54' N., long. 15° 52' E. It is surrounded with well-built mud walls, at least 20 ft. high, with round buttresses, loopholes for musketry, and gates wide enough to admit a laden camel. Pop. about 2,500. The street of entrance is about 300 yards long, by 100 broad, and leads to the sultan's castle, an immense, but irregular edifice, built of mud, in the middle of the city. In Mourzouk there are said to be 16 mosques; but most of them are small. Sockna is situated in a plain, on the road between the cap. and Tripoli. It is walled, and may contain 3,000 inhab. Germa has been considered, but without sufficient evidence, to be the an. *Garama*. No antiquities have been discovered in it; though, in various parts of the country, remains belonging to the Roman and subsequent periods are frequently met with.

The country of the Garamantes was conquered by the Romans under Cornelius Balbus, soon after the Christian era. In the 7th century it fell under the dominion of the Arabs; but in 1300 a portion of it was tributary to the Soudan state of Kanem. Soon afterwards a family of the *Sherifs* (descendants of Mohammed) took possession of it, and held it till 1811, when the bey Mukii usurped the throne. (*Denham & Clapperton, Trav. in Africa; Oudney, Gyon, Ritchie, Horneman, &c.*)

FIESOLE (an. *Fiesola*), in antiquity a considerable city of Etruria; now a small though celebrated village of Central Italy, grand duchy of Tuscany, prov. Florence, on a precipitously steep hill commanding a fine view of the *Val d'Arno*, 4 m. N.E. Florence. The face of the hill is cut into a gradation of narrow terraces, enclosed in a trellis of vines, and faced with loose stone walls. It has a cathedral, a seminary, and numerous country houses belonging to the citizens of the Tuscan capital. It is first noticed by Polybius in his account of the early war between the Gauls and the Romans. It was the head-quarters of Catiline, who retired thither after the discovery of his conspiracy. Near it, in 405, was fought the last great battle gained by the Romans in Italy, in which Stilicho defeated Radagaisus and the Huns. In 1010, the Florentines dismantled and ruined Fiesole, and enlarged their own city with some of its materials; but the ruins of a few of its ancient buildings are still visible,

particularly those of its Etruscan walls, and of a vast amphitheatre supposed to be of Roman origin. (*Rampoldi*, ii. 44.; *Cramer's An. Italy*, i. 177.)

FIFE, a marit. co. of Scotland, consisting of the peninsula lying between the Frith of Forth on the S., the German Ocean on the E., and the Frith of Tay on the N.; having on the W. the coas. of Perth, Kinross, and Clackmannan. Area, 300,000 acres, of which more than two thirds are cultivated. This is one of the best situated and most beautiful of the Scotch counties, exhibiting every variety of surface and soil, from the mountain to the level plain, and from moss and gravel to the finest loams. The Lomond hills, on its W. border, attain to an elevation of about 1720 ft. above the level of the sea. The E. and S.E. parts of the county are comparatively level and fertile; and the district, called the "How of Fife," traversed by the Eden, is particularly well cultivated and productive. There is a good deal of moor land in the W. parts of the county along the E. and S. borders of Kinross-shire, and between the latter and Dunfermline; but it is gradually being brought under tillage. Climate dry and good, having been materially improved by drainage and extended cultivation. Generally speaking, the soil is superior; and both arable and stock husbandry are well understood and successfully practised. All the new improvements in drainage and in agriculture have been introduced into the county, which has, in consequence, been wonderfully improved. "By the new system of agriculture, and especially by the liberal employment of draining, the land has been brought into the highest state of cultivation; and grounds, which 40 years ago would have been thought good for nothing, are now seen waving with the richest harvests. The houses of the peasantry are now equal to what those of the farmers were then; and the mansions of the latter surpass, both in appearance and comfort, such as the smaller proprietors formerly possessed. The condition of the people is much improved. Tea has become a new article of consumption. Their superior clothing forms another striking proof of the improvement of the peasantry." (*New Statist. Acc. of Scotland*, § Fife, pp. 234, 314.) The Fife breed of cattle is well known, and is one of the most valuable of the Scotch breeds. Property is more subdivided in this than in most Scotch counties. Farms vary in size from 50 to 500 acres; leases for 19 years, and corn rents, general average rent of land, in 1810, 22s. 6d. an acre. No county affords finer situations for building, or is better wooded, or has a greater number of gentlemen's seats. Coal and lime are both abundant, and are largely exported. The linen manufacture is carried on very extensively at Dunfermline, Kirkcaldy, Dysart, and other towns. A considerable number of people in the smaller towns round the coast derive a subsistence from fishing. Principal rivers, Eden and Leven. Principal towns, Dunfermline, Kirkcaldy, St. Andrew's (a city), &c. Fife contains 13 royal burghs, 41 parishes, and a university, St. Andrew. It may be said to return 4 mems. to the H. of C., viz., 1 for the county, 1 for the E. district of burghs, or those of Cupar, St. Andrew, &c.; 1 for the Dysart district, including those of Dysart, Kirkcaldy, &c.; and 1 for the W. district of burghs, including Inverkeithing, Dunfermline, Queensferry, Culross, and Stirling, of which the last two do not belong to the county. Registered electors for the county, in 1838-39, 2,367. In 1831, Fife had 20,712 inhab., houses, 28,804 families, and 128,539 inhab., of whom 60,781 were males, and 68,058 females.

FIGEAC, a town of France, dép. Lot, cap. arrond., on a declivity beside the Gôlè, 31 m. N.E. Cahors. Pop. (1836) 4,650. It is surrounded by an amphitheatre of wooded and vine-clad hills, interspersed with numerous habitations and abrupt rocky heights; but the town is generally ill-built, and its streets narrow, crooked, and dirty. It was formerly encompassed by ramparts and ditches, but these are now only seen in the ruins of some traces of them exist. It is said to owe its origin to a Benedictine monastery, established here in 755 by Pepin le Bref. The church of this ancient abbey is remarkable for the singularity of its architecture; it has a dome surmounted by a spire, together upwards of 255 ft. in height. At the S. and W. extremities of the town are two obelisks, called *ingulles*, as to the origin of which several fabulous stories are afloat. These are octagonal, and upwards of 50 ft. in height; and appear to have been intended to support lanterns. Figeac contains numerous ancient buildings, among which is the castle of Baleine, an edifice of great extent and solidity, and originally a place of some strength; it is now used as a hall of justice. It has a court of primary jurisdiction, a communal college, and a school of design; and has manufactures of linen and cotton fabrics, dyeing-houses, tanneries, &c., and some trade in wines and cattle. It suffered greatly in the religious wars of the 16th century. It was the birth-place of Champallion, the Egyptian traveller. (*Hog's*, i. 104, &c.)

FIGUERAS, a town of Spain, near the N.E. extremity of the kingdom, Catalonia, prov. Gerona, on the road be-

tween Perpignan and Barcelona, 71 m. N.N.E. the latter: lat. 42° 16' 1" N.; long. 2° 57' 39" E. Pop. 7,422. (*Milano*, 1826.) It is "an ugly straggling town," situated in the middle of a plain on which an abundance of olive trees are grown. Like almost all Spanish towns, it has its square (*plaza*); the streets are tolerably wide, but the houses ill-built. It has a parish church, three convents, an hospital, barracks, with a small garrison, custom-house, post-house, &c. There are two inns; but Mr. Inglis says of the one which he visited in 1830:—"It is singular that in a town so near the frontier, it should still be, in all respects, the Spanish *posada*—it is just as little French as the *posada* of Murcia or Andalusia: the fire still blazes in the middle of the floor; coffee and tea are unattainable; and meat is to be found, not in the inn, but in the market." (ii. pp. 305, 306.) About three furlongs W.N.W. of the town is the citadel, or castle of San Fernando, constructed at an immense cost, about the middle of the last century, and reckoned one of the finest fortresses in Europe; it stands on a little eminence, commanding the whole plain; all the approaches to it are undermined, and every building within it is bomb-proof. Its form is an irregular pentagon; the walls are of freestone, and very thick; the moats deep and wide; its ramparts, magazines, stables, cellars, barracks, and hospital, are defended by a casemate; and the firm, bare rock on which it is built has been turned to so great advantage, that trenches can scarcely be opened on an side, the ground being every where stony. It will serve as an entrenched camp for from 16,000 to 17,000 men. It has, however, been several times captured: the French took it in 1808; the Spaniards recovered it in 1811; but it was retaken in the same year by the French, who kept possession of it till 1814. They took it again in 1823.

This fortress has a military governor, whose jurisdiction extends over the town. Figueras is the seat of a subintendant of police; it has some trade with France, manufacture of leather, sugar, &c., mills of various kinds, and a large market every Thursday. Iron and black marble are obtained in its vicinity. (*Milano*; *Inglis's Spain*, ii.; *Mod. Trav.* xviii. 54.)

FILIPPO D'AGIRO (SAN) (an. *Aggrum*), a town of Sicily, not far from the centre of the island, Val di Catania, cap. cant., on a hill near the Trachino, 34 m. S.W. by N. Catania. Pop., in 1831 (*inc. cant.*), 7,166. It has several churches and convents. The best saffron in Sicily is grown in its environs. Aggrum was of great antiquity, and is celebrated as being the birthplace of Diomedes Scutulus.

FINALE, a town of N. Italy, duchy of Modena, cap. distr., on an island in the Panaro, 10 m. from its confluence with the Po, 21 m. N.E. Modena, and 16 m. W. Ferrara. Pop. 7,600. It derives its name from its being the last town to the E. in the Modenesse dom. It is surrounded by a wall, and has some wide streets, fine bridges, and a college. It has manufactures of silk and woollen fabrics, and some trade in corn, wine, and hemp. In 1822 it suffered much damage from an inundation of the Panaro. (*Rampoldi*, &c.)

FINDHORN, a village and sea-port of Scotland, co. Moray, on the river of that name, at its mouth, and in the par. of Kinloss, 3 m. N. by E. Forres, and 10 m. W. by N. Elgin. The Findhorn, which falls into the Moray Frith, and which, near its mouth, flows into a loch or arm of the sea, upwards of 1 m. in length by ¼ m. in breadth, is rendered famous by its inundation in the disastrous floods of August, 1829. (*Sir Tho. D. Lauder's Morayshire Floods*.) Pop. 670; but, during the herring fishing season, there is an increase of about 700. The number of boats, decked and undecked, employed in the herring fishery in 1832, was 163, manned by 739 persons. There were 99 coopers and 129 individuals employed in gutting, cleaning, packing, &c. the fish, as also 16 labourers. Number of fish-curers, 18. Some salmon are also caught. A considerable number of trout are shipped from Findhorn. About 9 m. S. from the village stood the Abbey of Kinloss, belonging to the Clisterian order of monks. (*Keith's Cat. of Scot. Bishops*, Edin. 1824, p. 418.)

FINDON, or **FINNAN**, a fishing village of Scotland, co. Kincardine, on the sea-coast, in the par. of Banchory Devenick, 6 m. S. Aberdeen. Pop. 450. It is a poor place, but has long been celebrated for its preparation of smoked haddock, known by the name of "Finnan haddock." This village was at one time unrivalled for the whole process,—for gutting, cleaning, splitting, and smoking the fish; but it is admitted that the several white-fishing stations on the coasts of Kincardine and Aberdeen, are now about equal to it in this respect. Dunbar and various towns on the Frith of Forth have tried to rival Finnan, but in vain. The most delicate part of the process is the smoking, which should be done by the green branches of fir, particularly spruce, thus communicating to the fish its peculiar odour and bright yellow colour. A somewhat similar result may be effected by the use of pyroligneous acid, but nothing but the fir has ever been used for the purpose at Finnan and

the neighbouring coast. The genuine Finnan haddock should never be kept above two or at farthest three days after it has been cured, should be roasted by a very quick fire, and served up immediately. The inhabitants of the Finnan, like those of many other fishing towns on the E. coast of Scotland, are supposed to have had a foreign, most likely a Danish, origin; their physical aspect, dress, manners, language, being peculiar, and remaining unchanged from generation to generation. (*The Book of Ben-Accord*, Aberdeen, 1839, pp. 17, 18, 270.; *Meg Dods's Cookery*, p. 17.; *Boswell's Life of Johnson*, by Croker, ii. 343.)

FINISTÈRE, or FINISTERRE, the extreme W. dep. of France, formerly part of the prov. Brittany, between lat. 47° 45' and 48° 15' N., and long. 35° 25' and 49° 50' W., surrounded on three sides by the ocean and British Channel, and having E. the d'eps. Côtes-du-Nord and Morbihan. Length, N. to S., 65 m.; breadth about 55 m.: area, 666,705 hectares. Pop. (1836) 545,955. The coasts of this dep. are generally steep, rocky, and indented with many bays and harbours, some of which, as that of Brest, are of the first excellence. Ushant, and many groups of small rocky islands, are situated near the shores. Two hill-chains run through this dep. E. to W., one terminating near Brest, and the other at the opposite peninsula of Crozon. Both chains are granitic, but the summits of neither rise above 900 ft. Rivers numerous; the principal are the Aulne, Landerneau, Odet, &c.: there are also a great many small lakes. Climate mild, but humid; fogs are common; W. winds are most prevalent, and violent storms often occur.

In the Official Tables, the extent of rich land in the dep. is set down at 289,490 hectares; arable lands occupy 273,210 hect.: and heath and waste lands no fewer than 208,578 hect. In 1835, out of 84,396 properties subject to the *contribution foncière*, 39,096 were assessed at less than 5 fr., and 13,092 at between 5 and 10 fr.: there are but few large properties. Agriculture is in a very backward state, and the land is capable of yielding a much larger return if better methods of husbandry were followed: still, however, more corn is produced than is required for home consumption; it consists chiefly of oats, rye, wheat, and barley, in the order now stated. The corn produced in 1835 amounted to 3,140,540 hectolitres, to which produce may be added 1,236,000 hectol. of potatoes. In accordance with a singular superstition, which has prevailed from an early period, one corner of every ploughed field is left fallow, and designated the *part du diable*: and it is believed that any attempt to convert this portion to a productive use would be productive of loss! Flax, hemp, and pulse of a good quality are grown: the vine is not raised; but about 70,000 hectol. a year of cider are made. Pasturage is excellent, and three hay harvests are sometimes obtained in a year. Many cattle are reared, principally oxen, cows, &c.; their number in 1830 being about 115,000. In the same year there were about 70,000 goats, but only 47,300 sheep. Hogs are numerous, and bees are largely reared—honey and wax being important articles in the commerce of the dep. The *terres froides*, or thin and poor soils, are sown with broom or furze, which furnish at the same time forage, fuel, and manure. According to a report by the British consul at Brest in 1834, the farms in that part of the dep. vary in size principally between 5 and 40 or 45 acres. The larger farms are commonly let on leases of 9 years, the rent being paid in money at Michaelmas. The rent of poor lands varies from about 5s. to 11s.; and of *terres chaudes*, or rich lands, from 17s. to about 30s. an acre. The amount of assessment varies very considerably in different communes; in that of Conquet it is charged on the rent in the proportion of about 1s. in the pound; but in the commune of Plouzané it is as high as 5s. in the pound: the *octroi* duties are also much higher in the latter commune. Farm servants board and lodge with their employers: men's wages vary from 2s. 8d. to 4d. 10s., and the women's from about 1l. 15s. to 3s. per year. Adjoining Brest, wages are higher. Pork, beef, cabbage soup, oatmeal porridge, potatoes, bread, butter, and pudding, comprise the chief articles of food. A family of 12 persons is estimated to consume 700 or 800 lbs. of pork, and from 100 to 500 lbs. of beef or veal annually. The women spin, and assist in field labour. Clothing is cheaper than in England; and the condition of the farmers is said to be prosperous. The pilchard and other fisheries are important; they employ about 850 boats, and 4,400 hands, and are estimated to realise a gross produce of about 2,100,000 fr. a year.

Finistère is rich in metallic products, especially lead. The mines of Poullaouen and Huelgoet are, perhaps, the largest of any in France. The first employs 300 miners, and yields annually 7,500,000 kilogr. of lead ore, from which 660,000 kilogr. of smelted metal are obtained. The second employs 280 miners, and yields 4,600,000 kilogr. of ore yearly, which ultimately give 870,000 kilogr. of raw metal. The lead is argentiferous; and about 700 kilogr. of silver a year are extracted at an average. Iron, zinc, and bismuth are, amongst the other

FINLAND.

metals, procured in the dep. There are also numerous granite, porphyry, slate, serpentine, and marble quarries, and beds of coal, potters' earth, &c. The manufactures are principally those of linen and woollen fabrics, saddle-cloth, paper, earthenware, cordage, leather, wax-candles, soap, chemical products, &c.; and in 1834, among 87 factories of various kinds, there was one of high-pressure steam-engines. Morlaix has a briak trade in litharge, butter, &c. The exports generally exceed the imports in value; the latter are chiefly the produce of the more S. dep.s, as wines, brandy, oil, &c. Finistère is divided into 6 arrondissements, and sends 6 mems. to the cham. of dep. Number of electors, 1,526. Chief towns, Quimper, the cap., Brest, and Morlaix. Total public revenue (1831), 11,671,403 fr. (*Hugo*, art. *Finistère*; *Encyclop. des Gens du Monde*; *Parl. Rep. on Agric.*, 1836; and *Official Tables*.)

FINLAND, called by the Inhab. *Suomen-maa*, or Land of Marshes, a country of N. Europe, forming the extreme N.W. portion of the Russian empire, including the government of Wyborg, and the W. portion of Russian Lapland, which are politically connected with it. It lies between lat. 59° 50' and 70° N., and long. 21° and 32° E.; having N. the Norwegian prov. Finnmark; E. the governments of Archangel and Olonetz; S. the Lake Ladoga, the government of Petersburg, and the Gulph of Finland; and W. Sweden and the Gulph of Bothnia. Length, N. to S., 730 m.; average breadth about 185 m. Area about 135,800 sq. m. Pop. (1836) 1,372,122. Its greater portion is a table land reaching generally from 400 to 600 ft. above the level of the sea, and interspersed with hills of no great elevation. In the N., however, are the Mauselka mountains, with an average height supposed to be between 3,000 and 4,000 ft. The coasts, particularly in the S., are surrounded by a vast number of rocky islands, separated from the main land and from each other by intricate and narrow channels, rendering the shores of Finland easy of defence in case of hostile attack by sea. But the chief natural feature of the country is its myriads of lakes, which occupy a large proportion of its surface; and some of which, as the Enare, Saima, Päijänne, &c. lakes, are of considerable size. The greater number of these are in the S. and E.; they have frequent communications with each other, and generally abound with islands. There are no rivers of any importance. Climate rigorous; even in the S. the winter lasts 7 months of the year, and the summer, which commences in June, terminates in August. Dense fogs are very frequent; heavy rains take place in autumn, and in May and June the thaws nearly put a stop to all travelling. In the N. the sun is absent during Dec. and Jan.; but during the short summer, while the luninary is almost perpetually above the horizon, the heat is often very great, and near Uleaborg the sun is sown and reaped within 6 weeks. The principal geological formations are granite, which very easily disintegrates, hard limestone, and slate. Soil for the most part stony and poor; but how barren soever, Finland is more productive than the opposite part of the Scandinavian peninsula, and when it belonged to the Swedish crown, it furnished a good deal more corn than was necessary for its own consumption, and was termed the granary of Sweden. Barley and rye are the kinds of grain chiefly cultivated, and the rye of Vasa is celebrated for its excellence: wheat and oats are but little grown. The peasants are obliged, from the humidity of the atmosphere, to dry all the grain in ovens, after which it will keep for 15 or 18 years. Pulse, hops, hemp, flax, and a little tobacco are raised; and potatoes were introduced about 1769, but they have not yet been brought into general use. Only a small proportion of the surface is under culture. The land requires a large quantity of manure, and that in common use is wood ashes, procured by setting fire to the forests and underwood, after which operation, heavy crops are sometimes obtained. The natural poverty of the soil is such that, excepting in the S. prov. of Tavastehus, where it is deprived of a continued supply of artificial stimulus, the crops rapidly fall off, and the cleared land is soon abandoned for another portion of soil, the wood on which is purposely destroyed. This plan of manuring the land, though well enough adapted to bring the fens covered with brushwood into cultivation, is highly injurious to the forests, and consequently to one of the chief sources of national wealth. The forests are very extensive, such as in the N. as lat. 69°; they consist principally of pine and fir; but contain also beech, elm, poplar, oak, ash, birch, &c. Timber, deals, potash, pitch, tar, and rosin, are amongst the most important products of Finland. Cherries and apples ripen at Vasa, and a species of crab-apple grows wild in the W.; but other fruits, except a few kinds of berries, are rare. Next to agriculture, cattle-breeding and fishing are the chief occupations of the people. Pasturage is scarce and indifferent, and forage rare; but cattle, goats, and hogs, which are fed upon leaves, straw, &c., are comparatively numerous. In the N. the

peasants possess large herds of rein-deer. Bears, wolves, elks, deer, foxes, beavers, polecats, and various kinds of game, abound. Seal and herring fisheries are established on many parts of the coast; and the salmon and streamling (*Clupea harengus*) are caught in great quantities in the lakes, supplying the inhabitants with an important part of their food. Iron mines were formerly wrought, but at present only bog-iron is procured. Lead, sulphur, arsenic, nitre, and a little copper are met with; salt is very scarce, and is one of the chief articles of import. Manufactures quite insignificant; except the products of a few iron forges, and glass, sailcloth, and hose factories, they are entirely domestic. The peasant prepares his own tar, potash, and charcoal; constructs his own boat furniture, and wooden utensils; and weaves at home the coarse woollen and other fabrics he uses. He often lives 100 miles from any town, and is, therefore, thrown for the most part upon his own resources and ingenuity, for the supply of his wants. In some districts the inhab. never repair to a town but to obtain salt. The exports consist of timber, butchers' meat, butter, skins, tar, and fish, to Russia and Sweden, with which countries the principal intercourse is maintained. There are a few good roads, made by the Swedes while they were in possession of the country; but they do not extend far into the interior. Post horses are furnished, as in Sweden, by the adjacent farmers. In commercial dealings, the Russian is the currency established by law; but Swedish paper money is in circulation, and is generally preferred by the population.

Since 1831, Finland has been divided into the 8 *Lenas*, or governments, and these again are divided into *fogderier*, or districts, &c. Chief towns, Helsingfors, the present cap.; Åbo, the former cap.; Tavastehus, Vasa, Uleaborg, and Torneo. A Russian military governor resides at Helsingfors. Finland has a diet composed of the 4 orders of the nobility, clergy, citizens, and peasantry, and a code of laws and judicial system similar to that of Sweden, but the diet is rarely convoked, except to consent to the imposition of fresh taxes, a senate more recently established having replaced it in the exercise of its functions. The annual revenue derived by the crown from Finland is estimated at about 1,300,000 silver roubles (about 205,000 £); the whole of it is, however, expended in the country. Among their privileges is the one that none but a native Finlander can hold any office of trust in the country. The regiments raised in Finland are also not promiscuously intermixed with the general forces of the Russian empire; and their fleet, by far the best-manned portion of the Russian naval force, forms a distinct squadron under the Finnish flag. Almost all the pop. are Lutherans, under the bishops of Åbo and Borgo; except in the government of Wyborg, where they belong to the Russian church. Public education is very backward; there is a university at Helsingfors, which, in 1833, had 389 students, besides schools in all the towns, but there is a great deficiency of country schools.

People.—On the W. coast, and in the Åland Archipelago (which is included in Finland), the inhab. are mostly of Swedish origin, and in the S.E. of Russian descent; but the great majority of the pop. are Finns. The latter have, by many geographers, been identified with the *Fenni* of Tacitus, and the *Phinici* of Ptolemy. There are, however, circumstances which give rise to considerable doubt respecting such identity. "The Finns call themselves *Suomalaiset*, or "inhabitants of the marshes." They have no analogy with the Slavonian or Teutonic races. They are of middle height, and robust, flat-faced, with prominent cheek-bones, light, reddish, or yellowish brown hair, grey eyes, little beard, and a dull sallow complexion. They are courageous, hospitable, and honest; but obstinate in the extreme, indolent, dirty, and it is said revengeful. They have not the gay disposition of their Slavonic neighbours; but are grave and unsocial. Almost every one is a poet or musician. The customs and habits of the Finns have been handed down time immemorial, and their costume forcibly brought their supposed E. origin to the mind of Mr. Elliot, who observes in his letters from the N. of Europe, "I could fancy myself in Asia. The peasants wear long loose robes or, a coarse woollen manufacture, secured by a silken sash like the *kummersbund* of the Mussulmans. Their dress, except the European hat, resembles that of the Beoparries, of Caboul. In Russia or Old Finland, the peasants wear a cloak or caftan, sometimes called a *khatai*, resembling in form, as well as in name, the E. dress." (pp. 251—257). "The Finns make frequent use of hot vapour baths, and Malte Brun considers it certain that it was they who communicated the custom to their Russian conquerors."

History.—The Finns were Pagans, living under their own independent kings till the 12th century; about the middle of which Finland was conquered by the Swedes, who introduced Christianity. The province of Wyborg was conquered and annexed to Russia by Peter the Great, in 1721; the remainder of the country became

part of the Russian dominions (also by conquest) in 1809. (*Schmitzer, La Russie*, pp. 606—624.; *Vodvolzskii, Dict. Géog. et Hist. de la Russie*; *Elliot's Letters from the N. of Europe*, pp. 245—265.)

FIORENZOLA, a town of N. Italy, duchy of Parma, district Borgo San Donnino, on the Iardi, 15 m. S.E. Piacenza. Pop. 3,000. It was the native place of Cardinal Albornoz. About 8 m. S., on the right bank of the Mira, stood the ancient city of Velio, buried in the fourth century by the fall of the mountain at the foot of which it was situated, and not discovered till 1761. The remains of antiquity that have been dug out of its ruins are more numerous and perfect than in any other ancient city of Italy, with the exception of Herculaneum and Pompeii. (*Cramer's An. Italy*, &c.)

FIUME, a sea-port town of Austria, situated on the Gulph of Quarnero, at the N.E. extremity of the Adriatic Sea; lat. 45° 19' 39" N., long. 14° 20' 45" E. Pop. 9,000. It is the chief town and seat of government of the diocese called the Hungarian "Litorale," and, with the minor adjacent harbours of Buccari, Porto Re, and Marina Chizza, is the point of contact for the rich and powerful kingdom of Hungary with the Mediterranean. The importance of Fiume was recognised at an early period by the emperor Charles VI., who constructed a magnificent road, about 75 m. in length, leading to this port from Carlstadt in Croatia, the spot where the inland navigation by means of the rivers Sava and Culpa terminates. This road was called, after its founder, the "Carolina;" but the difficult task of traversing the Julian Alps was found to be but imperfectly accomplished by its means, and the emperor Joseph II. laid down another line of road to the coast, between Carlstadt and Zeng, in the military frontier, which was named the "Josephine." In 1805, a third line of road, one of the finest undertakings of the kind in Europe, was opened at the expense of a joint-stock company, the shareholders in which were chiefly magnates of Hungary. This road was named the "Lonsa," after the empress Maria Louisa; and, on account of its comparatively gentle declivity, is the most frequented. Notwithstanding these exertions, and the outlay of a considerable sum of money in an endeavour to render the Culpa navigable above Carlstadt, the trade carried on here is inconsiderable, as will be seen from the annexed returns, excepting in years when there is an exportation of grain to Great Britain. The true reason of this want of activity at Fiume is the want of capital, which makes the Hungarian trade dependent on the merchants of Trieste and Vienna. Indeed the greater part of the trade of Fiume is carried on upon Trieste account. Mr. Hill, vice-consul for Great Britain, has kindly furnished the annexed statements of the trade of Fiume for the year 1839:—

According to information from the same source, it appears that the quantity of merchandise forwarded from the interior to the coast by the "Louisiana" road, in the

year 1839, amounted to 142,400 qrs. of wheat (21,330 shipped to England), 12,500 qrs. of rapeseed, 47,339 cwt. of rape, 6,333,580 lbs. of tobacco (chiefly shipped to France).

The branch of this road which leads to Buccari is chiefly used for the transport of timber and staves. Mr. Hill describes the trade of the Hungarian littoral as increasing. Several vessels, he says, of 600 tons burden, were built there within the last eight years, and others are now building. The freights for England, which in ordinary years are only 7s. to 7s. 6d. per quarter for wheat, rose in 1839 to 14s., in consequence of the scarcity of vessels, and the unusually large exportation of that kind of grain. There are some manufactures at Flume of linen, coarse cloths, leather, and rogoglio; also a wax-bleaching establishment, and a sugar refinery. The harbour is small, being only the entrance to a mountain-stream of a few miles in length, which it is very difficult to keep clear. Large vessels lie in the roadstead, at a few hundred paces off shore, where the water is deep enough, and where the high land of the coast shelters them tolerably well from the effects of the *bora*, or N.E. wind. (*Private Information.*)

FLAMBOROUGH HEAD, a bold promontory of England, on the Yorkshire coast, projecting a considerable distance into the sea; lat. 54° 7' N., long. 0° 5' W. This is at once the most striking and most celebrated headland on the E. coast of the kingdom. Its high, white, perpendicular, limestone cliffs render it a most conspicuous object. Many of the rocks of which it is composed are insulated, of a pyramidal form, and soar to a great height. Most of them have solid bases, but others are pierced through and arched. On the N. side are vast caverns, leading into the body of the Head, the retreat of immense numbers of sea-fowl and wild pigeons. A light-house, with a revolving light, having the elevated 214 ft. above the level of the sea, was erected on this head in 1806.

FLANDERS, the name of a fertile and well-cultivated district of Belgium, divided into the provinces of E. and W. Flanders. *See* BELGIUM.

FLËCHE (I.A.), a town of France, dép. Sarthe, cap. arrond., on the Loire, 24 m. S.W. Le Mans. Pop. (1836) 5,833. It is generally well built; streets broad, clean, and ornamented with fountains supplied by an aqueduct upwards of 4 m. in length. Its building is owing to a royal military college, formerly a celebrated Jesuits' college, founded, in 1603, by Henry IV. It is very extensive, and well laid out; contains an elegant church, a public library with 14,000 vols., a picture-gallery, &c.; and has attached to it a fluo park, and gardens. The church of St. Thomas, Chanoine-hall, hall of justice, hospital, &c. are the other principal edifices. La Flèche, though advantageously placed on a navigable river, is remarkably deficient in manufactures and trade. It is the seat of a sub-prefecture, and court of original jurisdiction. Its environs are fertile, and highly agreeable. Previously to the 10th century, it was called *Fissa*; it owes its present name to the spire (*flèche*), placed in the 12th century on the tower of St. Thomas's church. (*Hugo, art. Sarthe; Guide du Voyageur, &c.*)

FLENSBOURG, a sea-port town of Denmark, cap. of a bailiwick, on the E. coast of Sleswick, at the bottom of a deep fiord or bay, 19 m. N.W. Sleswick. Lat. 54° 47' 14" N., long. 9° 27' E. Pop. 13,550. It is ancient, well built, clean and thriving. The harbour has water sufficient to float the largest ships. There are sugar-houses and distilleries, with manufactures of cloth, cotton, paper, soap, tobacco, &c.; but it is chiefly celebrated for the tiles made in its immediate vicinity, of which large quantities are exported. About 250 vessels belong to, and several are built at the port.

FLINT, a marit. co. of N. Wales, consisting of two separate portions, the largest and most important of which is bounded on the N. by the Irish sea, on the E. by the estuary of the Dee and the Dee itself, and on the S. and W. by Denbighshire; the other and smaller portion lies along the S. bank of the Dee, between Cheshire and Salop. Area, 186,160 acres, being the least of the Welsh counties. The surface is considerably diversified. The N. part is mostly flat, and consists in great part of a portion of the vale of Clwyd. The vale of Mold is also flat and highly productive, as is the detached portion to the S. of the Dee. A ridge of hills runs through the whole extent of the county, mostly parallel to the Dee and its estuary, which, though externally barren, are valuable from their mines of lead and other minerals; but, on the whole, there is a larger proportion of good land in this than in any other Welsh county. Besides the Dee and the Clwyd, the county is watered by the Alyn and other streams. Agriculture, though still rather backward, has been materially improved, and many parts are well cultivated. There has, also, within the present century, been a great improvement in the farm buildings and cottages, and in the implements and stock. Average rent of land, in 1810-11, 18s. 3d., being nearly double that of any other co. in Wales. Manufactures have been introduced into Flintshire, especially that of

cotton, which is carried on to some extent at Mold. But the principal branch of industry carried on in this co., next to agriculture, is that of mining; its lead mines are at present the most extensive of any in the empire; those of copper are also of considerable value; and beds of coal exist all along the shore of the Dee, large quantities of which are used in smelting works, in addition to those that are exported. The smelting works in the vicinity of Holywell are very extensive, and employ from 600 to 700 hands. Flint returns 2 mms. to the H. of C., viz. 1 for the co., and 1 for the town of Flint and its contributory bors. Registered electors for the co., in 1838-39, 2,221. It is divided into 5 hundreds and 28 parishes; and in 1831 had 11,716 inhabited houses; 12,136 families; and 60,012 inhab., of whom 26,924 were males and 30,088 females. Sum contributed to the relief of the poor in 1838-39, 16,641.

FLINT, a parl. bor. and sea-port town of N. Wales, co. Flint, hund. Colehill, on the estuary of the Dee, 11 m. N.W. Chester. The borough, the limits of which were not changed by the Boundary Act, includes the parish of Flint, and the township of Colehill-Pawr, and had, in 1831, a pop. of 2,216. It is situated within a large quadrangular space, surrounded, on the principle of a Roman campment, by ramparts, and a deep intrenchment, having at the N.E. extremity its ancient castle. Two main streets cross at right angles, and are similarly intersected by smaller streets, the frequent gaps and broken walls in which give the town a dilapidated deserted aspect. It has a small chapel of ease, in which the service is performed alternately in Welsh and English; a Rom. Catholic and three dissenting chapels; a national school for 140 children, several Sunday-schools, and a guildhall. The assizes, formerly held here, have been long since removed to Mold, to which the county gaol has also been more recently transferred. The coal works and lead mines in the vicinity employ the chief part of the pop. Of late years, in consequence of obstructions in the channel of the Dee, Flint has become, to a considerable extent, the port of Chester; and here the larger vessels (especially those with timber) discharge into lighters, or rafts are formed and floated up to that city. The wharfs, which have been much improved and extended of late years, are accessible to vessels of 300 tons, at any time of tide. Railways lead from the wharfs to the mines. The exports consist chiefly of coal to Ireland and coastwise; and lead, in pigs, sheets, &c., from the works in the vicinity. During the summer season Flint is a place of some resort for sea-bathing: there are also hot baths for the accommodation of visitors. The castle, now in a state of rapid decay, is a square building, with round towers at three of the angles; and at the fourth is a much larger tower at a little distance from the castle, but originally joined to it by a drawbridge. Formerly the Dee flowed beneath the walls, and rings were fastened to them, to which ships were moored; but it has now receded to some distance. The foundation of this castle is ascribed to Henry II. Flint received its first charter in 1283. Since the 27th Henry VIII. it returned 1 mem. to the H. of C., along with the contributory bors. of Rhyddlan, Overton, Caerwils, and Caerwgwile: to these the Reform Act added St. Asaph, Holywell, and Mold: the right of voting previously to the Reform Act was vested in the inhab. paying poor and church rates. Registered voters for Flint and its contributory bors. in 1838-39, 1,297. The municipal bor. is restricted to a small space round the town, and is governed by 4 aldermen and 12 councillors. The numerous relics in the vicinity make it probable that Flint was a Roman station: and the remains of smelting-places and washes on the ancient plan, prove that the lead mines had been worked at a remote period. (*Boundary Report; Penman's Tour*, i. 58, &c.)

FLODDEN, a village of England, co. Northumberland, 6 m. S.E. Coldstream, memorable as the scene of one of the most destructive conflicts recorded in British history. James IV., king of Scotland, having invaded England with a large force, was encountered here, on the 9th of Sept., 1513, by an English army under the Earl of Surrey. James, who was destitute of every quality of a general, except bravery, was killed, and his army totally defeated. The loss on the part of the Scotch was extremely great. Besides the king, no fewer than 12 earls, 13 lords, and 5 eldest sons of peers, with a vast number of gentlemen and persons of distinction, and probably about 10,000 common soldiers, were left on the field. The loss on the part of the English was comparatively inconsiderable. This is by far the most calamitous defeat in the Scottish annals, and as there was hardly a family of distinction in the kingdom who did not lose one or more members in it, the whole nation was involved in mourning and despair. (*See Tytler, Pinkerton, &c. Histories of Scotland*: Sir Walter Scott has given a vivid and generally just account of this great battle in his *Marmion*.)

FLORENCE (Ital. *Firenze*, an. *Florentia Tuscorum*), a city of Central Italy, and cap. of the grand duchy of Tus-

cany, on both sides the Arno, 63 m. S. by W. Bologna, 68 m. E.N.E. Leghorn, and 187 m. N.W. Rome; lat. 43° 46' 41" N., long. 11° 18' 45" E. Pop. (1836) 87,548. It stands in a rich, well wooded, well cultivated, and beautiful valley, encircled by the Apennines, and though rather dull, is well built and agreeable. Its shape is nearly a square, the sides of which almost correspond with the cardinal points; the Arno intersects it from S.E. to N.W., 3 of the quarters into which it is divided being situated on the right, and the fourth on the left bank of the river. It is enclosed by an old wall about 5 m. in circuit, flanked with towers and pierced by 7 gates, which, besides being useless as a means of defence, is injurious, by preventing the free ingress and egress of the citizens, and checking the circulation of the air. The communication between the opposite sides of the river is maintained by means of 4 bridges. Florence contains a great number of magnificent edifices, and squares, generally adorned with statues, columns, or fountains; and they reckon no fewer than 170 churches, 89 convents, 2 ducal, and many other palaces, 12 hospitals, and 8 great and small theatres. "To this hour," remarks Mr. Bell, "Florence bears the aspect of a city filled with nobles and their domestics—a city of bridges, churches, and palaces. Every building has a superb and architectural form. Each angle of a street presents an architectural view, fit to be drawn for a scene in a theatre." Many of the houses are palaces; and a palace in Florence is a magnificent pile, venerable from its antiquity, of a square and bulky form, with a plain front, extending from two to three hundred feet, built of huge dark grey stones, in a massive, gloomy, and impressive style. The roof is flat, with a deep cornice, and bold projected soffits, which gives a grand, square, and magnificent appearance to the edifice. The chimneys are grouped into stacks, the tops of which, increasing in bulk as they rise in height, resemble a crown. Many of these palaces are fitted up with great magnificence, and some of them contain valuable galleries of pictures, that are mostly open to the public. The streets, though in parts narrow, winding, and angular, are mostly wide and straight; and they are admirably paved, after the manner of the old Roman roads, with angular blocks of trap, or sandstone. The houses generally are substantial, more so, apparently, than those of Rome. The Piazza Gran Ducale is the largest square; it has a fine marble fountain, and an equestrian statue in bronze of Cosmo I. by John of Bologna: the Piazza dell' Annunziata is surrounded by arcades, and has two fine bronze fountains, and an equestrian statue of the grand duke Ferdinand I. The Piazza del Mercato Vecchio, exactly in the middle of the city, has a marble column from which it is a mile to each extremity. The Arno is decidedly superior to the Tiber at Rome. The bridge *S. Trinità*, built of marble in 1557 by Ammannati, is designed in a style of elegance and simplicity unrivalled by the most successful efforts of modern artists. The Ponte Vecchio, built in 1345, has the houses of the street continued over it, so that it is not till they arrive at an open arcade in the centre that passengers become aware of their situation. The bridges, and the handsome though not spacious quays by which it is bordered, afford fine views of the river Florence, being in this respect much superior to the "Eternal City." The cathedral, or *Duomo*, a vast edifice, coated with marble, about 500 ft. in length, and 394 ft. in height to the top of the cross, stands in a spacious square. It was begun by Arnolfo di Lapo in 1296, and finished by Brunelleschi in 1426; its cupola is said to have suggested to Michael Angelo the first idea of that of St. Peter's. It has been usual to speak in high terms of commendation of this edifice, but M. Simond and Mr. Maclaren appear to have estimated it at its just value. It is built of brick, and venerated, as it were, with various-coloured marble slabs, arranged in narrow strips or panels. "There is something," says M. Simond, "imposing in the name of a marble edifice, but not so in fact; really, polished marble is worse than rough marble, which, again, is inferior to sandstone or granite; but coloured marble (particoloured especially) is worse than all. The *Duomo* of Florence, built in defiance of all the orders of architecture, is neither Grecian nor Gothic, although of the age of the latter style; and its dimensions alone give it greatness. The interior is very striking, but spoiled by a circular screen of Grecian columns round the altar." (p. 102.) Mr. Maclaren says, that this cathedral is to St. Peter's what harlequin is to a Roman senator. The Campanile, or belfry, adjoining the *Duomo*, but detached from it, is a fine tower 288 ft. in height. Charles V. was so well pleased with it, that he used to say it should be kept in a glass case. With the exception of the *Duomo*, the other churches have little worth notice in their architecture; and many of them are unfinished, mean, and poor. That of Santa Croce, however, called the Pantheon of Florence, is interesting from its containing the remains and tombs of four of the greatest men of modern Italy, or indeed of modern times,—Michael Angelo, Galileo, Machiavelli, and Alfieri. The church of San Lorenzo con-

tains the mausoleum of the Medici family, said by Lord Byron to be a "tawdry, glaring, and unfinished chapel," and admitted by less severe critics to be ostentatious, and in bad taste. In a cloister, attached to this church, is the Laurentian library, containing a peculiarly valuable collection of above 6,000 manuscripts, and 190,000 vols. Among the palaces are the *Palazzo Vecchio*, or old palace, inhabited by the Medici, when citizens of Florence. It was begun in 1298, and finished in 1350. It is in a massive, severe, and gloomy style, and has a noble tower 268 ft. in height, which commands a fine view of the surrounding country. This palace is now occupied with the principal public offices. The *Palazzo Pitti*, erected in 1440, the ordinary residence of the grand duke, is a vast and heavy structure; it is furnished in the most costly manner, and is enriched with a great number of fine statues, busts, and pictures, and an excellent library. Attached to the Pitti palace are the Boboli gardens, laid out by Cosmo I. in 1550, in the pure classical style; that is, says M. Simond, "in rectangular walks, flanked with cut trees fashioned into a wall or arched over-head, and furnished with a due quantity of stone steps, stone walls, and stone statues." Connected with these gardens is the botanical garden, a museum of natural history, a splendid anatomical collection modelled in wax by the Abbé Fontana, occupying 15 apartments, and a fine library. Another fine palace, the Riccardi, was built in 1440, after a design by Michelozzo. It has a noble gallery, with a ceiling painted by Luca Giordano, and a select library with 46,000 vols. open to the public. It was purchased by the government in 1814, and is now occupied by the *Accademia della Crusca* and some public departments. But the great glory of Florence is its grand gallery: it occupies the upper floor of the *Uffizi*, a building erected after a design of Vasari by Cosmo I., consisting of two parallel corridors or galleries, each 448 ft. in length, and 72 ft. apart, united at one end by a third corridor*, the choicest and most valuable specimens of art being preserved in saloons opening from the corridors on each side. This gallery contains some *chef-d'œuvre* of statuary, at the head of which, by universal consent, is placed the *Venus de Medici*, the goddess who "lives and loves in stone." This matchless statue was discovered in the 16th century, in the Villa Hadriani near Tivoli; and being acquired by the Medici family, was placed in their palace in Rome, whence it was conveyed to Florence by order of Cosmo III. The whole of the left arm, and a part of the right, are modern, having been restored by Bandinelli. An inscription on the base intimates that it is the work of an Athenian artist, called Cleomenes; this, however, is generally discredited. But, whoever may be the sculptor, it is certainly worthy to rank with the famous statue of Venus sold by Praxiteles to the children, respecting which some rather curious particulars may be seen in Pliny. (*Hist. Nat. lib. xxxv. § 5.*) The attitude of the *Venus de Medici* corresponds with the verses of Ovid, who perhaps had this very statue in his eye:—

Ipsa Venus pulchra, quoties velamina ponti,
Protegitur lava semi-reducta manu.

De Arte Amand, ll. v. 614.

Addison says of this famous statue, that "the softness of the flesh, the delicacy of the shape, air and posture, and the correctness of the design, are inexpressible." (*Travels, art. Florence.*) And, according to Byron,

— The goddess loves in stone, and fills
